[PRICE 1½d.]

A LEGEND of 1745

THE following story is gathered from an interesting narrative published by Miss Porter many years ago. The incidents, to which we have confined ourselves, were told her by a lady of rank, who assured her that every circumstance was strictly true, and well known to a member of her own family.

The scene of this remarkable adventure was a castle in Argyleshire, now in ruins, but at that time (the year

1744-5) inhabited by a Scotch Laird and his sister. This gentleman, on the death of his elder brother, had recently retired from foreign service, and returned to Scotland, bringing with him his young sister, who had been educated in France. For some months their time passed pleasantly in scenes and habits of life new to both of them; but after this the young lady observed with concern that her brother's spirits became depressed, and that his natural cheerfulness was changing into an expression of habitual gloom and melancholy. Herself of a remarkably timid, gentle character, she had no power to contend against his growing depression, and her spirits sank with his, till at length, to relieve her own troubled and anxious fears, as well as in the hope that another might have more skill to chase away her brother's gloom

than she had found herself to possess, she persuaded him, with some difficulty, to allow her to invite a friend to pass some months with her. This young lady, somewhat older than herself, was free to act according to her own wishes, in pity for her poor friend's loneliness and evident anxiety of mind, consented to comply with her entreaties, and shortly after arrived on her promised visit. There was a great contrast in the character of the two friends; Miss Mackay, which is the name of our heroine, possessing in a remarkable degree the courage, energy, and strong understanding, which her young hostess wanted, but the want of which, in her case, was atoned for by great kindness of heart, and a most sweet and affectionate temper.

She was not long in confiding to her friend the change in her brother which had caused her so much uneasiness; and Miss Mackay's keen observation very soon led her to suspect that his evident depression was owing to some painful or dangerous secret which weighed heavily on his mind. Acting on this conviction, she endeavoured, by every kind and unobtrusive attention, to win his esteem and confidence; the only means by which she could hope to be of real service. During her stay at the castle, many accidental circumstances occurred to bring out her extraordinary qualities. On one occasion especially, when the house where they happened to be visiting took fire, the Laird could not but be struck by her courage, and extraordinary presence of mind. This led him voluntarily to seek her society, instead of giving way to the habits of lonely musing which had lately grown upon him; so that his sister, rejoicing in this change, and attributing it only to one cause, began to form high hopes that the friend she loved best in the world might one day become her sister. Miss Mackay, however, understood his manner better, and being very sure that admiration, in the ordinary acceptation of the word, had no part in his feeling towards herself, she was at liberty to pursue her plan of kindness towards him.

His sister's timidity and delicate health did not allow her to venture on horseback; but Miss Mackay was glad to be able to explore, under his escort, the neighbouring country, and thus she had fresh opportunities for observing his deportment. Among the possible causes for his depression, she began to suppose him the victim of second-sight, (a belief still prevalent in Scotland,) an opinion which was one day much strengthened, when, on reaching a height which commanded a view of the sea, she heard him exclaim to himself, "I see, I see the bloody issue!"

At these words, Miss Mackay boldly stepped forward, and, allowing the nature of her suspicions to transpire, entreated him, if he could trust in her kindness and regard, and she could in any way relieve or assist him, to say what it was that weighed so heavily on his mind; adding, that though she could not claim a sister's right, yet, in his case, a sister's very anxiety and affection might prevent her being an equally safe confidant.

Thus urged, he owned that he had a secret, though not of the nature she had hinted at, nor his alone; that it was one fraught with difficulty and danger, yet in which she might be of the greatest service, if, as he believed, she had courage for the part that might be assigned to her, and was willing to incur the risk to which she would render herself liable. He then asked, if she was willing to hear this secret, under the solemn promise never to reveal it to any one.

She answered, "If your secret contains nothing against the commandment of God, and the well-being of my country, I am here ready to hear it, keep it, swear to it."

He assured her that there was nothing in it which, as a religious Scotchwoman, she might not lend her hand and heart to; but that he must not tell it then; adding, with solemnity, that there was but one place, and one hour, in which he should feel it safe to reveal it—that hour was twelve o'clock of the same night, and the place of meeting the smaller door of the last quadrangle of

the castle, whence he would conduct her to the spot where the secret was to be told.

Having full reason to trust his assurances, she promised to obey these directions, though not without some apprehensions as the time appointed drew near. She succeeded, however, in concealing those feelings from her young friend. The day passed as usual; and, as the clock struck ten, they separated for the night. Resolving not to alarm herself unnecessarily, by dwelling on the singular interview which was before her, Miss Mackay sat down to read till it was time to leave her room. Then, wrapping herself in her plaid, she knelt down for a few moments to ask a blessing on her enterprise; as the clock struck twelve she opened her door, and lightly descending the stairs, and threading the mazes of a long and intricate passage, she let herself out by a back door into one of the open courts. From thence she made her way through other deserted passages, and roofless portions of the building, till she entered the most distant quadrangle, where stood the great tower. By the light of a small lantern, which she kept carefully turned in an opposite direction from the inhabited part of the castle, she saw the Laird was waiting for her at the appointed spot. In silence he bowed his head as she came up to him, and, leading the way, proceeded to a door at the foot of the tower. This he opened with a small key, and having entered at the bottom of a spiral staircase, locked the door, and, turning to her, asked, in a low voice, if, in spite of such almost awful precautions, she still adhered to her first resolution,—entreating her, if she felt any fear, to return at once. The hour, and the strange mystery, for a moment daunted her spirits; but, summoning her courage, she answered boldly, that she would go through with what she had undertaken.

From the first landing-place, they turned into a long suite of apartments, which occupied the whole of that side of the building. They were large and deserted. In some the windows were entirely shaken out, in others they were loose and shaking. In the last chamber, which was smaller than the preceding ones, and the windows of which were better secured, the Laird stopped, locked the door, and warning his companion to remember all he did, pressed his foot upon the spring of a trap-door, which immediately started up. He then guided her down a steep flight of stone steps into a vault, evidently running far under the castle. Here he paused, and pointing to a large iron chest, begged his companion to rest upon it, while he should explain all she had seen, and try to secure her aid in a good cause.

He then told her of the projected invasion of Scotland by him whom she had been taught to consider the son of her rightful king, and that he was shortly expected to head, in person, such an army as his friends might privately collect. The Laird had been presented to the Prince abroad, and had there entered into his cause with enthusiasm. He had come to Scotland full of hope; but, in the progress of his negotiations with the different noblemen and gentlemen who were to take part in the enterprise, he had found so much lukewarmness, rashness, and folly, in those concerned, that all his bright expectations faded, and he was full of despair for the issue. It was this that had so clouded his spirits; his faculties had become bewildered, as he looked forward to the future; he foresaw a fatal end to the enterprise ere it began; and, conscious that his castle contained documents of vital importance to many, he was tormented with apprehensions for others, which he disregarded for himself. In the iron chest on which Miss Mackay sat, were deposited many deeds and bonds from the great exile, to different noblemen and gentlemen, acknowledging loans of money, and pledging himself to reward present services by future grants. These documents, if discovered, together with a correct list of all the persons contributing to the cause, either by gold or men, might prove the ruin of some of the best and bravest men in Scotland.

The Laird knew that, either just before or immedi-

ately upon his royal master's landing, he would be summoned to report certain needful details; and he feared leaving the high trusts committed to him behind in the castle, within the very grasp of Argyle, without also leaving some one empowered to destroy them in his absence, should any misfortune render such a measure necessary. As Miss Mackay's character had opened upon him, he had been struck with the thought, that Providence had in her provided him with the very person he needed. Time and further observation only strengthened this opinion; when, just at this point, and while still in doubt, a summons had arrived, commanding him to repair to another staunch friend of the Stuarts, where Charles Edward's most confidential agent was expected from France. It was at this eventful moment that Miss Mackay had opened the way to confidence, and he was now in consequence disclosing to her all that had weighed so long on his mind, and asking her co-operation.

His auditor listened to all he had to tell with the deepest interest; for she had ever been taught to consider Charles Edward her rightful prince, and the thought of being in any way able to devote herself to his service brought the fire to her eye, and the warm blood into her cheek.

When the Laird, in conclusion, asked, whether she would take upon her the charge of what he must leave behind, or, refusing that, simply give him her oath never to divulge what she knew, she readily promised to do all he had asked, and, kneeling down, took an oath to this effect on the little pocket Bible the Laird had brought with him. He then opened the iron chest, and displayed its contents. There were, besides the parchments he had mentioned, several leathern bags, which he told her contained money and jewels, contributed by faithful Scotchmen to the cause. He then begged her to listen carefully to the instructions he would give her. He was going instantly to join the Prince's party in Inverness, and, when gold was needed, would send a messenger she might entirely trust, to whom she must deliver it under the shadow of night. The arrival of such a messenger would be notified to her by the figure of a cross being cut on the trunk of a great ash tree which grew opposite her chamber-window; and a certain number of very small crosses cut under the large one would notify the number of bags she should give him. If, instead of money, the messenger should have to announce defeat and disaster, a figure of an axe should be marked on the tree instead of a cross; in which case her business would be to destroy every written paper or parchment in the chest. After that, he bid her use her own discretion whether to remain in the castle or depart; he himself by that time would probably be lying a corpse on the field of battle. In conclusion, he assured her, that he did not believe himself to be bringing her into real danger by the commission he now gave her, adding further directions, that on seeing the given sign on the tree, she was to repair at night to the same spot where he had met her, go down to the vault, bring up the bags, and, before opening the door into the quadrangle, (of which the messenger would have no key,) one was to give the pass-word, "Bruce," to which the other would answer, "Charles Edward." She then might open the door and deliver the bags into his hands; the messenger would give a voucher in return, which she must go back to deposit in the iron chest, and her duty would be over.

If, however, the secret announcement were disaster, she might burn the documents, one by one, at the candle in her lantern. "Mark," he said, in conclusion, "mark, I pray you, all the peculiarities of the places you will have to pass through, so that nothing may embarrass you, should accident extinguish your light. Above all things, remember to leave the trap-door well settled on its supports, as it opens only from the outside. For Heaven's sake, be careful to observe this!"

After some further discourse, as to what would be best to do for his sister in case of his death, they found it

time to return. Miss Mackay most carefully noted all his movements; learnt the secret of the spring which opened the trap-door, and passing with her guide through the solitary chambers, found herself again in the court of the quadrangle. Here she received from him the key of the tower door, and the more important one belonging to the chest; and they then took a solemn farewell of each other, as he was to leave early next day.

More than a fortnight passed before Miss Mackay was called upon to execute any part of her commission. At length, one morning, on going to her window, which she now always did on first rising, she observed a cross marked on the ash tree, and two smaller ones cut below it. She could not help feeling some apprehension, as she thought of the task that lay before her. The remembrance of the large deserted chambers of the gloomy vault, to be descended at midnight, now and then appalled her; but she concealed all appearance of anxiety, and passed the day as cheerfully as usual.

Half an hour before midnight, when every one was asleep, she lighted her lantern, and wrapping herself from head to foot in her plaid, issued from the dwelling-house into the first court. The moon shone brightly, and everything was so calm, that her confidence returned. Encouraging herself by thoughts of prayer, she reached the door of the tower, and there a faint sound made her turn towards the place whence it proceeded. A gentleman in a highland dress instantly stepped forward into the moonlight, from the archway where he had been standing, and, with an inclination of respect, whispered the word "Bruce." In the same tone, she answered, "Charles Edward," and hurrying into the tower, locked herself within it.

She had remembered every direction, so that she found no difficulty in reaching the vault. The bags were so heavy, that she found it necessary to carry each separately to the foot of the tower stairs. She then opened the door, and, without either uttering a word, the bags of gold were exchanged for the receipt; and, once again locking herself in, she returned to the vault, and from thence, when her task was done, returned to her own room. The whole had been accomplished so easily, that, after this, she felt no alarm or anxiety on her own account for any future errand of the same kind with which she might be entrusted.

The Laird's absence, meanwhile, crept on from week to week; neither by public report nor private information did any news of Charles Edward's landing reach her; and her zeal for his cause kept her in constant nervous watchfulness. Winter was now far advanced: her young friend, anxious about her brother, whose absence was unaccountable to her, and alarmed, too, at living without his protection in that lonely place, at such a season, claimed more and more of her care. Some kind friends from a distance would, every now and then, leave their homes, and spend a day or two with their timid young friend; but these meetings often more than failed in their object, from the ill-chosen nature of their topics for conversation. With long fireside-evenings came stories of murder and witchcraft, of ghosts and apparitions, all of which had a peculiar fascination for the poor young lady at the time, though they left her less fit than ever to sustain cheerfulness under adverse circumstances. Even Miss Mackay's stronger mind was not proof against the effect of these gloomy histories; and, after an evening thus spent, she did not feel her nerves in the fittest state for executing the commission she had received that morning, by the given sign on the ash tree. She remembered, too, that the deserted chambers she had to pass through were reported to be haunted. She would not, however, suffer such imaginations to hinder her in the performance of her duty; and, at the appointed hour, she set out on her errand.

Instead of the friendly moonlight which had cheered her before, a fearful tempest now raged without. The roar of the distant sea was heard in the intervals of the still louder wind, which pealed like thunder through

the mountain chasms. The crash of trees, and the fall of fragments from the ruined walls of the castle, added to the noise and danger. Not a star was visible; every thing was wrapped in thick darkness. Some fear she could not but feel, as she hurried through the tottering trees and groaning ruins; and, added to this, she fancied she heard footsteps behind her, as it were pursuing her.

It was a relief when she reached the tower-door, and could lock herself within. Lighted by the dim flame of her lantern, she passed along the suite of rooms, the wind howling through them, and rattling against the loose and broken casements. Her hand shook a little, as she settled the rests of the trap-door; but by degrees she regained her composure, and, counting out the bags of gold which had been sent for, she carried them down, one by one, as before; delivered them with the given signal to the messenger without; locked the door again, and returned once more to the vault with the voucher, in order to deposit it in the iron chest. Just as she was replacing it there, she was startled by a loud crash, followed by a thundering clap. After a moment's pause, she flew up the steps to see what was the cause. She had not yet realized her misfortune: it was the trap-door which had fallen,—blown down by a sudden gust of wind, which had forced in the window just above it.

In a moment she understood the full misery of her situation. Her first effort was to push against the door, hoping it was not firmly fixed in its place; but it resisted her wildest efforts of strength, and she remembered that the Laird had said it could only be opened from without. Again and again she repeated her ineffectual efforts, and in despair called aloud for help. The wind alone answered her cry, pealing in the distance above her.

There was but one person who could help her—the owner of the castle, who was far away: and, as she paused from the wild energy of her first despair, she began to doubt how far it would be right, even if it were possible, to call for other aid, if she could only procure it by revealing a secret in which the lives and fortunes of so many were involved. She sunk upon the steps in a confusion of dreadful feelings; the dews of death seemed to spread over her as she faced the full horrors of her situation. She saw she must either risk the discovery of this awful secret, or be content to remain where she was, and perish by slow degrees. How light and easy would death on the scaffold have appeared to her, contrasted with this solitary lingering fate of horror! Thoughts like these for a time rendered her passive; then she would revive her hopeless exertions for releasing herself, till, exhausted by fatigue, she could do no more. At length, wearied and hopeless, she left the steps, and returned into the vault, and throwing herself on the damp floor, from which her plaid was her only protection, she tried to compose herself, and seek for patience and submission in prayer. She lay listening to the dreary sounds which reached her from without, to the progress of the storm, and to the heavy rain which succeeded it, and which she could hear pour down through the rafters in the roof upon the trap-door of her dungeon. From this sound, dreary as it was, she gathered that there was some chance of her cries being heard, should she determine on its being right to use such efforts for her release.

The storm had subsided, so that she could hear the clock strike five: her lantern had long burnt out, and she remained in total darkness, as hour by hour passed by: at length noon struck, though no ray of light reached her to tell her of the cheerful day. Sounds of life from a distance came upon her ear, only making her own state more terrible; she became bewildered by wild thronging thoughts, and almost unconscious; for a few moments she called piercingly for help. She thought how heavily her death would weigh on his mind who had unwittingly led her into such a grave. In alternations of distraction and resignation the day wore away. She grew weak from want of food, and a sickening feeling of exhaustion came upon her, which she knew

to be the precursor of sharper and fiercer pangs of hunger. Her head became giddy, and she feared her senses were leaving her; but, with a strong effort of will, she overcame the temptation to wander, and fixing her mind on the thoughts best suited for such an hour, gave herself up to the will of her heavenly Father, and resigned herself wholly into His hands. Every moment she felt herself grow weaker. Her tongue cleaved to the roof of her mouth; she could utter no audible sound; her head grew more dizzy; her limbs were benumbed; by degrees sense and recollection failed her, and she sank lifeless on the steps of the vault. It seemed as if death had come to her relief. But there was help at hand for her. By a wonderful chance, as it would be called, but more justly by a merciful providence, it so fell, that twenty-four hours after the Laird had despatched his friend to the castle for the gold they were in need of, he found he had immediate occasion for one of the papers in the iron chest; and, as the best and shortest means of obtaining it, he set out himself. Having the master-key of all the doors, he had no occasion to go into the house, but proceeded at once, it being nightfall, to the tower-door. It was his intention to leave a line on the chest, informing Miss Mackay of what he had done, for he did not deem it prudent to venture into the house, or see his sister. He walked calmly through the desolate apartments, observed the damage done by the wind, and at length he lifted the trap-door, and was descending, when his light fell upon the bright colours of Miss Mackay's plaid. In alarm and astonishment he gazed on the motionless form, pale as death, that lay extended before him, and at once comprehending what had happened, sprang down the remaining steps, and flew to her assistance, if indeed help did not come too late. Happily he carried a flask of spirits with him, and succeeded in pouring some drops into her lips. By slow degrees she revived, and within an hour after sinking into unconsciousness, she opened her eyes on him who had been sent to her rescue.

Before asking her any questions, he made her swallow a few morsels of the oaten cake he happened to have with him. Under this refreshment she soon revived; and her deliverer could now give utterance to his thankfulness at having thus come in time for her relief, pledging himself never more to require of her a similar effort of friendship and loyalty. She was too lost in thoughts of gratitude to Heaven for her wonderful deliverance, to hear what he said, or listen to the plans he was forming to entrust his friend the messenger henceforward with the entire accomplishment of his hazardous errand. At length she roused herself to arrange with him the best mode of accounting for her absence without exciting dangerous suspicions; then, refreshing herself with another small portion of his travelling fare, she left her prison, and, supported by his arm, reached the last court before the house, where she took leave of her conductor, who, much as he longed to see his poor sister, dared not venture to show himself.

Her absence could only have been observed since breakfast time; and, as she was in the habit of taking early morning walks, it might well be supposed that, tempted by a gleam of fine weather after the night's storm, she had ventured out, and that the subsequent heavy rain had detained her in the shelter of some distant cavern or shelling till its violence had abated. Weak and exhausted she entered the house, and was received with the utmost delight by her friend, who had been in the greatest alarm on her account. Miss Mackay, who was evidently too weak for much conversation, spoke of having been seized with a fainting fit, of her inability to send word where she was to the castle; and her friend, occupied in attending upon her obvious wants, readily credited the few words which implied rather than told what it was desirable she should believe, and, in anxiety for her health and comfort, all farther questions were forgotten.

Here Miss Mackay's share in the perils of the rebellion

ended. The Laird soon after fell, according to what had seemed his presentiment, at the battle of Culloden. Subsequently Miss Mackay became the wife of the Highland gentleman, who, as messenger to the castle, had shared with her the secret of the tower. He had been struck by her courage in undertaking so arduous a commission; her manner and appearance, during the very few opportunities he had of seeing her in their mysterious communications, had strengthened this first impression; and his had been the footsteps which she had heard in the fearful night of the storm, as he followed her in the hope of protecting her from the dangers of her road. They were married abroad, where their poor young friend remained with them, till Scotland was quiet enough to admit of her returning thither, and taking up her abode once more in her brother's castle, among her own people. There she was often visited by her faithful friends and their children; and there the heroine of this history herself repeated the singular adventure that had happened to her within its walls.

[It is exactly a hundred years since the occurrence of the events detailed in the foregoing narrative; and, although that was not the consideration which suggested to us the placing it first in the first number of this Magazine, yet it forms a circumstance of coincidence which it appears to us may, with much propriety, be taken advantage of and followed up. There is, undoubtedly, no more real relation between events and conditions of society separated by precisely defined intervals of time, than between any others; there may be much less; still the mind delights to seize hold of such intervals, as resting-places from which to look around, and to institute those comparisons, and lay the foundation for those generalizations, which constitute the really valuable results of historical studies. It is true, there is no year whatever of which it may not be said, that something remarkable happened exactly one hundred years before; and that so this sort of relation of suggestion is a mere peg on which anything whatever may be hung. It may be so; but it never was held a good reason why a man should not observe the anniversary of his own birth, or those of his friends, that there is not a day in the year which is not some one's birth-day. The year 1745 forms most unquestionably a cardinal point in the internal history of this country. It witnessed the closing act of a drama which had been played with more or less continuity for more than a century. It closed one volume of our history, and opened a new one. Its events gave a new direction to the hopes, and energies, and industry, of a large portion of the people, and so laid the foundation for much of that advance in wealth, enterprise, and improvement, which is now the astonishment of the world. We propose, therefore, in pursuance of this idea, to lay before our readers, in early numbers, a few papers on the leading events connected with the rebellion of 1745, and on the most remarkable contrasts presented by the condition of the world, and of this country in particular, then, and at the present day.—EDITOR S. L. M.]

RURAL SKETCHES; WITH HINTS FOR PEDESTRIANS.

NO. I.

HE who has been immured for months in this great overgrown modern Babylon—which, probably, is even more vast than that ancient city, whose magnitude and magnificence have given to it an undying fame—will do well to bid farewell to the

city for a season—to buckle his knapsack on his shoulders, and with his oaken stick in hand, to wend his way, with his back to St. Paul's.*

Having resolutely turned his face to the country, it is of little importance to which part of the compass he directs his steps; sufficient it is for him, that in every direction around him and the city, a goodly portion of Nature's fair domain is stretched out, in endless variety of wood and water, of hill and dale, of green pasture lands and hope-inspiring corn-fields, and the wide-spread and well-planted park, whose hushed stillness is oftentimes broken by the sudden trampling of deer.

Nor are these all that will claim his attention. The cottage which smiles amide a profusion of roses and honeysuckles, and the sweet-scented mignionette: the rustic bridge, often of rude workmanship, and inconvenient from its contracted breadth and its steep ascent, yet forming an appendage to a landscape which the painter loves to transfer to his canvas—and the ivy-clad ruin, the castellated building of the feudal times, whose walls have been rent and shattered in the fierce battle-strife of civil war; and those peaceful and holier piles whose aisles, day by day, were wont to resound with the matin and the vesper, but, alas! have been madly defaced and destroyed by sacrilegious hands.

In another locality he will find the old-fashioned, and therefore picturesque hall, whose name has for centuries been associated with that of the family of right ancient descent, whose pedigree may be traced back to the time of the conquest of England by William the Norman, and who, while the crown of England has descended from one royal house to another, and has been successively worn by the Plantagenets, the Tudors, the Stuarts, and the Guelphs—have retained possession of the estate and the manor; and in an unbroken line, from one generation to another, they have descended in worshipping alliance, gracefully wedded to the name of the family, whose residence there has been most highly beneficial to the neighbourhood.

Nor will he fail to ramble on the banks of those beautiful streams and rivers which gladden the face of nature. They will arrest his attention, and decoy him from the turnpike road and the foot-path through the fields and the coppice, to more unfrequented places, where the disciples of Izaak Walton pursue their gentle craft. The half-trodden path will conduct him through scenes of surpassing beauty, which will make him not regret the change for, it may be, a rougher road. Here he will

"Find tongues in trees, books in the running brooks,
Sermons in stones, and good in every thing."

And here it will be well for him to remember what the good and the pious Izaak Walton says: "When I would beget content, and increase confidence in the power, and wisdom, and providence of Almighty God, I will walk the meadows by some gliding stream, and there contemplate the lilies that take no care, and those very many other various little creatures that are not only created, but fed, man knows not how, by the goodness of the God of Nature, and therefore trust in Him. This is my purpose; and so, 'Let every thing that hath breath praise the Lord!'"

"The sun knoweth his going down," and when the shades of evening dim the more distant parts of the landscape—when the noisy, yet not altogether

* Written 12 September.

inharmonious sounds from the rookery grow fainter and fainter, when

The curfew tolls the knell of parting day,
The lowing herd wind slowly o'er the lea,
The ploughman homeward plods his weary way ;"

the pedestrian will repair for his night's repose to the quiet village inn, where he may enter in his diary the events of the day, and some account of the most remarkable places he has visited.

The season of the year most suitable for a pedestrian excursion, may be left to the choice or convenience of the tourist. Any of the four great divisions of the year, excepting the gloomy winter, when the country possesses so little attraction, will be found to answer his purpose: the fresh and cheerful spring, the leafy and fruitful summer, and the more sober and many-tinted autumn—each possesses attractions peculiarly its own.*

If he prefer the Spring, when the Almighty "renews the face of the earth," the annual resurrection of nature from the death of Winter, will impart a cheerful elasticity to his spirits, invigorating his frame, and bracing his limbs, as he treads the tender and springing grass; and he will often pause to hear the rich, and joyful, and thrilling harmony of that bird (unlike its fellows "which sing among the branches") that soars so high to pour forth his gushing matin song, that it is almost lost to sight, "singing at heaven's gate."

The trees are now partly clad with their vernal foliage, but the tardy ash is yet bare. The horse-chestnut is conspicuous, with its pyramidal-shaped flowers gracefully bending to the breeze, which is no less grateful from the delicious sense of coolness it imparts, than from the fragrant scent with which it is laden from the flowers which grow "man knows not how," he knows only that "God so clothes the grass of the field," that the many-hued flowers minister richly to his enjoyment.

The hedge-rows too are beautifully ornamented with the snow-white blossom called *May*, over which proudly tower the elm and the ash, the leafy sycamore, and "the gnarled and knotted oak." Other trees there are which are more ornamental, such as the lilac, and the bright laburnum, with its golden festoons of singular beauty. Nor must we forget these useful fruit trees, whose rich blossoms give such a gorgeous appearance to the orchards.

One of the most interesting rural operations of the season is hay-making; and how beautiful is the landscape which includes all the processes, from the mowing to the carrying home the valuable food for the cattle! Look at that field in the distance, where the mowers are cutting down the rich herbage, with all the regularity of good rowers, now and then stopping to whet their scythes, and we can hear the hissing sound, for the wind is fresh and such as the farmer loves for hay-making. And see, in the next field, how busy is that large number of young persons, who are engaged in turning over the hay, and yet can find time for the innocent joke; the loud laugh is often heard, and speaks favourably for their contented state. Another field is filled with long rows of hay-cocks, which give such a delicious odour to the air, and contrast pleasingly with the fresh green-sward from which it has been recently cut. Watch the shadows of the clouds as

they career across the vale, until they are lost to our sight in that field from which the waggons are conveying the hay to the farm buildings. The man on horseback, who is superintending the operations of the work-people, is the farmer, and right glad he is for such favourable weather, and, let us hope, not less grateful to Him who "crowns the year with his goodness," and bids "the little hills rejoice on every side;" to whose good providence he leaves the valleys which "stand so thick with corn," hoping "that it may please Him to give and preserve to our use the kindly fruits of the earth, so as in due time we may enjoy them."

Some tourists may prefer the Summer for a pedestrian excursion, although the heat is then more oppressive. In fact, each season has advantages peculiarly its own, and each also has its disadvantages. The cheerful and invigorating freshness which is so characteristic of the Spring, is now passed, and we miss, with regret, the song of birds which lately made the woods vocal. The increased temperature of the air on some days, renders walking unpleasant, and the dusty state of the roads often proves a source of equal annoyance; while on other days, and especially for some period after the day on which the luckless attempt was made to remove the remains of St. Swithin, one is likely to suffer a long confinement to the house by continuous torrents of rain. Whatever may be our opinion as to the above-named attempt being the cause of this immense fall of rain about the latter end of July and the earlier part of August, there can be no difference of opinion respecting the fact that it does almost invariably occur.

The corn-fields now assume an appearance which makes the farmer doubly anxious for fair weather. The orchard-trees are laden with fruit; the purple plum and the bright red cherry make the mouths of many an urchin water as he sees those "sour grapes" over the high wall. Many of the more delicious and valuable fruits, the nectarine, the peach, and the apricot, with their soft and downy skin, are beautiful as flowers.

The pedestrian will now be wishful to walk where he is well shaded with trees, and he will be glad to seat himself "*sub tegmine fagi*," by some murmuring brook, and watch the trout springing to the flies; while in other parts of the stream, he will see the cattle standing knee-deep in the water, apparently ruminating on the annoyances to which they are subject from the insects and the heat. This scene gives tone to the landscape, which would lose half of its interest were it not for these accessory attractions, such as Cuyt delighted to paint.

As the summer advances, the most important agricultural operation of the whole year takes place—this is the harvest, a time of much anxiety for the farmer, and one in which we are all more or less interested. When the fields are white for harvest, how pleasing is the sight of the corn, bending its golden heads before the wind, and waving in graceful promise of an abundant increase, "some a hundred-fold, some sixty, some thirty." And when the reapers take the field, and the rich crop falls before the sickle, how cheering is the appearance of the fields, and how gratefully should we acknowledge the goodness of Him who has promised that "seed-time and harvest shall not fail," and to assure us of His kindness, has set His bow in the clouds, to the intent that we may have an oft-repeated monitor of His mercy:

* We have adopted an arbitrary division of the six months suitable for tourists; thus, we may call May and June, Spring; July and August, Summer; and September and October, Autumn. May is the earliest month suitable for an excursion, and it should not be deferred until after October.

"Nor lets the type grow pale with age
That first spoke peace to man."

The choice or the convenience of other tourists may lead them to travel in the Autumnal months, when the party-coloured foliage gives us warning that Winter is approaching, and the trees must soon be stripped of their leaves, and that the flowers which yet linger in our gardens must die. Yet to cheer even this season of affectionate regrets for the past, and of somewhat mournful anticipations of the dark dreary Winter which we know awaits us, the fields are again enlivened with the song of birds, and the woods echo with the powerful yet melodious whistling of the blackbird.

The orchards now present a beautiful appearance when the apples and the pears are ripe; some of the former are of so rich a colour, that at a little distance the trees appear to be covered with blossom; while the branches of the more graceful pear-tree bend with its valuable produce, and give to it much of the appearance of a weeping willow.

The one great and peculiar charm which now imparts to the country so much of gorgeous beauty, and enhances the picturesque appearance of an otherwise insignificant landscape, is the endless variety of tints given to the woodlands and the hedge-rows. The evergreens remain unchanged, and contrast forcibly with those which are preparing to shed their leaves. The contrast and variety exhibited, are such as a painter would scarcely dare, if he were able, to copy, lest he should be charged with having

"O'erstepped the modesty of nature."

The pen and the pencil cannot but fail in their attempt to describe and depict them.

S. J.

THE MORAL CHARACTER OF THE MONKEY.*

A GENTLEMAN whose premises were infested by a large breed of sparrows, said they were *birds of no principle*. Of all monkeys it may be said, with much more propriety, that they are beasts of no principle; for they have every evil quality, and not one good one. They are saucy and insolent; always making an attempt to bully and terrify people, and biting those first who are most afraid of them. An impertinent curiosity runs through all their actions; they never can let things alone, but must know what is going forward. If a pot or a kettle is set on the fire, and the cook turns her back, the monkey whips off the cover to see what she has put into it; even though he cannot get at it without setting his feet upon the hot bars of the grate. Mimicry is another of the monkey's qualities. Whatever he sees men do, he must affect to do the like himself. He seems to have no rule of his own, and so is ruled by the actions of men or beasts; as weak people follow the fashion of the world, whether it be good or bad. No monkey has any sense of gratitude, but takes his victuals with a snatch, and then grins in the face of the person that gives it him, lest he should take it away again; for he supposes that all men will snatch away what they can lay hold of, as all monkeys do. Through an invincible selfishness, no monkey considers any individual but himself, as the poor cat found to her cost, when the monkey burned her paws with raking his chestnuts out of the fire. They can never eat together in company without quarrelling and plundering one another. Every monkey delights in mischief, and cannot help doing it when it is in his power. If any thing he takes hold of can be broken or spoiled, he is sure to find the way of doing it; and he chatters with pleasure when he hears

the noise of a china vessel smashed to pieces upon the pavement. If he takes up a bottle of ink, he empties it upon the floor. He unfolds all your papers, and scatters them about the room, and what he cannot undo he tears to pieces; and it is wonderful to see how much of this work he will do in a few minutes when he happens to get loose. Every body has heard of the monkey whose curiosity led him to the mouth of a cannon to see how it went off; when he paid for his peeping with the loss of his head. In a ship where a relation of mine was an officer, while the men were busy in fetching powder from below, and making cartridges, a monkey on board took up a lighted candle, and ran down to the powder-room to see what they were about; but happily was overtaken just as he got to the lantern, and thrown out at the nearest port-hole into the sea with the lighted candle in his hand. Another lost his life by the spirit of mimicry; he had seen his master shaving his own face, and at the first opportunity took up the razor to shave himself, and made shift to cut his own throat. When the wild monkeys have escaped to the top of trees, the people below who want to catch them shew them the use of gloves, by putting them on and pulling them off repeatedly; and when the monkeys are supposed to have taken the hint, they leave plenty of gloves upon the ground, having first lined them with pitch. The monkeys come down, put on the gloves, but cannot pull them off again; and when they are surprised, betaking themselves to the trees as usual, they slide backwards and are taken. A monkey who had seen his mistress upon her pillow in a nightcap, which at her rising she pulled off and hung upon a chair, puts on the cap, lays his head upon the pillow, and by personating the lady, made himself ten times more frightful and ridiculous; as awkward people do, when they *ape* their superiors, and affect a fashion which is above their sphere. A mischievous disposition is always inclined to persecution. There are minds whose greatest pleasure it is to ride and tease the minds of other people. A late friend and neighbour of mine in the country kept a monkey who took to riding his hogs, especially one of them, which he commonly singled out as fittest for his use; and leaping upon its back, with his face towards the tail, he whipped it unmercifully, and drove it about, till it could run no longer. The hogs lived under such continual terrors of mind, that when the monkey first came abroad in the morning, they used to set up a great cry at the sight of him. A well-known nobleman once had a wild horse whom nobody could ride. "I know not what your lordship can do with him," said one, "but to set the monkey upon his back." So they put a pad to the horse, and set the monkey upon it with a switch in his hand, which he used upon the horse, and set him into a furious kicking and galloping; but Pug kept his seat and exercised his switch. The horse lay down upon the ground; but when he threw himself on one side, the monkey was up on the other: he ran into a wood with him, to brush him off; but if a tree or a bush occurred on one side, the monkey slipped to the other side; till at last the horse was so sickened and fatigued and broken-spirited, that he ran home to the stable for protection. When the monkey was removed, a boy mounted him, who managed the horse with ease, and he never gave any trouble afterwards. In all the actions of the monkey, there is no appearance of any thing good or useful, nor any species of evil that is wanting in them. They are, indeed, like to mankind: they can ride a pig as a man rides a horse, or better, and are most excellent jockeys; but, after all, they are only like the worst of the human species. If all the qualities of the monkey are put together, they constitute what is properly called *ill-nature*; and if any person would know what an ill-natured man is, that man is a monkey to all intents and purposes, with the addition of reason, which makes his character much worse, and the loss of religion and conscience, which is worst of all; for without these reason is rather a disadvantage.

* From Rev. W. Jones, of Nayland.

A FEW WORDS AT STARTING.

WE do not feel that much apology is necessary for the attempt we are about to make, to add one to the number of those caterers for the literary appetite of the day, who spread out their stores at regularly recurring intervals to catch the public eye. In all those cases in which the appearance of the applicant for favour is really an intrusion, uncalled for and unwelcome, the process of putting him down (being nothing more than merely letting him alone) is at once so simple and so effectual, gives so little trouble, and does the business so thoroughly, that it amounts to a tax upon the public good-nature sufficiently slight to admit of its being easily pardoned, even though it should be rather unceremoniously imposed. If, however, we must needs, for the sake of good manners, offer some apology, it shall be much about what we should suppose a tradesman to say in justification of his opening a shop in a crowded thoroughfare:—"No doubt there are many shops, but there is also a large demand. The world is becoming fuller every day, and the article in which I deal is getting more and more into request. Why should not I find customers as well as another, if I only give them as good an article for their money as he does?"

In this "if," lies the pinch of the case; for it cannot be denied, that there are already articles in the market, with which it would not be prudent rashly to challenge a comparison. It is, besides, precisely the point on which it least becomes him to speak, upon whom the task of introducing a publication of this kind by a preliminary notice generally devolves. A tradesman may commend his own wares without incurring the charge of presumption or bad taste; but the literary workman has no such privilege. Diligence and good intention are the utmost to which he can be permitted to pledge himself beforehand. Of his ability to command the other qualities requisite to render his commodity attractive, he is seldom a competent judge; and it is, therefore, a point of prudence with him to be silent on a subject on which his opinion would not carry much weight. The world has become sufficiently knowing in these matters, to refuse to accept the expression either of confidence or of humility, as a sure indication of the possession of powers to command success. If the former is too often the offspring of presumption and ignorance, the latter, where it is genuine, is just as likely to be nothing better than the mere outleaking of unretentive conscious dulness. Silence, in these circumstances, is the wisest and most dignified course. Readers very soon discover for themselves what they ought to think; and promises made at starting are speedily forgotten amid the realities of actual performance.

Our Publisher has informed the world already, in the announcement circulated by him, that his object has been "to furnish a publication which shall supply the general reader with matter of an amusing and instructive character, for the hours of recreation." We do not know that we can add much to this description of the purpose of this publication. That it points to what has now become one of the imperative wants of society, which must somehow or other be supplied, no man of common observation is ignorant; nor are we at all disposed to question that the want is, in many quarters, and from many sources, very worthily

supplied. But the desire of knowledge is an appetite which grows by what it feeds on. The more it is gratified, the more insatiable becomes its craving. Wherever it is planted, it carries a living generative principle within it, unceasingly tending to an indefinite increase. The more thoroughly a publication of this kind succeeds, the more impossible does it become, that it should occupy alone the field which it has opened up. Its power of gratifying the hungry cravings which it is waking up around it, is bounded by limits, moral, intellectual, mechanical,—while these cravings are unbounded in the extent of their increase, and in the diversified character of their objects. The man who first stirs up the inert soil of his neighbour's mind, and sets him a thinking, may perhaps be able, unaided, to keep up for him a constant supply of materials, suited to his temperament and intellectual character, on which to exercise his thoughts. But he who does the same service for twenty or a hundred men, each of whom has his own peculiar turn of mind, will most infallibly fail in the attempt to furnish them all with intellectual food of which they can continue to make a profitable use. And when we consider that each man, in whom the desire of knowledge is awakened, carries about with him an atmosphere which transmits it like a contagion to the circle around him; that each of these in turn, as soon as infected, forms the centre of a circle, from which the like influence radiates to every point on its circumference; and so on, in endless geometrical progression; it becomes manifest, that we shall far sooner reach the limit of our power to supply the demand for intellectual sustenance, than we shall that of the demand itself.

The growing development of this particular form of publication—the Periodical—and the increasing variety of subjects to which it is becoming adapted, are a necessary consequence of the extension of a literary taste beyond the class of merely literary men. The professional student, whose business lies in his books, can afford time to dig for his necessary knowledge through the bowels of the most ponderous folios, and finds in the fruit of his labours a sufficient reward for his toil. But thousands have now been taught to regard knowledge as a necessary, whose pursuit of it can be followed only by snatches, at intervals of relaxation from their ordinary business and labour; and to these, this mode, desultory and fragmentary though it is, of presenting it, prepared and trimmed for immediate use, the husk removed, the shell broken, and the kernel ready for mastication, is as indispensable as the daily supply of the common necessities of life. Their Magazine must come to their doors as regularly as their milk or their beer.

The knowledge which publications of this kind disseminate may be compared to a fountain, far hid among the mountains, which can only be reached, after much painful and toilsome travel, by a few; to render it available to the multitude, reservoirs must be formed, and pipes laid, which carry it to every man's door, to be drawn off as he needs it, without waste of time, expense of labour, or hindrance to his regular employments. We claim only to be allowed to insert our pipe into the general reservoir, and so to share in the work of distribution of the precious element. There is little danger that all of us together shall either exhaust the fountain, or deluge the world with an overabundant supply.

A single word may be necessary as to the principle on which we propose that this Magazine shall be conducted. We intend its contents to be as diversified in character as may be found practicable, furnishing something to gratify all tastes, except such as we cannot stoop to gratify without degrading ourselves. Original essays, tales, articles descriptive of objects of antiquarian or historical interest, will be interspersed with translations from approved foreign authors, and occasional notices of, and interesting extracts from, English publications not generally accessible. And to the lovers of poetry we think we can promise contributions in that department, to which they will not disdain to grant more than one perusal.

We should be sorry to allow any reader to rise from the perusal of these remarks, with the impression that we had no moral purpose in view in this undertaking, although we have not attempted formally to obtrude it upon his notice. We are, we trust, sensible of the responsibility which attaches to every man, who takes upon him to address the world through the press, and who thus sets in motion an agency, whose effects may be immeasurably out of proportion to his individual capacity or personal importance. We wish to instruct as well as amuse; to instruct while we amuse; so to amuse that our readers shall be wiser and happier for the enjoyment we may afford them. Disclaiming all intention of usurping the chair of the appointed religious teacher, we trust so to regulate our undertaking, that the reader of this Magazine will find it to deepen in his mind the impression, that religion and pure morality are the sources of our truest happiness—the foundations of our highest hopes. Having no party views, we have no intention of addressing ourselves to the limited sympathies of any particular class. We shall find more pleasure in dwelling upon those views of our present condition and future hopes, which afford to all of us a common ground for our sympathies to rest upon, than upon those which may be suggestive of topics of contention and animosity.

No part of our projected plan is contemplated by us with more interest and satisfaction, than that which holds it out as intended to furnish employment for "hours of recreation;" for it suggests that we shall be engaged in lightening the burden of labour; in conveying some portion of the more elevated enjoyments of life within the reach of men whose condition is, too generally, one of unmingled toil and privation; and thus contributing to sweeten the lot and brighten the hopes of those whose stalwart limbs, if we view the matter aright, are the main pillars on which the structure of society rests.

THE LAST SUPPER OF LEONARDO DA VINCI.

(Translated from the German.)

"It is enough!" said the excellent old master, Andreas del Barrochio, smiling mournfully, as he put up his easel, and placed it gently in the farthest corner of his room. "Rest thou there! I, too, can now rest." Again he stood musing before the painting he had just taken down. It was the Baptism of St. John, in which there was an Angel's head, from the pencil of his scholar, Leonardo da Vinci, that, for exquisite beauty, far excelled any of his own productions.

"Thus far, and no further!" he continued, turning to Leonardo, who just entered, and who was struck by the

strangely solemn tone of the master. "See, my son, with this angel thy career begins, and mine finishes. One man cannot accomplish all, neither should one man attempt, in his vain imaginings, to reach the far distant limits of art, which the united powers of many, simultaneously and successively, have not attained. I lay my pencil aside, and henceforth paint no more. But thou, who hast already surpassed thy master, be bold, be vigorous. Italy will ere long do homage to thy genius."

Leonardo stood glowing with delight at the praise of his master, and gazed with sparkling eyes at the painting.

"And he does not cast down his eyes!" murmured Andreas to himself, as he read in Leonardo's countenance the vain and presumptuous thoughts that were passing through his mind. "There is still time. One draught of bitter medicine, and his better nature will triumph. Yes," he continued, addressing his scholar, and taking him kindly by the hand—"yes, my son! thou wilt shine, but thy lustre will not be the dazzling radiance of the midday sun, but like a gentle Aurora, or the soft rosy hue of evening. Of this, too, rest assured, that arrogance and self-sufficiency will never bring thee to the goal, from which thou art yet far distant. Examine thine angel a little closer. It is good, I repeat, very good; but is it not incorrect in the foreshortening? That look, however celestial it may appear at first sight, has it not, in reality, more of the languishing gaze of a courtesan? This curl over the right eye, is it not unnatural, as if burnt by an iron? No,—this work of Leonardo da Vinci shall not go down to posterity. Thou knowest now of what thou art capable. Let perfection henceforth be thy mark, and let what is imperfect perish. This shall be the last stroke of my pencil." With these words, he besmeared the picture with a coat of black annihilating paint.

This passed like an electric shock through the heart of the affrighted scholar, and a hasty word of anger and reproach trembled upon his lips. But he was silent; for silence was a lesson his master had early taught him. He swallowed, therefore, the bitter gall of wounded vanity, and calm reflection soon returned, and with it the firm determination to repress his arrogance and presumption. "I thank you, master," he exclaimed, deeply affected; and from that moment became his own severest critic, more disposed to find what called for censure in his works, than what deserved praise. This distrust of his own powers increased in proportion to his advances in skill and knowledge; so that many, even of his best productions, were destroyed by his own hand; at first, in the angry discontent of a noble mind, satisfied with nothing short of perfection; afterwards, when his passions had been cooled, and his judgment had been matured by the sage counsels of his paternal friend, from a sober and settled conviction, that, by these means only, was excellence to be attained; and many relics of his pencil have, only by artifice or fraud, been rescued from destruction.

"That is right," his master was wont to say, with his quiet smile; "that is the way to immortality, the title to which consists, not in the multiplicity of a man's works, but in their excellence."

If he received an order, or went to work from his own impulse, he would tremble like a child, when he thought of the difficulties he had to encounter, and how far his picture would fall short of that standard of excellence it was his desire to reach. Still, notwithstanding these feelings of despondency, he laboured indefatigably, by day and night; for he had learned from his master, that not genius only, but industry,—patient untiring industry, was necessary to the attainment of his object; for how often has the man of inferior ability, by unremitting diligence and attention, arrived at a degree of eminence, which, to idle ill directed talent, remained for ever unapproachable!

Thus did Andreas del Barrochio, the Florentine, instruct his beloved pupil in the best and noblest principles of his art, and rejoice at the success of his teaching.

But his last hour approached, and from his sick bed he thus addressed the mourner by his side: "Why weepest thou unmanly tears, now that the time is come that I must depart hence? Earth demands her offering and her right?"

"And heaven too,"—interrupted Leonardo, kissing the withered and trembling hands of his dying friend. "Heaven calls the noble undying spirit back to its home."

"Dost thou wonder, then," resumed Andreas, "that I have been seized with home-sickness? Do I not depart with the conviction, that with thee I leave behind a portion of my being, and that I have fulfilled the mission entrusted to me, a weak instrument, to usher in the dawn which, from the unprofaned temple of thy genius, now sheds its mild radiance over Italy?"

"But which," said Leonardo, mournfully, "the Perugian would darken!"

"No envy, my son," interrupted Andreas, mildly; "is this Pietro, then, the only painter? Surely, the path we are all treading is wide enough for many. Behold how various nature is in her formations! how diversified in material and design! and shall the ideal world, the world of dreams, be found so poor, that one may exhaust the magazine, and leave nothing for a fellow-worker? Therefore, my son, no envy in thy pure bosom! No ugly jealousy! Above all, never let these personal feelings of hatred or contempt be transferred to thy works! That is alike unworthy of a noble art, and a generous artist. Even when thou smartest under the lash of oppression, or the reproach of undeserved persecution, never degrade the dignity of thy art, by making it the instrument of thy revenge. Revenge thyself by words of mildness, by deeds of charity: then will thy productions, free from the stain of unworthy passions, go down to future ages, living memorials of thy merits and thy wrongs. My strength is fast sinking; but, before I depart, give me thy hand, and promise me that thou wilt observe my words, and, never refusing the honour due to the merits of others, pursue thy appointed path in cheerfulness and humility. Give me thy hand, and promise me this, Leonardo!"

And Leonardo gave him his hand.

"Then will I be also near to thee," said the master, while an unearthly smile played upon his features, "in the hour of thy greatest earthly need. My spirit shall hover near thee; and when, bowed down by the thought of what seems impracticable, every human resource fails thee, and thou art threatened by undeserved shame and disgrace, then cry aloud, that thy voice may reach me amid the palm-trees of Paradise; cry aloud, Andreas! Andreas!—And—I will..."

The angel of death gently interrupted the words of promise and comfort. The head of the faithful master sank back upon the pillow, and Leonardo, in the bitter sorrow of separation, closed the eyes of the departed, and, with the sign of the holy cross, blessed the gentle spirit of his beloved master to its eternal rest.

It is needless here to tell of the eminence and celebrity which Leonardo da Vinci subsequently attained, or how much he contributed, in conjunction with the first Perugino, to the restoration of the art of painting. His merits are known and acknowledged by the whole of the civilized world, which, even at this day, after the lapse of four centuries, admires the fragments of his genius, though time, which wraps everything in mist, has deprived the colouring of its freshness, and covered his paintings with the yellow hue of age. But he shone as a man as well as a painter; excelling in every good and noble quality which can enrich the heart and dignify the character; and, in obedience to his master's precepts, ever judged mildly of another's faults, acknowledged generously another's merits, and, with meek patience, endured much bitter persecution. Of this, however, the world knows but little; and only those who have had the opportunity of reading his manuscript notices of his life, preserved in the Ambrosian Library, and in

the Escorial, can rightly appreciate these points of his character. These prove their author to have been a profound thinker, an enthusiastic lover of his art, and an upright noble-minded man. His acquirements were various. He excelled as engineer and architect, as well as painter. For even in this age of mechanical wonders, men admire the skill displayed in a work, at that time deemed impracticable—that, namely, of carrying the waters of the Adige to Milan; those of the Arno from Pisa to Florence; and the canal of Mortsana through the valleys of Chiavenna and the Voktellina, a distance of two hundred miles. Nay, he even constructed automata, the like of which had not been seen until his day; for when, at the entrance of the French king, Louis XII. into Milan, the citizens begged him to execute some novel and extraordinary work in honour of their august visitor, he performed the task committed to him in a manner which showed how well he deserved their confidence. As the King, in triumphant pomp, passed through the state rooms of the palace, a majestic lion approached, lashing himself with his tail, and gazing round with flashing eyes. Suddenly he threw himself at the King's feet, his breast opened, and displayed to the astonished monarch, and the gaping multitude, the arms of the French king. This lion was the work of Leonardo da Vinci. As a writer upon the arts, he surpassed any of his contemporaries; nor was his soul less susceptible of the ennobling influence of music. With all this, he was a cheerful and entertaining companion, who despised no amusement that conduced to harmless and healthy enjoyment, reining in the untamed horse with the skill of an experienced rider, and fighting in the lists like a Roman Gladiator. On these various accounts, his fame was noised abroad throughout all Italy, at that time the only country where the arts and sciences found a shelter, under the protection of the noble house of Medicis, the magnificent Pope Leo X., and various other princes. It was this well-earned reputation which induced Ludovico Moro Sforza, Duke of Milan, by the most brilliant offers, to seek to allure him to his court. Most unwillingly did Leonardo accept this flattering invitation; most unwillingly did he forsake the land of his birth, and his own lovely Florence; for he had a gloomy presentiment of coming evil. He shuddered, too, at the thought of entering that den of slaughter, in which the inhuman Galeazzo Maria, unlike his noble father Francis, had raged like a wild beast, and whose blood still reeked upon the ducal throne; for he felt a sacrifice to the revenging *Nemesis*, by the hand of an assassin. Upon this throne sat his brother, the above-mentioned Ludovico, who, no less cruel, but more subtle and cautious, had succeeded in usurping the inheritance from John Galeazzo, the son of his murdered brother. But, at that time, where was there a spot in Italy that was not disgraced by the perpetration of the most scandalous crimes? Did not the members of the princely house of Medicis stain their hands red with human blood? Did not Florence and Pisa, in bitter and deadly feud, slaughter each other's children? Even in Rome itself, were not virtue, life, and everything held sacred by the faith or the affections of mankind, to be purchased with gold? Little, then, could it matter to the man of refined taste and intellectual pursuits, where, under these circumstances, he took up his abode. Here was Sodom, there Gomorrah, and the danger which threatened his pure life and simple manners not greater in Milan than in Florence.

Another motive urged Leonardo to accept the invitation of Ludovico Sforza. His residence in Florence had become embittered to him by the bold unbending opposition of a boy, not yet eighteen years old, with a mind, however, far beyond his years, who, in proud anticipation of future greatness, met every advance of the mild and contemplative Leonardo with enmity and contempt, and embittered to him his beloved city, and the spot where the ashes of his master rested. This boy was Michel Angelo Buonarroti. He overcame, therefore, his reluc-

tance, controlled the gloomy presentiments which oppressed him, and, encouraging himself by contemplating the prospect opened to him of higher and more varied exertion in his art, bade his lovely home adieu, and, with the light and buoyant spirits of youth and inexperience, directed his steps to Milan. Let no one blame him also, if, young, ardent, ambitious, and gifted with every faculty of enjoyment, the anticipation of the rewards and pleasures that awaited him in that rich and luxurious Babylon of Lombardy, formed part of his happy dream.

The Duke gave him a reception honourable alike to both, and in accordance with the fashion of those times, when patrons sought to add to their own lustre, by paying honour to those whose merit had already gained for them a renown more enduring than that which depends upon the smile of princes. The haughty, yet cunning Ludovico, drew in his dangerous talons, and caressed the master with an appearance of fondness. The courtiers, according to their wont, began also to follow the example set them, and overwhelmed the guest and favourite of their prince with their hollow kindnesses.

The most prominent among those whom he was in the habit of meeting at the court, was a monk, whose tall, lean, ghost-like figure was continually crossing his path, as if to watch his movements. His small restless eyes gleamed maliciously from beneath his dark brows, above which rose, like a wall of rock, the hard, yellow, angular forehead. The nose was aquiline; the firmly compressed mouth wore a constant, though scarcely perceptible sneer, and the pointed chin was overgrown by a beard of mingled red and black. This was the Prior of the Dominican monastery of St. Maria della Grazia, the Duke's confidential adviser. His speech distilled like honey-drops, but the poison of asps lurked beneath his lips. From the first moment of Leonardo's arrival, he had inwardly chafed at the favour in which he stood with the Prince, and, at each meeting, the bitter, though concealed hatred of the one, and the undefined antipathy and apprehension of the other, increased; and it was strange that these feelings oppressed the painter most when occupied by his labour within doors. When in the open air, superintending his mechanical and architectural undertakings, he could breathe more freely. He felt refreshed and strengthened by the ever-varying, ever-beautiful forms and colouring of nature; the light breezes that played round his temples—the soft grey mornings—the dewy evening—night, with the delicious melody of the nightingale, and her eternal heaven of stars; and, by day, the bustle and hurry—the driving and riding over hill and vale—all this, by occupying his mind, gave him courage and cheerfulness. But, when he sat alone before his easel, in his solitary chamber, a vague, almost supernatural horror would seize him, till the sweat-drops stood upon his brow, and the trembling and uncertain hand could with difficulty guide his pencil. And thus it is that we have so few paintings of this master belonging to this particular period of his life; most of them were destroyed by himself, and many of them when wanting only the last touches.

The Duke often stood enraptured before his growing picture, but, when he began to hope the painting would soon be ready to adorn his gallery, he found it on his next visit destroyed—torn in pieces or burnt. This, doubtless, was vexatious enough; still he might have been content with those which did receive completion, and consequently, were stamped with the seal of the master's own approbation.

"Now, master," he exclaimed, upon one occasion, "this time you shall paint *me*, and, of course, in this instance, we shall hear nothing of cutting or burning."

The descent of a thunderbolt when the sky is clear and cloudless, could not have struck more sudden terror into the heart of Leonardo, than did this announcement of the Duke's, accompanied as it was, by the ambiguous smile of the Dominican. What? *he*, the refined and fastidious painter, accustomed to depict only the most noble and lovely of nature's forms, or the beautiful and fairy-

like creations of his own exuberant fancy—he shall paint that face, the personification of ugliness, where might be read, as in an open book, the characters of the worst passions that ever disgraced humanity—the history of a nature inhumanized by crime; that grey, bristly hair, starting from every side of the abominable head; those cheeks of ashy paleness, the graves of worn-out passions; those mulberry marks upon the neck, from which he had received the name of "Moro;" the cruel malicious twitching of the pale lips, visible through the disordered beard! No, it was impossible! And yet the command had been given; what was he to do? To paint, or not to paint? And, if he painted—would he not be required to flatter the tyrant,—conceal his ugliness with a professional lie? But then, what would remain of the original features? The picture, in that case, would be no likeness. If, on the contrary, his pencil should be faithful, what reward might he not expect from a tyrant whom all feared, if he presented to him, as himself, a copy of distorted humanity, frightful enough to be taken for a counterfeit of the devil himself? Verily, the painter was in a sore strait, and often and anxiously did his mind revert to the promise of his departed master. On whichever side he turned, he saw nothing but ruin awaiting him; shame and disgrace to his professional reputation, as well as to his moral character, if, for the sake of wealth and patronage, he stooped to produce a false and flattering picture; or the most terrible revenge of which an insulted tyrant is capable, if he represented him in his true colours.

"Oh, what shall I do? how shall I save myself?" exclaimed the trembler, as with anxious steps he paced his lonely chamber, and thought of the last words of his master.

"Oh Andreas! Andreas! hear me and help me as thou promisedst, in this my greatest need!" But his master heard him not; the time was not yet come; Leonardo had not yet encountered the greatest difficulty he was to meet with upon earth.

"Be it so, then," he exclaimed at length; "I will drink this bitter cup, and paint the truth, for I can do no other."

The day for the first sitting came; with a trembling hand he seized his pencil, for before him sat the haughty Duke arrayed in princely ermine, and urged him to dispatch. Another sitting, and the sketch was complete. The finishing now alone remained; but, with each day that the picture advanced towards completion, the painter's anxiety and gloomy forebodings increased. At length, it stood finished before him, against the wall; and, as he gazed, the hateful figure so worked upon his heated imagination, that it appeared to him like some dreadful apparition from the nether world. "What!" he exclaimed, "is it possible that Leonardo da Vinci's pencil can have produced thee, thou frightful monster! and that, for centuries to come, thou wilt hang in the gallery as his work? Must I be forced to stain my noble art and my future fame with this specimen of distortion? Away from my sight, Satan!" and, in the violence of his rage, he stamped upon the unlucky painting till the canvass cracked, and scarcely knowing what he did, tore it with the violence of a maniac, and scattered it in a thousand pieces about the room.

"So, ho!" croaked the Dominican, who had been sent by the Duke to inquire after the progress of his picture, peeping through the half-opened door, "you seem to have a violent, I might almost say, a dangerous paroxysm! Well, I will not disturb you."

Leonardo, thus recalled to his senses, felt his blood freeze with horror, and, as the dreadful spectre disappeared as softly as it had approached, he became fully conscious of the mad action he had committed. He had abused the portrait of his sovereign, and what might he not expect from the anger of one whom he had so grossly insulted? But a deeper sorrow than that arising from the fear of punishment struck upon his generous heart. It was his patron, his benefactor, whom he had thus ill-treated.

"Oh, what have I done?" he groaned out, as he gazed upon the destruction that surrounded him, and began gathering up the fragments. "Those eyes, though their glance might have been cruel to others, have ever looked on me with kindness. Those pale lips have never addressed me but with favour. Oh, my prince! to others thou may'st be all that thy face betrays, but to me, thou wert only a friend and benefactor. It is not thy fault that thou art a rival of the devil himself in ugliness." And as he spoke, bitter and sorrowful tears fell upon the torn relics. The door again opened, and he received a summons to attend the Duke.

"I do not now invoke thee, Andreas, in this my greatest need," he said softly; "thou canst not hear me, for I have sinned by giving way to a foolish passion. Whatever happens, I have deserved it." And thus prepared for the worst, he entered the saloon of the palace.

The Duke was pacing gloomily up and down the apartment. The Prior sat in a window recess, his hands folded, and his eyes fixed upon the ground. The courtiers stood round in silence, and not a breath disturbed the oppressive calm which announced an approaching tempest. It was long before the Duke spoke; at length, in a tone scarcely audible from suppressed rage, he asked the trembling painter, "Where is my portrait?"

"It is destroyed," stammered Leonardo.

"Destroyed!" exclaimed the Duke, in a louder tone, "destroyed—again destroyed! and nothing else but destroyed! And, even myself—my picture! And wherefore?"

Leonardo stood with his eyes rooted to the earth, unable to answer a word.

Upon this, the Prior raised his head and softly whispered, "Most probably from reverence, your highness! from a feeling of his own inability, not being yet equal to so great a work; from a fear that he might not do justice to his illustrious original."

"You lie, Father Prior!" shouted the enraged painter, with the desperate courage of one who already knew his ruin certain.

"He lies?" repeated the Duke, stepping back, while his countenance assumed the paleness of death, "therefore that was not the reason; and you assert that so boldly and without further explanation! What was it then?"

"Madness, my lord," replied Leonardo, more composedly; "rage at myself."

"If that was it," interrupted the Duke proudly, "I will not say that you have acted altogether wrong; it is better for your fame that an inferior work should not descend to posterity, more especially with such a subject. Take care, however, that the like happen not again."

"Forgive me, my prince!" entreated Leonardo, "give me but a different task; drive me through fire and water—send me into the abode of the damned, and your commands shall be obeyed. I will work day and night to show myself worthy of your kindness, and, if possible, to recover your confidence."

"It shall be as you have said," returned the Duke, "and, for the future, as no secular subject appears to succeed with you, you shall dedicate your art to what is sacred. The refectory of the Dominican Monastery of St. Maria della Grazia is in need of some decoration; to your pencil it shall be entrusted. You shall paint upon the wall the Last Supper of our Lord, and complete the work within a year from this day. And again I say to you, and for the last time, forget your folly."

The Prior smiled maliciously, and, glancing contemptuously at Leonardo, extolled the clemency of the Duke, and poured out his thanks for the favour bestowed upon him and his Monastery. The courtiers again decked their faces with smiles, though they could not help inwardly marvelling, that the threatening storm should have passed away without some one suffering from its fury. They considered not, it is true, that the great and free Florentine, whose services had already been so numerous and valuable, and who was ranked among the ornaments of his age, deserved to be treated with a leniency to which none of them had any claim.

Again deeply agitated, Leonardo escaped as soon as possible into the fresh air. The sense of his own merits pressed upon him much less forcibly than the kindness of his patron. He smote his forehead, and exclaimed, "Is this the return which Satan makes for ingratitude? what more could a saint do to bless those that curse him? But stay—am I not a fool to fancy the danger over? I may only have escaped Scylla to fall into Charybdis. It must be so;" and, all at once, the idea struck him, that the direction which the affair had taken could have been suggested by no other than the crafty Dominican. Still, what kind of a viper would creep out of it, was to him a mystery, while this mystery only served to increase his uneasiness, as the fear of a concealed danger is more harassing to the mind than a known and positive evil. Whatever might be the result, it jarred sorely upon his feelings, there to dedicate his pencil to the Most Holy, where the hated monk resided. This, however, had been precisely the object of the latter. Yes, he—the proud, high-minded painter, who scarcely deigned him a look, who had supplanted him in the favour of his prince—he should be made to devote to him and his convent the splendid efforts of his genius, or perish. This had been his motive in the plan he had recommended to the Duke; for, if the master completed his difficult task, the more difficult for being in a style to which he was little accustomed, he had served him, the Prior—had been the minister of his wishes. Should he, however, fail in his task, which was more probable, and more agreeable to his hate; or, should he execute it in an unworthy manner, it was only calling upon his enemy, the stripling Buonarrotti, to do it better, a step to which it would not be difficult to persuade the already displeased prince, and his ruin as a painter was certain. For, that Leonardo's fiery temperament would not endure this disgrace, without breaking out into some fresh insult to the Duke, who would be disposed to show little ceremony or kindness towards one whose reputation was sullied, and whose services were no longer indispensable, followed in the Prior's calculation as matters of course.

(To be concluded in our next.)

STATESMEN OF THE REIGN OF GEORGE III.*

THE period over which the long reign of George III. extended, possesses an interest of a peculiar kind for the men of this generation. It is fast receding into the region of "time past," but has not yet fairly reached it. Its events, and the men who figured in them, have scarcely come to be regarded by us with the quiet absence of emotion with which we look upon matters of pure history, however important in their results, although they have, in a great measure, ceased to awaken any of those contentious feelings, which it is difficult to repress when our attention is directed to matters or persons of interest belonging to our own day. Few of us have seen any of the great men of that era, and still fewer of us have been personally affected by their political failures or successes; but we have lived and conversed with those to whom their names were familiar as household words—who were their warm partisans or bitter foes—who regarded them as paragons of good or of evil, as the saviours or destroyers of their country; and we feel, therefore, a kind of reflected and subdued interest, a curiosity not unpleasantly warm, yet not coldly speculative, regarding their real characters, and the exact situation of the niche which each of them is destined to occupy in the temple of Fame.

"Historical Sketches of Statesmen who flourished in the reign of George III. By Lord Brougham. London: Charles Knight.

* Sketches of Statesmen of the Reign of George III. By LORD BROUGHAM. London: Charles Knight.

rished in the time of George III." is therefore an interesting title of a book to readers of the present day; the addition,—“by Henry, Lord Brougham,” is one which gives us assurance of a book as interesting, to the full, as its title would lead us to anticipate. The author's name is a pledge that the promise of the title will be fulfilled in its pages; that, whether his principles be true or false, his views crude or matured, his estimates of character liberal or prejudiced—his sketches, take them in the whole, will be neither dull nor commonplace. They are but sketches unquestionably, and that, in some instances, of the slightest description; a few hasty strokes of the pencil, exhibiting the mere outline of the figure, with some of the more striking peculiarities of form and carriage; but the pencil is one whose slightest touch bears the impress of genius, and is therefore pregnant with meaning. They have, besides, the additional charm of being revelations regarding a class of men raised high above common observation, by one of themselves, though belonging to a somewhat later era; dictated, with occasional exceptions, in the kindly and gossiping spirit, with which we should imagine a veteran statesman to detail, to the family circle collected around his fireside, the recollections of his early years—the story of his struggles and his triumphs, and to unfold the character of his compeers long dead, and slumbering with all the animosities which they felt, or of which they were the objects, in the grave.

With the politics of these sketches, or of their author, we shall not intermeddle. The time is, perhaps, not yet come, when an altogether impartial estimate can be formed of the *public* character and acts of the statesmen at the close of the last and beginning of this century; nor are we quite sure that one who, like Lord Brougham, has devoted his physical and intellectual energies, while in their fullest vigour, and during a period of unexampled political excitement, to a contest on either side of which almost every man whom he notices had been ranged while he lived, is the person to form such an estimate at any time. Besides, in the political character of great men, that which is esteemed a virtue by one-half of the nation, is regarded as a vice and a blemish by the other; and we desire to avoid such disputable matters. There is enough in their characters as men, in their genius, their fortunes, even in their intellectual peculiarities, which we can regard, if not with unmixed approbation, at least with an interest not liable to be disturbed by controversial associations. We propose therefore, to select from these sketches, and lay before our readers, one or two of those passages regarding statesmen of all parties indifferently, which are the least imbued with political feeling.

We begin with the character of Lord Chatham.

“The first place among the great qualities which distinguished Lord Chatham, is unquestionably due to firmness of purpose, resolute determination in the pursuit of his objects. This was the characteristic of the younger Brutus, as he said, who had spared his life to fall by his hand—*Quicquid vult, id valde vult*;* and although extremely apt to exist in excess, it must be admitted to be the foundation of all true greatness of character. Everything, however, depends upon the endowments in company of which it is found; and in Lord Chatham these were of a very high order. The quickness with which he could ascertain his object, and dis-

cover his road to it, was fully commensurate with his perseverance and his boldness in pursuing it; the firmness of grasp with which he held his advantage, was fully equalled by the rapidity of the glance with which he discovered it. Add to this, a mind eminently fertile in resources; a courage which nothing could daunt in the choice of his means; a resolution equally indomitable in their application; a genius, in short, original and daring, which bounded over the petty obstacles raised by ordinary men—their squeamishness, and their precedents, and their forms, and their regularities—and forced away its path through the entanglements of this base undergrowth to the worthy object ever in view, the prosperity and the renown of his country. Far superior to the paltry objects of a grovelling ambition, and regardless alike of party and of personal considerations, he constantly set before his eyes the highest duty of a public man, to further the interests of his species. In pursuing his course towards that goal, he disregarded alike the frowns of power and the gales of popular applause, exposed himself undaunted to the vengeance of the Court, while he battled against its corruptions, and confronted, unappalled, the rudest shocks of public indignation, while he resisted the dictates of pernicious agitators, and could conscientiously exclaim, with an illustrious statesman of antiquity, ‘*Ego hoc animo semper fui ut invidiam virtute partam, gloriam non invidiam putarem*!’†

“Nothing could be more entangled than the foreign policy of this country at the time when he undertook the supreme direction of her affairs: nothing could be more disastrous than the aspect of her fortunes in every quarter of the globe. With a single ally in Europe, the King of Prussia, and him beset by a combination of all the continental powers in unnatural union to effect his destruction; with an army of insignificant amount, and commanded by men only desirous of grasping at the emoluments, without doing the duties or incurring the risks of their profession; with a navy that could hardly keep the sea, and whose chiefs vied with their comrades on shore in earning the character given them by the new Minister, of being utterly unfit to be trusted in any enterprise accompanied with the least appearance of danger; with a generally prevailing dislike of both services, which at once repressed all desire of joining either, and damped all public spirit in the country, by extinguishing all hope of success, and even all love of glory—it was hardly possible for a nation to be placed in circumstances more inauspicious to military exertions; and yet war raged in every quarter of the world where our dominion extended, while the territories of our only ally, as well as those of our own sovereign in Germany, were invaded by France, and her forces by sea and land menaced our shores. In the distant possessions of the Crown, the same want of enterprize and of spirit prevailed. Armies in the West were paralysed by the inaction of a captain who would hardly take the pains of writing a despatch to chronicle the nonentity of his operations; and in the East, while frightful disasters were brought upon our settlements by barbarian powers, the only military capacity that appeared, in their defence was the accidental display of genius and valour by a merchant's clerk, who thus raised himself to celebrity.‡

“As soon as Mr. Pitt took the helm, the steadiness of the hand that held it was instantly felt in every motion of the vessel. There was no more of wavering councils, of torpid inaction, of listless expectancy, of abject despondency. His firmness gave confidence, his spirit roused courage, his vigilance secured exertion, in every department under his sway. Each man, from the first Lord of the Admiralty down to the most humble clerk in the Victualling Office—each soldier, from the Commander-in-Chief to the most obscure contractor or com-

* I was always of that mind, that I esteemed what censure was cast upon me on account of my virtue, to be praise, and not censure.

† Mr. Clive, afterwards Lord Clive.

* Whatever he wills, he wills with all his soul.

missary—now felt assured that he was acting or was indolent under the eye of one who knew his duties and his means as well as his own, and who would very certainly make all defaulters, whether through misfeasance or through nonfeasance, accountable for whatever detriment the commonwealth might sustain at their hands. Over his immediate coadjutors, his influence swiftly obtained an ascendant which it ever after retained uninterrupted. Upon his first proposition for changing the conduct of the war, he stood single among his colleagues, and tendered his resignation should they persist in their dissent; they at once succumbed, and from that hour ceased to have an opinion of their own upon any branch of the public affairs. Nay, so absolutely was he determined to have the controul of those measures, of which he knew the responsibility rested upon him alone, that he insisted upon the first Lord of the Admiralty not having the correspondence of his own department; and no less eminent a naval character than Lord Anson, as well as his junior Lords, was obliged to sign the naval orders issued by Mr. Pitt, while the writing was covered over from their eyes!

"The effects of this change in the whole management of the public business, and in all the plans of the Government, as well as in their execution, were speedily made manifest to the world. The German troops were sent home, and a well-regulated militia being established to defend the country, a large disposable force was distributed over the various positions whence the enemy might be annoyed. France, attacked on some points, and menaced on others, was compelled to retire from Germany, soon afterwards suffered the most disastrous defeats, and, instead of threatening England and her allies with invasion, had to defend herself against attack, suffering severely in several of her most important naval stations. No less than sixteen islands, and settlements, and fortresses of importance, were taken from her in America, and Asia, and Africa, including all her West Indian colonies, except St. Domingo, and all her settlements in the East. The whole important province of Canada was likewise conquered; and the Havannah was taken from Spain. Besides this, the seas were swept clear of the fleets that had so lately been insulting our colonies, and even our coasts. Many general actions were fought and gained; one among them, the most decisive that had ever been fought by our navy. Thirty-six sail of the line were taken or destroyed; fifty frigates, forty-five sloops of war. So brilliant a course of uninterrupted success had never, in modern times, attended the arms of any nation carrying on war with other states equal to it in civilization, and nearly a match in power. But it is a more glorious feature in this unexampled Administration which history has to record, when it adds, that all public distress had disappeared; that all discontent in any quarter, both of the colonies and parent state, had ceased; that no oppression was anywhere practised, no abuse suffered to prevail; that no encroachments were made upon the rights of the subject, no malversation tolerated in the possessors of power; and that England, for the first time and for the last time, presented the astonishing picture of a nation supporting, without murmur, a widely-extended and costly war, and a people, hitherto torn with conflicting parties, so united in the service of the commonwealth, that the voice of faction had ceased in the land, and any discordant whisper was heard no more. 'These,' (said the son of his first and most formidable adversary, Walpole, when informing his correspondent abroad, that the session, as usual, had ended without any kind of opposition or even of debate),—'These are the doings of Mr. Pitt, and they are wondrous in our eyes!'

"To genius, irregularity is incident, and the greatest genius is often marked by eccentricity, as if it disdained to move in the vulgar orbit. Hence, he who is fitted by his nature, and trained by his habits, to be an accomplished 'pilot in extremity,' and whose inclinations carry him forth 'to seek the deep when the waves run

high,' may be found, if not 'to steer too near the shore, yet to despise the sunken rocks which they that can only be trusted in calm weather, would have more surely avoided. To this rule, it cannot be said that Lord Chatham afforded any exception; and, although a plot had certainly been formed to eject him from the Ministry, leaving the chief controul of affairs in the feeble hands of Lord Bute, whose only support was court favour, and whose chief talent lay in an expertness at intrigue, yet there can be little doubt that this scheme was only rendered practicable by the hostility which the great Minister's unbending habits, his contempt of ordinary men, and his neglect of every-day matters, had raised against him among all the creatures both of Downing-street and St. James's. In fact, his colleagues, who necessarily felt humbled by his superiority, were needlessly mortified by the constant display of it; and it would have betokened a still higher reach of understanding, as well as a purer fabric of patriotism, if he, whose great capacity threw those subordinates into the shade, and before whose vigour in action they were sufficiently willing to yield, had united a little suavity in his demeanour with his extraordinary powers, nor made it always necessary for them to acknowledge, as well as to feel, their inferiority."

"The true test of a great man—that at least which must secure his place among the highest order of great men—is his having been in advance of his age. This it is which decides whether or not he has carried forward the grand plan of human improvement; has conformed his views and adapted his conduct to the existing circumstances of society, or changed those so as to better its condition; has been one of the lights of the world, or only reflected the borrowed rays of former luminaries, and sat in the same shade with the rest of his generation at the same twilight or the same dawn."

"Mr. Pitt had evidently, though without much education, and with no science of any kind, yet reflected deeply upon the principles of human action, well studied the nature of men, and pondered upon the structure of society. His reflections frequently teem with the fruits of such meditation, to which his constantly feeble health perhaps gave rise, rather than any natural proneness to contemplative life, from whence his taste must have been alien, for he was eminently a man of action. His appeals to the feelings and passions were also the result of the same reflective habits, and the acquaintance with the human heart which they had given him. But if we consider his opinions, though liberal and enlightened upon every particular question, they rather may be regarded as felicitous from their adaptation to the actual circumstances in which he was called upon to advise or to act, than as indicating that he had seen very far into future times, and anticipated the philosophy which further experience should teach to our more advanced age of the world."—Pp. 28—38.

One of the most pleasing passages in these sketches, is the following description of the judicial demeanour of Sir William Grant when Master of the Rolls. It is remarkable also as coming from the pen of one, whose own demeanour, when placed in a similar situation, presented in some particulars, if we are rightly informed, a striking contrast to that which he here eulogizes.

"The court, in those days, presented a spectacle which afforded true delight to every person of sound judgment and pure taste. After a long and silent hearing—a hearing of all that could be urged by the counsel of every party—unbroken by a single word, and when the spectator of Sir William Grant (for he was not heard) might suppose that his mind had been absent from a scene in which he took no apparent share, the debate was closed—the advocate's hour was passed—the parties were in silent expectation of the event—the hall no longer resounded with any voice—it seemed as if the affair of the day, for the present, was over, and the Court

was to adjourn or to call for another cause. No! the judge's time had now arrived, and another artist was to fill the scene. The great magistrate began to pronounce his judgment, and every eye and every ear was, at length, fixed upon the bench. Forth came a strain of clear unbroken fluency, disposing alike, in most luminous order, of all the facts and of all the arguments in the cause; reducing into clear and simple arrangement the most entangled masses of broken and conflicting statement; weighing each matter, and disposing of each in succession; settling one doubt by a parenthetical remark; passing over another difficulty by a reason only more decisive that it was condensed; and giving out the whole impression of the case, in every material view, upon the judge's mind, with argument enough to show why he so thought, and to prove him right, and without so much reasoning as to make you forget that it was a judgment you were hearing, by overstepping the bounds which distinguish a Judgment from a Speech. This is the perfection of Judicial Eloquence; not avoiding argument, but confining it to such reasoning as becoms him who has rather to explain the grounds of his own conviction, than to labour at convincing others; not rejecting reference to authority, but never betokening a disposition to seek shelter behind other men's names, for what he might fear to pronounce in his own person; not disdaining even ornaments, but those of the more chaste graces that accord with the severe standard of a judge's oratory. This perfection of judicial eloquence Sir William Grant attained, and its effect upon all listeners was as certain and as powerful as its merits were incontestable and exalted.

"It may safely be said that a long time will elapse before there shall arise such a light to illuminate either the Senate or the Bench, as the eminent person whose rare excellence we have just been pausing to contemplate. That excellence was, no doubt, limited in its sphere; there was no imagination, no vehemence, no declamation, no wit; but the sphere was the highest, and in that highest sphere its place was lofty. The understanding alone was addressed by the understanding; the faculties that distinguish our nature were those over which the oratory of Sir William Grant asserted its controul. His sway over the rational and intellectual portion of mankind was that of a more powerful reason, a more vigorous intellect than theirs; a sway which no man had cause for being ashamed of admitting, because the victory was won by superior force of argument; a sway which the most dignified and exalted genius might hold without stooping from its highest pinnacle, and which, some who might not deign to use inferior arts of persuasion, could find no objection whatever to exercise."—Pp. 169—173.

Our next extract shall be from the sketch of the intellectual character of Burke; but our space compels us to reserve it for a future number.

Poetry.

[In Original Contributions under this head, the Name, real or assumed, of the Contributor, is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

TO THE PRIMROSE.

[By DAVID SMART.]

COME, sweet Evangelist of Spring,
And, in the poet's ear,
Rehearse the message thou dost bring,
In thy prophetic blossoming,
Of resurrection near!

While yet no timorous bud dares peep,
Half wakened from its wintry sleep,
Thou scorn'st the poor defence;
And, mid the inhospitable heath,
Dost draw thy soft and infant breath,
In fearless innocence.

The frown that knits the brow of heaven
Unbends before thy smile;
What time, beneath his furrowed sky,
Thou dost unseal that dove-like eye,
His menace to beguile.

The wind hangs fondly o'er thy bed,
And softly rocks thy gentle head,—
While, from his dark retreat,
Thy smile the playful streamlet courts;
And, like an elder brother, sports
And gambols at thy feet.

Woo, then, the nursing breezes near,
That rock the cradle of the year,
And flutter light thy damask wing;
And fancy's ear the voice will bless,
That crieth in the wilderness,—
Prepare the way of Spring.

THE VILLAGE BLACKSMITH.

UNDER a spreading chestnut-tree
The village smithy stands;
The smith, a mighty man is he,
With large and sinewy hands;
And the muscles of his brawny arms
Are strong as iron bands.

His hair is crisp, and black, and long,
His face is like the tan;
His brow is wet with honest sweat,
He earns what e'er he can,
And looks the whole world in the face,
For he owes not any man.

Week in, week out, from morn till night
You can hear his bellows blow;
You can hear him swing his heavy sledge,
With measured beat and slow,
Like a sexton ringing the village-bell
When the evening sun is low.

And children coming home from school
Look in at the open door;
They love to see the flaming forge,
And hear the bellows roar,
And catch the burning sparks that fly
Like chaff from a threshing floor.

He goes on Sunday to the church,
And sits among his boys;
He hears the parson pray and preach;
He hears his daughter's voice
Singing in the village choir,
And it makes his heart rejoice.

It sounds to him like her mother's voice,
Singing in Paradise!
He needs must think of her once more,
How in the grave she lies;
And with his hard, rough hand he wipes,
A tear out of his eyes.

Toiling,—rejoicing,—sorrowing,
Onward through life he goes;
Each morning sees some task begin,
Each evening sees it close;
Something attempted, something done,
Has earn'd a night's repose.

Thanks, thanks to thee, my worthy friend,
For the lesson thou hast taught!
Thus at the flaming forge of life
Our fortunes must be wrought;
Thus on its sounding anvil shaped
Each burning deed and thought!

Longfellow.

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne*.

THE SNOW-PALACE.

AGAIN we see—again (in fancy) we sit in the snow-house built by us boys out of a drift in the minister's glebe; a drift—judging by the steeple, which was sixty—about twenty feet high, and pure as marble. The roof was all strewn with diamonds, which frost saved from the sun. The porch of the palace was pillared, and the character of the building outside was without any servile imitation, for we worked in the glow of original genius, and none of us had ever seen itself or its picture, wonderfully like the Parthenon. Entering, you found yourself in a superb hall, lighted up—not with gas, for up to that era gas had never been used, except in Pandemonium—but with a vast multitude of farthing candles, each in a turnip stuck into the wall, while a chandelier of frozen snow-branches pendant from the roof set the presence-chamber in a blaze. On the throne at the upper end sat young Christopher North, and proud were his subjects to do him homage. In niches all round the side walls were couches covered with hare, rabbit, fountart, and foxes' skins, furnished by those animals slain by us in the woods and among the rocks of that sylvan and moorland parish; the regal torus alone being spread with the dun-deer's hide from Lochiel forest in Lochabar. Then old airs were sung in sweet single voice, or in full chorus that startled the wandering night-traveller on his way to the lone King's Well; and then, in the intermediate push, old tales were told "of goblin, groom, or fairy," or of Wallace Wight at the barns of Ayr or the brigg o' Stirling, or a glorious outlaw harbouring in caves among the Cartlane Craigs, or of Robert Bruce the Deliverer, on his shelly, cleaving in twain the skull of Bohun, the English knight, on his thundering war-steed, armed *cap-à-pie*, whilst the king of Scotland had nothing on his unconquered head but his golden crown. Tales of the snow-house! Oh, that we had but the genius to recall you to life in undying song! Nor was our frozen hall at times uncheered by the smiles of beauty; for the cottages poured forth their little lasses in flower-like bands, nor did their parents fear to trust them in the fairy frozen palace. Sometimes the old people themselves came to see the wonders of the damp; nay, the minister himself, with his mother and sister, were with us in our fantastic festivities, and gave to the architecture of our palace their wondering praise. Then Andrew Lyndsay, the blind Paisley musician, a Latin scholar who knew where Cremona stood, struck up his famous fiddle-jig or strathspey, and the swept floor in a moment was alive with a confused flight of fourscore reels. Fifty years have fled since that snow-palace melted away, and of all who danced there—how many are now alive?—*Blackwood's Magazine*.

THE GLOUCESTER MISER AND HIS BOY.

OLD WOOD, the miser of Gloucester, whose will has lately been before the courts of law and the Privy Council, kept a boy—a little one—miserably fed, and in great bondage. One Sunday the master was getting ready to go to church, but got his dinner in some readiness first, that nothing might have to be done when he came home but to eat it. It was a roast chicken, which the boy stayed at home to dress. The old fellow also got out the quantity of wine he meant to allow himself, and put it upon the chimney-piece; but to prevent it being tasted, he wrote upon it, in large letters, "*Poison*." So off he went. The lad was cravingly hungry; and as the fowl roasted, he could not help drawing his fingers

across and tasting it. But this sharpened his appetite, and he could not resist pulling off a leg. The theft began, he soon went on to the other leg; and so further and further, till he had quite devoured the whole. What was to be done?—for then came remorse, and, worse than that, soon was coming his master! He felt quite desperate; and just at that moment his eye caught sight of the phial with the label upon it. Off he drank, at one draught, the whole contents; and old Wood came home to find him well-fed, and in high spirits,—the first time he ever had animal spirits to be so, since he had been in his service!

It is not so great a matter to live lovingly with good-natured, with humble and meek persons; but he that can do so with the immoral, with the wilful and the ignorant, with the pceivish and perverse, he only hath true charity; always remembering that solid, true peace, and peace of God, consists rather in complying with others, than in being complied with; in suffering and forbearing, rather than in contention and victory.—*Jeremy Taylor*.

True eloquence I find to be none, but the serious and hearty love of truth; and that, whose mind soever is fully possessed with a fervent desire to know good things, and with the dearest charity to infuse the knowledge of them into others, when such a man would speak, his words, like so many nimble and airy servitors, trip about him at command, and in well ordered files, as he would wish, fall aptly into their own places.—*Milton*.

Most people read merely to pass an idle hour, or to please themselves with the idea of employment, while their indolence prevents them from any active exertion; and a considerable number with a view to the display which they are afterwards to make of their literary acquisitions. From whichever of these motives a person is led to the perusal of books, it is hardly possible that he can derive from them any material advantage. If he reads merely from indolence, the ideas which pass through his mind will probably leave little or no impression; and if he reads from vanity, he will be more anxious to select striking particulars in the matter or expression, than to seize the spirit and scope of the author's reasoning, or to examine how far he has made any additions to the stock of useful and solid knowledge.—*Dugald Stewart*.

It is common for men to say, that such and such things are perfectly right—very desirable; but that, unfortunately, they are not practicable. Oh, no, no. Those things which are not practicable are not desirable. There is nothing in the world really beneficial, that does not lie within the reach of an informed understanding and a well-directed pursuit. There is nothing that God has judged good for us, that he has not given us the means to accomplish, both in the natural and the moral world. If we cry, like children, for the moon, like children we must cry on.—*Burke*.

THERE is frequently more truth in the common acceptance of general terms, than in the more precise and rigorous definitions of science. Common sense gives to words their ordinary significations; and common sense is the genius of humanity.—*Guizot*.

BEAUCHAMPS.—A TALE.

CHAP. I.

Speed.—But shall she marry him?

Launce.—No.

Speed.—How then, shall he marry her?

Launce.—No, neither.

Two Gentlemen of Verona.

IN the course of looking through, and arranging, the papers of my late revered uncle, Theodore Dawson, Esq., it was my chance to find a large and thick envelope, containing several pages very closely written. These, so far as I could judge on a hasty perusal, professed to be a relation of certain passages in the life of a private individual, and were addressed to my deceased relative, in the character of an old and attached friend. The testamentary trust with which I have been honoured by my dear uncle, including a desire that I would select, and prepare for the press, such of his papers as should appear in my judgment suitable for publication, authorizes my complying with the wish expressed by the juvenile members of my own family, that the memoir of Sir Henry Tracey should be presented to the public. Like many of their age, they are prone to find interest in the most flimsy productions, and of such, I profess, appears to me the MS. of the supposed Baronet. I say supposed, because the name of Tracey is unknown to me as friend or acquaintance of my deceased uncle. That he passed several years of his own life in Bengal is indeed true; and, therefore, I will not affirm the narrative to be altogether fabulous; especially as the circumstances recorded are of the most common-place description, and such as one can scarcely imagine Sir Henry Tracey, or any other person, taking the trouble to invent. I have only to add that the MS. having no title when it came into my hands, that of "Beauchamps," (perhaps not strictly appropriate,) was made choice of by the family of the editor, who now subscribes himself,

DAWSON LEE.

London, 1845.

Nearly sixteen years have passed since I was banished from Knightswood for making love to my cousin Julia; and now I am returned to become its possessor! Thus thought I, when, having escaped from gardener, game-keeper, and bailiff, above all, from the family man of parchments, I crossed the park, and leisurely ascended the narrow track which, winding up a hill, formed on that side the boundary of my domain. In by-gone days it had been a favourite walk of Julia's, and for reasons good; it bordered the sunny side of a hedge-row, where the first sweet violets of the year, and the freshest tufts of primroses, were always to be found; birds, too, with which the thicket abounded, were supposed to sing there with peculiar melody. Gaining the brow of the hill, I seated myself on a stile and, with somewhat melancholy

feelings, looked down on the well remembered scene; a scene which, approaching not to the grand, nor even to the highly picturesque, was yet pleasing to the eye, and endeared to mine by a thousand recollections. The park of Knightswood lay stretched before me, just sufficiently varied in its surface to escape the charge of insipidity, and adorned with thriving plantations, mixed with some forest trees respectable in age and growth; from a group of the latter, part of the mansion, in its whole a square heavy pile of building, looked out to advantage. The large fish-pond, which in my boyish eyes had once the dignity of a lake, was shining a bright spot in the distance. What hours of holiday sport had been spent upon its banks, or in paddling through its reedy waters! What moments there had been of deep piscatory interest! and once, on one memorable occasion, what alarming mischance! We were all there; Will, Fred, and, in the absence or illness of the governess, their three sisters, besides Mark Gifford. The girls were talked into thinking they should like to be rowed across the pond; it struck them, at least, as rather a grand idea; and so into the boat we all got; when, lo! in some ostentatious display of nautical skill, we boys contrived to capsize our flat-bottomed craft; a feat, up to that moment, believed to be impossible. Happily we were not far from land, and we all scrambled up the bank near which the accident occurred, with no particular display of gallantry on the part of the amateur crew. We were, however, considerably ashamed of ourselves, and would gladly have concealed our misadventure, had that been possible; but it was not; dripping frocks, and flattened bonnets, were not circumstances of such every day occurrence as muddy jackets and trowsers. So the young ladies were forthwith despatched to their several beds; and we, their betrayers, underwent a lecture from Sir William, full as long as the occasion could be thought to justify.

But it was time to continue my ramble; so, following the course of the same footpath, I passed from field to field, till, having gradually descended the opposite side of the hill, I came in front of the old manor house of Beauchamps. There it stood, in the midst of richly-timbered meadows, with its gabled front and tall chimneys peering out, as they had ever done, from a screen of venerable sycamores. I stopped, and looked about me; this place, like Knightswood, had passed into other hands; a change which took place some years previous to my leaving India. One packet of letters had acquainted me with the death of old Mrs. Gifford, and the succession of her nephew and my old friend and playmate, Mark, to the inheritance; and then, in the next, I learnt the more surprising news, that Mark Gifford had married—not Julia Tracey, but Julia's elder sister! It surprised me, because, of my three cousins, Harriet was the one whom he had always appeared to like the least.

I had been told that the family was now absent from Beauchamps; yet I could not resist an inclination to approach its walls. So I proceeded, and, upon turning a corner, which brought me in front of the principal entrance, was vexed to find that its appropriate iron-studded door had given place to, or was concealed by, a conser-

vatory. The windows of what I had always known as the oak parlour were open; and, as I passed, I caught sight of a harp standing in the very corner which had formerly been occupied by Mrs. Gifford's distaff. "Old fashions have given place to new," thought I; "and no harm either, under the guidance of good taste. I object not to the harp; but the conservatory! How could Mark suffer such an innovation? it is abominable." My soliloquy was cut short by the approach of two fine girls, returning, as it should seem, from their walk, under the charge of a gay-looking governess. Judging the former to be the daughters of the house, I introduced myself with suitable apologies for the intrusion, as their relation and near neighbour. My young cousins were more lavish of blushes than of words; but with Mademoiselle the case seemed to stand differently, and she descanted with great volubility on the lengthened absence of Monsieur and Madame, and the *tristesse* of Beauchamps as a residence for herself and pupils. A harp and a French governess at Beauchamps! and I, Henry Tracey, master of Knightswood! These are considerable changes; and what, I wonder, has become of poor Mary Deane?

My solitary dinner concluded, the wine on the table, and my feet on the fender, the same thought returned; what has become of Mary Deane? Before speaking, however, more particularly of her, or the other companions of my youth, let me remind you, Dawson, that I was myself an orphan, slenderly provided for; and that when I lost in my father my surviving parent, I was received into the family of his elder brother, Sir William Tracey. My father! suffer me to indulge in a brief tribute to his memory. He was a clergyman; and, if I may trust to the impressions of my boyhood, confirmed by the testimony of a few surviving friends, one who joined to the learning and humility of a Hooker, the fine taste and gentlemanly feeling of a Herbert. Does such praise sound like exaggeration? Know that private papers, diaries, &c., once in possession of my uncle, and now my own property, have refreshed my memory, and realized all my long-cherished, though somewhat vague, ideas of my father's excellence. Greatly have I been indebted (I feel it now) to the first principles which he so firmly established in my mind, that, however weak and wavering in practice, I never could wholly surrender them to the temptations or the perplexities of after years. Possibly I may have owed yet more to my father's prayers. I love to think, that, in the preservation of my youth from vice, and in putting into my heart some good desires, God saw fit to answer the petitions of his more faithful servant. Yet I am sure you remember, that, at the time when we first became acquainted in the Cantonment of B—, I was far from deriving either comfort or support from such considerations. Too good for the gay, (so they said,) not good enough for the serious, rejected by both, I felt isolated, irritated, and, consequently, miserable. Grievously was I in want of a wise and sympathizing friend, and such a one I found in you. That we ever met under a Bengal sun, was brought about by that same love-passage of early life with which I began my narrative.

One unlucky conversation that took place in the orangery at Knightswood, between Julia and myself, and of which my uncle overheard every syllable, sealed my fate. He was too prudent to give undue importance to that which he was pleased to consider a childish fancy; he did not lock Julia up, and feed her upon bread and water; he did not reproach me with poverty or ingratitude; he did not say much on the article of cousinship; but it happened soon after, that Julia was invited to visit some relations at Brighton; and, in the course of a few more weeks, that my uncle informed me a commission in the army was at my service, if I still retained my predilection for a military life. The church had been my destination, but, as he well knew, not especially my choice; so I was not long in making up my mind. Boyish fancies for active and adventurous life

revived; and, if I distinguished myself, as who could say that I should not, what better chance had I of eventually obtaining the hand of Julia Tracey? With such sanguine hopes, and a small silk handkerchief, dropped by Julia in her precipitate retreat from the orangery, I joined my regiment, which, in the course of a few months, received orders to embark for India.

How I sped there, I need not here relate; how, without meeting with any extraordinary good or ill fortune, I saw some service, and got on in my profession; and how I exchanged into another regiment, when that with which I had come out returned to England. By that time—I will not confess how much sooner—I had ceased to be in love with Julia Tracey. It is true that no communication, by letter, could safely pass between us; and after Julia's first spring in London, I no longer received even a guarded message of remembrance per favour of Mark Gifford. All was at an end, and I felt that our romance had died the natural death of such early prepossessions; but, during my protracted stay abroad, much happened at home, and much of a melancholy nature. My cousin Frederick, who, like myself, had entered the army, fell in the course of our continental war. He was a kind-hearted, generous fellow, bearing a strong resemblance to his sister Julia, by whom he was much beloved. His elder brother, William, married imprudently and unhappily, fell into an ill state of health, was ordered to the south of France, and died at Montpellier. He left no children; so, at his death, I became, by right of entail, the next heir to Knightswood. My uncle could not, however, resolve on recalling me to England; and, during the remainder of his life, which, with impaired health and broken spirits, lasted not many years, I continued, as you well know, an absentee. My aunt had vacated Knightswood, and, when I arrived in England, was residing at Bath, with her two unmarried daughters. The eldest, as I before mentioned, had become the wife of my friend Gifford; and this brings me back to Beauchamps, and its former inmates.

There is the lady of the mansion,—I have her now before me,—advanced in years, but of fair and fresh complexion, and very upright in her carriage; in her youth she must have been extremely handsome. Her dress, so ancient in its fashion, and put on with such precision! Her manners, at least to strangers, stiff as her dress; at no time, perhaps, conciliatory, yet distinctly marking the gentlewoman. For the rest, she was homely in her tastes, narrow-minded, and brimful of absurd prejudices, each and all fostered by consciousness of power, and long retirement from the world. Under her care lived, and had lived from infancy, her great niece Mary Deane, the prettiest girl, always excepting Julia Tracey, I had ever seen before leaving England.

She was an orphan, the only child of a niece who had married so as to displease her family generally, and her aunt Gifford very particularly. The better part of that good lady's nature, (for good she was, notwithstanding all that I have said,) relented, however, in favour of the destitute child. Mary was received and brought up at Beauchamps; I will not say, petted; neither can I, with truth, affirm that she was educated. But what then? Mrs. Gifford meant not to treat her little niece unkindly; she always had, (as she herself said,) preferred boys to girls; and, of all boys in the world, who could compare in importance with her own destined heir? Thus it was natural that Mark Gifford, her husband's nephew, should be more valued and more indulged than her own little kinswoman, Mary Deane. As for education, to be sure Beauchamps could boast neither of school-room nor governess; there were no maps but such as hung in a dark passage at the back of the house; no globes, except a broken pair in the lumber room; and how they got into the house nobody could remember. There were no Pinnocks to confuse, no Parleys to mislead, and neither in jest nor in earnest was Mary likely to acquire at all more knowledge than was good for her; but, as I once heard Mrs. Gifford remark to Mr. Penrose, the

clergyman of the parish, Mary read the psalms and lessons every morning after breakfast, except on Sundays, Wednesdays, and Fridays, when she went to church, and the old schoolmaster attended twice a-week to teach her writing and cyphering; besides which, she came on very prettily with her needle; and, on Sundays, never failed to say her catechism, either to herself or Hannah. "And what," asked Mrs. Gifford, "can any child of her age want more? I do not say but that, some time or other, I may have her taught to dance, for I should wish the girl to hold up her head, and carry herself like a gentlewoman; but I can tell you this, Mr. Penrose, that Mary shall never learn French, nor fillagree, nor any such nonsense."

Concerning fillagree, Mr. Penrose was probably ill competent to decide, not knowing, except in the way of alliteration, how it stood connected with the French language; but he saw that his proposal of instructing Miss Deane in the rudiments of the latter was wholly unacceptable, and that he had better talk of something else. Mark's first set of shirts with collars were Mary's entire performance from beginning to end; that was a fact well known to all who in those days frequented Beauchamps; but, as her aunt had accomplished the same task when younger by half-a-year, it was nothing, as she observed, for Mary to conceit herself upon. Poor Mary! there was little chance of her growing up conceited; and the sweetness of her disposition preserved her equally from fretfulness or discontent. Childhood, if healthy, will find pleasures for itself; and Mary Deane had her's. It was pleasure to her to collect from the hedges food for Mark's rabbits; to assist in gathering rose leaves and lavender; to hunt the wilderness, as it was called, for guinea-fowl nests; to have a hen and chickens of her own; and even to run through a dirty lane to the parsonage, in order to fetch or return the county paper, was pleasure. Yet, in spite of Mary's active habits, perhaps the greatest of all delights was, in some sequestered nook, whether within or without the house, to pore over certain marble-covered volumes, with morocco backs, lent her by Mark. Her aunt did not love the sight of them; when left about the parlour by their owner, they were condemned as litter; when seen in Mary's hands, they were worse even than that; at such times Mrs. Gifford would shake her head, and foretell that Mary, after all, would turn out a mere book-worm.

A yearly, or it might be half-yearly, exchange of visits was all that Lady Tracey and Mrs. Gifford had ever accomplished in the way of neighbourly intercourse; the fault, as it seemed to me, resting chiefly with the latter. To Mrs. Gifford, my aunt appeared on various accounts an objectionable person; in the first place, it was reported and believed at Beauchamps, that she was an extravagant fine lady, who knew neither the exact number of her gowns nor her servants; in the next, she spent, with her family, part of every spring in London, whereas Mrs. Gifford had never done, nor thought of, such a thing above once in her whole life. Then my aunt was an educationist, not only in her own family, but patronized both Sunday and Day Schools, thereby, in Mrs. Gifford's opinion, doing her utmost to train up, for the succeeding generation, a race of lazy, pert, and thriftless servants.

It was an unlucky circumstance, too, that Knightswood House, with a small portion of the park, stood within the limits of the same parish to which the Beauchamps property belonged; for, in consequence, the Tracey family possessed, and had done so from the time when pews were first invented, a capacious box in the aforesaid parish church. Now this box was not only of the same dimensions as Mrs. Gifford's own pew, but, to make matters worse, placed exactly over it. The Traceys of my time usually attended the church of Knight Magna, being the parish in which they held most of their property, and only occasionally occupied their strong post at Fordover; still, for forty years, that is to say, from the time of her marriage, had Mrs. Gifford been exposed to the recurrence of this mortification.

She never could, poor woman, view the subject in any light but one, that of undue assumption on the part of the Traceys; nor ever hear them mount the stairs of their pew, without a belief that they were placing themselves above her in spirit, as well as in body.

Mr. Penrose, who probably had reasons of his own for disliking the pew, endeavoured, on occasion of some alterations within the church, to get rid of it altogether; but the spirit of resistance was strong both in Sir William and his lady, and, absurd as they would have considered the heart-burnings of poor Mrs. Gifford, their own pride took instant offence at the interference of the clergyman. Its effect was to bring them, for a time, more frequently to Fordover Church; and Mrs. Gifford looked, as we passed her pew in order to ascend to our own, sourer and sourer.

The coolness which subsisted between the heads of the two houses did not, however, extend to us boys; cricket, indeed, was the great bond of union between some of the parties; but Mark and I were friends, independently of that all-bewitching game, and as partial to each other's society at Christmas as at Midsummer. My friend was always well received at Knightswood; and one summer vacation, though I know not what brought it to pass, he was made the bearer of a polite request from my aunt, that Miss Deane might be permitted to favour her daughters by spending a day at Knightswood.

I believe there was some demur at Beauchamps in accepting the invitation; but acceptance did come, in the form of a queer little note, so quaintly written, both as to hand and style, that it narrowly escaped a place in my cousin Harriet's scrap-book. An awful day it was for Mary! And well she remembers it, I doubt not, at this very time. The day, the hour, the moment came, when, under the care of her cousin (for so she habitually called him) Mary was to set forth for Knightswood. She had received the last charge from her aunt to hold up her head, and curtsy to Lady Tracey, and not let her think that they had no manners at Beauchamps; but, when the last moment arrived, no Mary was forthcoming. After repeated calls, and some search upstairs and down, she was discovered by Mark, seated disconsolately, and with tearful eyes, on the top of a hen-coop in the poultry-yard; and it required the exertion of all Mark's influence, in their subsequent walk to Knightswood, to revive Mary's spirits, and allay her fears; for she had never seen Lady Tracey above once or twice in her life, except at church; and the Miss Traceys were such fine ladies, and learnt so many things! and she was sure they would ask her if she could play and sing, or draw; "And then French, Mark! If the governess should speak to me in French, what will become of me?"

"Why, I think you will return home at night, alive and well, if she does," replied Mark, "and laugh about it to-morrow. Never mind, dear little Mary; if they bother you about their music and nonsense, you may tell them that you hem all my pocket handkerchiefs, and keep my gloves so nicely mended. It will be long enough before William or Fred get as much good out of their sisters, as I do from my good little cousin."

"This is all very well," thought I, "by way of encouraging your good little cousin," when Mark related to me the foregoing particulars, and the difficulty he had found in getting Mary within the gates of Knightswood, in a composed and rational state of mind; "but, after all, there can be no comparison between a shy, ignorant girl, like Mary Deane, and Julia Tracey!"

The dreaded visit was not, I believe, after all, nearly so bad a business as Mary had anticipated. Harriet, to be sure, who was a grown-up and come-out young lady, read hard books, studied geology, and had, if I remember right, some theory of her own respecting the deluge, put Mary in a flutter by talking to her about new works and talented writers; especially as, at the same time, she turned over the leaves of a very large book; except-

ing the Church Bible, Mary had never beheld anything so prodigious in the shape of a book before. But with the rest of the family she soon felt herself tolerably at ease. After that day Mary occasionally visited at Knightswood; every time with less discomfort to herself, and, according to Mark's observations, not wholly without profit; Nature had well done her part, and Mary was not ill-disposed to do her own. From the time of her acquaintance with my cousins she seldom worked in her garden, or gathered hog-weed for the rabbits, without her gloves, and absolutely rejected the use of a knife in eating fish.

J. A. E. L.

THE HEALTH OF TOWNS AND POPULOUS DISTRICTS.*

Speak not to me of swarms the scene sustains;
One heart free tasting Nature's breath and bloom,
Is worth a thousand slaves to Mammon's gains.

See, left but life enough and breathing room
The hunger and the hope of life to feel,
Yon pale mechanic, bending o'er his loom,
And childhood's self, as at Ixion's wheel,
From morn till midnight task'd to earn its little meal.

Is this Improvement? Where the human breed
Degenerate as they swarm and overflow,
Till toil grows cheaper than the trodden weed,
And man competes with man, like foe with foe,
Till Death, that thins them, scarce seems public woe?
Improvement! smiles it in the poor man's eyes,
Or blooms it on the cheek of Labour? No;—
To gorge a few with Trade's precarious prize,
We banish rural life, and breathe unwholesome skies.

CAMPBELL.

THESE lines are sufficiently beautiful to excuse, we trust, a rather indirect application to the subject they are made to introduce. It is not our present purpose to follow out the precise line of thought suggested by the poet, by examining the influence which the direction given to the stream of national industry, in particular districts of the country, has exercised upon the happiness and comfort of the labouring classes. We are not about to paint "the pale mechanic bending o'er his loom," or "childhood task'd as at Ixion's wheel." But, leaving these to other hands, or to another occasion, we are to direct the attention of our readers to a different class of influences, of even more general operation, which not less leave to the mechanic "but life enough and breathing room, the hunger and the hope of life to feel;" which as effectually steal the smile from the poor man's eyes, and the bloom from the cheek of labour. We are to speak of the unhealthy condition of their dwellings, occasioned by the want of pure air, and the constant presence of poisonous exhalations; and to show how this noxious agency shortens their lives, abridges their comforts, and, alas! vitiates and debases their characters.

We do not know that there is anything from which we should draw more favourable auguries of a permanent amelioration in the character and condition of the poorer classes of our countrymen, than the appearance and growth among them of a desire for an improved style of accommodation in their dwellings,—for better means of maintaining cleanliness and comfort around their firesides. The indolent sluttishness which sits down contentedly in the midst of every description of filth, breathing a foul and contaminated atmosphere, through which the fair light of day struggles with difficulty, is at

once an evidence of a degraded condition of being, both morally and physically, and the fruitful parent of still further degradation, becoming more hopeless of cure as it advances. The love of cleanliness is in itself a highly moral attribute—a virtue of no mean rank, and the direct source of a large portion of our enjoyment as sentient beings, susceptible, at every instant, of pleasurable or painful impressions from the objects around us. But it becomes invested with a still higher dignity and importance, when it is regarded in connexion with its moral effects—in its bearing upon the character and conduct of those by whom it is cultivated or disregarded. So highly are we led, from the evidence accumulated on the subject, to estimate its importance in this point of view, that we should scarcely hesitate to pronounce the general prevalence of cleanly or filthy habits, to be a decisive test of the moral character of the population of a district.

The painful reflection to every benevolent mind, in connexion with this subject, is, that the vice of filth, with its attendant train of moral and physical evils, may be said to be, in the case of a large proportion of mankind, an inevitable circumstance of their condition: they cannot avoid it, or escape from it, if they would. The poor man cannot choose where he is to live; he cannot gratify himself by retreating to an airy, dry, and cheerful site, far from the presence of all offensive sights, and sounds, and smells, as his happier wealthy neighbour can do; he cannot pay for having pure water conveyed from a distance, and those things, the presence of which is offensive and injurious to health, carried away to a distance from his dwelling. He must be content to live where he can, and how he can, confining his ambition to the bare preservation of life, and never aspiring to the luxury of those decent enjoyments, the absence of which deprives life of its greatest charm. He is surrounded by influences, and, through all his senses, brought into daily contact with objects, which almost literally act over again, in his case, the tyranny of Mezentius, who chained a living man to a putrefying corpse.

This wretched state of things is part of the tax which society has hitherto been in the practice of demanding, with most rigid severity, from those who profit the least from her arrangements. It is time that a compensating agency were set in motion—that those whose benefits from society have been large in comparison of their sacrifices for its sake, should relieve themselves, to some small extent, of the debt thus standing against them, by making an effort to reduce the anomaly at the other end of the scale; that they should try, if possible, whether the world cannot be carried on on a fairer principle of equality, so that less may be taken away from those to whom least is given. The poor, whose utmost labour is hardly sufficient to gain them the means of barely living, have no time nor opportunity to acquire the knowledge or taste which might direct them to add to mere life some of those amenities which render it a source of enjoyment; nor have they the means of casting off the accumulating impurities which the congregation of human beings into large masses, in an advanced state of society, necessarily gathers around them, literally and metaphorically. This must be done for them by the rich and powerful, whose proper function it is; who are elevated above the

* Letters on the Unhealthy Condition of the Lower Class of Dwellings, especially in Large Towns, founded on the First Report of the Health of Towns Commission. By the Rev. Chas. Girdlestone, A.M. Rector of Alderley, Cheshire. London: Longman, Brown, Green & Longmans, Paternoster Row. 1845.

mass for the very purpose, that, as their time and labour are not wholly occupied, like those of the poor, in providing for their own sustenance, they may devote them to exertions for the general good, and especially for the good of those whose circumstances put it out of their power to care properly for themselves.

The desire for personal cleanliness, and decent and comfortable accommodation, is, we are persuaded, instinctive in all men. No man would rather be dirty than clean,—would prefer a damp house to a dry one, or a suffocating unwholesome atmosphere to the pure breath of heaven. An unconquerable indolence of disposition may, in some cases, induce slovenly habits in persons who have not the excuse of want of means to keep themselves and their houses sufficiently clean; and in others, the force of strong prejudice, based upon ignorance and evil habits, may lead them obstinately to reject, as disagreeable innovations, whatever would improve their own condition, or that of their houses, in this respect; but, in a large proportion of cases, it is the utter hopelessness of attempting to struggle against the unfavourable circumstances by which they are surrounded,—the want of room, the want of light, the want of drainage, the want of water, the want of time, the want of strength, the want of money; it is these grievous and insurmountable wants which cause many a poor man and woman, who would have been respectable if they could, to become reconciled by degrees to what they began by loathing, until, at last, the poison which dries up the marrow in their bones, and stagnates the stream of life in their veins, penetrates into their very souls, and every feeling of delicacy and self-respect utterly and forever disappears.

There are few of those who live in easy and comfortable circumstances, who have not some general idea that there is at all times to be found, at no great distance from them, heaped together in the garrets and cellars of dark lanes and alleys, much that it would be disgusting to look upon, and not very safe to enter into close contact with. They are aware that every large town has its "mysteries," from which, however, they have no desire to lift off the veil. So long as their own immediate precincts remain unpolluted to the outward sense, they are satisfied. They adopt the legal maxim, "*de non apparentibus et non existentibus eadem est ratio*,"* forgetting that there is a vast difference between the inability to see that which is carefully looked for, and just contriving to escape seeing it by studiously looking the other way. They act like the housemaid who considers her work of cleaning completed when she has swept the dirt under the carpet. The subject is not an inviting one, certainly, nor does it present any pleasing objects of contemplation. It cannot be wondered that many should shrink from entering into its details. But "entire affection hateth nicer hands." The man who is intent upon doing good, will not turn back because there is a noisome slough between him and the object of his benevolence; and the fastidious delicacy which refuses to look narrowly into the unpleasing realities of the condition of the poor and wretched, in order to its improvement, and which, if it be not a mere mask for selfishness, is at best a very childish weakness,

might do well to bear in mind, that it is to such exertions on the part of others for it, as it refuses to make in return, that it, whatever be its rank, is indebted for the protection it enjoys, from encountering, in its daily walk, objects offensive to the senses, corrupting to the mind, and fitted to offer revolting suggestions to the imagination.

Happily the attention of our legislators has, at length, been directed in good earnest to this subject. A kindlier spirit of social sympathy is beginning to grow up among us. The possessors of rank and wealth appear to be learning to feel, that the advantages which they enjoy involve responsibilities and impose duties, as well as confer opportunities of enjoyment. And surrounded, as every rank in society, with the exception of the very lowest, now is, by the most refined and complicated appliances of luxury and gratification, we are becoming sensible to the shame that there should be one class among us, in numbers equal to all the rest, the arrangements for whose comfort continue such as would disgrace the most barbarous age, knowing nothing of civilization but the vices which it teaches, and conscious of its presence only by the bitter contrast every day presented to their experience, between their own miserable debasement and the multiplied enjoyments of others.

Let us not inquire too minutely, whether the benevolent feelings which have led to an increased attention on the part of the rich to the condition of the poor, be altogether unmingled with selfish considerations; whether a sense of danger has not been as powerful an incentive to philanthropic exertion, as a conviction of duty. Unquestionably there was ground for apprehension. A population increasing every day in numbers and in intellectual activity; sufficiently instructed, however ignorant of other things, in the physical power of their own masses; but feeling themselves connected by no common bond of sympathy with the rest of society; pressed by physical suffering; exposed to numberless corrupting and vitiating influences; their dwellings a stronghold in which disease and death held their perpetual seat, from which to issue forth at intervals, and spread desolation over the rest of the world; such a population moving about in hourly increasing swarms around and among them, could not but carry lively apprehensions of danger to the breasts of all who felt interested in the peaceful continuance of our social system.

It is generally known that, a few years ago, in consequence of disclosures resulting from a variety of investigations into isolated points affecting the condition of the poorer classes, a Commission was appointed, containing the names of men of the highest distinction, both for rank and scientific acquirement, for the purpose of instituting a more general inquiry into the state of the people, chiefly as regards health, and morals in so far as affected by those circumstances by which health is affected, in large towns and populous districts. A first report of this Commission was published in 1844, and a second in the present year. Such documents, however, not being generally accessible, nor, when procured, thrown into a form well suited to gain the attention of general readers, it becomes almost essential to their utility, that they should undergo a condensing and sifting process, so as to present unmingled, and at a small cost, the really valuable matter which they contain—at least that which it most concerns the public to be acquainted with.

* Things not seen are to be accounted as not existing.

This service has been well performed, in the present case, by Mr. Girdlestone, who has, in a series of letters, thrown into a very convenient form the most important results of the Commissioners' investigation, and has urged them upon the attention of the public with an affectionate earnestness well becoming his sacred office.

Mr. Girdlestone treats his subject under the following general heads:—1. Sewerage and drainage. 2. Supply of water. 3. Receptacles of refuse filth. 4. Ventilation. And, after exhibiting the result of the evidence laid before the Commissioners on each of these branches of the inquiry, he sums up by a detail of striking facts illustrative of the influence exercised by the deplorable state of the towns and populous districts, in regard to these necessary arrangements, upon public morals, and by a brief suggestion of some of the more practicable remedies.

The general results of the reports regarding the actual condition of the inhabitants of the districts referred to, are thus stated:—

"It is proved that the rate of sickness and mortality of the working classes, in our populous towns, is much greater than that of the same classes in the country districts, and much greater than that of those classes in the same towns where dwellings are better drained and better ventilated. It is proved that the greater liability of the working classes to the most afflictive and painful disorders does not arise from deficiency of food and clothing, but from their living usually, with no alternative, in narrow streets, confined courts, damp dwellings, and close chambers; undrained, unventilated, uncleaned. It is proved that they suffer the most severely in those cases where they spend the day in crowded workshops, or where they live in cellars, or sleep in rooms on the ground floor, or in chambers that have no chimney flue, or other vent to the vitiated air. It is proved that in such situations the average duration of human life is at least twenty years less than it otherwise might be; and that during this curtailed period of existence, the working power of those who live is seriously diminished, and much more their capacity for enjoyment, by a constant depression of health and spirits, and by the active attacks of fever, cholera, scrofula, and consumption. It is proved that this excess of mortality falls most heavily, first on the infantine portion of the community, and next on the heads of families between twenty and thirty years of age. It is proved that, in the metropolis alone, from twenty thousand to thirty thousand lives are thus wasted in each single year, with all the attendant misery of sickness, and sorrow, and want; owing to causes which may be easily obviated or removed. It is proved, that the burden which is thrown, by this excess of sickness and mortality, on the poor's rates, to say nothing of infirmaries and dispensaries, of friendly societies, and of private almsgiving, is such as to exceed the cost of effecting those improvements, which would suffice to make the average health of the working classes nearly equal to that of the rest of the community. It is proved that in the mere article of wasted manures, the refuse of a town, if duly collected and carried off, might, in most cases, be so applied as to repay the whole cost of sewerage, increasing the produce of the surrounding country, instead of saturating with pernicious moisture the ground on which the dwellings of the poorer classes stand, and defiling the air they breathe with pestilential vapours. And, finally, it is proved that, besides the waste of money, health, and life, incurred by the system now usually pursued in erecting the lower classes of dwellings in great towns where comfort, cleanliness, and decency are either not thought of at all, or are sacrificed to a short-sighted greediness of gain, there is also an incalculable amount of demoralization attributable to the same

causes; and that, to say the least, an effectual bar is thereby put to the intellectual, moral, and religious improvement of this large portion of the community."

The only consolation which the contemplation of so much misery admits of, is the assurance that it is not beyond the reach of remedy; nay, that it requires only a vigorous effort to make the remedy comparatively easy.

"It is most abundantly proved," says Mr. Girdlestone, "that the evils which have been now laid bare are within the reach of remedy. To a great extent they may be removed in the case of dwellings already built, and they may be entirely obviated in those which shall be constructed henceforth. And these objects may be compassed by an expenditure, which is not only small as compared with the good to be accomplished, but which also may be made to repay itself. This, I say, is a most cheering circumstance; for, if we look at the enormous wealth concentrated in comparatively few hands, and securing to its possessors the command of this world's goods; and if we next consider how poor, in comparison, the great multitude of mankind remain, and how often the poor are sickly, and how early they are cut off by death, our hearts might well sink within us, if we could see no way of relief, short of equalizing the poor with the wealthy in the sumptuousness of their fare, and clothing, and abodes. But now we know, that neither these, nor yet immunity from labour, are the points which mainly make the difference. The rich man's abundance may expose him to as many diseases, arising from excess or indolence, as those which beset the poor man, owing to hard fare or scanty clothing. Let the labourer but have a decent home, built on a dry soil, well drained, and with all its putrefying refuse properly removed; let his dwelling have at least two bed-rooms above the ground floor, and let it have a good supply of pure water and fresh air; and there is evidence to show, that he is as likely to enjoy health and length of life, supposing that similar attention is paid to the place in which he does his work, as the most wealthy of his employers. And if he may be thus physically on a par with them—as who would not wish him to be?—there remains nothing to hinder him from being so also, as every Christian ought to be one with another, both morally and religiously."

RURAL SKETCHES; WITH HINTS FOR PEDESTRIANS.

No. II.

THERE are some objects which the tourist will not fail to visit, presenting the same features, at all the three periods of which we have spoken.

As he wanders along the road which winds gracefully, with its beautiful green edging and its rich hedge-rows, his eye will be attracted by the heaven-directed spire of a village church, which had been previously hidden from him by the abundance of wood surrounding the village, and as a sudden turn in the road presents the whole of the venerable and interesting building to his view, he will feel the sentiments expressed by Wordsworth:—

"may we'er
That true succession fall of English hearts,
That can perceive, not less than heretofore
Our ancestors did feelingly perceive,
What in those holy structures ye possess
Of ornamental interest, and the charm
Of pious sentiment diffused afar,
And human charity, and social love."

Having glanced over the exterior of the building, and examined the church-yard, noticing, it may be, the cross near its south entrance, and the venerable

yew; the ancient grave-stones, with their short and simple "Hic Jacet" in old English letter, presenting a striking contrast to the verbose and fulsome epitaphs of modern times; and the nameless graves beneath which

"The rude forefathers of the hamlet sleep,"

he will be prepared to enter the building to notice more carefully what it contains.

The first object which claims his attention as he enters is the font; and this is frequently of a much older date than the church itself—many Norman fonts are yet preserved where the churches have been once or again rebuilt. The windows probably contain stained glass in greater or less profusion, and the bright sunshine throws a warm many-hued stain on the pavement. In some churches he will find the stoup for holy water yet remaining at the entrance; on the south side of the chancel, the sedilia, formerly used by the priest, deacon, and sub-deacon, during part of the Divine service; eastward of this, the piscina; and opposite to the sedilia, in the north wall, the arch for the holy sepulchre.

The ancient charity-box is yet remaining in some churches; and, of rarer occurrence, as most of them are obliterated by repeated coats of white-wash, are the fresco paintings, with which the walls were anciently covered. Some churches have chantry chapels attached to them, and in very many are fine monumental effigies, once rich with "the boast of heraldry, the pomp of power," but, now, alas! mutilated and defaced. The bells are frequently of an early period, and containing inscriptions of a religious nature.

These remarks of course apply chiefly to those churches which were built before the Reformation. Some, of great antiquity, will be easily recognised as Anglo-Norman by the massy piers, the semi-circular arches, the round-headed doorways, with their rich mouldings, of which the chevron is the most common, and the broad buttress, scarcely projecting from the wall. To the Norman style succeeded the Early-English, and subsequently the Decorated, and the Florid or Perpendicular, all of which are of a lighter and more elegant character, distinguished by pointed arches. These three latter styles were successively used from the reign of Stephen to the commencement of that of Henry VIII.

Occasionally, too, the pedestrian's attention will be drawn to the ruined castle, whose towers and battlements frown over the neighbouring valley; and on approaching it, he will find no traces of the draw-bridge, the moat nearly filled by a luxuriant crop of nettles and thistles, and the walls much rent, affording in their fissures sufficient nourishment for trees which have been propagated from seeds conveyed thither by the birds, while other parts appear to be sustained by the matted ivy, so interwoven as to support fragments which might otherwise endanger his safety.

On entering the gloomy gateway, where the portcullis once hung, and the warden kept strict watch, he is forcibly struck by the change wrought in our social condition since the time when baron waged war against baron, or at a later period, when the unnatural strife of the Roses was carried on, or, still more recently, when the fair plains of England were converted into battle-fields in the great Rebellion. 'What share of picturesque

genius Cromwell might have, I know not. Certain, however, it is, that no man since Henry VIII. has contributed more to adorn this country with picturesque ruins. The difference between these two masters lay chiefly in the style of ruins in which they composed. Henry adorned his landscapes with the ruins of abbeys; Cromwell, with those of castles."* The dungeons he will probably find half filled with rubbish and loose stones, rolled into them by idle boys. Many materials for profitable thought will be supplied him, in endeavouring to trace the probable age of different parts of the castle—this window has been inserted long after the original walls were built, and that tower also is an addition of later date.

But there are other ruins which will draw the pedestrian from the road. In the midst of some lovely vale, fertile as lovely, and peaceful as fertile; down which winds a crystal stream, the haunt of the trout; whose meadows seem enriched with an almost unaccountable and superabundant fruitfulness—lo! in the midst of this paradise, this Eden of luxuriant growth, rises the fair tower of a despoiled and desecrated abbey.

Hastily crossing the ancient stone bridge thrown across the stream, for which we are in all probability indebted to the monks, he will be soon treading the rich greensward which conducts him to the west front of the abbey. This, the principal entrance, was usually adorned with sculpture, often with the Virgin and Child, "the glorious company of the Apostles," windows with graceful mouldings, and a very highly ornamented doorway; and, high over all, the gable is enriched by an elaborately sculptured cross. Entering the nave, whose "long drawn aisles" give such imposing effect to the clustered piers, how great is the regret that such noble workmanship, the produce of an age which has been reviled as dark and ignorant by one inferior to it in real and solid architectural magnificence—should have been desecrated and despoiled, and allowed to decay.

The grass now occupies the place of the variegated pavement; the ivy hangs in the window once filled with storied pictures and sacred emblems; the rain and the hail, and the rough winter's wind, beat in where the fretted roof was so skilfully hung; rude feet trample on the tombs of the abbot and the baron—their armorial bearings defaced, their simple inscriptions obliterated.

The abbot's house, where royal and noble guests were entertained on their journeyings, in some cases is converted into a residence for the hind or the steward; the refectory and the dormitory are the resort of bats and owls and unclean birds; the mortuary chapels are thickly overgrown with the nettle and the thistle; the chapter-house, where the cowed monks assembled for grave capital deliberation, and for the government of their abbey, is perhaps now used as a mere shed for the cattle who graze on the abbey-lands; and the cloisters, where formerly they walked, are strewn with rubbish and loose stones—a miserable spectacle, when contrasted with the judgment we may form of what they have been, by the cunning workmanship displayed in the groined roof, the airy and graceful column, and the elegant window, so rich in beautiful tracery, which yet remain to mock their present desolation and decay. S. J.

THE WELL OF ST. KEYNE

A Ballad,

The well of
St. Keyne

A WELL there is in the west country,
And a clearer one never was seen ;
There is not a wife in the west country
But has heard of the well of St. Keyne.

An oak and an elm-tree stand beside,
And behind does an ash-tree grow,
And a willow from the bank above
Droops in the water below.

A traveller came to the well of St. Keyne.
Joyfully he drew nigh,

For from cock-crow he had been travelling,
And there was not a cloud in the sky.

BY THE LATE ROBERT SOUTHEY, LL.D.

POET LAUREATE.

He drank of the water so cool and clear,
For thirsty and hot was he;
And he sat down upon the bank,
Under the willow-tree.

There came a man from the neighbouring town,
At the well to fill his pail;
On the well-side he rested it,
And bade the stranger hail.

"Now art thou a bachelor, stranger?" quoth he,
"For an if thou hast a wife,
The happiest draught thou hast drunk this day
That ever thou didst in thy life.

"Or has thy good woman, if one thou hast,
Ever here in Cornwall been?
For an if she have, I'll venture my life
She has drunk of the well of St. Keyne."

"I have left a good woman who never was here,"
The stranger he made reply;
"But that my draught should be better for that,
I pray you answer me why."

"St. Keyne," quoth the Cornishman, "many a time
Drank of this crystal well;
And before the angel summon'd her,
She laid on the water a spell.

"If the husband of this gifted well
Shall drink before his wife.
A happy man henceforth is he,
For he shall be master for life.

"But if the wife should drink it first,
God help the husband then!"

The stranger stoop'd to the well of St. Keyne,
And drank of the water again.

"You drank of the well, I warrant, betimes!"
He to the Cornish man said:

But the Cornishman smiled as the stranger spake
And sheepishly shook his head:

"I hasten'd as soon as the wedding was done,
And I left my wife in the porch;
But, I faith, she had been wiser than me,
For she took a bottle to church."

THE LAST SUPPER OF LEONARDO DA VINCI.

(Concluded from page 12.)

THIS web of malice was, as yet, concealed from the eyes of Leonardo, but the anxious throbbing of his heart told him there was evil influence at work. It was also inexplicable to him, that the Duke had not insisted upon his painting another portrait, so as thus to bring matters to extremities at once. "But," thought he, "that may still be in reserve." Whether this really were so, and whether Leonardo ever did finish a portrait of the Duke, it is now impossible to obtain any certainty. In the collection of heads by Leonardo da Vinci, published by Count Caylus, there is none that could be taken for the Duke; and the picture preserved in the Dresden Gallery, by this master, of an old man, wearing a fur habit and a hat decorated with a medal, in one hand holding a glove, and a sword in the other, can scarcely be Ludovico Moro, though not improbably another member of the princely house of Sforza.

Be this as it may, it is enough that the picture of which we have spoken was, and remained, annihilated. And Leonardo, escaped from the suffocating heat of the ducal palace, with the cool refreshing evening air felt his courage revive, while he resolved by the most persevering diligence to prove his gratitude, and atone for his former wilfulness. "Yes," he exclaimed, his eyes sparkling with a holy enthusiasm, "I will paint the twelve and their Lord, as he sat with them at meat on the night in which he was betrayed! My God! on this very night." It was, indeed, on Maunday-Thursday that these events had occurred to Leonardo, and he now wandered in solitary musings through the lovely gardens which encircled Milan.

Spring had already spread her charm over the landscape; the tender buds had expanded into bright green leaves, the violets shed their perfume upon the fresh verdant turf, and the declining sun gilded the summits of the fragrant groves, as they waved to and fro in the gentle breath of evening.

"And I am to paint the celebration of thy remembrance, O Lord, on the evening of thy last supper!" exclaimed the rapt enthusiast. "How will that be possible to my weak pencil? How dare I—the trembler, the desponder—attempt so sublime a work?"

And, verily, he trembled afresh. The more he endeavoured to arrange the plan of the picture, the more did his courage sink. Everywhere he found insurmountable difficulties. His mind at length became so completely confused, that he could no longer form any settled idea of his subject; everything swam in gloomy chaotic mist before his soul, and the sun was just setting as he returned, in an agony of despair, through the gates of the city. Unmindful of his steps, he found himself before the Dominican Convent. He heard the organ pealing through the lofty majestic church, and the voices of the monks mingling with its harmony. The solemn strains fell upon his troubled spirit like hymns of eternal rest from a better world, and subdued his mind to a temper of humble resignation.

They are there now, thought he; no one will observe me, if I examine the spot where my work is to be carried on. He entered the cloisters, and with hushed and timid footsteps passed through the solitary arched corridor which led to the refectory. Day had already faded into twilight; only in the western horizon lingered the last rosy tints of evening. The tones of the organ reverberated faintly through the walls, accompanying that noble hymn, subsequently immortalized by Palestrina's genius,—

"Fratres ego enim accipit."

"Those are the blessed words of Institution!" murmured the painter, in pious ecstasy. "Oh, thou that takest away the sins of the world! how can my weak hand paint thee in the moment of thy greatest glory upon earth?—in that last night of surpassing agony!"

And how shall I paint you, ye glorious Apostles? Alas, never! My mind is obscured with a dreary mist, though my heart burns with devotion and desire. I am oppressed by the sense of my weakness: do thou, Source of all power, vouchsafe to me thy aid!" With a beating and anxious heart he opened the door of the refectory; but terror and amazement forced him back over the threshold. An irresistible impulse again impelled him forwards, for a scene, glorious as that of the opened heavens, was before him. Sitting at the long table in the hall, with their Lord in the midst, he beheld the twelve Apostles. The head of the blessed Jesus was surrounded by the last purple glow of the western sky, which, gleaming through the central window towards which his back was turned, thus formed a natural halo. His eyes were fixed upon the table with an expression of deep sadness, for he had just uttered the words, "Verily I say unto you, that one of you shall betray me." No anger, no reproach was visible in that heavenly countenance, down which the parted hair descended in golden locks upon his shoulders, and his left hand spake silently,—"Yes, my beloved! such is the will of my heavenly Father, and I murmur not." But John, the maidenly beautiful John, the disciple whom Jesus loved, and who had been reclining upon his breast, overcome with sorrow at this sad prophecy, was sunk back with closed eyes, as though groaning out in the deepest anguish,—"No, it is impossible!" though the folded hands testified his reverent belief in the words of his divine Master, and meek resignation to his will. At his side bent Peter towards him with a look of noble, almost contemptuous confidence, as though he said,—"Be comforted, thou trembler! What can traitors avail against him, be they who they may." Behind him started up the grave Alphæus, with terrified looks, from among the crowd of the disciples. To the left of Jesus sat Simon the Canaanite, the sinless shepherd, who had forsaken his lambs to follow the great Shepherd of souls. Like Him, he wore his hair parted, and flowing smoothly over his shoulders, and his face and outstretched hands, turned towards the Lord, expressed his unwillingness to believe the hard sentence. The noble, fiery James, like his brother John the relative and confidant of his blessed Master, had risen from his seat, and turned to the inquiring Andrew, and to the pious, silver-haired Bartholomew, with both hands pointing to the other end of the table, as if he said,—"Do you hear, my brethren, this hard unintelligible saying of the Lord?" But there, at that other end of the table, sat Judas Iscariot, leaning backwards to the pensive John, and holding the purse in his right hand with which he had just overturned the goblet. The question, "Lord, is it I," was not yet to be read in the countenance of any of them, for they were still in the first burst of amazement, into which those sad prophetic words had thrown them, still unable to believe fully their dreadful import; all except Judas, in whose every feature lurked the damning secret, and who, in the dread of detection, had just overturned the cup. Thomas stood behind Simon, with the bent finger raised, as if asking, how such malice could be conceived, and showing its impossibility; while the quiet, child-like Lebbeus, brother of James Alphæus, with the folded hands upon his breast, looked as though he said, "Master, in me is no guile!" Philip, the philanthropic Philip, had risen from his seat at the other end of the table, and, leaning forward before the musing Mother, with both hands supported upon the table, gazed upon the scene in dumb and wondering expectation.

After this manner Leonardo da Vinci saw the Lord and the twelve Apostles. His senses forsook him; he sank upon the pavement; and, when the monks returned from the chapel, they found him senseless upon the threshold of the refectory.

"Oh, why did they waken me with their essences?" he exclaimed upon the following day, as he paced restlessly to and fro in his chamber: "it was well with

me. I have beheld the glory of my Lord and His Apostles! But with what colours shall I paint them? It is impossible!" Still, though he suffered much from a timid anxiety, he was now in possession of a plan for his work, and everything stood in living reality before him, as he had beheld it in his holy trance, and he was resolved thus to paint it, and not otherwise. Immediately after the Easter festival, therefore, he began his work. The refectory was locked, and no one allowed ingress so long as Leonardo painted. Only the prior peered closely after him whenever he came and went, if haply he might discover from his countenance with what success the work proceeded. At first this occasioned Leonardo little annoyance, and, in the excitement of his work, he passed and repassed the monk almost without noticing him. As, however, there seemed to be no end of this spying and watching, and as every day the malice of the prior, whose hateful visage and satanic smile never failed to encounter him, became more apparent, the Master entered the refectory in bitterness, and left it in fury. "Wait only, thou Iscariot!" he once mentally exclaimed, in a fit of ungovernable rage, "wait only a short time longer, and thou shalt have enough to satisfy thee as long as thou livest." And with these words, uttered almost unconsciously, he at once hit upon the means and manner of his revenge. His plan was this,—first to finish painting the eleven, then to paint Judas, for whom he had now obtained something more than an ideal original, and then, when with this he had appeased his wrath—then, last of all, the Lord himself.

But how dare a mortal hope to unite the extremes of light and darkness without some intervening middle tints? By what means shall human art acquire the power of depicting, first, the personification of spiritual deformity, and, immediately afterwards, the perfection of spiritual beauty? This vain attempt cast a stumbling block in Leonardo's path, which rendered the completion of his work impossible. Summer and autumn were past, and winter had already covered nature with a mantle of silence and shadows. The eleven were finished, and stood depicted upon the wall in lines of living glory, as he had seen them on the night of Maunday-Thursday. He had sated his fury and revenge by the representation of the traitor Judas, and now came the time when he should paint the Lord; but at this part of his task his wonted powers forsook him. The graceful contour of the head, the folds of the robe, were all he could effect; for out of the bitter source from which he had called Judas into being, he could never produce the most Gentle and the most Holy. Leonardo felt his incapacity, but his darkened mind saw not the cause. The divine features of the Redeemer, as he had gazed upon them on that night, had entirely vanished from his soul. He still hoped, however, that the spirit would return; and for days together he stood in mournful contemplation before his picture, or spent the time in drawing idle figures upon the scaffold. Thus passed days, then weeks, and still the spirit for which he waited so anxiously came not, though the time appointed him for the conclusion of his work was now very near. The mild breezes of spring were already breathing over Italy; already the banks of the streams and the rushing rivulets showed a brighter verdure; and still Leonardo remained in inactive fruitless musing. But now his heart beat more anxiously. He had hitherto avoided as much as possible looking his danger in the face; its near approach, however, compelled him to do so; and the conviction settled upon his mind that he should never be able to complete his work. His bodily strength decayed in proportion to the decay of his mental energies; and his sunk eye and pallid cheek betrayed too plainly his mental sufferings. These were characters which the prior found little difficulty in reading; and this hated object, which every day more boldly and with less concealed scorn encountered him, deprived him of the last remains of his

self-possession. The trees of the forest again gave their budding tops to the gentle rocking of the breeze, and the Duke inquired more pressing about his work. Leonardo spent the little time now remaining in earnest prayer to God for support, and invoking his sainted Master to grant his promised aid. But in vain! No help appeared; and he could only tell the Duke, in answer to his repeated inquiries, that the picture should be finished upon the appointed day.

The holy week came, and his ear caught the sound of low contemptuous whisperings. His bosom-friend, Ottaviano, rushed into his room, and gasped out,—“Save thyself, Leonardo—thou art lost! The Prior knows that thou canst not paint the Christ—the Duke knows it! They talk of Buonarrotti, of the dungeon—of trial for a state crime in trampling upon the Duke's picture!—Save thyself!—Fly!”

“Yes!” exclaimed the unhappy painter. “I will fly—will shake the dust of this abhorred city, this abode of serpents and adders, from my feet, and in my own beloved Florence, where the vengeance of the More and these monks cannot reach me, begin a new, a free life!—I will!”

Here he was interrupted by the entrance of a detachment of the Duke's guard, who announced to him that he was a prisoner.

“Now all is lost!” groaned Leonardo, falling back into his chair. “My sun is set! What avails me all the labour I have bestowed upon the twelve in the refectory, when their Lord is wanting? What avails me all that I have done for thee and thy Milan, thou malicious tyrant? The enemy will come and reap where I have sown. Leonardo da Vinci will perish, and his memory with him. It is indeed bitter! Oh, how have I deserved this hard fate!”

Thus mourned the unhappy captive, for such in truth he was, though the guard that attended him were ostensibly for the purpose of protecting him from disturbance in his visits to the refectory. But these last visits proved as fruitless as many that had preceded them; and so approached the Wednesday in Passion-Week. The scaffolding was then taken down, and nothing but the curtain which concealed the picture remained. And now, when this last evening had given place to darkness and night, Leonardo tossed restlessly upon his couch of tears, and cried out,—“Andreas! Andreas! save me in this my greatest earthly need!” But all remained still; all save the death-tick in the rafters; and no Andreas appeared to the suppliant. But at midnight belated travellers saw the windows of the refectory of the Dominican Convent gleam with an unearthly light, and a gigantic shadow move to and fro upon the arched ceiling.

Maunday-Thursday at length dawned, joyous and fragrant with violets as that of the preceding year; and Leonardo rose from his couch in a quiet composed frame, becoming one of his noble nature.

At the hour of noon he was conducted to the refectory. There a dense crowd was assembled, consisting of the monks of the convent, with the dignified clergy of Milan, all the great and noble of the city, the members of the Academy of Painting, and artists of every kind and degree. The confused hum of the multitude was hushed into a deathlike silence as the Master approached. Every look was fixed upon him, as, with eyes bent upon the ground, he leaned against a pillar in a recess of the window.

A noise without announced the approach of the Duke, who soon after entered the hall, surrounded by numerous attendants; at his side walked the Prior, with a face of triumph.

“Now, Master,” said the Duke, turning to Leonardo, “if it be your pleasure, show to us the picture of the Lord's Supper, which you have completed in a year's time, in obedience to our commands. All our nobles and connoisseurs are assembled to behold what the celebrated painter of Florence has produced.”

Incapable of answering, Leonardo bowed low, and remained in a stooping posture, like one awaiting the stroke of the executioner; and at the Duke's command the curtain flew back. A general "Ah! ah!" passed through the assembly. But Leonardo still remained stooping, his eyes rooted upon the pavement. Again, after a sudden stillness, burst forth the exclamation, "Ah! ah!"

And now Leonardo timidly raised his eyes, not daring to look at the picture, and yet not able to withhold his glance from turning in that direction. But the moment the painting encountered his uncertain gaze, he started back as if struck by lightning. He looked again, and his beating heart assured him that he indeed lived: that all this was indeed reality, and not the delusion of a dream. The pearly tears gushed from his eyes; he stretched out his arms towards the picture, and exclaimed, in a voice half choked by emotion,—"Oh, Andreas! Andreas!"

Before him, in finished beauty, he beheld the twelve Apostles, with the heavenly figure of the Redeemer, as they had appeared to him on the evening of his trance. At length the Duke turned to Leonardo, and measuring him from head to foot with a long expressive gaze, said to him, "Truly, Master Leonardo, you are a great painter; and the gold chain, with which unfortunately we are not provided, shall not be wanting.—But you, Father Prior!—What say you to this? and what becomes of your penetration? Your reckoning will not bear the proof." Pale as death stood the monk, but made no answer, while louder on every side rose the noisy applause of the multitude; and, with the applause and the flattery with which the Master was overpowered, a comparing look, first singly here and there, passed from the painting to the Prior, then followed suppressed smiles and whispers, then louder murmurs, and at length all voices burst out into the malicious chorus:—"Tis he! 'Tis he!" while Ottaviano, approaching the picture, pointed with his right hand to the painting, and with his left to the Prior, and said,— "That is Judas Iscariot, who betrayed his Lord and Master!"

"Tis he! 'Tis he!" answered the delighted multitude; while the monks of the convent, concealed behind the throng, hating each other, and still more cordially hating the Prior, shouted louder than the rest, "Vere! Vere! est, est, est!" The Duke, too, pointed at the unhappy priest, distorted his mouth to a satiric grin, and said, "Est!"

A bitter pang shot through Leonardo's bosom. It is true, he had at first been gratified with the low whispered recognition of Judas; but the now triumphant shouting of the assembly disgusted him, and he felt it was a discord, destroying the harmony which the representation of a scene so blessed should have produced. It was only afterwards, when connoisseurs and lovers of the art lingered by the other figures of the picture, that more pleasurable feelings were restored, and that he heard with cheerfulness the various criticisms which were bestowed upon his work. After this manner, therefore, did Leonardo da Vinci complete his picture of the Lord's Supper, and his fame spread throughout Milan. On the same day the whole population crowded to the refectory, many of them, however, less with the intention of gazing with holy devotion upon the noble picture, than out of curiosity to see the Judas Iscariot; for the Prior had contrived to draw upon himself the dislike of all, old and young, rich and poor, chiefly on account of the baneful influence he exercised over the mind of the prince. Leonardo was completely overpowered by the burden of this fortunate day. Every one desired to see him; every one wished to entertain the man who had finished so great, so glorious a work; every one, according to his taste and his means, sought to testify his admiration, and it was late at night before the painter succeeded in escaping from the throng, into the quiet asylum of his lonely chamber.

Here, where for so long a time had been heard only sighs of hopeless anguish, flowed now unrestrained tears of joy and gratitude.

"Thou hast kept thy word, my faithful master!" exclaimed the happy one, his full heart panting for utterance. "Oh, what can I do to render myself more worthy of thy fatherly love? Henceforward my life shall be devoted to fulfilling thy instructions, even as I have practised them to this day!"

Sleep, which had so long forsaken him, gently rocked the exhausted painter in her arms; and, as he slept, Andreas appeared to him, but his countenance was grave and stern. "What!" he spake angrily, "thou hast faithfully followed my precepts!—Oh, Leonardo! Thy heart is not yet free from earthly pollution. Love your enemies,—bless them that curse you,—do good to them that despitefully use you; that is our Lord's commandment. Hast thou kept this commandment? How often have I warned thee never to enter upon thy labours in a spirit of petty malice, or to transfer to thy productions the hateful or disgusting peculiarities of an enemy? What were my words to thee in the last hour I spent upon earth?—that such labours never attain immortality. Hast thou kept the promise thou madest me, when the angel of death called me from thee? Thou turnest away in shame and remorse, for thy conscience awakens: and now the truth dawns upon thee, that the pious devotion with which thy work was begun forsook thee, when, in Judas Iscariot, thou couldst pander to a base revenge. Thy object is attained; the Prior is trampled to the earth; never again will he have it in his power to injure thee. But this object might have been reached without also insulting him in his fall. A contemptible and secondary motive—the gratification of a moment—had more weight with thee, than the completion of a perfect work. And to this moment thou hast sacrificed the immortality of thy masterpiece. Yes, Leonardo, madly and sinfully hast thou cast away the greater, to obtain the less. But thy sin was committed in a time of heart-blindness; therefore pardon, as well as punishment, has been awarded thee; pardon, in that I was permitted to hear thee, in thy hour of greatest earthly need; (for it was indeed thy greatest, both as man and artist,—henceforth none like it will darken thy horizon;) for this purpose I returned upon earth: and with the hues of heaven I painted the Lord of Glory. But I bring also thy punishment; for even this divine and sacred portion of thy picture will not escape the sad consequence of thy sin. For this is the curse of evil, that the good with which it is mingled is involved in its destruction. How could the representation of that most holy feast of love be gifted with enduring excellence, when with thine own hand thou hadst degraded it into a farce—when the laugh of vulgar malice was permitted to desecrate a scene which should only have awakened deep and solemn devotion? Therefore thy painting must perish. Yes, my son, thy picture shall perish, but not thy fame. Unskilful hands will seek to restore what time has despoiled; but, together with their touches, will all that is original gradually fall to dust. Only many thousand copies will tell to the most distant ages, how glorious that great original must have been. But none will give again the figure of the Lord as it there stands. To do this, is the pencil or graver of no mortal capable. The greatest ornament of thy painting will be lost, and in this consists thy greatest punishment. Future generations shall see only as in a dull mirror the divine countenance of the Redeemer as I have there depicted it, though even from the imperfect copy they will be exalted into a state of holy joy and admiration. But I enjoin upon thee silence regarding the assistance I have rendered thee. The knowledge that through this assistance alone thou and thy picture have arrived at such distinction,—a knowledge which thou must lock up in a grateful heart, will keep thee humble amid the incense-clouds of praise; will purify and ennoble thy mind, by imparting to it a tone of pensiveness, so that thou mayst

ever be ready to acknowledge, with humility and gratitude, that every good which befalls weak erring man comes from above. It will teach thee also to appreciate the merits of others, even when these seek thine hurt. In thy writings alone thou art permitted to bury my secret; for no one will read them. They, and all thou hast laid down in them for the well-being and happiness of mankind, shall rest quietly with the dead. The dust of solitary libraries will cover them, and thy labours shall lie hidden and useless, until, after long centuries, a few sparks will escape from these ashes, into a luxurious and all-knowing world too wise to be instructed. Thou sighest!—thou groanest! Be comforted, Leonardo. The evil that it was my duty to announce to thee is now ended. Behold now the brighter prospect, which thy loving master is permitted to display to thee.—Like gold out of the fire, thou goest forth out of this last error. Low unworthy passion shall never more stain the purity of thy life. Thou wilt drink the bitter cup of persecution, but that will only conduce to thy perfection; and while others excel as artists, thou shalt be great and honourable as a man. Me thou shalt see no more upon earth, for thou wilt not again require my aid; but, in a better land—a land of undisturbed love and felicity—we shall be reunited; and when thy last hour approaches, as I may not myself conduct thee over death's gloomy threshold, I will send thee for a token my favourite flower,—the sacred, snow-white lily; when her fragrance greets thee, remember that it is the odour of Paradise. Then, on the bosom of the noblest of his age, thou shalt sink into thy last slumber, in the arms of a king, as becometh Leonardo da Vinci! Farewell, my son!"

"Oh! tarry a moment longer!" cried Leonardo, "my beloved master! One word more respecting eternity!"

In vain! Andreas had disappeared; and when Leonardo opened his eyes, the early dawn of Good Friday glimmered on the walls of his apartment.

Strengthened and refreshed, a new life seemed to open before him. Sentence had been passed upon his picture, but it disturbed him not, for he felt that it was just. But the future which his master had revealed to him awakened in his heart a feeling of noble exultation, softened by a vein of tender melancholy. From that time forward his life was passed in Milan, in uninterrupted peace, and the esteem of his fellow-citizens, until his patron, the Duke, betrayed by his own crooked policy into the hands of Louis XII., was carried prisoner into France. Upon this, Leonardo left Milan, and returned to his darling Florence, where, in company with Michel Angelo Buonarrotti, he produced many wonderful pictures. Michel Angelo soon left Florence and went to Rome, where, together with Raffaello Langio, he became engaged in those important works which still shed such lustre on the names of both.

There were times when Leonardo da Vinci longed also to visit Rome, that his pencil might contribute to its decoration; and for this purpose he travelled thither in the suite of Julian de Medicis. But the enmity of Buonarrotti, who had already acquired firm footing there, together with other circumstances, occasioned him so much sorrow and mortification, that he very shortly left Rome. But all these mortifications and persecutions he endured with the greatest mildness; never again degraded his noble art to be the avenger of his private wrongs, and lived, warmly loved and esteemed, to an advanced age. It was then that he received the invitation to visit France. His hand, however, had now lost its firmness; he felt his bodily powers were decayed, and no longer capable of calling into existence the once brilliant picturings of his fancy: he consigned his pencil, therefore, to eternal rest; while, honoured and beloved by old and young, high and low, he enjoyed a green old age. And when at length the weakness and infirmities of seventy-five years confined him at Fontainebleau to a sick-bed, and his eyes became dim, his soul longed for the approach

of that last hour which was to unite him with his faithful master in the abode of the blessed. One day, as he lay upon his couch in silent devotion, it seemed to him as if he heard the tones of an organ floating on the still air, accompanying the blessed words of Institution in the Holy Eucharist, as he had heard them on the threshold of the refectory in the Dominican convent at Milan; he perceived also that odour of Paradise, which Andreas had given him for a token. Joyfully he lifted his fainting head, and gazed through the opening door a garland of lilies, with their fragrant, snow-white bells, was borne into the room,—they were the lilies of France. The master sank back, smiling, whilst over him was whispered—

Quando corpus morietur,
Fac ut animæ donetur,
Paradisî gloria! *

He breathed his last in the arms of the noble, chivalrous King of France, Francis the First.

DUFAVEL'S ADVENTURE IN THE WELL.

ONE morning, early in September 1836, as Dufavel, one of the labourers employed in sinking a well at a place near Lyons, in France, was about to descend in order to begin his work, one of his companions called out to him not to go down, as the ground was giving way, and threatened to fall in. Dufavel, however, did not profit by the warning, but, exclaiming, "I shall have plenty of time to go down for my basket first," he entered the well, which was sixty-two feet in depth. When about half way down, he heard some large stones falling; but he nevertheless continued his descent, and reached the bottom in safety. After placing two pieces of plank in his basket, he was preparing to reascend, when he suddenly heard a crashing sound above his head, and, looking up, he saw five of the side supports of the well breaking at once. Greatly alarmed, he shouted for assistance as loudly as he was able; but the next moment a large mass of the sandy soil fell upon him, precluding the possibility of his escape. By a singular good fortune, the broken supports fell together in such a manner, that they formed a species of arch over his head, and prevented the sand from pouring down, which must have smothered him at once. To all appearance, however, he was separated from the rest of the world, and doomed to perish by suffocation or famine. He had a wife and child, who now came into his mind, and the thought of them made him feel still more bitterly his imprudent obstinacy in descending into the well, after being warned of the danger to which he was exposing himself.

But although Dufavel regretted the past and feared for the future, he did not give way to despair. Calm and self-possessed, he raised his heart in prayer to God, and adopted every precaution in his power to prolong his life. His basket was fastened to the cord by which he had descended; and when his comrades above began to pull the rope, in the hope of drawing him up to the surface, he observed that, in their vain efforts, they were causing his basket to strike against the broken planks above him in such a manner, as to bring down stones and other things. He therefore cut the rope with his knife, which he had no sooner done, than it was drawn up by those at the top of the well; and, when his friends saw the rope so cut, they knew that he must be alive, and determined to make every exertion to save him.

The hole made by the passage of this rope through the sand that had fallen in, was of the greatest use to Dufavel: through it he received a supply of fresh air, and, after a while, his friends contrived to convey food to him, and even to speak to him. Of course he was in utter darkness; but he was enabled, in a curious manner, to keep a reckoning of time. A large fly was shut

* Literally,—"When the body shall die, grant that to the soul may be given the glory of Paradise."

up with him, and kept him company all the time that he remained there. When he heard it buzzing about, he knew that it was day, and when the fly was silent, he knew that it was night. The fly boarded as well as lodged with him: he was as careful as he could not to interrupt it while taking its share of his meal; when he touched it, it would fly away, buzzing as if offended, but soon return again. He often said afterwards, that the company of this fly had been a great consolation to him.

More skilful persons than the poor labourers of the village of Champvert were soon engaged in the attempt to liberate Dufavel. The municipal authorities of Lyons procured the assistance of a band of military miners, who, under the direction of experienced officers, began to form a subterranean passage for the purpose of relieving him. Prayers for his safety were daily offered up in the churches of Lyons, and the most intense interest prevailed: it was found necessary to erect a barricade, and station a guard of soldiers round the scene of the accident, to keep off the flocking crowd from the neighbourhood, all eager to obtain news, and see what was being done.

The cavity at the bottom of the well, over which the wooden rafters had so providentially formed a sort of roof, was at first about seven feet in height; but owing to the sand constantly running through, and pressing down the roof from above, by the third day the space became so small, that the poor man could no longer stand, or even sit upright, but was crushed upon the ground in a peculiarly painful manner, his legs doubled under him, and his head pressed on one side against his left shoulder. His arms, however, were free, and he used his knife to cut away such parts of the wood work as particularly incommoded him, and to widen the hole the passage of the rope had made. Through this hole, by means of a small bottle, soup and wine were let down to him, and, after a few days, what was quite as important, a narrow bag to receive and bring to the surface the constantly accumulating sand, which must soon have smothered him, if this means of removing it had not been devised, and he had not had strength and energy for such a painful labour as the constantly filling and refilling the bag soon became. Of course, any pressure from above would have forced in the temporary roof, so that nothing could be attempted in the way of removing the mass of sand, &c., that had fallen in. They dared not to touch the surface above; but they contrived, by means of a tube, to speak to him. A cousin of his, himself a well-digger, was let down for this purpose. This man spoke to Dufavel, and assured him the miners were making progress, and would soon reach him: he inquired after his wife and child, and charged his cousin to tell her from him, to be of good cheer, and not lose heart: at this time he had been a week in the well.

Day succeeded day, and still the expectations of the miners were deceived. They worked night and day, but such was the treacherous nature of the soil, that neither pickaxe nor shovel could be used: the foremost miner worked upon his knees, inserting cautiously a flat piece of wood into the ground, and afterwards gathering up with his hands, and passing to those behind him, the sand which he thus disturbed. On the twelfth day of his imprisonment, they calculated they were only twelve inches from him, and yet it took them two days longer before they were able to reach him. Every minute the ground was giving way; and it sometimes took them many hours to repair the damage that a single moment had produced. Besides, they felt it necessary to proceed with the utmost caution, when they approached Dufavel; for there was great reason to fear, whenever an opening was made, the mass of sand above his head would fall down and suffocate him. At length, about two o'clock in the morning of Friday, 16th September, they made a small opening into the well, just above his shoulders. The poor man shouted for joy,

and was able with his knife to assist in extricating himself. He was carefully conveyed along the horizontal gallery, and wrapped in blankets before he was drawn up into the open air. Several medical men were in attendance, and one of them had him conveyed to his house, and put to bed.

We will not attempt to describe Dufavel's happy meeting with his wife, nor the tears of joy which he shed over his infant boy, who did not at first recognise him, muffled up as he was obliged to be to protect him from the cold, and his chin covered with a beard of more than a fortnight's growth. In the evening, he was so well, that Doctor Bienvenu consented to his being conveyed to his own home; and he was accordingly transported thither in a litter, attended by a great concourse of happy and thankful spectators.

Select Oriental Tales.

I. THE PAIR OF SLIPPERS.

THERE once lived in Bagdad a merchant, named Abu-Casem, who was quite notorious for his covetousness. Notwithstanding his great wealth, his clothes were all in rags and tatters. His turban was composed of a large cloth, whose colours were no longer distinguishable; but, above all the other articles of his dress, his slippers attracted everybody's attention. The soles of them were armed with huge nails; the upper leather was composed of as many pieces as a beggar's cloak; for, during the ten years they had been slippers, the cleverest cobblers of Bagdad had used all their skill in fastening the shreds together. Of necessity, therefore, they had become so weighty, that when people wanted to describe anything very heavy, they compared it to Casem's slippers.

As this merchant was one day walking through the great bazaar of the city, a considerable stock of glass was offered to him a great bargain, and he very gladly agreed to purchase it. Some days afterwards, he heard that an unfortunate dealer in precious balms was reduced to sell only rose-water, as a last resource. He turned this poor man's misery to account, bought all his rose-water for half its value, and was consequently in the best of humours.

It is the custom of Oriental merchants, when they have made a successful bargain, to give a feast of rejoicing; but this our niggard would not do. He thought it more profitable to bestow a little extra indulgence upon himself; and therefore he went to the bath, a luxury to which he had not for a long time treated himself. Whilst he was taking off his clothes, one of his friends (so, at least, he called him, but such niggards seldom have a friend) said to him, that it was quite time for him to leave off his slippers, which had made him quite a by-word in the city, and buy a new pair. "I have been thinking of it for some time," answered Casem; "but, when I look well at them, they are not so very bad, but that they may do a little more service." Speaking thus, he undressed, and went into the bath.

Whilst he was there, the Cadi of Bagdad entered, and because Casem was ready before the Judge, he went out first. He dressed, but sought in vain for his slippers. Another pair stood where his own bought to have been, and our careful man soon per-

sued himself that the friend who had given him such good advice while he was undressing, had made him a present of these new ones. He put them on with much satisfaction, and left the baths with the intention of thanking his friend for them.

But, unhappily, the slippers belonged to the Cadi; and when he had finished bathing, his slaves sought in vain for them; they could only find in their stead a miserable pair, which were immediately recognised as Casem's. The porter soon ran after him, and brought him back to the Cadi, as detected in a theft. The Judge, provoked at the unblushing avarice of the old miser, immediately sent him to prison; and, in order to avoid the open shame due to a thief, he had to pay richly: the law condemned him to give the worth of a hundred pair of slippers if he would escape with a whole skin.

As soon as he was safe out of gaol, he revenged himself upon the cause of his trouble. In his rage, he threw the slippers into the Tigris, which flowed beneath his window, so that he might never set eyes upon them again; but it was to be otherwise. A few days afterwards, some fishermen, on drawing up their net, found it unusually heavy: they thought they had gained a treasure; but, alas! nothing was there but Casem's slippers, the nails of which had torn the net so much, that it would take whole days to mend it.

Full of indignation against Casem and his slippers, they threw them in at his window, which was just then open; and as, unluckily, all the flasks of beautiful rose-water which he had bought were neatly ranged beneath the window, those heavy iron foes fell upon them, the bottles were broken, and all the rose-water spilt upon the floor.

Casem's horror, when he entered his apartment, may be better imagined than described. "Detestable slippers!" he exclaimed, tearing his beard, "you shall not do me any further mischief." He took a spade, and ran with them into his garden, where he hastily dug a hole to bury his slippers; when, unhappily, one of his neighbours, who had long meditated some mischief against him, happened to look through his window, and saw him hard at work, digging this hole. Without delay, he ran to the Governor of the city, and told him, as a secret, that Casem had found a great treasure in his garden. This was quite enough to arouse the Governor's cupidity; and it was all in vain that our miser declared he had not found anything, but had only buried his old slippers. In vain he dug them up again, and brought them forth in presence of the Judge; the Governor had made up his mind to have money, and Casem was obliged to purchase his release with a large sum.

In utter despair, he left the Governor's, carrying his expensive slippers in his hand, while in his heart he wished them far away. "Why," said he, "should I thus carry them in my hand to my own disgrace?" So he threw them into an aqueduct not far from the Governor's palace. "Now," said he, "I shall hear no more of you; you have cost me money enough—away with you from my sight!" But, alas! the slippers stuck fast in the mud of the aqueduct. This was enough; in a few hours the stream was stopped, the water overflowed; the watermen ran together, for the Governor's cellars were inundated, and for all this trouble and misfortune Casem's slippers were answerable! The watermen soon discovered the unlucky cause of the mischief, and as quickly made it known. The owner of the

slippers was taken into custody, and as this appeared to be a vicious revenge upon the Governor, he was sentenced to atone for it by paying a larger fine than either of the foregoing ones. But the Governor gave the slippers carefully back to him.

"What now shall I do with you, ye accursed slippers?" said poor Casem. "I have given you over to the elements, and they have returned you, to cause me each time a greater loss; there remains but one means—now I will burn you."

"But," continued he, shaking them, "you are so soaked with mud and water, that I must first lay you to dry in the sun; but I will take good care you do not come into my house again." With these words he went up to the flat roof of the house, and laid them under the vertical rays of the sun. Yet had not misfortune tried all her powers against him; indeed, her latest stroke was to be the hardest of all. A neighbour's pet monkey saw the slippers, jumped from his master's roof on to Casem's, seized upon and dragged them about. While he thus played with them, the unlucky slippers fell down and alighted on the head of a woman who was standing in the street below. Her husband brought his grievance before the Judge, and Casem had to atone for this more heavily than for aught before, for his innocent slippers had nearly killed one of his fellow-creatures. "Just Judge," said Casem, with an earnestness which made even the Cadi smile, "I will endure and pay all and everything to which you have condemned me, only I ask your protection against those implacable enemies, which have been the agents of all my trouble and distress to this hour—I mean these miserable slippers. They have brought me to poverty, disgrace, ay, even to peril of my life; and who knows what else may follow? Be just, O noble Cadi, and make a determination that all misfortunes which can be clearly ascribed to the evil spirit which haunts these slippers, may be visited upon them, and not upon me."

The Judge could not deny Casem's request: he kept those disturbers of public and private peace in his own possession, thinking he could give no better lesson to the miser than this which he had now learnt at so much expense, namely, that it is better to buy a new pair of slippers when the old ones are worn out!

Poetry.

[In Original Contributions under this head, the Name, real or assumed, of the Contributor is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

TO THE FRINGED GENTIAN.

Thou blossom, bright with autumn dew,
And coloured with the heaven's own blue,
That openest when the quiet light
Succeeds the keen and frosty night;
Thou comest not when violets lean
O'er wandering brooks and springs unseen,
Or columbines, in purple drest,
Nod o'er the ground-bird's hidden nest.
Thou waitest late, and com'st alone,
When woods are bare and birds are flown,
And frosts and shortening days portend
The aged year is near its end.
Then doth thy sweet and quiet eye
Look through its fringes to the sky,
Blue—blue—as if that sky let fall
A flower from its cerulean wall.
I would that thus when I shall see
The hour of death draw near to me,
Hope, blossoming within my heart,
May look to heaven as I depart.

Bryant.

THE ORIGIN OF THE MOSS-ROSE.

(From the German.)

BY MRS. ABDY.

A SPIRIT of air gaily roamed o'er the flowers,
Sleep fell on his eyelids—he needed repose,
And sought for a refuge from dews and from showers,
Beneath the rich leaves of a beautiful rose:
The Spirit awakened, and eager to grant
Some boon to the flower that had saved him from harm;
“Oh! tell me,” he murmured, “thy wish or thy want;”
“I ask,” said the rose, “one additional charm.”

The Spirit bewailed the fair flower's discontent;
“I may not,” he sighed, “to improve thee presume;
How balmy, how sweet, is thy exquisite scent!
How lovely thy shape! and how vivid thy bloom!”
Yet still to his promise resolved to be true,
His fancy he tasked some new grace to propose,
Then smiled, waved his wings, and exultingly threw
A veil of soft clustering moss o'er the Rose.

The Rose's vain sisters rejoiced in their pride,
That their charms had not suffered so grievous a loss;
But brief was their triumph—all passed them aside,
To gaze on the Rose with the vesture of moss;—
Revealing this truth—that though gladly we greet
Attractions and grace that our senses enthral,
We never can deem them entirely complete,
Till humility casts her soft veil o'er them all.

THE BEST EPITAPH.

BY S. W. PARTRIDGE.

IN yon wide churchyard's meanest nook,
Where sunbeams rarely fall,
A lonely grave o'ershadowed lies
Beneath the ivied wall.

No pompous stone records the name
Or virtues of the dead;
An osier-girded sod alone
Betrays the lowly bed.

Yet oft at eve the village poor
To that lone spot repair,
And wear the grass that grows around,
And weep in silence there.

In vain proud urns and monuments
Invite their feet to stay;
As onward, to the nameless grave,
They urge their mournful way.

Ah! what avails the record vain,
Whence sprung? to whom allied?—
Too often but the incense base
Which Interest burns to Pride.

Thine, grandeur, be the crested tomb,
The praises insincere;
“The poor man's friend” my title be,
My epitaph—his tear.

Miscellaneous.

“I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them.”—*Montaigne*.

SAGACITY OF A CART HORSE.

DIRECTLY opposite my residence a church is being erected, and during its progress temporary sheds have been put up for the use of the workmen, and one as a stable for a very fine cart horse, the property of the builder. The extreme docility of this animal attracted my attention to him, and since that some of his manœuvres appear to me to border strongly on the sense and the powers of reflection. His stable was erected at one end of the church: on one occasion two poles had been fastened across his usual road to it, in order to strengthen the scaffolding; he went up,

tried the strength of these first, then finding that he could neither get over nor under, he turned round, and, at a full trot, made the circuit of the church, and got to the other side of the poles by another path. Here was no straying about, and at last finding his way, but a fixed resolve to go round, as if an idea had at once flashed across his mind. Another day, a waggon had been put standing in the narrowest part of his road to the stable: he looked and tried each side, but found there was not space enough for him to pass; he took very little time for consideration, but put his breast against the back part of the waggon, and shoved it on to a wider part of the road, then deliberately passed on one side to his stable. Could human wisdom have done better? But to crown all his manœuvres, I mention the following as being, I consider, very extraordinary. During the winter a large wide drain had been made, and over this strong planks had been placed for our friend, the cart horse, to pass over to his stable. It had snowed during the night, and froze very hard in the morning. How he passed over the planks on going out to work I know not, but on being turned loose from the cart at breakfast, he came up to them, and I saw his fore-feet slip; he drew back immediately, and seemed for a moment at a loss how to get on. Close to these planks a cart-load of sand had been placed; he put his fore-feet on this, and looked wistfully to the other side of the drain. The boy who attends this horse, and who had gone round by another path, seeing him stand there, called him. The horse immediately turned round, and set about scraping the sand most vigorously, first with one foot then the other. The boy, perhaps wondering what he would be at, waited to see. When the planks were completely covered with sand, the horse turned round again, and unhesitatingly walked over, and trotted up to his stable and driver.—*Sporting Magazine*.

EXCELLENCE OF THE BRITISH POLITICAL SYSTEM.

OUR political system is placed in a just correspondence and symmetry with the order of the world, and with the mode of existence decreed to a permanent body composed of transitory parts; wherein, by the disposition of a stupendous wisdom, moulding together the great mysterious incorporation of the human race, the whole, at one time, is never old, or middle-aged, or young, but in a condition of unchangeable constancy, moves on through the varied tenor of perpetual decay, fall, renovation, and progression. Thus, by preserving the method of nature in the conduct of the State, in what we improve we are never wholly new; in what we retain we are never wholly obsolete. By adhering in this manner, and on those principles, to our forefathers, we are guided not by the superstition of antiquarians, but by the spirit of philosophic analogy. In this choice of inheritance, we have given to our frame of polity the image of a relation in blood; bending up the constitution of our country with our dearest domestic ties; adopting our fundamental laws into the bosom of our family affections; keeping inseparable, and cherishing with the warmth of all their combined and mutually-reflected charities, our State, our hearths, our sepulchres, and our altars.—*Burke*.

THE CHANCES OF FORTUNE.

"It cannot be too often repeated," observes Madame de Staël, "that the experience, whether of individuals or of nations, furnishes to them but one favourable moment for securing good fortune or power; that moment must be seized as it flies; for the happy chance seldom returns a second time in the course of the same destiny; and, to him who has let it slip, there remains for the rest of his life only the bitter experience of continued reverses." These words are little more than a paraphrase of the well-known passage of Shakspeare, which we cannot doubt Madame de Staël had in her eye when she wrote them.

"There is a tide in the affairs of men
Which, taken at the flood, leads on to fortune;
Omitted, all the voyage of their life
Is bound in shallows and in miseries."

We should be sorry to acquiesce, without some reservation, in the view of our destiny exhibited either in the lady's prose or the poet's verses. We cannot think so hardly of our common lot, as to represent to ourselves the whole family of man as receiving, among the innumerable openings of fortune presented to each during his three score and ten years, but one that leads to happiness, and enjoying but one fleeting moment of opportunity to enter upon it. What fearful odds would there be against any man's escaping the shoals and miseries of so dubious a voyage! What hope could any of us reasonably entertain, that, among the numberless accidents of a changeful life, he should have the skill, or presence of mind, or good fortune, to seize upon the one right chance at the one right time?

We must not, however, rashly impeach the philo-

sophy of our own matchless poet, or of the acute and ingenious Frenchwoman. Principles may be sufficiently true for all the purposes of a limited or occasional application, which become false and dangerous if held forth as universal laws. We may safely admit, that it would be false to lay it down as one of the fixed laws of our being, that, one chance of success suffered to pass unimproved, the shadows of disappointment and reverse sink down upon our fortunes, never to be lifted off or dispersed, for it would be contradictory of our daily experience; and that it would be, moreover, a most mischievous thing for any man to believe in as a general law, because tending to induce a fatalism of the most disheartening character, and to paralyse every effort to redeem the errors of youth and inexperience; and yet leave ourselves room for asserting, that, taken in a restricted sense, and applied to a special description of circumstances, it is a principle founded in sound philosophy, and susceptible of a most salutary application to the business of life, that an opportunity for securing any of fortune's great prizes, once presented and not taken advantage of, seldom or never returns a second time to the same man.

The lines quoted from Shakspeare are placed by him in the mouth of Brutus, immediately before the battle of Philippi. The philosophic Roman employs them to vindicate his determination, in opposition to the advice of his friend and colleague Cassius, to peril the fate of his cause upon the issue of a decisive battle. The disastrous result would appear to give rather a denial than a practical confirmation to the soundness of the application of the principle in that particular case. Indeed, it may be doubted, whether the main intention of the character of Brutus, as drawn by Shakspeare, was not to illustrate the inadequacy of mere theoretical wisdom, unsupported by practical experience, to grapple with the difficulties of a great emergency, and the danger of rashly applying the refined conclusions of philosophy, gained in the closet by mere study and reflection, and without a sufficient acquaintance with the qualities and powers of the material agents with which they are to be wrought out, to the actual business of life. He, most probably, meant us to infer, that the plain common-sense and military experience of Cassius, the practised soldier and man of the world, would have been a safer guide in a question of mere strategy, than the well-sounding speculations of his philosophic friend, who, with the characteristic dogmatism of a mere theorist, bearing down all opposition by the weight of his unrivalled moral character, and confident in the soundness of his judgment, not so much from overweening self-conceit as from absolute inexperience, assumed the guidance of affairs which he had not sufficient practical knowledge to direct. We may, therefore, with much likelihood, contend that, so far from asserting unqualifiedly, and to its extreme extent, the principle expressed in the passage quoted, it was part of Shakspeare's object to expose the danger of rashly or ignorantly applying such speculations to actual affairs. He rescues it from undue contempt, by putting it into the mouth of the wisest and most philosophic character he had ever drawn; but he makes the result show that it is not by acting upon nice quilllets of philosophy, but by the skill derived from actual experience, that an important enterprise can be conducted to a successful issue.

Madame de Staël unquestionably announces the principle broadly and unqualifiedly, as one that she herself fully believes in. The absence of qualification, however, may very fairly be taken for one of those artifices of rhetoric, proper to writings of the class to which the work belongs in which the passage in question is to be found, which are intended to give emphasis to a statement which, if guarded by all the reservations required by strict logic in works of pure reasoning, would fall coldly and ineffectually on the ear. In works of a declamatory character, one of the most effectual means of persuasion is the unhesitating confidence with which the writer commits himself to assertions which will not bear a very minute examination; it shows him to be in earnest; and we give him credit for having satisfied himself on better grounds than he is able to show to us; nay, the slight touch of paradox involved rather enlists our sympathies than shocks our reason. We must, therefore, not reject such a statement of a principle or philosophical law as unworthy of attention, because it will not bear a kind of criticism for which it was never intended. In the present instance, Madame de Staël is speaking of the errors committed by the Constituent Assembly, which gave its first form and body to the French Revolution. She represents it as having had the destiny of France placed in its hands, during the interval between the fall of the Bastille on the 14th of July, and the removal of the Royal Family and Legislature from Versailles to Paris, on the 6th October, 1789. That interval rightly used, she contends, would have enabled it to secure the liberties and future welfare of France; but, having been suffered to pass unimproved, its uses neglected or misunderstood, a second opportunity of saving their country, for the same men, was not within the range of reasonable probability. So applied and limited, we cannot refuse our assent to the proposition, or, at all events, brand it as false in principle or mischievous in practice.

There is a kind of superstition in such matters, which most men have a tendency to cherish. The wisest of us has some hankering after a belief in lucky days, in favourable or unfavourable omens, in the existence of more things in heaven and earth, than are dreamt of in our philosophy. We hold more firmly than we are often aware of, by the persuasion of some mysterious and unseen agency, undefined even to our own minds, and which we should not care to be asked to define,—some power whose seat is higher than earth, yet lower than heaven,—a fate—which gives a direction to our fortunes, and governs the results of our actions, on principles apparently capricious, or at least inexplicable to our reason. It is this which, in former days, gained for the reveries of judicial astrology, admission into minds at the same time fully imbued not merely with philosophy, but with sound religious truth; and which still, although, in these matter-of-fact times, every year clears away some of the not displeasing twilight which used to hang over certain regions of our belief, leads many a devout Christian, in every walk of life, to mingle with his habitual reliance upon the good providence of God, a clinging belief in something else, as influencing his destiny—he does not well know what,—which it would greatly disturb his religious feelings to be compelled to embody to his own mind by giving it a name.

It may be partly some touch of this superstitious feeling, which causes us to hold strongly by the persuasion that every man's life has its turning point, its crisis, which colours, for good or evil, the remainder of his career. It is a belief, however, which we are fully persuaded has more than superstition to rest upon, and forms part of the creed of almost every observer of human life; not in the extravagant sense which we have already disclaimed, as dooming us to but one chance of happiness or success against numberless chances of misery and disappointment, but according to a more sober and regulated understanding of it. The best evidence of the general acceptance of such a persuasion, is the large proportion of the most successful works of fiction whose interest hinges upon circumstances bearing more or less directly upon it. The authors of such works delight to fix our attention upon some one event, often an apparently trivial occurrence, from which issues an influence, good or evil, as the nature of the narrative may require, which pervades its whole course; and the watching for the return of this influence at every important turn of the story, with the feeling of gratified surprise at its occasional, often unexpected, appearance, constitutes one of the most exciting pleasures of that description of reading. Such a mode of viewing our condition and fortunes would not continue to please, had it not some foundation in truth and nature.

The biographies of several of the men who have risen to the highest professional eminence, furnish us with striking illustrations of the road to high fortune having been entered upon at some unexpected turning, by a narrow opening, which common observation would have overlooked,—which common sagacity would have deemed a deviation from the true path—from the difficulties of which common industry or courage would have shrunk. Such things we generally call fortunate chances, and, in one sense, they are so; they are opportunities for distinction or success, which no merit, no genius, no industry, can create. But they are not so rare in their occurrence, as is the combination of endowments required to seize hold and make a right use of them. Some there may be, the very step-children of fortune, to whom they are never presented; but how much more frequently is it the case, that we have been either dreamingly unconscious of their presence, or too indolent to take advantage of them, or wanting in skill rightly to use them! It is the combination of sagacity to perceive the opportunity, energy and activity to act upon it, presence of mind to act exactly at the proper moment, and skill to turn it rightly to advantage, which makes the fortunate man—the man whom one of those things called lucky chances raises to wealth and distinction.

We may suppose the aspirants for the gifts of fortune to be like men stationed at different points by the side of a road, along which the goddess passes in her chariot at a swift and steady pace, standing still for no one, but ready to carry forward to a happy goal whoever can spring up and take his seat by her side. Noiseless in her approach, she must be carefully watched for; and he whose mind has been occupied by a hundred frivolities, finds that she has passed him long before he dreamt that she was near. The rash man springs too soon, and, falling under the horses' feet, lies stunned and senseless in the dust; then, recover-

ing himself after she is far out of sight, limps off a cripple for life. The timid man, fearing a similar mischance, shakes his head and turns despondingly away. The indolent man would gladly step up if she would only stop for a moment, but he cannot risk such a leap; he prefers taking his chance of what may yet cast up by way of conveyance less difficult of entrance. The unready, or irresolute man, gets up with the full purpose of doing what man can in the matter; he considers how he shall best prepare himself for the spring; which leg he shall put foremost; whether he will leap before she has quite come up to him, or after she is a little past, and various other matters; but before he can make up his mind on the half of these points, she has flown past, and his opportunity is gone. But one man alone of many, watchful, resolute, composed,—neither hurrying before the time, nor lagging behind it,—well prepared beforehand, and having accurately calculated his distance,—with a firm foot and fearless spirit, springs in just as she is passing by him, and is borne onward in triumph and safety to receive the reward of his courage and skill. For the rest, some trudge onwards on foot, some are taken up by other and humbler conveyances, and deposited at a humbler resting-place than their fortunate companion has been received into; some get foundered in the mud, and perish by the way.

Taking, then, a somewhat lower ground than Shakspeare and Madame de Staël have done, we may safely assert it for a truth, without meaning to discourage any attempt to retrieve past errors, or to make up for past neglect, that one opportunity allowed to slip past unimproved, a second will not be presented which can be turned to the same account. The tide having turned, does not flow again for that man; it is an ebb which continues to recede till the day of his death. There is no day on which something may not be done, but less than might have been done the day before; and far, far less than might have been done had the tide been taken at the flood.

The practical lesson which we think ought to be drawn from this, is the *value of present time*; the portion of time with which alone, or at least mainly, we have to do. It is difficult, but it is necessary, to fix upon our minds the conviction, that not some important moment yet to come, but the ordinary common-place-looking one now actually in our hands, may perchance be the turning point of our fortunes. If, while idly lamenting the past, or listlessly speculating upon the future, we suffer the present to pass away without being turned to its proper account, we suffer, beyond all question, a loss which can never be recovered; and, for anything we can tell, we are letting slip the one great chance of our lives. For it has this peculiarity, that we never know when it is presented to us. It sounds no trumpet before it to call our attention to its approach. It comes silently and stealthily upon us, bearing nothing about it to distinguish it from the crowd of every-day times and occurrences by which it is surrounded. To make sure of it we must make sure of all. How many a man of genius and accomplishment is there now wearing out his life in the struggle to make way against a receding current, who might have been standing on the very topmost pinnacle of fortune, had he been sufficiently watchful to take the tide at the flood!

BEAUCHAMPS.—A TALE.

CHAP. II.

(Continued from page 20.)

At the time of my leaving Knightswood, Mary was, I think, about fifteen; Mark Gifford four years older. Their mutual affection seemed so to have grown with their growth, so deeply to have taken root in the heart of each, and so likely to ripen into a full and lasting attachment, that, as I before observed, the intelligence of Mark's union with Harriet Tracey took me by surprise; but enough of these reminiscences.

I resolved on visiting Bath. Julia Tracey was still unmarried; and, although she had long ceased to be an object of particular interest, she had never been forgotten; in short, there was no saying what, after all, might not happen. Discovering, however, that an old and favourite servant of Mrs. Gifford's, and whom I well remembered, was still residing at Fordover, I resolved, before leaving the country, to call upon her; partly with a view to obtain information concerning Mary Deane, of whose history I knew only, that, on the death of Mrs. Gifford, she had gone to reside with some of her father's family. From a passage in one of Mark's letters, written about that period, I feared that she had not been well provided for by her aunt; and although he had, probably, taken upon himself the care of relieving her from all embarrassments of a pecuniary nature, I could not but suspect that there were other claims, which, though gaining by independence the power, he had lost the inclination to fulfil. At all events, I wished to learn the present residence of Miss Deane; and, as the advanced age and infirm health of Mr. Penrose had obliged him to resign the care of his parish to a Curate, I knew no one more likely than old Hannah to satisfy me on that point.

To her cottage I accordingly repaired; and, on entering the neat kitchen, found it necessary, in the first place, to identify myself with the Master Harry of olden time; and next, I had to be well settled in an arm-chair, and drink currant wine, besides answering a variety of questions, before I could gain, in my turn, the slightest particle of information. After a time, however, Hannah recovering from the surprise which my entrance had occasioned, recollections of former days, of her old mistress, and all appertaining to Beauchamps, prevailed. A strange place it was now, she observed, by all accounts; for her part, she did not like to look at the tops of the high chimneys from her own back window, and therefore it was not to be thought she should ever cross the threshold. Great changes, she did hear, took place after the new lady came; the laundry turned into a servants' hall, and her mistress's little breakfast-parlour into a housekeeper's room; the main of the old pictures, too, she was told, were stowed away in the lumber-garret. Seemingly she recollected my connexion with the present family, for she suddenly checked herself, and, casting on me a glance of suspicion, added, "but, then, it don't matter what such as I think about it."

After a moment's silence, she resumed, in a more cheerful tone, "And you be'n't married, sir, yet?"

"No, Hannah, not I; the means, or the time, or something or other, have always been wanting: and Miss Deane, tell me about her; is she married?"

"No, poor dear, more's the pity."

"Then amongst all the young people whom you remember at Beauchamps and Knightswood, only two have married?"

"And they two," replied Hannah, with some asperity, "weren't paired aright."

"They were not paired, certainly, as I had myself expected; I confess that I always fancied Mr. Gifford more partial to his own cousin than to any one of mine."

"There was no fancy in the case, nor cousinship neither, for that matter; but no one could be off of

loving her, sweet pretty creature as she was; and I shal always think, sir, asking your pardon for saying so, tha Miss Tracey, or my lady, wheedled Master Mark away from her."

"I hope not so, Hannah, either."

"I should be sorry to misjudge any one, sir; but with your leave, I will tell you all I know of the matter; and when I have done, perhaps you may come to be pretty much of the same mind yourself." Then, edging her chair a little nearer to the fire, and arranging with the tongs the bits of wood of which it was composed, she continued in a more confidential tone:

"The last time Master Mark left home for the university, he seemed as fond of Miss Deane as ever. The day before he was to go, he came up to the little book-room, that you may remember; or may be, as it was at the top of the house, you might never have been in it. Miss Deane was very partial to that room, and used mostly to bide there, when not in the parlour with my mistress. There was a sight of old books in this little room, and had been from time out of mind, however they come there; Master Mark went rummaging amongst them one time when he was at home for the holydays, and got leave of my mistress to have a few shelves put up in the same room; after which he and Miss Deane sorted and set up the books. Some of them they read together, by snatches, as they could find opportunity; and some he set marks in, for her to read to herself when he was away; and many a time have I known her sit up there, perishing in the cold, because she would not anger my mistress by taking books into the parlour. To be sure, it was a pleasant sunny place enough, with two windows, one looking out into the wilderness as then was, and the other, front ways, into the pleasure ground. Miss Deane used to keep her canaries up there, and in the south window she had her myrtles and geraniums; and altogether, as I was saying, she took great delight in this room. Well, up came Master Mark; it happened that I was in the next room, which was the china closet, looking for a teapot as my mistress had been inquiring about: he did not shut the door after him, and so, presently I heard him say, how sorry he was to think that this was the last day of his being at home for a good while to come. 'Will it be longer than usual, Mark?' says she. He made answer, that most likely it would; for he thought next time he must stay up and read for his degree. I think those were his words, though I did not rightly understand their meaning; I remember thinking, there were books enough for him to read in, if that was all he wanted, without stirring from where he then was. I knew, by the sound of her voice, when she answered him, that Miss Deane was very much concerned; though she said he must, in course, know best what he ought to do; and that, for her part, she was sure he would not be absent longer than he could any ways help. 'Yes,' says he, 'Mary, you may well be sure of that; and when once I have got through my examinations, I shall lose not a moment in returning to Beauchamps. In the meantime,' says he, 'you will read what I have looked out for you; and I have left some of my own books for your amusement. I need not commend Carlo to your kindness, for you know the old saying. . . . Yes, thinks I, any one may know what that means; however, as I did not want to listen to such sort of discourse, I contrived to make a rattle amongst the china, that should let them know whereabouts I was; not but what, as the door of the china closet stood open, Master Mark might have seen me plainly enough as he came up the stairs. Master Mark! how I do forget myself: poor mistress used to be always telling me of it; she said as I should never leave off calling her nephew Master Mark; if I lived till he was as old as herself. However, that did not come true, for I have found it easy enough to say Mr. Gifford since I left Beauchamps; and it is only talking of old times, sir, that makes me go back to Master Mark."

"It sounds very natural in my ears, Hannah; pray go on."

"I have no more to say, sir, concerning that particular time. When they knew that I was within hearing, they spoke in a whisper; and after a bit, Master Mark came out, ran down stairs, and was off to the stables. When Miss Deane passed me soon after, I saw that her eyes were red, and that she had been crying, poor dear! Well, sir, things went on pretty much as usual after Master Mark's departure, and in course of time we hoped he would come back, and bide at home. My mistress expected no less; and she had the window curtains and bed furniture belonging to his room dyed, and made up quite handsome, with new fringe. Miss Deane, too, was as happy and busy as may be. She set his books, and everything he had left at home, in order; and she embroidered (braided, she called it,) a beautiful cover for his writing table; it was a pity, as I told her, it should be slopped all over with ink. But when we least thought of such a thing, there came a letter from Master Mark, to say as how he was going with Mr. Tracey to London for a week or two, and should come down to Beauchamps from thence. We heard no more for three weeks, and then he wrote again to excuse his bidding a little longer in London. He said as he was amongst old friends, all the Knightswood family being in town, which we knew before; and as how Lady Tracey was very polite, and invited him to all her grand parties. Miss Deane was sorely disappointed at hearing this letter, I could see that; and my mistress was not over well pleased; however, she soon got the better of it, and said that, after all, it was no more than right, that a young gentleman of his expectations should see something of London life before he settled down in the country; and I know that she sent him up a handsome present of money by return of post.

"It was nigh upon two months before Master Mark came down to Beauchamps; and I noticed that Miss Deane did not run out to meet him as she was used to do; she was up stairs when he arrived, and there she stayed for some little time. So, sir, when Master Mark had been into the oak parlour, and talked a bit to my mistress, he came out again, and I met him in the passage leading down to the back hall. 'Miss Deane, sir,' says I, 'is up stairs in the little book room.' He thanked me, and said he should see his cousin presently, but he wanted to know about a fishing-rod, that he had ordered to be sent down from London, and whether it was come safe. I can say nothing as to how he and Miss Deane met, but the next day she showed me a beautiful work-box, fitted up with smelling bottles and all manner of things, that Master Mark had brought her as a present from London; and glad I was to see it. However, sir, notwithstanding the work-box, and though he used to walk sometimes with his cousin, or read with her, I could see a great change in Master Mark, and that neither Miss Mary, nor any thing else at Beauchamps, pleased him as it had done. My mistress saw something of it too. I don't know as I ever knew her so much offended in my life, at least with her nephew, as she was one day at dinner, concerning the cooking of some dish; his bidding so long in London was nothing to it; and it can't be denied but she had some reason; for every thing that was sent up to table at Beauchamps was cooked according to the choicest family receipts. Besides, when Master Mark said that he preferred this dish dressed some other way, my mistress thought that Lady Tracey had set him on; but, for my part, as I told Andrew, I did not think that very likely. Master Mark used to sit a good deal in the dining parlour by himself—a reading and writing, as I suppose; till, by and by, when Sir William, and my lady, and all the rest of them came down; and then there was never a day, I verily believe, but he was at Knightswood, one part or other of it. Your eldest cousin, Mr. Tracey, married beneath himself, or in some way or other to displease his father;

and he made a sort of go-between of Master Mark, in order to obtain Sir William's pardon, and something, I conclude, to live upon. This might be one cause of our young gentleman's being so much at Knightswood; and then there was always something or another going on up there, in which his company was wanted; so it came to pass that he and Miss Deane saw but little of each other. Towards the end of that uncomfortable summer, my poor mistress had a paralytic stroke, from which she never wholly recovered. Her memory quite failed her, and she was very feeble besides; so she was never from that time left alone, either Miss Deane or myself being in constant attendance upon her; and I must do Master Mark the justice to say, that he was very attentive and dutiful to his aunt, and more mindful, as it seemed to me, of his cousin. Oftentimes he would come into the oak parlour, and say, 'Now, Mary, let me prevail on you to take a walk this fine day, whilst I stay with my aunt; and go you, too, Hannah, and look after your chickens; I will ring if you are wanted.' I remember, in particular, one afternoon, that he had persuaded Miss Deane to go out for a little air,—my mistress was asleep, or in a doze like, upon the couch, with a large screen before her, to shade off the light; and I was sitting with my needle-work near one of the windows, Master Mark having desired me to sit still, and not mind him, unless I wished to leave the room: so there I sat, and he took up the newspaper. I don't know whether the noise he made in turning it backwards and forwards disturbed her; but presently my mistress roused herself up, and, 'Where is Mary?' said she. 'Who is in the room? What are you about, Mary?' 'Mary is not here,' said Master Mark; 'I thought it would do her good to get out in the air for a little while, and she is taking a turn on the terrace.' 'Oh!' said my mistress, as if she did not quite understand his words, and was dozing off again. Just then Miss Deane came back into the room; she opened the door so quietly that my mistress did not hear her, or know that she was present. 'Mary is a good girl,' says she presently, again waking up, 'a very good, dutiful child, and may be not so well provided for as she deserves. I am too poorly to do anything now, and have no hope that I shall ever be better, or have any head for business; but what I can't do, I desire you will, Mark; whatever you think right, I leave it all to you.' Those were her very words, and I shall never forget them. As for poor Miss Deane, I thought she would have dropped; and Master Mark looked rather confused too. However he besought his aunt that she would set her mind at rest concerning Mary Deane, who had, he said, a double claim upon him for every service he could render her. Had they not been brought up under the same roof? and had she not been to him all her life as a sister? You may think, sir, that I noticed that last word; but my poor mistress made no answer; she had dozed off again, almost before he had done speaking; so he shook Miss Deane's hand, in a hasty sort of way, and went out of the room.

"After a time, my mistress, to the surprise of every one, seemed to mend. She could manage to take a turn on the terrace, steadying herself with a staff in one hand, and leaning upon Miss Deane, or her nephew, or me, with the other, just as it might happen. Sometimes she could listen whilst Miss Deane read a chapter in the Bible; and, unless she was very poorly indeed, always saw Mr. Penrose, who came up most days to read prayers. Upon the whole, she did seem a deal more comfortable; and Master Mark believed there could be no immediate danger. I told him, as I thought it my duty to do, that my mistress might have another attack at any moment; the doctor had told me as much, and also said, that most likely the next would be fatal. No doubt it was a great confinement to a young gentleman of his age, and very wearisome. So, as the family at Knightswood were going on a tour, as they call it, into Wales, he was persuaded to go along with them. He desired Miss Deane to write to him, especially if his

aunt should get worse, or if he was wanted at home, telling her, as near as he could, to what post-offices she should direct her letters; and so he went."

"Went!" I exclaimed, interrupting Hannah.

"Yes, sir, and I can't say that I was altogether sorry for it. I thought my mistress might linger on for a good many weeks, and that, as things then were, we could do as well without Master Mark as with him; except in regard to carrying my mistress up and down stairs; when, to be sure, we were always glad of his help. However, it was God's will that she should not need that, or any other earthly help, much longer. Master Mark had not been gone above ten days, when, going to my mistress's bed-side early one morning, which I always did as soon as I awoke, for I slept in her room, I found her speechless; and, before the doctor could reach the house, she had breathed her last, to the great grief of us all."

Here the faithful Hannah, although so many years had passed since the death of her mistress, was obliged for a few moments to suspend her narrative. I expressed myself sorry for having, by my inquiries, occasioned her distress, and proposed to conclude my visit some other day.

"No, sir," she replied, recovering herself; "there is no need for you to go; it does one good to talk it all over with such a kind gentleman as yourself; one who was a friend of the family, as I may say. There was none of your name, sir, that ever came to Beauchamps like as you did."

"That was no merit in me," I replied. "I had great pleasure in visiting there, and so would my cousins, also, had they been invited."

"No doubt of it; and then to have gone away, and made game of us. I ask your pardon, sir; I ought not to speak disrespectfully of your kinsfolk."

"Nor of the departed, my good friend; those to whom you allude, both found an early grave."

"And that is a true word," she replied, "and I should have thought of their untimely end before I spoke; but it is no harm to say, that my mistress always favoured you, sir, although she was by no means partial to the rest of the family."

"And I have not forgotten her kindness, nor ever shall; that is one reason why I feel an interest in Miss Deane. Tell me (if it really is not painful to you to speak on the subject) what happened next; and how poor Miss Deane was supported under such trying circumstances."

"Why just, sir, by the goodness of the Almighty; a scene of desolation it surely was; but there was too much to be done for us to sit down and think about it. When I saw the state my poor mistress was in, I rang up Dinah, the housemaid, and desired her, as soon as she came, to send off for the doctor. A few minutes after, Miss Deane, having heard the bell ring pretty sharply, came running into the room, half dressed. Between us we supported my mistress in her last agony; but, as I said before, it was soon over; and when Mr. Meadows arrived, he said that nothing could have been done to save her, if he had been on the very spot. I begged of him, seeing Miss Deane was in no state to do anything, to write to Master Mark, and would have sent the letter by an express; but Miss Deane, coming more to herself, told us that her cousin must then be on his way home, and if the letter were directed to Ross, and sent by the post, she thought it would get there just at the right time to meet him. So that was done, but we were forced, with the help of Mr. Meadows and good Mr. Penrose, who came up as soon as ever he heard of our misfortune, to make some preparations for the funeral; hoping, and expecting, however, to have Master Mark (Mr. Gifford, I should say) back, long before it could take place. It was a dismal day at Beauchamps, and a still more dismal night that which followed. We were got quite into the autumn, and the weather was stormy; the rain pelted against the windows; the wind shook the shutters, and seemed to

go moaning and lamenting all through the house. Then, between whiles, Carlo within doors, and old Towzer without, howled so piteously, one could not be off from thinking that the poor beasts were sensible of the change that had taken place. Sad enough it was for all of us, but especially for a young creature like Miss Deane. Very loth she was to go to bed; so I made a fire in the little dressing-room next to my mistress's chamber, and sat with her there. She fetched her large prayer-book; and, sitting herself down on a low stool near the fire, she read to me out of it several psalms and collects. You remember that book, sir." "Certainly, if you mean the prayer-book that I gave Miss Deane, just before I left England. It had belonged to my father, and, being too large, as well as too handsome, for my use, I left it, as a token of remembrance, for Miss Deane." "And she always set great store by it, sir; my poor mistress, too, mightily admired the book—the print was so beautiful. Well, I let her take her own way, and sit up reading; for I thought, when she was tired out she would go to bed, and have a good sleep; and so it proved; for when I went into her room at eight o'clock, thinking to take her a cup of tea from my own breakfast, I found her still asleep. So, however, we wanted Mr. Gifford. It was likely that my mistress had left some directions concerning her funeral; but, although Miss Deane knew very well where to find her will, it could not be opened, nor anything else done, more than such things as could not be delayed, before her cousin came home. In the mean time, she wrote to an elderly lady of her own name, her father's aunt, (there was no one else she knew of to write to,) concerning her own loss; and by return of post she got a very kind answer, which she showed me. This lady, and her daughter, invited her to reside with them at Kensington, (which was what my mistress had planned in her own mind,) saying, that they should be glad to see her whenever she liked to come—the sooner, the better—and though it was not in their power to offer her such a home as she had been used to, yet she should find that she was not left altogether friendless." RURAL SKETCHES; WITH HINTS FOR PEDESTRIANS.

No. III.

AFTER a few days' journey amidst such scenery and attractive objects as we have attempted to describe, the tourist will be glad to hear the early church bell ringing to welcome that day of rest which occurs after those six which are devoted to secular employments and manual labour. Some works of necessity yet claim the attention of the farm-servant: the ox and the ass must be loosed from the stall; and the lanes and the village green are busy with the cattle which are led away to watering.

In all respects, save these and the like, there is a peculiar stillness in the country on the Sunday; it is unlike the other days, when "man goeth forth to his work, and to his labour, until the evening." The fields, which yesterday were busy with persons engaged in those various occupations that fill up the seasons, one by one,—are now deserted and quiet, until the time arrives when they go up to the parish-church, where their forefathers worshipped; and then those meadows and fields, through which lay the pleasant paths which conduct them to God's house, are trod by the old and the young, and they are seen approaching in all directions—"Young men and maidens, old men and children."

But, hark! the cheerful chime of the bells reminds all that the time approaches for Divine service:

"Think, when the bells do chime,
'Tis angel's music; therefore come not late." 1

Little groups assemble in the churchyard; some engaged in discussing the weather, hazarding opinions of a change, or of a continuance of the same bright sunbeams which make glad this day of rest. Others are reading the epitaphs on the head-stones, which, by a pleasing and pious uniformity, all face to the East: and if children ask us why they do so, it is sufficient for us to tell them, and for them to know, that it has been the custom so to place the dead, facing to the East, in allusion to Him who is the resurrection and the life; and as the body of the departed reposes, awaiting the sound of the last trump, it is meet that "even in his grave, thither still he directs his slumbering eye, in quiet expectation of awakening to behold in the same direction the second coming of his Lord." 2

But the bells cease their chime, and the last loiterers in the churchyard enter the temple gates. All irreverence is checked in him in whom it might be otherwise unsubdued, by the Scriptures, which meet his eyes as he crosses the threshold:

"This is none other but the House of God; this is the gate of Heaven."
"We will go into His tabernacle; and fall on our knees before His footstool."
"For the Lord is a great God, and a great King above all Gods."

And as the priest commences to read one or more of those sentences of the Scriptures which are appointed, all rise from their seats, and assume a reverent attitude while the exhortation is read which reminds them of their duty now they are assembled together in God's house, and calls on them with bended knee to join in the confession, with which so appropriately His worship commences.

The afternoon arrives, and again "the church-going bell" sends out its cheerful sound over the valleys and the woodlands. He who has been accustomed to spend his Sundays in the city, will miss the various tones of a hundred bells by which the different parishioners of a crowded neighbourhood are called to their respective churches. Here the bells of one church only greet his ear, save when the wind brings a faint sound from those of an adjoining parish. The churchyard path is again trod by many of the morning worshippers, or by those whose duties then prevented their attendance.

After the service is concluded, the mournful tolling of the heaviest bell announces that a parishioner is about to be carried to his long home; and soon the slow and measured tread of footsteps of men is heard, who are carrying to his burial some deceased neighbour, in plain yet decent show of grief, a touching contrast to the nodding plumes and ill-assumed gravity of the hired mutes and attendants, which mock the sable pageantry of a funeral procession through the streets of a city. When they reach the gate of the churchyard, the corpse is met by the clergyman, who bids the mourners to weep not as those without hope, by reciting the cheering words of Scripture which are appointed for the occasion. The body of the departed is then borne into that building in which he was "received into Christ's holy Church" by baptism, and where he received the solemn rite of

confirmation; where he was united to the faithful partner of his joys and of his sorrows, and where he so often had partaken of the Holy Communion: meet it is, therefore, that his body should be interred beneath the shade of those sacred walls.

After the conclusion of that part of the funeral service which is appointed to be read in the church, the procession is again formed, and proceeds to the grave, where

"Friends, brothers, and sisters, are laid side by side,
Yet none have saluted and none have replied." 3

And here the body of the departed is committed to the ground, "earth to earth, ashes to ashes, dust to dust; in sure and certain hope of the resurrection to eternal life, through our Lord Jesus Christ." All those who stand around the grave were either friends or relatives of the deceased, by all of whom his death is more or less regretted. Here, again, is a contrast to the *business-like* funerals "performed" in a city!

"Oh, the grave! the grave It buries every error, covers every defect, extinguishes every resentment! From its peaceful bosom spring none but fond regrets and tender recollections. Who can look down upon the grave, even of an enemy, and not feel a compunctious throb that he should ever have warred with the poor handful of earth that lies mouldering before him! But the grave of those we loved—what a place for meditation! There it is that we call up in long review the whole history of virtue and gentleness, and the thousand endearments lavished upon us almost unheeded in the daily intercourse of intimacy; there it is that we dwell upon the tenderness, the solemn, awful tenderness of the parting scene." 4

As the evening approaches, the tourist will probably take "a sabbath day's journey" through the fields by which the village is skirted, even as the evangelist records of our Saviour, that "he went through the corn-fields on the sabbath-day." 5 Seating himself beneath a wide-spread beech, he may take Walton's Lives from his pocket, and hold converse with those good men who, like himself, felt that

"The Sundays of man's life,
Threaded together on Time's string,
Make bracelets to adorn the wife
Of the eternal glorious King.
On Sundays, Heaven's gate stands ope,
Blessings are plentiful and rife—
More plentiful than hope." 6

The hum of bees, the lowing of the kine, the bleating of sheep, and the harmonious and joyful concert of the birds, blended with the pleasant murmur of the brook which rolls peacefully near his feet, and the sighing of the wind among the branches over his head, will dispose him to read with peculiar pleasure the pleasant pages of Izaak Walton. As he closes the book, and bends his steps to his lodging, those lines of Herbert will present themselves with peculiar force to his mind:

"Sweet day! so cool, so calm, so bright,
The bridal of the earth and sky;
The dew shall weep thy fall to-night,
For thou must die."

II. ALMET'S VISION.

As Almet, who watched the holy lamp at the grave of the Prophet, stood at the eastern door of the Temple, and prayed, he saw a man clad in costly robes, and attended by many followers, approach towards him. Almet went forth to meet the Stranger, and inquired if he sought him. "Almet," answered he, "thou seest before thee a man who is rendered miserable by the gifts of fortune. All my wishes are fulfilled; I have the enjoyment of all earthly blessings in my grasp; and yet I am not happy. I lament the time past, because it passed unenjoyed: I have no hope for the future, because I know no real blessedness: yet I tremble at the thought of death. To pass away like the foam on the waves—to slumber beneath the veil of darkness—these are pictures before which my heart fails me. If thou, amongst the treasures of wisdom, canst find advice which will bring contentment and peace, let me participate in it: for this am I come."

Almet listened to the complaint of the Stranger with an expression of sympathy and sorrow; but his countenance soon regained its tranquillity. He lifted up his hands towards Heaven, and said, "The Prophet hath instructed me in this matter; thou shalt learn his wisdom from my mouth."

"I sat one day, as the sun was going down, alone and thoughtfully in the porch of the Temple, and gazed down the streets of the city, in which an innumerable company of pilgrims, of all degrees and nations, moved up and down, like the waves of the great sea. As I marked the anxiety with which the rich strove one against another, and the patient industry with which the poor bore heavy burdens, my heart was oppressed within me. 'Poor mortals,' I exclaimed, 'why are ye thus hurried? Ye seek happiness, but who among you find it? Can robes of silk and purple confer contentment? Can the glitter of precious stones satisfy the mind? Or, are your eyes blinded, that ye strive so unvariedly after deceitful brightness, which at each step recedes from your grasp? Which are happiest, the rich or the poor? In what enjoyment, in what pleasure, is contentment to be found? All is a dream! all is deception! Neither wisdom nor riches bring happiness: we are the sport of our desires, which drive us hither and thither, until the great sea of destruction overwhelms us!'

"Thus said I to myself, and sighed; then I felt a strange hand touch me, and the streets of the holy city disappeared from my sight. I stood on the top of a high rock, and saw beside me a youth in white clothing; I was amazed at the brightness of his appearance, and closed my eyes with awe."

"'Almet,' said he, 'I am Assoran, the messenger of instruction. It is known to me that thou hast dedicated thy life to wisdom and calm contemplation, that thus thou mightest warn thy brethren against the way of error; but now thou hast thyself erred, therefore look up, attend, and become wise!'

"I lifted up my eyes, and saw a lovely meadow; it was beautiful as the garden of Paradise, but of small compass. Through the midst of it ran a green path, which, towards the west, was lost in a desert waste, over the outside boundary of which there lay a thick darkness, and hid it from view."

Trees of every kind, bearing blossoms and fruit, overshadowed this path, and birds sang merrily among the branches. Beautiful flowers sprang up all around, and filled the air with their sweetness. On one side flowed a clear stream, gently murmuring over golden sand, which glittered through the rippled water; on the opposite side, rivulets, grottoes, and waterfalls, enlivened the scene, and were crowned by a gentle acclivity, which, however, did not conceal the boundary of the little field.

"As my eyes dwelt with delight on this enchanting scene, I saw a man, richly attired, slowly and thoughtfully pacing along the path. His eyes were bent on the ground, his arms folded across his breast, and his face full of distrust and sorrow. A numerous train followed him, and appeared ready at the least sign to fulfil his commands. One gathered for him the finest fruit; another offered him a golden cup; but he ate and drank as though he heeded it not. The most beautiful fruit, which he had eagerly taken in his hand, he would throw away with indifference, having scarcely touched it with his lips. He laid himself down near the streams and waterfalls, as though he would listen to their gentle murmurs and to the song of the birds: but here also he found no rest. He threw himself now on one side, now on the other; then arose, and pursued his way with his former discontented deportment. At times, he would start, as if in alarm or pain; and when his eyes rested on the Desert which lay before him, then would he totter back some steps, and try to return; but an unseen power led him, against his will, still nearer to the Desert."

"'What may this vision mean?' I spoke, and turned to the Angel. He replied, 'The book of Nature lies open before you; look on, and learn wisdom.'

"I turned again, and saw a narrow valley, between bare and savage rocks; neither grass nor herb grew in its sandy waste. The sun's rays descended with burning heat upon the rocks, and the only stream which flowed from their sides soon disappeared in the hot sand. Except a few wild deer, which were leaping over the rocks, no living thing was visible in this desert; but towards the west, this wilderness lost itself in a fruitful country, full of trees, fields, and houses. My eye returned to the burning valley, and I saw a half-clad man, bearing on his back a slaughtered deer, climbing with difficulty the rocky heights. The sharp stones wounded his hands and feet, yet he heeded them not, but diligently ascended until he reached a cave, before which stood, awaiting him, a woman and four children. When the little ones saw the man, they called to him, stretched out their arms, and ran to the edge of the rock to meet him; they jumped joyously about him, and led him with shouts of delight to the cave, where he threw down his prey, and sat to rest with them in the shade. His face was thin and sun-burnt, but its expression was kind and peaceful. He laughed with his children as they wiped his hot brow with their little hands, and he seemed to forget in their joy how hard his toil had been. At times he gazed with quiet pleasure on the cheerful view which lay before him in the distance; he also pointed it out to the children as the abode of joy and peace. Still I did not perceive anything in his deportment which could lead me to believe that the beautiful prospect made him less contented with his rocky cave."

"I gazed on, and rejoiced in the appearance of this man, who was happy in that barren desert. Then the Angel said to me: 'Observe, Almet, what thou hast seen. Contentment and Hope are daughters of Love. He who works not for the well-being of others, will never be happy himself. In the midst of superfluity misery will assail him. Thus thou hast seen the idle one in the field of Pleasure: he did nothing for others; he lived for himself alone, and held as slaves those who worked for him; therefore he could experience no pleasure. He heard not the song of the birds, he saw not the beauty of the flowers, he felt not the balmy air which surrounded him. He looked with dread upon the dark Desert which lay beyond him, because he felt his own uselessness and nothingness. For how could he believe that his self-seeking and self-love would obtain for him any future reward? Must he not learn from that Justice whose law is written in the human heart, that good deeds alone are rewarded, and await a stern judgment?'"

"This poor man, on the contrary, works for his wife and children. The love which dwells in his heart makes him strong and of good courage. He bears his burden with cheerfulness, for the joy of his loved ones is reward enough for him. The love which produces self-sacrifice for others, feels their worth: it hopes for a just recompense, and all that it hopes for itself it desires likewise for them. Therefore it is that this poor man looks contentedly forward to the prospect which lies before him, without allowing the trials of his present situation, in which those he loves participate, to disturb his serenity. Thus has Eternal Wisdom placed true happiness in man's own hands. The idle and self-

willed, who live only to indulge pride and self-gratification, will never escape unrest and despair: whilst, on the other hand, to the self-denying man, to the good father, his children, and his people, joy will not be wanting, and they will look forward without doubtfulness to a better future."

"Whilst the heavenly Messenger thus spoke, the vision disappeared from before my eyes; I awoke, and found myself alone in the porch of the Temple. The sun had gone down: the inhabitants of the city rested from their toil. I returned into the Temple by the light of the holy lamp, and thought over the vision which had passed before me."

"Thus, my son," said Almet to the Stranger, "the Prophet instructed me in wisdom, not for my own advantage only, but also for thine. Thou hast, hitherto, lived only for thyself, and for thine own gratification; on that account thou hast found no real happiness. Thou hast had no hope in the future, because conscience, the unsparing judge, told thee thy deeds deserved no reward. Let not this lesson of the Prophet be lost to thee, like the rain which falls upon a barren rock; but go and practise what thou hast been taught. Become a father to thine own, and to thy people; clothe the naked with thy herds; feed the hungry from thy fields; be a friend to those who are oppressed by wrong; love mankind, and work their good. Thus shalt thou find contentment and hope; for never was the true heart of a loving father saddened by the melancholy belief that he and his are only as the foam upon the waves of the sea."

Almet, his face glowing with benevolence, returned into the Temple, and the Stranger went on his way in peace.

A Night in the Forest.

FROM THE GERMAN OF DE LA MOTTE FOUQUE.—BY S. M.

DRAMATIS PERSONÆ.

CHARLEMAGNE, King of the Franks.
HAGENULPH, a Saxon knight.
WINDRUDA, his wife.
Armed Saxons.
Knights and Woodsmen belonging to the train of Charlemagne.

A thick forest, with a hut.

WINDRUDA (*comes forth from the door.*)

Home fly the eagles to their lofty nests;
The slanting beams of yon pale autumn sun

Stream feebly through dim fog and faded leaves;—
Where lingers he? Why stays my soul's beloved?

HAGENULPH'S VOICE (*afar.*)

The Saxon rode through the woods alone;

The eagle sate on the dark grey stone ;
They gazed on each other with friendly mien,
Each of the twain was a knight, I ween.

WINDRUDA.

That is the song of mighty Hagenulph ;
I hasten to prepare his evening meal. [*She enters the hut.*]

HAGENULPH'S VOICE (*nearer.*)

Ha ! trusty Lightfoot, is thy stall in ruins ?
Cleft by the ruthless whirlwind ! Wait awhile,
We will amend it for thee.

WINDRUDA (*re-enters after a pause.*)

How—not yet !

Surely I heard his voice. [*Calling aloud.*]

Where lingerest thou ?

Give answer, Hagenulph !

HAGENULPH'S VOICE.

I come, I come.

WINDRUDA.

How canst thou pause when thy Windruda calls ?

HAGENULPH'S VOICE.

Patience awhile ! The hurricane hath shattered
My brave steed's dwelling. 'Twill be soon repaired.

WINDRUDA (*aside, turning away.*)

So—first his horse, and then his royal wife !

HAGENULPH (*slowly approaching the hut.*)

Here is thy Hagenulph, my gentle love.

WINDRUDA.

It is not he.

HAGENULPH (*embracing her.*)

What ! Knowest thou not his kiss ?

WINDRUDA (*disengaging herself.*)

No, truly no, this is not Hagenulph,
The knightly, and the courteous, and the gentle,
Who wooed Windruda in such noble fashion
From her sire's castle in the Weser-vaile.
To Hagenulph his wife was all the world—
And now, he heeds his horse before his wife !
Oh ! thine ennobling love hath made this forest
A palace in mine eyes,—myself a queen :
Robbed of that spell, I'm but a hapless woman,
Driven forth by foes into a wilderness.

HAGENULPH.

Not so ; thou'rt still a queen of Nature's making,
Royal and haughty.

WINDRUDA.

Go, serve thy darling Lightfoot with his food ;
See if his couch be smoothed to suit his pleasure.

HAGENULPH.

What, angry with my horse ? Rememberest thou,
When the Franks chased us with resistless force,
How, like a noble hart, he sought the woods,
And bare thee, covered with my shield, before me,
Softly, yet with the swiftness of the storm,
Nor paused till thou wert safe ? Then didst thou stroke
His silver mane with thy caressing hands :—
Now, must he shiver in the autumn night ?
Thou art a lofty dame, a prince's child ;
'Twas ne'er the manner yet with noble princes
So to reward the loyalty of friends.

WINDRUDA (*caressingly approaching him.*)

Hero of mighty heart, thou speakest well.
Is the stall finished for thy trusty steed ?

HAGENULPH.

Ay, ay ; 'twill do.

WINDRUDA.

Nay, prithee, my beloved,
Go and complete his shelter for the night.

HAGENULPH (*kissing her.*)

My princely-hearted wife !

[*Exit Hagenulph by the side at which he entered.*]

Windruda, signing to him affectionately with
her hand, re-enters the hut.

CHARLEMAGNE (*enters on horseback from the forest.*)

Ye heavens ! how deep and dusky is the forest,
As though therein a mounted knight might ride

A thousand years, and find no boundary !
Lo ! these audacious birds of prey, that wheel
With grim and ghastly shrieks around my head !
Hark to the growling of the wrathful bear,
And the wolf's hungry yell ! My way is lost ;
Night rises like a vapour from the earth ;
I see no happy end to this adventure.
Oh, for the shelter of a peasant's roof !

WINDRUDA (*in the doorway.*)

Who rides so tall beneath our woodland shades ?

CHARLEMAGNE.

A gentle greeting to thee, noble lady,
From a benighted huntsman !

WINDRUDA (*coming forward*)

Thou art welcome.

Dismount and rest.

CHARLEMAGNE (*dismounting, and approaching her.*)

Come I to Christian men ?

WINDRUDA.

No ; to the bravest and most hospitable
Of heathen warriors. Rest thee in his castle !

CHARLEMAGNE.

A castle in these mountain woods ?

WINDRUDA (*pointing to the hut.*)

'Tis there.

The castle of great Hagenulph.

CHARLEMAGNE (*smiling.*)

There, sayest thou ?

Oh, pardon ! I mistook it for a hut.

WINDRUDA.

How ? In the doorway stands a noble dame ;
Within, a hero dwells. Are lime and marble,
Ivory and brass, the honour of a house ?
The whole wide forest with its leafy halls
Is as a palace since my lord dwelt there.

CHARLEMAGNE (*bowing.*)

Forgive me, honoured lady ! I have erred.
Your castle is no theme for mockery.

HAGENULPH (*entering, carrying game on his shoulder.*)
Look on my trophies of to-day, sweet wife.
[*He begins to hang up the game on the walls of the hut.*]

WINDRUDA.

Here stands a noble guest, my knightly husband !

HAGENULPH (*desisting from his labour, and approaching Charlemagne*)

Welcome, sir knight. I crave your fair construction
Of this my tardy greeting. I am now
So poorly furnished with esquires and serfs,
That I myself am seneschal and huntsman,
Cupbearer, chamberlain, ay, even groom.
Therefore my noble wife must entertain you,
Whilst I lead forth your charger to his stall,
Soon to return and crown for you the bowl.

CHARLEMAGNE.

Nay, nay, my valiant host ! my steed hath here
A supper, and a couch of down.

HAGENULPH.

But wolves

Are howling in the distance ; therefore yield.
'Twould fix eternal shame upon my house,
If guest of mine, in horse, or goods, or limb,
Were harmed by my neglect.

[*Exit, leading Charlemagne's horse.*]

WINDRUDA.

Now to the hearth
Follow me, noble guest ; the vessel steams,
And bright the goblets shine. [*They enter the hut.*]

Nay, by your leave,

Shut not the door ; Sir Hagenulph delights
Thus to gaze forth upon the wood's green aisles,
And on the star-sown canopy of heaven.

CHARLEMAGNE.

The custom of this noble house I love.

WINDRUDA (*taking his bow and quiver, and hanging them against the wall.*)

Hero! permit thy hunter's panoply
Thus to be loosened by a lady's hand.

HAGENULPH (*returning and tasting a goblet before he hands it, as cupbearer.*)

My honoured guest, I bid thee freely welcome!
All that the house of Hagenulph affords
Is thine. Come, seat thee at our cheerful board.

[*They seat themselves around a stone table; Charlemagne in the middle, Hagenulph and Windruda on either side of him.*]

Thou art silent, noble sir. Dost aught displease thee?

CHARLEMAGNE.

Nay, God forbid! But this I freely own,
I feel like one who wanders in a dream;
A noble hero and a lovely lady
In the wild forest! Courtesy and grace
Under a poor hut's mossy covering!
Why, one might deem it glamour's mocking work,
And look to see a momentary change—
The forest, to a baron's lofty towers,—
The dark cell, to a golden hall of pomp,—
The shrieking owls and bats, to maids and squires!

HAGENULPH (*smiling.*)

Nay, honoured guest, expect not such conclusion;
These weeds conceal no crafty necromancer.
Once, truly, once it was as thou hast said:
But now!—Those castle-halls
Lie desolate beside the Weser-stream,
And sailors sigh when they behold their ruins.

CHARLEMAGNE.

Whose wasting hand destroyed such goodly halls?

HAGENULPH.

Thou art, my guest, by speech and garb a Frank,
And canst thyself best answer such a question.

CHARLEMAGNE.

Ah, ah, thou brave defying race of Saxons!
God knows, this desolation was thy work:
Charles did lament it from his very heart.

WINDRUDA.

Such, and so gentle is the heart of Charles?
His followers are not like him.

CHARLEMAGNE.

What is this?

What mean the sparkling drops that dim thine eyes,
And the quick blush that burns upon thy cheek?
In God's name, gentle hostess, tell me truth;
Hast thou been injured by a Frank, beyond
The injuries that war compels and sanctions?

WINDRUDA.

Oh, sir! pure wine we tender to a guest,
Not bitter gall. I pray you, pardon me
That heedless word which hath escaped my lip;
Let me be silent of the dreadful deed.

CHARLEMAGNE.

If I may seek a hospitable gift,
I ask but for this story.

WINDRUDA.

Listen then:

A boon, so ask'd, must never be withholden.
Upon the stream's edge lay my gallant brother,
Wounded and faint; his arm had rescued me,
And on the farther bank I stood in safety.
There came—even now before mine eyes I see
That dark and bloody shape!—there came a knight,
A Frankish warrior, pricking through the forest,
And at his heels a swarm of armed serfs.
Out-numbered thus, and faint, my wounded brother
Stretched feebly forth his naked sword, and said,
"Comrade, I yield me thy true prisoner."
Then laughed the Frank,—
Cried, "Out with this base people, root and branch!"
Then, scoffing thus, his squires and he did pierce

With their sharp spears that young and gallant heart!
In vain did I, (ah, wretched maiden!) call
For aid to men and gods!
The Frank but laughed more scornfully, and cried,
"Fair maid, I come to kiss thy tears away."
Then, rushing, came my Hagenulph, and swung
His trusty javelin; to the forest depths
The recreant craven fled.

HAGENULPH.

Reproach not me,
My noble guest, that still the dastard lives.
First was I bound to save my gentle love,
And he meanwhile escaped me. Unavenged
Beside the wood-stream sleeps my gallant brother.

CHARLEMAGNE.

Thus shall he sleep no more, so help me God!
If in the Frankish host I find that villain,
Into thy hands will I deliver him;
Thou, noble dame, shalt be thine own avenger.

WINDRUDA.

Sir, do as thou hast promised.

CHARLEMAGNE.

Doubt me not!

As thy true knight will I achieve this deed.
Ere I depart, thy words shall paint to me
The aspect of the knave, his steed, his arms,
That so my vengeance may take certain aim.
But first, kind friends, I pray you answer me,
What is the fire which kindles hearts so true
So to oppose the high and holy teaching
Of the eternal God, who, out of love
To sinful men, became a helpless child?
Who, faithful Shepherd, sought His wandering flocks,
Recalling, teaching, and exhorting them,
Till, out of love, He died a bitter death;
Then, Conqueror of wrath and sin, arose;
And shall return in light to judge the world,
Receiving to eternal bliss the good,
Where, changeless, in a world of changeless brightness,
Their souls shall join the everlasting psalm!

HAGENULPH.

To speak the simple truth, not much I know,
Nor much have heard, of this thy Christian doctrine.
For once there came a shaveling to my castle,
In a priest's garb—right well I welcomed him;
But he began with his blaspheming words
To mock my father's gods, and thus I thought:
"The spirits of the mighty in Valhalla
Have favoured thee in love, and blest in war;
And when thou goest forth into their woods,
Thy strong heart swells with thankfulness within thee;
Shalt thou endure to hear them scorned? Away,
The priest's a sorry knave!" I took the priest,
And hurled him from my door. The blame was his,
Yet was my wrath a shade too vehement—
He fell, and broke his neck! and feud and war
Broke forth upon our desolated land.
The words which thou hast spoken please me well,
And may be true, for I have early heard
A story from the ancient days of Odin,
Of a God's Son who died for love to man;
Of fire sent down to purify the earth;
And of eternal glory, after judgment.

WINDRUDA.

Speak ye of that God-Man whose name was Christ?

CHARLEMAGNE.

Ay, of our blessed Saviour Jesus Christ.

WINDRUDA.

My heart is glad to hear thee speak of Him;
I pray thee tell me somewhat of His teaching.

CHARLEMAGNE.

This was His first great law: to love mankind,
And do to all men good—even to our foes.

WINDRUDA.

True, if they sit as guests beside our hearth.

HAGENULPH.

Most true, if they be weaponless or sick;
And true, perchance, if they be stainless women.

CHARLEMAGNE.

No, no, God asks an undivided heart;
Thou canst not be a Christian on conditions!
We must love all at once, and all together,
For all are children of one Father.

WINDRUDA.

Nay,
That burden were too heavy for our hearts.

CHARLEMAGNE.

'Tis like that wondrous mountain in the East;
At first the climber labours with slow steps,
But walks more lightly as he rises higher,
And at the summit treads as if on wings.

(To be continued.)

THE MARTYRED TEMPLAR.

Altered from the German of Spindler.

It was a wild rocky coast; the gale was tremendous, and the waves ran high, so that a young fisherman who had been struggling for some hours to effect a landing, had the utmost difficulty in at last running his little vessel on shore in a narrow sandy cove, the entrance to which was almost concealed by the high cliffs. Here he proposed to remain until the storm should subside, it being too far away from his home to think of returning there by land, in darkness, and over a difficult path-way. His only companion was a boy, who, though not grown up, had strength enough to assist in adjusting the sails, and sometimes in rowing. The remains of a ruined chapel, dedicated to St. John, were about a quarter of a mile distant, and hither the mariners wended their way to seek shelter for the night. Strange stories were circulated with regard to the sacred remains; for the inhabitants of the north of Europe were quite as superstitious, when the incidents of our story took place, some centuries ago, as their descendants are now; and it argued some courage on the part of the young fisherman to venture there at all. They had scarcely reached the old building, and stretched their weary limbs under the part of the chapel still protected by a roof, when the boy started, and whispered to his master, "Hark! do you not hear the sound of men's voices? And there! see a light through the grating that covers the vault."

"Hush!" said the fisherman, "creep softly to the grating, and try if you can discover anything without being seen."

The boy obeyed, and informed his master that a great assemblage of men were gathered together below, who seemed to be consulting in a strange language, which he could not understand. They were clad in white mantles, and each carried a drawn sword in his hand; but the indistinct light prevented him discovering more. The young fisherman turned pale at this intelligence, and exclaimed, "God preserve us! These must be the great lords from France, that have taken refuge in our country. Some people say they go to St. John's Chapel to pray, and others that it is for wicked purposes they assemble here! At any rate let us depart, for it is not safe to remain, lest they discover us, and think we are spies."

So saying he took the boy by the hand, and dragged him away, but the noise of their footsteps, and the long shadows moving in the moonshine, betrayed them to one of the party, who was stationed outside as a sentinel. "Halt!" was cried in a loud voice; and an armed man in a white mantle advanced with threatening gestures towards them. The boy then threw himself on the ground; the fisherman, kneeling, begged for mercy, assuring his captor that his presence in the chapel was purely accidental.

"What weather, brother?" cried a second man in white, appearing at the door of the vault.

"It rains," said the first; and the questioner instantly disappeared. Had not terror obscured the faculties of the captives, they would have taken the strangers for madmen, as the storm had abated, and nothing could be clearer than the firmament at this moment; the stars were shining brightly, and not a single rain-drop was to be felt. A tall and stately man now stepped out of the vault, and began to question them. The fisherman related everything simply as it had happened, and the boy corroborated his narrative; so that it was easily seen that they were not spies, and that they had had no time to make any discoveries, while, from pure curiosity, looking down the vault. Upon this, the stately looking chief dismissed the lad, ordering him to return home immediately, and, if he valued his life, never to breathe a word of what he had seen and heard. The boy promised all that was required; and, being set free, darted away like a frightened deer, leaving his master in the hands of the strangers.

"You are a fisherman, are you not?" asked the chief. "Do you think that you could convey a man, without luggage or other encumbrance, to the coast of France; set him on shore in the neighbourhood of Calais; and after waiting till he had finished his business, however long that might detain him, convey him safely here again?"

"Why not?" exclaimed the fisherman, after a moment of consideration. "My boat is an excellent one, or it would not have survived this gale. I have gone to France before, so I understand very well how to steer my way through the high seas. There is nothing to hinder me, provided you give me a suitable reward."

"Do not be afraid," said the chief; "I shall take care you shall be handsomely recompensed. In the mean time go and get ready your little bark, for your passenger must embark without delay."

"I must go home first," said the fisherman, who had by this time lost his fear, "to provide food and other necessities for the voyage."

"That you shall not," said the chief, with an oath. "Your passenger will provide everything; in the mean time you must be watched."

With these words he re-entered the chapel; and the sentinel in the white mantle accompanied the astonished fisherman to the cove where his little vessel was lying. They had not long to wait; for a fine-looking young man, in a dark dress, speedily followed them, and, after handing in a few necessities, stepped lightly into the boat, and silently sat down on the plank laid across the middle for his accommodation. He took no notice of the sentinel, not even vouchsafing him an adieu; and, making signs to the fisherman to steer, leaned his head on the cross of his sword, and looked moodily at the waves, over which the vessel danced merrily, the storm by this time having completely subsided.

The stranger appeared to be dumb, for during the whole of the following day not a syllable escaped his lips; and when the fisherman that evening put into a little seaport, he handed him money in solemn silence, making signs to him to purchase more provisions. While he rested along the bottom of the boat, during the man's absence, he was careful to conceal his face in his cloak whenever any one approached. On the return of the fisherman he betook himself to slumber, and the poor fellow once more laid hold of the rudder, cursing the stupidity of his companion, who never offered to assist him, nor even cheered him by friendly conversation. Sleep at last unloosed the tongue of the strange passenger; his dreams appeared to be troubled; words escaped from his lips, and were audible to the astonished fisherman, even through the folds of his mantle, which he had drawn over his countenance.

"Will it then be accomplished?" he muttered. "Will the noble building be completed? Shall I mix the cement, and build up the pillars? Oh! master, master."

You might have spared your comrade this duty. Other mysterious words he continued to murmur, which were almost unintelligible.

"Oh, ho!" said the fisherman to himself; "the secret is out now! Well, how I have been mistaken! I thought my passenger had been something extraordinary, and now I find he is only a common mason, or hewer of stones. And these French gentlemen have probably come to our parts in order to repair, and build again, those chapels and churches which have been ruined by pirates, or during the wars. A most pious undertaking, and one highly to be commended!" At this moment the eyes of the fisherman were arrested by the sword, which hung at the young man's side, and shaking his head, he continued, "Well, well! If I did not take the fellow for a noble knight! However, it does not matter; since a mason's gold is quite as good for my purpose as that of a man of quality."

In the same manner passed away other twenty-four hours, the young man still preserving the strictest silence, till at last they arrived at Calais, when, for the first time, he addressed the fisherman. "So this is the coast of France!" he exclaimed, as he stood up in the little bark; and looking towards the shore, sighed heavily. The fisherman assented, and asked him where he wished to be landed. The youth seemed overpowered with strong emotion; his breast heaved; his face was flushed; and he took off his hat, and tore open his vest to cool himself, although the rain was falling in torrents. The fisherman, after waiting in vain for an answer, turned the boat's head towards a secluded landing-place, at a short distance from the town; and running up close to the little quay, the stranger hastily leaped on shore. A small hut was near, but instead of taking shelter there from the inclemency of the weather, as the mariner advised, the young man told him to hold his tongue; and proceeded himself to inquire, at the cottager's, the road to the chapel of "Our Lady of Tempests." The inhabitants of the hut described the path to be long and difficult; the young man, however, had already taken his resolution. "By the third day, at furthest," whispered he to the fisherman, "I shall return." Then, wrapping himself in his mantle, and using his sword as a pilgrim's staff to support his steps, he proceeded along the wet and slippery track which had been indicated. By and by he reached a cross erected at the side of the road; and throwing himself on his knees, embraced the cold stone, while tears filled his eyes. "Mother earth! holy ground, where I was born!" he stammered forth, sobbing; "with what changed feelings do I now behold thee! Would to God it had been spared me thus to return as an assassin to the land of my ancestors! Alas! I must again flee from thee, beloved country, as soon as my vow shall be accomplished! . . . Hail once more to the dear land of France; and, oh! dark night! shield me with thy dusky wings, that no one may follow on my track,—no one watch the deed I am about to do!"

Having said these words, he rose, and walked manfully forward towards a distant field, from which a light glimmered faintly. The rain fell more and more heavily, and the way became more difficult; whilst the damp mantle of the traveller clogged his steps, impeding every motion with its weight. The storm raged without; but more tumultuous still were the feelings which contended within the bosom of the youth. By the time he reached the little church, whence the light had proceeded, his strength was nearly exhausted; and he was obliged to sit down to recover himself, while he tried to distinguish the objects around him. "Here is the church," he murmured, "of which the master spoke. To the right I can discern the large white cross, visible through the darkness. On the left I hear the rushing of a brook;—all is, in short, as was described. Courage, then! Advance! If not deceived by mist, I think I can trace the outline of a building, which I must shortly reach.—There is the goal of my labours!"

He was not mistaken, and soon reached the building; it was in the form of a square, and surrounded by a field inclosed by a stone wall, a small gate forming the entrance. The young man sprung over it, and passing by numerous implements of agriculture piled against out-houses, reached the entrance of the building, and climbing up the ruinous steps, gave two loud and quick knocks on the door, which he followed after a second or two by a third, long and resounding. A dog within the house now began to bark. No one came, however, and the stranger was obliged to repeat the signal, which he did in exactly the same manner. At length a man's voice was heard, asking what was wanted.

"I am a poor and hungry pilgrim, who has lost his way," replied the youth. "Can you give me shelter?"

After a short pause a light was seen through the window, steps approached, the bolt was withdrawn, and the door opened. The stranger had meanwhile laid his hand on the hilt of the dagger which he wore below his clothes; but his purpose faltered when he beheld the man who advanced to greet him. Benevolence and frankness were depicted on his countenance, as he welcomed the wet and weary wanderer. The hand of the youth sank powerless as he relinquished his dagger, and his tongue stammered as he inquired, if he were now in the presence of the proprietor Gilbert. The man replied in the affirmative.

"Then I greet you in the name of God, and of St. John, whom we both acknowledge as our patron," said the youth, holding out his hand. "And I call upon you to greet me at my entrance under your roof."

At this salutation, Gilbert staggered back astonished, while the mysterious grasp with which the unknown pressed his hand increased his fear and bewilderment.

"Why do you not respond to my greeting? Why not make the sign with your hand?" asked the stranger, boldly. "Brother Perrail, that is not right!"

Ashy pale, Gilbert supported himself against the wall. Then you know—"he stammered; but soon recovering himself, he continued. "Let us see," said he, "if some rogue is not mocking me. Your pass word?"

"Notuma," replied the youth.

"Give me the word!" continued Gilbert, in an anxious and threatening tone.

"Tell me the first letter . . . I shall then give you the second," answered the stranger.

In this manner they made out the word. Gilbert had no longer any doubt. He clasped his hands together, and whispered, "Man, what wouldst thou in my house, that thou comest upon me like a thief in the night?"

"I want bread, salt, fire, and shelter," replied the stranger.

"Dare I trust you?" inquired Gilbert, with some hesitation.

"Are we not bound by an oath?" said the stranger.

"Alas! the oath! . . ." sighed Gilbert, whilst his head sunk upon his breast.

"Calm yourself," rejoined the youth. "I am a runaway like yourself; therefore am I come to you."

Gilbert scrutinized him for some moments with attention, and then shook his head distrustfully. At last he closed the door, and led his singular guest into an apartment, in the corner of which stood a plain, but clean-looking couch. He then set bread and wine before him, and, stirring the fire, proceeded to dry his wet mantle.

"I wish you a sound and peaceful slumber," he then said to the youth, who in silence watched all his proceedings. "You are in perfect safety in my house. To-morrow we shall talk more."

Gilbert! cried a soft and pensive voice from an adjoining apartment. "Where are you? With whom are you talking?"

"I am coming," replied Gilbert, calmly, as he shook hands with his guest.

"Is that your wife, Brother Perrail?" asked the latter, in a significant whisper.

"Yes! my wife," replied the host, in a firm voice, after a moment's pause; and then withdrew, saying Good night to the stranger.

The youth long remained standing before the fire, watching the burning embers, and plunged in contemplation. Now and then he pressed his hand on his breast, as though he would thereby calm the tumultuous emotions within. "And shall I bring death into this peaceful house?" said he to himself. "This man, upon whose calm brow is legibly impressed benevolence and truth, utterly incompatible with the perjury of which he is accused,—shall I blot him out from the land of the living, and make his wife, whose soft voice so touched my heart, a widow? . . . Uncle! cruel, cruel uncle! what a price hast thou set upon my admission into thy order!" He now paced in great agitation up and down the apartment. "Shame on thee, Guy!" said he then to himself. "Dost thou shudder at the trial? Oh! wherefore did my arm tremble when I entered this abode? Wherefore did I not smite the perjured and accursed one to the earth, thundering in his ears, 'This is the last greeting of the grand-master and companions, perjured brother of the order?'—then all would have been done. Oh, incomprehensible destiny! why didst thou restrain my arm? Why dost thou compel me to pay hospitality with ingratitude—nay, with bloodshed? for the deed must be done. Oh, that some friendly spirit would warn the unhappy wretch to take flight! If he only would make use of this night's delay! happy then should I be; my obligation would be fulfilled, and with pure hands I should return to the brotherhood. May God, and the blessed Virgin, and the holy St. John, direct me what to do!" Then, committing himself to the Divine protection, the agitated youth, overpowered by fatigue, forgot his perplexities, and fell asleep.

Late the next morning, a sudden noise awakened him from a troubled dream. He fancied that he beheld his host standing beside his bed with a drawn sword in his hand, and that he uttered these words:—

"Die thyself!—thou who camest to sound my funeral knell!"

Half asleep, and unable to distinguish imagination from reality, he started up with a loud cry, and grasped his sword. Then, for the first time, he became aware of the presence of a very beautiful woman, with an infant in her arms, who stood near his bed. He sank back confused, while the same sweet voice that he had heard the night before calmed his perplexity.

"Be not alarmed, dear sir," said the fair lady. "You must have had a frightful dream, since you are so agitated by the voice of a weak woman like myself, who now comes to bid you welcome. You have slept long; the sun is now high in the heavens; and I bring you your breakfast."

Heartily ashamed, Guy took a basin of rich soup from the white hands of his hostess, and inquired, hesitatingly, whilst he looked around, "Where is Perrail?"

"I do not know whom you mean," replied the beautiful woman. "Of whom do you speak?"

In some confusion Guy struck his forehead, and then spoke more firmly: "Pardon me, I mistook! I meant to ask about your husband, Gilbert."

"He has gone to the fish-pond to catch fish," replied Blanche, for that was the name of the fair lady. "You know this is *maigre-day*, and my husband wishes to provide you a good dinner."

"God be praised!" said Guy to himself, in the strong conviction that Perrail had guessed his errand, and was now saving himself by flight from the vengeance of the order. Joyfully he now raised his eyes towards his kind hostess, and sank them again, lost in admiration of her beauty. Her simple attire added nothing to her loveliness, but, on the contrary, borrowed charms from it; while, as she stood before the youth, with the innocent child in her arms, she seemed to him a living image of the Madonna. A rough dog, of enormous size, crouched

humbly at her feet, and jealously watched every motion of his mistress.

"The soup is most excellent," said Guy, as he laid down the empty basin. "May God reward the hospitality you have exercised towards a stranger! And now, pardon me for asking, has your husband explained to you the business which has led me here?"

"I know nothing about it," replied Blanche. "He did not tell me whether he knew you before or not, and has not alluded in any way to the business which brings you here. It is more my duty to attend to our guest, than to ask questions concerning him."

"But has not . . . I mean Gilbert, explained . . . in short, made you acquainted with the circumstances of his past life?" rejoined Guy.

"Oh, yes?" replied Blanche, with the simplicity of a child. "His occupation has always been known to every one. The life of a master mason is necessarily commonplace, and without adventure, unless during the time passed in travelling to learn the trade. Gilbert's life has been like the rest. He was born in the city of Arles, and journeyed about in his youth, till he became a master. Then he took a fancy to revisit France, the land of his birth, and passing through Calais, got acquainted with my father, to whom this farm belonged, part of the former possessions of the Templars, the ruins of whose hospital can be seen from this window. My father and Gilbert formed a strong friendship, and, after a while, the latter gave up his trade, and took to agriculture, when he married me. My father did not long enjoy the assistance of his honest son-in-law. He died, and was consoled on his deathbed by the thought, that he was leaving me to a kind protector. Believe me, kind sir, Gilbert is one of the best of men, and is respected throughout the whole country. But perhaps you knew him before, and I am tiring you with my talk."

"On the contrary," said Guy, "you interest me greatly. But what is keeping Gilbert? He is very long in returning; perhaps the pond is at a distance."

"No," replied Blanche, "it is quite near. I begin to wonder also that he is so long."

"God be praised!" whispered Guy's conscience; for all conspired to confirm his previous conjecture. "God be praised! He has escaped, and I am spared the commission of an act which would have filled me with remorse to the end of my days. My errand is accomplished, and, to avoid any unlucky mischance, I shall instantly return to where I left my little vessel." Then, wrapping himself in his mantle, and grasping his sword, he strode towards the hearth, where Blanche was busily preparing some food. "Farewell, kind hostess! . . ." he hurriedly began, as though he feared to be detained; "accept my warmest thanks for your hospitality. I must depart immediately. Farewell!"

Blanche raised her eyes in astonishment, unable to account for this sudden resolution. "Are you obliged to go?" she inquired. "How? What is this? I know not what you mean? Is it possible that I have offended you?"

"On the contrary, you have gained my esteem and friendship," replied Guy, in great agitation; "and for that very reason I must depart."

"I do not comprehend you. My husband, Gilbert, will be very much grieved when he finds you gone at his return."

"I wish to go before his return," continued Guy. "I wish to spare both him and myself a painful meeting. Unfortunate woman, do not detain me! The happiness of your life is departed, should I remain." Once more he pressed the hand of Blanche, and turned towards the door; but started back as though annihilated . . . for on the threshold he met Gilbert.

(To be concluded in our next.)

Poetry.

THE MOWER'S MAIDEN.¹

(See Engraving, p. 33.)

"Good morrow to thee, Mary! right early art thou laden!
Love hath not made thee slothful, thou true and steadfast maiden!
Ay, if in three brief days, methinks, thy task of work be done,
I shall no longer have the heart to part thee from my son."

It was a wealthy farmer spake, it was a maiden listened:
Oh, how her loving bosom swelled, and how her full eye glistened!
New life is in her limbs, her hand outdoes her comrades all;
See how she wields the scythe, and see how fast the full crops fall!

And when the noon grows sultry, and the weary peasants wend
To sleep in pleasant thickets, and o'er cooling streams to bend;
Still are the humming-bees at work beneath that burning sky,
And Mary, diligent as they, works on unceasingly.

The sun hath sunk, the evening bell gives gentle summons
home;
"Enough," her neighbours cry, "enough! come, Mary, prithee
come!"
Shepherds, and flocks, and husbandmen, pass homeward through
the dew,
But Mary only whets her scythe, and goes to work anew.

And now the dews are thickening, the moon and stars are bright;
Sweet are the new-mown furrows, and sweet the songs of
night;
But Mary lies not down to rest, and stands not still to hear;
The rustling of her ceaseless scythe is music to her ear.

Even thus from morn till evening, even thus from eve to morn,
She toils, by strong love nourished, by happy hope upborne;
Till when the third day's sun arose, the labour was complete,
And there stood Mary weeping, for joy so strange and sweet.

"Good morrow to thee, Mary! How now?—the task is done!
Lo, for such matchless industry, rich guerdon shall be won;
But for the wedding—nay, indeed—my words were only jest
How foolish and how credulous we find a lover's breast!"

He spake and went his way, and there the hapless maid stood still,
Her weary limbs they shook, they sank, her heart grew stiff and
chill;
Speech, sense, and feeling, like a cloud, did from her spirit pass,
And there they found her lying upon the new-mown grass!

And thus a dumb and death-like life for years the maiden led
A drop of fragrant honey was all her daily bread.
Oh, make her grave in pleasant shades, where softest flow'rets
grow,
For such a loving heart as hers is seldom found below!

From the German of Uhland.

LAMENT OF THE HEATHEN SAGE.

[BY S. M.]

I know thou art returned to dust again,
That wert unto my soul its only star,—
I know that prayer is vain, and tears are vain,
And words of comfort, oh, how vainer far!
What shall I do, or by what power sustain
The desolation of my heart, the war
Of my resistful spirit, which at length
Lies prostrate in the fulness of its strength?

And I have striven to think it is not so,
Have bid my heart remember the quick life
So eloquently speaking in the glow
Of thy young cheek, in every gesture, rife
With health that seemed invincible—the brow
Serene, as if disdainful of the strife
Death holds with meaner things—itsself, a throne,
Where Life and Inspiration sat alone.

And my too faithful heart remembers well
(Would it were more forgetful!) every line,
And lineament and feature, which can tell,
Of all I had, that is no longer mine;
I summon thee before me by the spell
Of tortured Memory,—I see them shine,
Thy clear, bright, *living* eyes—oh mockery! Why?—
It is impossible that thou couldst die!

Yet thou art dead, and we are severed, for
I saw the gradual blighting of that form;
The quenching of those sun-bright eyes I saw,
The freezing of that heart so fresh and warm;—
Yes, with mine agony subdued to awe,
I stood beside thee, keeping down the storm
In my wrung bosom, until all was past,
And my delirium may break forth at last.

And friends come round to comfort—idle task!
What can their busy voices say to me?
Vain is the love of Patience, and the mask,
The smooth deception of Philosophy.
Oh, hollow that ye are! I need but ask
If ye can set death's fettered captive free,
And Silence answers me—then let them prate,
Mine ears are deaf, and I am desolate!

But *Thou*—Great Heaven! Can any power put out
The steadfast watchfire of thy love? Can I
Be sad, and thou unconscious? Bitter doubt,
Resolved by such despairing certainty!
Oh, could I leap into my grave, without
The knowledge that mine eyes had seen thee die!
Thou canst not hear me—*thou*? Ah, maddening thought!
I speak to that which is not—thou art nought!

And in the music of the twilight breeze
I cannot dream thy spirit speaks to me;
And when cool night descends upon the seas
I hold no voiceless communings with thee,
The notes of thy familiar melodies
Stir up a passion in my memory,
But bring no peace—for I stood, helplessly,
And *saw* Decay consume thy soul and thee!

Oh for that blessed ignorance which paints
A world where severed souls may reunite!
Oh, how the weakness of my wisdom faints
In the chill radiance of its own vain light!
Why should I lade the air with weak complaints?
Let me sit down beneath the starless night,
Which weighs upon my spirit, and repeat,
Thou art no more, and we no more may meet!

Yet was thy soul so beautiful, methinks
It *could* not perish. Was it by the scorn
Of some un pitying, callous Fiend who drinks
The tears of bleeding hearts, that thou wert born
To wind thee round my spirit? Those sweet links
Twined they so closely only to be torn?
And were two hearts so moulded into one
That sterner ravage might by Death be done?

Oh, for some knowledge! Oh, for light, to shine
Through this sepulchral darkness, chill and black!
How would I clasp Death with these arms of mine,
If I had hope that Death could give thee back!
'Tis agony—this heart that seeks a sign—
These feet that wander, and can find no track.
Ah God, unknown, if any God there be,
Annihilate, or else enlighten me!

ANCIENT CHAPLETS.

THE garland long ago was worn
As time pleas'd to bestow it;
The Laurel only to adorn
The conqueror and the poet.
The Palm is due, who, uncontroll'd,
On danger looking gravely,
When fate had done the worst it could,
Who bore his fortunes bravely.
Most worthy of the Oaken wreath
The ancients him esteem'd,
Who, in a battle, had from death
Some man of worth redeem'd.
About his temples Grass they tie,
Himself that so behaved
In some strong siege by th' enemy
A city that hath saved.
A wreath of Vervain heralds wear,
Amongst our garlands named,
Being sent that dreadful news to bear,
Offensive war proclaimed.
The sign of peace who first displays
The Olive-leaf possesses:
The lover with the Myrtle spray
Adorns his crisped tresses.
In love the sad forsaken wight
The Willow garland weareth:
The funeral wan, besitting night,
The baleful Cypress beareth.
To Pan we dedicate the Pine,
Whose slips the shepherd graceth:
Again the Ivy and the Vine
On his swoll'n Bacchus placeth.

Drayton, 1593.

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—Montaigne.

GALLANTRY OF A YOUNG INDIAN.

A FEW years ago, a Pawnee warrior, son of "Old Knife," knowing that his tribe, according to their custom, were going to torture a Paduca woman, whom they had taken in war, resolutely determined, at all hazards, to rescue her, if possible, from so cruel a fate. The poor creature, far from her family and tribe, and surrounded only by the eager attitudes and anxious faces of her enemies, had been actually fastened to the stake. Her funeral pile was about to be kindled, and every eye was mercilessly directed upon her, when the young chieftain, mounted on one horse, and, according to the habit of the country, leading another, was seen approaching the ceremony at full gallop. To the astonishment of every one, he rode straight up to the pile, extricated the victim from the stake, threw her on the loose horse, and then vaulting on the back of the other, he carried her off in triumph!

"She is won! we are gone—over bank, bush, and scaur;
The'll have fleet steeds that follow," quoth young Lochinvar.

The deed, however, was so sudden and unexpected, and, being mysterious, it was at the moment so generally considered as nothing less than the act of the Great Spirit, that no efforts were made to resist it, and the captive, after three days' travelling, was thus safely transported to her nation and to her friends. On the return of her liberator to his own people, no censure was passed upon his extraordinary conduct—it was allowed to pass unnoticed.

On the publication of this glorious love story at Washington, the boarding-school girls of Miss White's seminary were so sensibly touched by it, that they very prettily subscribed among each other to purchase a

silver medal, bearing a suitable inscription, which they presented to the young Red-skin, as a token of the admiration of *white skins* at the chivalrous act he had performed, in having rescued one of their sex from so unnatural a fate. Their address closed as follows:—

"Brother! accept this token of our esteem: always wear it for our sakes; and when again you have the power to save a poor woman from death, think of this, and of us, and fly to her relief."

The young Pawnee had been unconscious of his merit, but he was not ungrateful:—

"Brothers and sisters!" he exclaimed, extending towards them the medal which had been hanging on his red naked breast, "this will give me ease more than I ever had, and I will listen more than I ever did to white men."

"I am glad that my brothers and sisters have heard of the good act I have done. My brothers and sisters think that I did it in ignorance; but I now know what I have done."

"I did it in ignorance, and did not know that I did good; but by giving me this medal I *know it*!"—*Quarterly Review*.

REPORTERS FOR THE ENGLISH PRESS.

WHAT most extraordinary men are these reporters of the English newspapers! Surely, if there be any class of individuals who are entitled to the appellation of cosmopolites, it is these; who pursue their avocation in all countries indifferently, and accommodate themselves at will to the manners of all classes of society. Their fluency of style as writers is only surpassed by their facility of language in conversation, and their attainments in classical and polite literature only by their profound knowledge of the world, acquired by an early introduction into its bustling scenes. The activity, energy, and courage which they occasionally display in the pursuit of information, are truly remarkable. I saw them during the three days at Paris, mingled with *canaille* and *gamins* behind the barriers, whilst the *mitraille* was flying in all directions, and the desperate cuirassiers were dashing their fierce horses against those seemingly feeble bulwarks. There stood they, dotting down their observations in their pocket-books, as unconcernedly as if reporting the proceedings of a reform meeting in Finsbury Square; whilst in Spain, several of them accompanied the Carlist and Christino guerillas in some of their most desperate raids, exposing themselves to the danger of hostile bullets, the inclemency of winter, and the fierce heat of the summer sun.—*Borrow's Bible in Spain*.

THAT implicit credulity is a mark of a feeble mind, will not be disputed; but it may not, perhaps, be as generally acknowledged, that the case is the same with unlimited scepticism.—STEWART.

On parent knees, a naked new-born child,
Weeping thou sat'st, while all around thee smil'd;
So live, that, sinking in thy last long sleep,
Calm thou may'st smile, while all around thee weep.

Translated from the Persian, by Sir W. Jones.

NAWORTH CASTLE, CUMBERLAND.

The Castle of Naworth, the baronial seat of the Earl of Carlisle, which has been recently destroyed by fire,¹ was the most complete and interesting specimen of a border fortress and a feudal castle of which the kingdom could boast; preserved, too, nearly in the state in which it appeared before the union of England and Scotland. It was one of the greatest "lions" of the North, and was visited by persons from all parts of England, and by foreigners. Its scathed and blackened ruins are eleven miles north-west of Carlisle, and about one mile south of the priory-church of St. Mary, Lanercost, near the edge of the wild district of Bewcastle, Spade-Adam-Waste, and the rude hut, to which celebrity has been given by the novel of Guy Mannering, under the name of Mumps' Ha'.

Sir Walter Scott, speaking of Naworth, says—

"This gothic edifice was, in former times, one of those extensive baronial seats which marked the splendour of our ancient nobles, before they exchanged the hospitable magnificence of a life spent among a numerous tenantry for the uncertain honours of court attendance, and the equivocal rewards of ministerial

favour. If we allow that the feudal times were times of personal insecurity, we must also admit that they were favourable to the growth of many and decided virtue; rude and unpolished in its structure, perhaps, but forcible and efficient in its operation. The evils of the institution were in some measure corrected by other qualities inherent in its system, while the good was pure and unmixed. There is a principle of affinity, more or less obvious, in everything. The vast and solid mansions of our ancient nobility were like their characters,—greatness without elegance; strength without refinement; but lofty, firm, and commanding. The solemn grandeur of Naworth Castle claimed for it a high distinction among these baronial edifices."²

At the time of the Norman Conquest, the barony of Gilsland, of which Naworth Castle has been for upwards of five centuries the baronial seat, was the possession of Gilles Bueth. He was promptly ejected, and the lordship was granted to the family of De Vallibus or Vaux, who were eminent among the northern baronial families. In the reign of Henry III. it was transferred, by the marriage of an heiress, to the De Multons. And again, in like manner, it passed to the Dacres, a family once of the highest importance in Cumberland. "Their vigour and ability, displayed as Wardens of the Marches,

(2) This latter locality is now invaded by the Newcastle-upon-Tyne and Carlisle Railway, which passes the hut at the distance of a few hundred yards.

(3) Border Antiquities.

must also add favourably to our estimate of them as men."¹

"Lord Dacre's bill-men were at hand:
A hardy race, on lathing (2) bred,
With kirtles white, and crosses red,
Arrayed beneath the banner tall
That streamed o'er Acre's conquered wall;
And minstrels, as they marched in order,
Played, 'Noble Lord Dacre, he dwells on the border.'"⁽³⁾

The Dacres were a family of military renown, which secured for some of them the proud distinction of the Garter; and it was by a Dacre that Naworth was castellated, A.D. 1335. George, the last Lord Dacre, was accidentally killed in his minority, when the family estates were divided among his three sisters. By this division, the Castle of Naworth and the barony of Gilsland came to Elizabeth, the youngest of the co-heiresses. She remained not long in undisturbed possession: her uncle, Leonard Dacre, claimed them as his, by virtue of an entail that he pretended had been made by his father, William, Lord Dacre; and he seized the Castle, which he garrisoned with 1,500 foot and 600 horse. He was speedily dispossessed, and his troops were routed; having been drawn out by a *ruse de guerre*, a fierce battle ensued, and Dacre fled to the continent, where he died in poverty.⁴

At the early age of fourteen, the Lady Elizabeth Dacre was married (A.D. 1577) to Lord William Howard, the *Belted Will* of romance.⁵ This distinguished person was the third son of the unfortunate Thomas, fourth Duke of Norfolk (of this family), who was her step-father and guardian, and the grandson of the accomplished poet and cavalier, Henry, Earl of Surrey; and thus the Castle and barony were transferred to a branch of the noble and illustrious house of Howard, in whose possession it has since remained. In consequence of various troubles brought on him by his profession as a Roman Catholic, and some litigations in which he became involved, Lord William did not come to reside at Naworth Castle until 1603. He appears to have repaired it, and adorned its interior; and there he was visited by Camden, in 1607.

Having been appointed Lord Warden of the Western Marches, he garrisoned his Castle with 140 soldiers. Nor was this military parade unnecessary. At that period the borders were in a state of lawless insubordination. Infested by fierce bands of marauders, the cattle and other properties of the peaceable were in continual danger. The laws were unheeded and set at naught. Bloodshed and rapine and fire were daily resorted to. Those desperate offenders were called *moss-troopers*; and the inhabitants of certain districts were required to keep blood-hounds, to pursue them among the wild mosses and bogs, in which they concealed themselves. Fuller says of them, "they come to church as seldom as the 29th of February comes into the Kalender."⁶ Such was the state of the borders when the Lord William Howard came to reside at his Castle of Naworth. "When in their greatest height," says Fuller, "the moss-troopers had two great enemies—the laws of the land and Lord William Howard, of Naworth."⁷ Amid all this disorder, to enforce obedience, to repress violence and bloodshed, to restore peace, to protect the peaceable, and punish the offending,—such were the duties of the Lord Warden. He vowed that the arm of the law should prevail, and that in the remotest part of this scene of lawless violence "the rush-bush should guard the cow." His vigilance and firmness, and occasional

military rigour, were successful in bringing about this result; and the fierce and bold moss-troopers were awed into submission, or driven from their strong-holds.

The late Henry Howard, Esq., of Corby Castle, gives the following pleasing domestic picture of the family at Naworth:—"In 1624, according to the accounts cited, Lord William and his lady were settled at Naworth, and all their family, sons, daughters, and their wives and husbands, appear to have lived with them; tradition says they were fifty-two in family."⁸ Lord William was not distinguished only by his martial valour, and by the prosperous result of his duties as Lord Warden; he was no less a man of letters and accomplishments; "but his real monument, *cere perennius*, should be inscribed, THE CIVILIZER OF THE BORDERS."⁹ He died at Naworth, October 9th, 1640. By the Lady Elizabeth, his wife, he had ten sons and five daughters. His eldest son, Sir Philip Howard, knight, was ancestor of the Howards, Earls of Carlisle; and Sir Francis, his second son, was ancestor of that branch, which has for two centuries been seated at Corby Castle,¹⁰ in the county of Cumberland, now the residence of Philip Henry Howard, Esq., M.P.

From the death of the Lord William Howard, until the period of the late fire, few alterations had been made in the Castle, and it retained its former stern character. Having escaped the horrors of a siege during the Great Rebellion, the principal part of the furniture, the ornaments, and the buildings, remained as when its courtyard was crossed by the mailed trooper, when—

"Rode forth Lord Howard's chivalry;"⁽¹¹⁾

and when the lords and ladies mounted their steeds to enjoy the pastime of hawking in the park, or in the beautiful vale of St. Mary's Holme, where the fair pile of the priory church of Lanercost rises in the midst—

"The cynosure of neighbouring eyes."

We have said that great care had been used to retain the Castle in its olden style, both internally and externally. About 130 years ago, however, the northern side of the quadrangle was destroyed by fire. This had been rebuilt, and is now preserved in its turn, while the other sides (of infinitely more value) are burnt and blackened by a second fire.

We may now proceed to give a description of the Castle as it appeared previous to the fire of 1844. We regret that we have to speak of it as a thing of the past, to describe it as it *was* lately, and not as it *is* now. It is a memory—a retrospection. Many of its antiquities, paintings, books, and some of the old armour, furniture, and tapestry, have, however, been saved, and will, ere long, decorate the new Castle.

The grey towers are prominent objects from the park, rising above the noble oaks and beech-trees. As the Newcastle-upon-Tyne and Carlisle Railway passes within a mile of the Castle, they may be momentarily seen by the passengers, where an opening occurs in the trees. How great a change has been effected in little more than two centuries! The scene of the moss-troopers' exploits, and of the lawless doings of predatory hordes, where the mailed trooper kept watch over the barren moors and the hilly haunts of the robber, is now traversed by a railway; and the bugle-call and the trumpet's clang of border warfare have been succeeded by the hissing noise of steam, and the shrill whistle of the locomotive!

Naworth Castle was of a quadrangular form, enclosing a court-yard, with two square embattled towers, respectively situated at its south-eastern and south-western angles. It was approached from the south through a gateway (leading into the outer court) with embattled parapets; and over the arch is a shield charged with

(11) Sir W. Scott.

the armorial bearings of the Dacres, surrounded by the Garter. On this side, the Castle was defended by two moats now filled up; and the draw-bridges have been dispensed with, now

"Grim-visaged war has smoothed his wrinkled front."

The other sides of the Castle were formed on a rocky precipice, at the junction of two streams. The windows of the principal apartments looked into the inner courtyard—one of singular beauty—with its oriel windows, its ivy-clad walls, and its grey towers, with their watch-turrets. The grand entrance led up a flight of steps into the great hall, around which the snow-white blossoms of the jasmine peeped out from its festooned branches.

"Say, did they from their leaves thus peep,
When mailed moss-troopers rode the hill?
When helmeted warders paced the keep,
And bugles blew for Belted Will?"(1)

Sir Walter Scott says, "the whole Castle bears the strongest memorials of ancient customs, and the inconvenient modes of domestic life which our ancestors adopted." The great hall occupied a considerable portion of the east side of the inner courtyard. It measured seventy feet by twenty-four, and was lighted by windows placed near the ceiling. The ceiling was in panels, and was painted with portraits of the kings of England. The spacious fire-place, which cheered this noble hall when the cold winter's wind howled in the chimney, was seventeen feet in width. Three suits of armour, of which one was pointed out to visitors as that worn by the Lord William Howard, and another as worn by the knight who conducted Joan of Arc to the siege of Orleans;² and four large carvings in wood,³ which appear to have been intended to carry arms on banners, have been preserved, and will be placed in the hall of the new Castle.

The dining-room, hung round with fine old tapestry and valuable portraits, was situated at the upper end of the hall. A great portion of the former, with the portraits, was saved with little damage.

One of the most interesting parts of the Castle was the chapel; for a chapel was once considered an indispensable appendage to the manor-house or castle of the nobleman, the knight, and the esquire, who religiously set apart a portion of their dwelling for the worship of Almighty God. The ceiling of this chapel at Naworth was panelled, and painted with representations of many of the prophets, and patriarchs, and other personages celebrated in Sacred History. A large window contained some fine stained glass, particularly the figures of Thomas Lord Dacre, K.G., who died in 1525, and his lady, represented in a posture of devotion—as was usual before the modern re-introduction of heathen emblems in commemorating the dead.

A few steps from the chapel conducted the visitor to the guard-room—another interesting portion of the Castle, but of how different a character! The carved stall, and the fretted screen, the still small voice which spoke from the pictured window where the dead were commemorated, the pious legend and the sacred emblem, the cross and the altar, were soon exchanged for the warlike guard-room, where the troopers of this baronial seat awaited the orders of their lord. It was appropriately fitted up with old armour, helmets, swords, breast-plates, &c., as,

"Bruised arms hung up for monuments."

Here also were the cradle, the saddle, the chest, the military gloves, and the

"rude and studded belt"

(1) Lord Morpeth. This "slight and slender jasmine tree"—which the present heir-apparent to the earldom of Carlisle has celebrated in verses, from which the above is an extract—was unscathed by the fire.

(2) This suit of armour had the medal of the Golden Fleece suspended from the neck.

of Lord William Howard, whose name is so indissolubly connected with the Castle. The room was 116 feet in length. It contained several portraits and paintings, all of which, with the armour, &c., were destroyed. After the fire a secret passage was discovered, which had been previously unnoticed. It formed a direct communication, parallel with the guard-room, between Lord William Howard's apartments in the east tower, and the dungeons beneath the west tower.

The eastern tower contained the private apartments of Lord William Howard—his library, his oratory, and his bedchamber. It was approached by a narrow stone staircase, guarded by a very massy iron-grated door, secured by bolts of huge thickness. The bed-room certainly looked anything but inviting—a very picture of a cheerless, uncomfortable room—the *beau idéal* of a haunted chamber!

"The chieftains of that stern old time"

must have had iron nerves indeed to occupy such a room in a stormy night in December; when the imagination, assisted by the howling wind sighing in the crevices and shaking the loose casement, would conjure up all the unrealities of ghost stories, and fill the mind with gloomy images and distorted impressions, "making night hideous." The floor was formed of a hard composition. The bed was low, and of very humble pretensions. The walls were wainscoted with oak, and covered with tapestry. Over the fire-place were three shields, charged with the arms of the family of Dacre, impaling, or quartered with, some of their alliances; each surrounded by the Garter—an honourable distinction for such an apartment! and, perhaps, a sufficient charm to induce the Lord Warden to pass his nights in the same room in which such illustrious men had formerly slept, and a charm to stay the "horrible imaginings" which oft come unsummoned at the midnight hour. Over this bedchamber were the library and oratory; these also were ascended by a narrow spiral staircase.

The library was another gloomy apartment. It was fitted up with closets, containing the books.⁴ Some of them were the companions of Lord William Howard, when disengaged from his duties as Lord Warden; and a few contained his autograph, written in a fair, bold character, which gives us a good idea of the man. In some of the books a pithy remark is appended to the name. In one by Luther is written, *William Howard. Folo sed non valeo* [the family motto] *non possum quod desidero*. In a copy of Galatea is, *for their glory is to change, and their liberty is to rainge*. One book contains the autograph of Bishop Fisher, who was put to death by Henry the Eighth for denying his supremacy; another was a present from an Abbot of Fountains. Here also was a very curious MS.—a life of Joseph of Arimathea and his twelve disciples, with a history of saints, and the number of years or days for which each could grant indulgences in the monastery of Glastonbury. It was written on six large skins of fine vellum, beautifully illuminated, and pasted in a wooden case. The ceiling of the library was richly carved, and ornamented with armorial devices on the corbels and bosses. The books and the MS. alluded to were saved.

The oratory or private chapel adjoined the library. It was wainscoted, and painted red, ornamented with scallop shells and cross-crosslets—respectively armorial devices of the Dacres and the Howards. Here also were fragments of a rich rood screen, probably brought hither by the Dacres from the adjoining desecrated priory of Lanercost.⁵ On the altar were placed several figures in white marble, about a foot high, in *alto relievo*. They represented the Descent of the Holy Spirit; St.

(4) See a Catalogue of them (the MS. of which was found by the present writer, in 1839,) in "The History of Carlisle."

(5) At the commencement of the last century, the north aisle of the nave was used as the parish-church, while the nave itself was roofless and ruinous. Since that period the nave has been repaired and fitted up for divine service.

Cuthbert carrying the head of St. Oswald, king and martyr; Judas betraying his Master with a kiss, &c.; and were also probably brought from Lanercost. The confessional was a small dark closet. Above the altar was a painting on wood, representing the Passion and Ascension of our Lord; beneath it was inscribed—

"O . . . omnes qui trāsitis per diām attendite:
et videte si est dolor sic ut est dolor meus."

The watch-turret on the summit of this tower commanded a fine prospect of park scenery, of farm homesteads, woodlands, and rich meadows; the north is enriched by the beautiful vale of St. Mary's Holme, and by the grey battlements and broken arches of the priory. The distant hills give a pleasing relief to the picture.

The south-western tower was in a ruinous state. It contained the dungeons—three on the ground floor, and one above. The masonry was very massive. The doors were of iron, with ponderous bolts, and no light was admitted to the unhappy wight of a moss-trooper who was immured at Naworth. In a note appended to the "Legend of Montrose," Sir Walter Scott says: "The fine old Border Castle of Naworth contains a private stair from the apartment of Lord William Howard, by which he could visit the dungeon." The existence of this passage was long unknown, although a diligent scrutiny had been made to discover it, until after the late fire, when it was revealed.

A suite of bed-rooms, on the south side of the Castle, presented a curious array of gloomy-looking beds, of considerable antiquity; their hanging and fringes much faded or decayed. One bed was pointed out as Queen Mary's bed, and another under the denomination of *the lady's fortune*. Tradition says, that the lady of one of the former lords of the barony, expended her whole dowry, of five hundred pounds, in the purchase of the latter. The north side of the quadrangle, which, as already stated, had been re-built during the last century, contained the residence of the steward, and some of the domestic offices.

The much-regretted calamity of May 18th, 1844, by which this noble and picturesque Castle was reduced to a mass of roofless and blackened ruins, is supposed to have originated in a defective flue. As the interior was chiefly composed of wood, the fire spread with extraordinary rapidity, and there were no sufficient cross-walls throughout the extent of the three sides of the quadrangle, which were destroyed, to check the progress of the flames. The fire was discovered about four o'clock in the afternoon, and by midnight it had well-nigh spent itself on the "time-honoured" Castle. Great exertions were made to save the pictures, books, furniture, armour, tapestry, and other curiosities; and considerable portions were rescued. The family plate, the muniments and deeds, were fortunately conveyed to a place of safety. But, alas! upon the Border Castle, the feudal residence of the De Multons and the Dacres, that memento of the age of chivalry, of romance, and of Border warfare, the fire has done its work, and the bare walls alone remain to tell the stranger of what it has been.

October, 1845.

S. J.

STATESMEN OF THE REIGN OF GEORGE III.

No. II.

LORD BROUGHAM's estimate of the character of Burke, both political and intellectual, is scarcely so favourable as to satisfy that great man's admirers, though perhaps quite as much so as we had any right to expect from one of his political views. He thus speaks of his style as a writer and orator:—

"How much soever men may differ as to the soundness of Mr. Burke's doctrines, or the purity of his public

conduct, there can be no hesitation in according to him a station among the most extraordinary persons that have ever appeared; nor is there now any diversity of opinion as to the place which it is fit to assign him. He was a writer of the first class, and excelled in almost every kind of prose composition. Possessed of most extensive knowledge, and of the most various description; acquainted alike with what different classes of men knew, each in his own province, and with much that hardly any one ever thought of learning; he could either bring his masses of information to bear directly upon the subjects to which they severally belonged—or he could avail himself of them generally to strengthen his faculties and enlarge his views—or he could turn any portion of them to account for the purpose of illustrating his theme or enriching his diction. Hence, when he is handling any one matter, we perceive that we are conversing with a reasoner or a teacher, to whom almost every other branch of knowledge is familiar. His views range over all the cognate subjects; his reasonings are derived from principles applicable to other matters as well as the one in hand; arguments pour in from all sides, as well as those which start up under our feet, the natural growth of the path he is leading us over; while to throw light round our steps, and either explore its darker places or serve for our recreation, illustrations are fetched from a thousand quarters; and an imagination marvellously quick to descry unthought-of resemblances, pours forth the stores which a lore yet more marvellous has gathered from all ages, and nations, and arts, and tongues. We are, in respect of the argument, reminded of Bacon's multifarious knowledge and the exuberance of his learned fancy; while the many-lettered diction recalls to mind the first of English poets, and his immortal verse, rich with the spoils of all sciences and all times.

"The kinds of composition are various, and he excels in them all, with the exception of two, the very highest, given but to few, and when given, almost always possessed alone—fierce, nervous, overwhelming declamation, and close, rapid argument. Every other he uses easily, abundantly, and successfully. He produced but one philosophical treatise; but no man lays down abstract principles more soundly, or better traces their application. All his works, indeed, even his controversial, are so informed with general reflection, so variegated with speculative discussion, that they wear the air of the Lyceum as well as the Academy. His narrative is excellent, and it is impossible more luminously to expose the details of a complicated subject, to give them more animation and interest, if dry in themselves, or to make them bear, by the mere power of statement, more powerfully upon the argument. In description he can hardly be surpassed, at least for effect; he has all the qualities that conduce to it—ardour of purpose, sometimes rising into violence—vivid, but too luxuriant fancy—bold, frequently extravagant, conception; the faculty of shedding over mere inanimate scenery the light imparted by moral associations. He indulges in bitter invective, mingled with poignant wit, but descending often to abuse and even scurrility; he is apt, moreover, to carry an attack too far, as well as to strain the application of a principle; to slay the slain, or, dangerously for his purpose, to mingle the reader's contempt with pity.

"As in the various kinds of writing, so in the different styles, he had an almost universal excellence, one only being deficient—the plain and unadorned. Not but that he could, in unfolding a doctrine or pursuing a narrative, write for a little with admirable simplicity and propriety; only he could not sustain this self-denial; his brilliant imagination and well-stored memory soon broke through the restraint. But in all other styles, passages without end occur of the highest order; epigram, pathos, metaphor in profusion, chequered with more didactic and sober diction. Nor are his purely figurative passages the finest, even as figured writing; he is best when the metaphor is subdued, mixed as it were with plainer

matter to flavour it, and used not by itself, and for its own sake, but giving point to a more useful instrument, made of more ordinary material; or at the most, flung off by the heat of composition, like sparks from a working engine, not fireworks for mere display. Speaking of the authors of the 'Declaration of Right,' he calls them 'those whose penetrating style has engraved in our ordinances and in our hearts, the words and spirit of that immortal law.'¹ So, discoursing of the imitations of natural magnitude by artifice and skill: 'A true artist should put a generous deceit on the spectators, and effect the noblest designs by easy methods.'² 'When pleasure is over, we relapse into indifference, or rather, we fall into a soft tranquillity, which is tinged with the agreeable colour of the former sensation.'³ 'Every age has its own manners, and its politics dependent on them; and the same attempts will not be made against a constitution fully formed and matured, that were used to destroy it in the cradle, or resist its growth during its infancy.'⁴ 'Faction will make its cries resound through the nation, as if the whole were in an uproar.'⁵ In works of a serious nature, upon the affairs of real life, as political discourses and orations, figurative style should hardly ever go beyond this. But strict and close metaphor or simile may be allowed, provided it be most sparingly used, and never deviate from the subject matter, so as to make that disappear in the ornament. 'The judgment is, for the greater part, employed in throwing stumbling-blocks in the way of the imagination (says Mr. Burke), in dissipating the scenes of its enchantment, and in tying us down to the disagreeable yoke of our reason.'⁶ He has here, at once, expressed figuratively the principle we are laying down, and illustrated our remark by the temperance of his metaphors, which, though mixed, do not offend, because they come so near mere figurative language, that they may be regarded, like the last set of examples, rather as forms of expression than tropes. 'A great deal of the furniture of ancient tyranny is worn to rags; the rest is entirely out of fashion.'⁷—a most apt illustration of his important position, that we ought to be as jealous of little encroachments, now the chief sources of danger, as our ancestors were of 'Ship Money' and the 'Forest Laws.' 'A species of men (speaking of one constant and baneful effect of grievances), to whom a state of order would become a sentence of obscurity, are nourished into a dangerous magnitude by the heat of intestine disturbances; and it is no wonder that, by a sort of sinister piety, they cherish, in return, those disorders which are the parents of all their consequences.'⁸ 'We have not (he says of the English Church Establishment) relegated religion to obscure municipalities or rustic villages—No! we will have her to exalt her mitred front in courts and parliaments.'⁹ But if these should seem so temperate as hardly to be separate figures, the celebrated comparison of the Queen of France, though going to the verge of chaste style, hardly passes it. 'And, surely, never lighted on this orb, which she hardly seemed to touch, a more delightful vision. I saw her just above the horizon, decorating and cheering the elevated sphere she just began to move in; glittering like the morning star, full of life, and splendour, and joy.'¹⁰—Pp. 175—180.

"It is another characteristic of this great writer, that the unlimited abundance of his stores makes him profuse in their expenditure. Never content with one view of a subject, or one manner of handling it, he for the most part lavishes his whole resources upon the discussion of each point. In controversy, this is emphatically the case. Indeed, nothing is more remarkable than the variety of ways in which he makes his approaches to any

position he would master. After reconnoitring it with skill and boldness, if not with perfect accuracy, he manoeuvres with infinite address, and arrays a most imposing force of general principles mustered from all parts, and pointed, sometimes violently enough, in one direction. He now moves on with the composed air, the even, dignified pace of the historian; and unfolds his facts in a narrative so easy, and yet so correct, that you plainly perceive he wanted only the dismissal of other pursuits to have rivalled Livy or Hume. But soon this advance is interrupted, and he stops to display his powers of description, when the boldness of his design is only matched by the brilliancy of his colouring. He then skirmishes for a space, and puts in motion all the lighter arms of wit; sometimes not unmingled with drollery, sometimes bordering upon farce. His main battery is now opened, and a tempest bursts forth, of every weapon of attack: invective, abuse, irony, sarcasm, simile drawn out to allegory, allusion, quotation, fable, parable, anathema. The heavy artillery of powerful declamation, and the conflict of close argument alone are wanting; but of this the garrison is not always aware; his noise is oftentimes mistaken for the thunder of true eloquence; the number of his movements distracts, and the variety of his missiles annoys the adversary; a panic spreads, and he carries his point, as if he had actually made a practicable breach; nor is it discovered till after the smoke and confusion is over, that the citadel remains untouched."—Pp. 184, 185.

Passing by the sketch of Fox, which, somewhat to our surprise, presents little that is sufficiently striking for extract, we come to that of Pitt. It was not to be expected that Lord Brougham should speak favourably of Pitt as a politician, but he does not refuse ample justice to his great talents, and to the unblemished integrity of his private character.

"At an age when others are but entering upon the study of state affairs and the practice of debating, he came forth a mature politician, a finished orator,—even, as if by inspiration, an accomplished debater. His knowledge, too, was not confined to the study of the classics, though with these he was familiarly conversant; the more severe pursuits of Cambridge had imparted to him some acquaintance with the stricter sciences which have had their home upon the banks of the Granta since Newton made them his abode; and with political philosophy he was more familiar than most Englishmen of his own age. Having prepared himself, too, for being called to the bar, and both attended on courts of justice and frequented the Western Circuit, he had more knowledge and habits of business than can fall to the share of our young patricians;—the material out of which British statesmen are for the most part fashioned by an attendance upon debates in Parliament, and a study of newspapers in the clubs. Happy had he not too soon removed into office from the prosecution of studies which his rapid political success broke off never to be resumed! For the leading defect of his life, which is seen through all his measures, and which not even his great capacity and intense industry could supply, was an ignorance of the principles upon which large plans are to be framed, and nations to be at once guided and improved. As soon as he entered upon official duties, his time was at the mercy of every one who had a claim to prefer, a grievance to complain of, or a nostrum to propound; nor could the hours of which the day consists suffice at once to give all these their audience; to transact the routine business of his station; to direct or to counteract the intrigues of party; and, at the same time, to learn all that his sudden transplanting from the Study to the Cabinet, and from the Bar to the Senate, had of necessity left unlearned."—Vol. ii. pp. 6, 7.

"If from the statesman we turn to the orator, the contrast is indeed marvellous. He is to be placed, without any doubt, in the highest class. With a sparing use of ornament, hardly indulging more in figures, or even in figurative expression, than the most severe examples of ancient chasteness allowed—with little variety of style, hardly any of the graces of manner—he no sooner rose than he carried away every hearer, and kept the attention fixed and unflagging till it pleased him to let it go; and then

"So charming left his voice, that we, awhile,
Still thought him speaking, still stood fix'd to hear."

This magical effect was produced by his unbroken flow, which never for a moment left the hearer in pain or doubt, and yet was not the mean fluency of mere relaxation, requiring no effort of the speaker, but imposing on the listener a heavy task; by his lucid arrangement, which made all parts of the most complicated subject quit their entanglement, and fall each into its place; by the clearness of his statements, which presented at once a picture to the mind; by the forcible appeals to strict reason and strong feeling, which formed the great staple of the discourse; by the majesty of the diction; by the depth and fulness of the most sonorous voice, and the unbending dignity of the manner, which ever reminded us that we were in the presence of more than an advocate or debater—that there stood before us a ruler of the people. Such were invariably the effects of this singular eloquence; and they were as certainly produced on ordinary occasions, as in those grander displays when he rose to the height of some great argument; or indulged in vehement invective against some individual, and variegated his speech with that sarcasm of which he was so great a master, and indeed so little sparing an employer; although even here all was uniform and consistent; nor did anything, in any mood of mind, ever drop from him that was unsuited to the majestic frame of the whole, or could disturb the serenity of the full and copious flood rolled along.

"But if such was the unfailling impression at first produced, and which, for a season absorbing the faculties, precluded all criticism; upon reflection, faults and imperfections certainly were disclosed. There prevailed a monotony in the matter, as well as in the manner; and even the delightful voice which so long prevented this from being felt, was itself almost without any variety of tone. All things were said nearly in the same way; as if, by some curious machine, periods were rounded and flung off; as if, in like moulds, though of different sizes, ideas were shaped and brought out. His composition was correct enough, but not peculiarly felicitous; his English was sufficiently pure without being at all racy, or various, or brilliant; his style was, by Mr. Windham, called 'a state-paper style,' in allusion to its combined dignity and poverty; and the same nice observer, referring to the eminently skillful way in which he balanced his phrases, sailed near the wind, and seemed to disclose much whilst he kept the greater part of his meaning to himself, declared that 'he verily believed Mr. Pitt could speak a King's speech off-hand.' His declamation was admirable, mingling with and clothing the argument, as to be good for anything declamation always must; and no more separable from the reasoning than the heat is from the metal in a stream of lava. Yet, with all this excellence, the last effect of the highest eloquence was for the most part wanting; we seldom forgot the speaker, or lost the artist in the work. He was earnest enough; he seemed quite sincere; he was moved himself as he would move us; we even went along with him, and forgot *ourselves*; but we hardly forgot *him*; and while thrilled with the glow which his burning words diffused, or transfixed with wonder at so marvellous a display of skill, we yet felt that it was admiration of a consummate artist which filled us, and that after all we were present at an exhibi-

tion; gazing upon a wonderful performer indeed, but still a performer."—Vol. ii. pp. 14—17.

"In private life he was singularly amiable; his spirits were naturally buoyant and even playful; his affections warm; his veracity scrupulously exact; his integrity wholly without a stain; and, although he was, from his situation, cut off from most of the relations of domestic life, as a son and a brother he was perfect, and no man was more fondly beloved or more sincerely mourned by his friends."—Vol. ii. pp. 21, 22.

The following is from the sketch of Windham:—

"From what has been said of Mr. Windham's manner of speaking, as well as of his variously embellished mind, it will readily be supposed that in society he was destined to shine almost without a rival. His manners were the most polished, and noble, and courteous, without the least approach to pride, or affectation, or condescension; his spirits were, in advanced life, so gay, that he was always younger than the youngest of his company; his relish of conversation was such, that, after lingering to the latest moment, he joined whatever party a saltry evening (or morning, as it might chance to prove) tempted to haunt the streets before retiring to rest. How often have we accompanied him to the door of his own mansion, and then been attended by him to our own, while the streets rang with the peals of his hearty merriment, or echoed the accents of his refined and universal wit! But his conversation, or grave, or gay, or argumentative, or discursive, whether sifting a difficult subject, or painting an interesting character, or pursuing a merely playful fancy, or lively to very drollery, or pensive and pathetic, or losing itself in the clouds of metaphysics, or vexed with paradox, or plain and homely, and all but commonplace, was that which, to be understood, must have been listened to; and, while over the whole was flung a veil of unrent classical elegance, through no crevice, had there been any, would ever an unkind or ill-conditioned sentiment have found entrance!

"Scilicet omne sacrum mors importuna profanat,
Omnibus obscuro injectit ille manus—
Ossa quæta precor, tutâ requiescite in urnâ;
Et sit humis cineri non onerosa tuo!" (1)

Vol. ii. pp. 42, 43.

One of the most amusing passages in the whole book is in the sketch of Mr. Dundas. The character of the commanding influence possessed by this able man in Scotland is touched off very happily, with enough of satire to tell with great effect upon those who at all understand what Scotch politics were at that time, without at the same time being too broadly offensive to the feelings of Scotsmen.

"That Mr. Dundas enjoyed this kind of ministerial sovereignty and received this homage in a more ample measure than any of his predecessors, was, no doubt, owing partly to the unhesitating and unqualified determination which regulated his conduct, of devoting his whole patronage to the support of his party, and to the extent of that patronage, from his being so long minister for India, as well as having the whole Scottish preferment at his absolute disposal; but it was also in part owing to the engaging qualities of the man. A steady and determined friend, who only stood the faster by those that wanted him the more; nay, who even in their errors or their faults would not give up his adherents: an agreeable companion, from the joyous hilarity of his manners; void of all affectation, all pride, all pretension; a kind and affectionate man in the relations of private life; and, although not always sufficiently

(1) "Relentless death each purer form profanes,
Round all that's fair his dismal arms he throws—
Light lie the earth that shrouds thy loved remains,
And softly slumbering may they taste repose!"

regardful of strict decorum in certain particulars, yet never putting on the Pharisee's garb, or affecting a more 'gracious state' than he had attained; friendly, self-denying to those inferiors in his department whose comforts so much depended upon him; in his demeanour hearty and good-humoured to all—it is difficult to figure any one more calculated to win over those whom his mere power and station had failed to attach; or better fitted to retain the friends whom accident or influence might originally have attached to his person. That he should for so many years have disposed of the votes in Parliament of nearly the whole Scottish commoners, and the whole Peers, was, therefore, little to be wondered at; that his popularity and influence in the country at large should have been boundless during all this period, is as easily to be understood. There was then no doubt ever raised of the ministry's stability, or of Mr. Dundas's ample share in the dispensation of its favours. The political sky was clear and settled to the very verge of the horizon. There was nothing to disturb the hearts of anxious mortals. The wary and pensive Scot felt sure of his election, if he but kept by the true faith; and his path lay straight before him—the path of righteous devotion leading unto a blessed preferment. But our Northern countrymen were fated to be visited by some troubles. The heavens became overcast; their luminary was for a while concealed from devout eyes; in vain they sought him, but he was not. Uncouth names began to be named. More than two parties were talked of. Instead of the old, convenient, and intelligible alternative of 'Pitt or Fox'—'place or poverty,'—which left no doubt in any rational mind which of the two to choose, there was seen—strange sight!—hateful and perplexing omen!—a Ministry without Pitt, nay, without Dundas, and an Opposition leaning towards its support. Those who are old enough to remember that dark interval may recollect how the public mind in Scotland was subdued with awe, and how men awaited in trembling silence the uncertain event, as all living things quail during the solemn pause that precedes an earthquake.

It was in truth a crisis to try men's souls. For a while all was uncertainty and consternation; all were seen fluttering about like birds in an eclipse or a thunder-storm; no man could tell whom he might trust; nay, worse still, no man could tell of whom he might ask anything. It was hard to say, not who were in office, but who were likely to remain in office. All true Scots were in dismay and distraction. It might truly be said they knew not which way to look, or whither to turn. Perhaps it might be yet more truly said that they knew not *when* to turn. But such a crisis was too sharp to last; it passed away; and then was to be seen a proof of Mr. Dundas's power amongst his countrymen, which transcended all expectation, and almost surpassed belief, if indeed it is not rather to be viewed as an evidence of the acute foresight—the political second-sight—of the Scottish nation. The trusty band in both Houses actually were found adhering to him against the existing Government; nay, he held the proxies of many Scottish Peers in open opposition! Well might his colleague exclaim to the hapless Addington, in such unheard-of troubles, 'Doctor, the Thanes fly from us!' When the very Scotch Peers wavered, and when the Grampian hills might next be expected to move about, it was time to think that the end of all things was at hand: and the return of Pitt and security, and patronage and Dundas, speedily ensued to bless old Scotland, and reward her providence or her fidelity—her attachment at once to her patron and to herself."—Vol. ii. pp. 47—50.

Our last extract is from the sketch of Wilberforce.

"His eloquence was of the highest order. It was persuasive and pathetic in an eminent degree; but it was occasionally bold and impassioned, animated with

the inspiration which deep feeling alone can breathe into spoken thought, chastened by a pure taste, varied by extensive information, enriched by classical allusion, sometimes elevated by the more sublime topics of Holy Writ—the thoughts and the spirit

'That touch'd Isaiah's hallow'd lips with fire.'

"Few passages can be cited in the oratory of modern times of a more electrical effect than the singularly felicitous and striking allusion to Mr. Pitt's resisting the torrent of Jacobin principles:—'He stood between the living and the dead, and the plague was stayed.' The singular kindness, the extreme gentleness of his disposition, wholly free from gall, from vanity, or any selfish feeling, kept him from indulging in any of the vituperative branches of rhetoric; but a memorable instance showed that it was anything rather than the want of power which held him off from the use of the weapons so often in almost all other men's hands. When a well-known popular member thought fit to designate him repeatedly, and very irregularly, as the '*Honourable and religious gentleman*,' not because he was ashamed of the Cross he gloried in, but because he felt indignant at any one in the British senate deeming piety a matter of imputation, he poured out a strain of sarcasm which none who heard it can ever forget. A common friend of the parties having remarked to Sir Samuel Romilly, beside whom he sat, that this greatly outmatched Pitt himself, the great master of sarcasm, the reply of that great man and just observer was worthy to be remarked,—'Yes,' said he, 'it is the most striking thing I almost ever heard; but I look upon it as a more singular proof of Wilberforce's virtue than of his genius, for who but he ever was possessed of such a formidable weapon, and never used it?'

"Against all these accomplishments of a finished orator there was little to set on the other side. A feeble constitution, which made him say, all his life, that he never was either well or ill; a voice sweetly musical beyond that of most men, and of great compass also, but sometimes degenerating into a whine; a figure exceedingly undignified and ungraceful, though the features of the face were singularly expressive; and a want of condensation, in the latter years of his life, especially, lapsing into digression, and ill calculated for a very business-like audience like the House of Commons—these may be noted as the only drawbacks which kept him out of the very first place among the first speakers of his age, whom, in pathos, and also in graceful and easy and perfectly elegant diction, as well as harmonious periods, he unquestionably excelled. The influence which the Member for Yorkshire always commanded in the old Parliament—the great weight which the head, indeed the fount, of a powerful religious sect, possessed in the country—would have given extraordinary authority in the senate to one of far inferior personal endowments. But when these partly accidental circumstances were added to his powers, and when the whole were used and applied with the habits of industry which naturally belonged to one of his extreme temperance in every respect, it is difficult to imagine any one bringing a greater force to the aid of any cause which he might espouse."—Vol. ii. pp. 98—100.

We cannot close without adverting to the form in which these Sketches are now published,—as part of a series of cheap publications, intended for popular reading. This fact is one of the most striking illustrations of the immense stride which has been taken of late in popularising literature even of the highest class. A dozen years ago no publisher would have dreamed of bringing out such a work, from such a pen, at a charge of less than ten shillings a volume, and here it is sold for one shilling.

The Lost Hunter.¹

BY A. B. STREET.

J. Franklin del.

W. Linton sc.

Numb'd by the piercing, freezing air,
And burden'd by his game,
The hunter, struggling with despair,
Dragg'd on his shivering frame;
The rifle, he had shoulder'd late,
Was trail'd along, a weary weight;
His pouch was void of food;
The hours were speeding in their flight,
And soon the long keen winter night
Would wrap the solitude.

Oft did he stoop a listening ear,
Sweep round an anxious eye,—
No bark or axe-blow could he hear,
No human trace descri;—
His sinuous path, by blazes wound
Among trunks group'd in myriads round,
Through naked boughs, between
Whose tangled architecture, fraught
With many a shape grotesquely wrought,
The hemlock's spire was seen.

An antler'd dweller of the wild
Had met his eager gaze,
And far his wandering steps beguil'd
Within an unknown maze;
Stream, rock, and run-way he had cross'd
Unheeding, till the marks were lost
By which he used to roam;
And now, deep swamp and wild ravine
And rugged mountain were between
The Hunter and his home.

A dusky haze, which slow had crept
On high, now darken'd there,
And a few snow-flakes fluttering swept
Athwart the thick gray air
Faster and faster, till between
The trunks and boughs, a mottled screen
Of glimmering motes was spread,
That tick'd against each object round
With gentle and continuous sound,
Like brook o'er pebbled bed.

The laurel tufts, that drooping hung
Close roll'd around their stems,
And the sear beech-leaves still that clung,
Were white with powdering gems.
But hark! afar a sullen moan
Swell'd out to louder deeper tone
As surging near it pass'd,
And bursting with a roar, and shock
That made the groaning forest rock,
On rush'd the winter blast.

As o'er it whistled, shriek'd, and hiss'd,
Caught by its swooping wings,
The snow was whirl'd to eddying mist,
Barb'd, as it seem'd, with stings;
And now 'twas swept with lightning flight
Above the loftiest hemlock's height,
Like drifting smoke, and now
It hid the air with shooting clouds,
And robed the trees with circling shrouds,
Then dash'd in heaps below.

(1) From a collection of American poetry, entitled "The Poets and Poetry of America," published at Philadelphia.

SHARPE'S LONDON MAGAZINE.

Here, plung'ing in a billowy wreath,
 There, clinging to a limb,
 The suffering Hunter gasp'd for breath,
 Brain reel'd, and eye grew dim;
 As though to whelm him in despair,
 Rapidly changed the blackening air
 To murkiest gloom of night,
 Till naught was seen around, below,
 But falling flakes and mantled snow,
 That gleam'd in ghastly white.

At every blast an icy dart
 Seem'd through his nerves to fly,
 The blood was freezing to his heart—
 Thought whisper'd he must die.
 The thundering tempest echoed death,
 He felt it in his tighten'd breath;
 Spoil, rifle, dropp'd; and slow
 As the dread torpor crawling came
 Along his staggering, stiffening frame,
 He sunk upon the snow.

Reason forsook her shatter'd throne,—
 He deem'd that summer-hours
 Again around him brightly shone
 In sunshine, leaves, and flowers;
 Again the fresh, green, forest-sod,
 Rifle in hand, he lightly trod,—
 He heard the deer's low bleat;
 Or, couch'd within the shadowy nook,
 Was lulled by music of the brook
 That murmured at his feet.

It changed;—his cabin roof o'erspread,
 Rafter, and wall, and chair,
 Gleam'd in the crackling fire, that shed
 Its warmth, and he was there;
 His wife had clasp'd his hand, and now
 Her gentle kiss was on his brow,
 His child was prattling by;
 The hound crouch'd dozing near the laze,
 And, through the pane's frost-pictured haze,
 He saw the white drifts fly.

That pass'd;—before his swimming sight
 Does not a figure bound?
 And a soft voice, with wild delight,
 Proclaim the lost is found?
 No, hunter, no! 'tis but the streak
 Of whirling snow—the tempest shriek—
 No human aid is near!
 Never again that form will meet
 Thy clasp'd embrace;—those accents sweet
 Speak music to thine ear!

Morn broke;—away the clouds were chased,
 The sky was pure and bright,
 And on its blue the branches traced
 Their webs of glittering white.
 Its ivory roof the hemlock stoop'd,
 The pine its silvery tassel droop'd,
 Down bent the burden'd wood;
 And, scatter'd round, low points of green,
 Peering above the snowy scene,
 Told where the thickets stood.

In a deep hollow, drifted high,
 A wave-like heap was thrown,
 Dazzlingly in the sunny sky
 A diamond blaze it shone;
 The little snow-bird, chirping sweet,
 Dotted it o'er with tripping feet;
 Unsullied, smooth, and fair,
 It seem'd, like other mounds, where trunk
 And rock amid the wreaths were sunk,
 But, O! the dead was there.

Spring came with wakening breezes bland,
 Soft suns, and melting rains;
 And, touch'd by her Ithuriel wand,
 Earth bursts its winter chains.
 In a deep nook, where moss and grass,
 And fern-leaves wove a verdant mass,
 Some scatter'd bones beside;—
 A mother kneeling with her child,
 Told by her tears and wailings wild,
 That there the lost had died.

HENRIETTA MARIA, QUEEN CONSORT OF CHARLES I.¹

The character of Henrietta Maria has never been favourably regarded by English historians. Even the friends of her unfortunate husband looked upon her with aversion, as having contributed by her counsels to the unhappy policy which terminated in his ruin; while by the Puritan party, the presence of a person of the Romish faith so near the throne, and exercising an important influence on public affairs—who, besides, took no pains to conceal her zeal in behalf of her own religion, was regarded as an intolerable offence to the Protestant feelings of the nation, and they attributed to her without scruple every possible enormity. She has at length, however, found a more favourable chronicler in one of her own sex. Miss Strickland, who has had the advantage of access to some new sources of information, has, in the last volume of her *Lives of the Queens of England*, presented the character of this much-reviled Queen to us under an aspect which, without disguising her faults, brings out into prominence many points and features which command very high admiration. We incline the more to rely upon the justice of this representation, that the picture which it places before us is in every particular an harmonious one. There are no virtues ascribed to her which it is difficult to reconcile with her acknowledged faults. On the contrary, both her virtues and her errors are easily traceable to a common source,—to a peculiarity of temperament, from which, if it sometimes disqualifies for acting prudently in difficult emergencies, there as often flow the most noble and generous qualities.

The merit of these royal biographies by Miss Strickland is too generally acknowledged to require any attestation of ours. The volume now in our hands, containing the lives of Henrietta Maria and Catharine of Braganza, is to us one of the most interesting of the series. Such of our readers as have an opportunity of seeing it, will not fail to read these delightful narratives in the authoress's own pages. To others it will not be uninteresting to receive here a slight sketch of the leading events detailed in one of them. A great part of our object, in laying it before our readers, will be served, if it contributes to subdue their minds to a tone of forgiving sympathy, in contemplating how very speedily the interval between the highest worldly grandeur and the lowest depth of misery, may be traversed. In perusing such a history as that of Henrietta Maria, whom we see at one time nurtured in a palace, and surrounded by all the luxury and observance which unbounded wealth and power can command; and then reduced to fly for her life, even in the hour of woman's greatest weakness and trial, and to take refuge in a mean hovel, and make her bed on straw; and again, sitting shivering and starving in the winter's cold, without money to purchase a bit of wood or a crust of bread, and glad to keep her child all day in bed, because wanting means to kindle a fire to warm her, should she get up: in contemplating such things, we see grandeur and misery alike divested of their imposing or revolting externals, and exhibiting the undisguised human heart

within; and so we learn to look upon the mean with less contempt, upon the great with less envy, and upon all with more of the feeling of our common brotherhood.

HENRIETTA MARIA was the youngest child of Henry IV. of France, and of his second wife, Marie de Medicis. She was born on the 25th November, 1609. She was the most lovely of a lovely family, the darling of her illustrious father, being the child of his old age, and his name-child; and she resembled him in features and liveliness more than any other of his family. She was destined, however, to be deprived of her father's affection and care long before attaining the age when she could derive any advantage from them. She was not six months old when he fell by the knife of the maniac regicide Ravaillac.

To this irreparable loss may be traced many of the misfortunes of her after life. Her mother was weak, bigoted, and petulant, full of absurd notions of the infallibility of sovereigns, and thus, of all persons, the worst calculated to train a future queen-consort for England. The religious education of the princess was guided by an enthusiastic Carmelite nun, called Mère Magdelaine. She visited this votary at stated times during her childhood, and consulted her constantly respecting her conduct in life. "It is possible," says Miss Strickland, "that the Carmelite might be sincere and virtuous, and yet not calculated to form a character destined to a path in life so difficult as that of a Roman-Catholic queen in Protestant England." In other respects her education does not appear to have been very wisely conducted. She was carefully instructed in the fine arts, for which she had an hereditary taste, painting, music, and dancing; but the more solid branches of education were neglected. In after life she lamented her ignorance of history, declaring that she had had to learn her lessons of human life and character solely from her own sad experience, which was acquired too late, when the irrevocable past governed her destiny.

On the 21st of May, 1625, when consequently she was in her sixteenth year, she was married to the ill-fated Charles the First, who had just ascended the English throne. On bidding her farewell, her mother put into her hands a letter, the composition of which had been the occupation of her sick chamber during a dangerous illness, by which she was attacked immediately after the marriage, and which had delayed her daughter's departure for England a fortnight, containing her last instructions for her future conduct in life. The letter, which is preserved, concludes with the following words:—

"You are the descendant of St. Louis. I would recall to you in this my last adieu, the same instruction that he received from his mother, queen Blanche, who said to him often, 'that she would rather see him die than to live so as to offend God, in whom we move, and who is the end of our being.' It was with such precepts that he commenced his holy career; it was this that rendered him worthy of employing his life and reign for the good of the faith and the exaltation of the Church. Be, after his example, firm and zealous for religion, which you have been taught, for the defence of which he, your royal and holy ancestor, exposed his life, and died faithful to Him among the infidels. Never listen to, or suffer to be said in your presence, aught in contradiction to your belief in God, and in his only Son, your Lord and Saviour. I entreat the Holy Virgin, whose name you bear, to deign to be the mother of your soul. And in honour of her who is mother of our Lord and Saviour, I bid you adieu again and many times.

"I now devote you to God for ever and ever: it is what I desire for you from the very depth of my heart.

"Your very good and affectionate mother."

Of this letter, Miss Strickland says, very justly, that notwithstanding the maternal tenderness which it breathes, and even the sublime moral truths which occur in it, its spirit was a very dangerous one to instil into the mind of an inexperienced girl, about to undertake the station of queen-consort in a country where the established religion differed from her own; that a comparison is drawn in most eloquent language

(1) *Lives of the Queens of England*. By Agnes Strickland. Vol. viii. Containing the lives of Henrietta Maria and Catharine of Braganza. London: Colburn. 1845.

between Henrietta and the English, and her ancestor St. Louis and the heathens; and that instead of inculcating a wise and peaceful tolerance, the utmost zeal of proselytism is excited in a young and ardent mind. She adds, that to this letter may be attributed the fatal course taken by the young queen in England, which aggravated her husband's already difficult position as the king of three kingdoms, each professing a different faith.

The young queen was received by her royal husband with an affectionate gallantry, which very soon ripened into the most passionate attachment. Her affection for him appears to have been equally strong; although she, during the early period of their marriage, suffered their domestic happiness to be disturbed by an ungoverned vivacity of temper, displayed chiefly in contending for points in relation to her religion and her French attendants, her standing up for which, in opposition to her husband's wishes, and to the known feelings of the whole nation, can only be excused on the ground of her extreme youth and inexperience. Her first serious act of opposition to her husband's will was her refusal to be crowned. She would not conquer her religious prejudices sufficiently to be consecrated by the prelates of the English Church. She was the first queen of England who had ever refused to be crowned. This piece of bigotry was at once most injurious to the king, and of mischievous consequences to the queen herself, since it gave occasion for her enemies afterwards to affirm that she had never been recognised as the consort of Charles I. It also gave the death-blow to her popularity in England; for the people never forgave the contempt she had manifested for their crown.

The king found some difficulty in getting rid of the queen's French attendants, to whose evil counsel he attributed her obstinacy in the matter of the coronation, even after he had overcome her own opposition to their removal. They had to be expelled from Whitehall literally by force: the guard thrust them all out of the queen's apartments, and locked the doors after them, and they were conveyed to Somerset House until they could be removed out of the country. They contrived to delay their departure from day to day. They retained possession of the queen's clothes and jewels as perquisites, actually left her without a change of linen, and with difficulty were prevailed on to surrender an old satin gown for her immediate use: they brought her in immensely in debt to them for purchases, which she (notwithstanding her partiality in their favour) allowed to the king were wholly fictitious. At last Charles, exasperated by their struggles to remain in England, wrote to the Duke of Buckingham, peremptorily commanding him to compel their departure, if necessary, by force.

It was not without some degree of force that, even after this, these foolish people could be prevailed on to quit the kingdom. Their expulsion was deeply resented by the young queen, in whose justification, however, this must be said, that there is good reason to suppose that in them she lost almost every individual with whom she could converse in her own language. She spoke no English; and as Buckingham, who had travelled, knew very little French, we may infer that the power of speaking that language was a rare acquirement in the English court at that day. We must also recollect that she was not yet seventeen years of age.

She complained bitterly of the treatment she received to her mother, who was then queen-regent of France, and by whom the duke de Bassompierre, one of the old friends and fellow-soldiers of Henry IV., was sent into England to inquire into the wrongs of Henrietta, and to hear from her own lips a recapitulation of her injuries, which her banished household had represented to her mother as most flagrant. Bassompierre was an honest and sensible man. He soon saw where the fault lay; and, instead of flattering the queen, as her

other counsellors had done, and encouraging her to think herself ill-used, he told her, with the freedom becoming her father's old friend, that he considered her much to blame. He repeatedly effected a reconciliation between her and the king, which, however, the provoking perversity of her temper as frequently broke through. He succeeded in getting her household satisfactorily arranged; but finding her still dissatisfied, and out of all patience at seeing her continue to play the vixen after all her grievances had been redressed, he told her his mind without caring for her rank. The following entry appears in his journal:—"Nov. 12. Came to the queen's, where the king came, who fell out with one another, and I afterwards with the queen on this account. I told her plainly that I should next day take leave of king Charles, and return to France, leaving the business unfinished, and should tell his majesty (Louis XIII.) her brother, and the queen her mother, that it was all her fault." The effect produced by this plain speaking is honourable to Henrietta's sense and real goodness of heart. "This," says Miss Strickland, "was the best way of settling Henrietta's mind and affairs. She had been told by her flattering retinue, that all her little tyrannies and lover's quarrels with Charles were entirely becoming to a queen, and, what (as Napoleon truly said) was far better, a pretty woman. But the few plain words of her father's comrade informed her that she behaved unlike a wife, and that he should so report her to her own family. And this honest dealing secured the lovely queen nearly eighteen years of conjugal happiness, with undisputed possession of a true heart that adored her, till it ceased to beat—a rich reward for listening to a few words of truth from a real friend." The death of the duke of Buckingham, too, soon removed a perpetual source of disagreement between her and her husband.

On the 13th of May, 1628, Henrietta gave birth prematurely to a son; but the child died on the day it was born. Rather more than a year afterwards, on the 29th May, 1630, another son was born, afterwards Charles II. The prince's appearance as an infant was thus described by his mother, in a letter to a friend: "He is so ugly, that I am ashamed of him; but his size and fatness supply the want of beauty. I wish you could see the gentleman, for he has no ordinary mien; he is so serious in all that he does, that I cannot help deeming him far wiser than myself." Her eldest daughter was born 4th November, 1631; and another son, afterwards James II., on the 14th October, 1633. The fondest attachment now subsisted between Henrietta and her husband: an increasing and lovely family cemented their conjugal union. Henrietta was a fond mother, and devoted much of her time to her nursery; occasionally her divine voice was heard singing to her infant as she lulled it in her arms, filling the magnificent gallery of Whitehall with its enchanting cadences. Queenly etiquette prevented her from charming listeners with its strains at other times.

At this period the happiness of Henrietta was at the flood; she described herself to her friends as the happiest woman in the world: happy as wife, mother, and queen. All was peaceful at this juncture; the discontents of the English people, whilst Charles I. governed without a parliament, were hushed in grim repose—it was a repose like the lull of the winds before the burst of the electrical tornado; but she knew it not.

In 1638, the queen's mother, Marie de Medicis, took refuge in England from the unrelenting persecution of Richelieu, who owed his rise to her favour. She was received with the greatest respect and affection by both Charles and her daughter, and with as much prosperity as if she had been at the pinnacle of royal opulence, instead of being a distressed fugitive, impoverished and hunted from kingdom to kingdom. The filial care of Henrietta was active in providing all that could contribute to soothe the wounded mind of her mother, especially in proving that, fallen as she was from her high

estate, she was, in the eyes of a dutiful daughter, more a queen than ever. Fifty chambers at St. James's were assigned to her as apartments, and furnished with particular care. But there was a personal trait of affection in Henrietta, that spoke more to the heart than any cost or splendour of reception could have done. When the royal carriage, in which were seated Marie de Medicis and her son-in-law, Charles I., entered the great quadrangle of the palace of St. James, queen Henrietta, at the first flourish of trumpets, left her chamber and descended the great staircase, to receive her august mother. She was accompanied by her children—the little prince of Wales, the duke of York, and the two princesses, Mary and the infant Elizabeth. The queen being then near her time, and in critical health, a chair was placed for her majesty at the foot of the stairs; but when she perceived her royal parent, such was her anxiety to show her duty and tenderness, that she arose, and, hurrying to her carriage, endeavoured with her trembling hands to open the door, which she was too weak to accomplish. The moment her mother alighted, she fell on her knees before her to receive her blessing, and the royal children knelt around them. Every one who saw it was affected to tears at the meeting.

Both Charles and Henrietta were but ill requited for their disinterested kindness. The restless spirit of Marie de Medicis, and the selfish turbulence of her numerous and hungry train, were a continual source of annoyance and embarrassment to them both.

The English troubles were now begun, and the bright sky of Henrietta's fortune became overcast never again to clear up. The death of Strafford was felt by her, as well as by her husband, to be the presage of their ruin. In the words of a narrative dictated by her to Madame de Motteville: "The king suffered extreme sorrow, the queen wept incessantly; they both anticipated, too truly, that this death would, sooner or later, deprive the one of life, and the other of all happiness in this world." She made the most strenuous exertions, though, perhaps, not the most wisely conceived, to save him; and yet Burnet, with his usual blundering recklessness of assertion, charges her with having induced the king to give him up to his fate.

During the king's absence in Scotland, in the autumn of 1641, when the queen was residing with her children at Oatlands, which had been a favourite dower residence of the queens of England for several centuries, "the parliament sent to her," her narrative states, "that she must surrender her young family into their hands during the absence of the king, lest she should take the opportunity of making papists of them." She replied, "that her sons were under the tuition of their separate governors, who were not papists; and, above all, she knew that it was the will of her husband that they should not be brought up in her religion." To remove all cause of complaint, she left Oatlands, and withdrew to Hampton Court, from whence she came occasionally to see her little ones, and thus gave up her constant sojourn with them. Then her enemies raised reports that she meant to leave the kingdom, and carry off her children. They sent orders to a gentleman who was in the commission of the peace at Oatlands, "to hold himself ready with a certain portion of militia," called by the queen *paysans armés*, "to serve the king according to their orders." For, among the other anomalies of this revolution, almost to the last, all measures in opposition to the king were enforced in his own name, to the infinite mystification of the mass of the people, who were mostly well-meaning, though unlearned. The parliamentary order to the Oatlands magistrate, commanded him and his posse to wait till midnight in the park at Oatlands, where they would be joined by cavalry, whose officers would direct what they were to do. The magistrate immediately sought the queen, showed her his order, and declared his intentions to obey her commands. She thanked him warmly, but told him that she wished him to do exactly what parliament dictated, and then to

remain tranquil." "Meanwhile, without raising any alarm, she sent promptly to the principal officers on whom she could rely in London, who were absent from the army on furlough, and she entreated them to be with her before midnight, with all the friends they could muster; then she summoned all her household capable of bearing arms, not even excepting the scullions in her kitchen. Without showing any inquietude, she proposed to spend the evening in Oatlands-park, where her muster arrived and joined her party. The night, however, wore away without the threatened attack from the adverse powers, save that about twenty horsemen, on the road near the park, were seen prowling around, and watching till daybreak; but these, perhaps, had only hostile intentions against the deer." There is no doubt but that the queen would have done battle in defence of her little ones, if need had been for such exertion. The family, which the royal mother was thus personally guarding, somewhat in lioness fashion, by nocturnal patrol round Oatlands-park, was numerous and of tender ages. They were soon after separated, never again to meet on earth in their original number.

The Irish Rebellion broke out the same autumn, with one of those atrocious massacres which are the usual consequence of a long series of civil strife and religious persecution on both sides. The Roundhead party, founding their accusations on similarity of religion, accused the queen of having fostered the rebellion and encouraged the massacre: not one particle of real evidence has ever appeared to support these calumnies. In fact, it was a deadly calamity to the royal cause, and the queen ever deemed it as such.

(To be continued.)

THE MARTYRED TEMPLAR.

(Concluded from page 56.)

"How? where are you going in such a hurry?" exclaimed Gilbert, after silently scanning the youth for a moment. "Return, I beg, my worthy guest. The weather is unpleasant. A cold wind blows from the sea, and the appearance of the sky is more like winter than summer."

"The gentleman wishes to leave us," interposed Blanche. "In my ignorance I have given him offence; or else our humble accommodation is not to his taste."

Gilbert gazed at the youth with a calm and steady glance, which penetrated to his soul. "Dear Sir," said he, at last, to Guy, who stood like a detected culprit before him, "you will not surely affront me before my neighbours, by thus suddenly leaving my house, without even explaining the business which led you here. See! I have brought you beautiful fish, which the steward of the estate has kindly permitted me to catch from the pond. Blanche shall cook them, and you shall have as good a dinner as the Templars themselves could have had."

With these words, he emptied the net in which he carried the fish, into a large vessel filled with water, and busied himself in assisting his wife in her preparation. Meanwhile, a sudden resolve darted into the mind of the youth, and earnestly he grasped the hand of his host.

"A word with you!" said he, in a meaning tone. "Now . . . instantly it must be spoken! I wish to be without witnesses."

"As you please," replied Gilbert, calmly; and making signs to Blanche to remain behind, led his guest to a verandah, which opened on the garden, and commanded a view of the desolate ruins of the hospital. "Here I think we shall be unheard," continued he to his moody and stern companion. "Speak on."

"I will," replied Guy, in constrained tones. "I dare not take a place at your table, eat your bread, and drink your wine, and afterwards do the deed which I am commanded to execute. Cast aside your disguise, brother

Perrail; runaway companion of the Templars! I myself will do it. Grasp, sign, and password, have already revealed me to thee as a brother; hear now my name. I am called Guy de Montfort, and am the nephew of Aumont, the Grand Master of those who, escaped from the sword of the persecutor, have sworn once more to build up the Temple of Solomon, in defiance of the powers of darkness. I, who am yet but a neophyte, am sent here by our noble brotherhood to thee, thou perjured master of our order! Canst thou divine my errand?"

"You are to kill me," replied Perrail, with composure. "I know the punishment of perjury."

"You know it," exclaimed Guy, fiercely, "and yet you were guilty of it!"

"Young man," replied Perrail, with dignity, "judge me with the heart which God has implanted in your breast."

"But your oath!" interrupted Guy.

"Hear me," said Perrail, "before you unsheath your dagger, and avenge your injured brethren; for a noble fire gleams from your eyes, and I should wish you to be compassionate, not to despise me. Driven by the cruelty of tyrants from our homes, and saving nothing but our lives, I sailed with Aumont, the successor of our murdered Superior, to a more hospitable shore. These events occurred before I had taken the solemn vows of our order; and my doing so was deferred until Providence should send us brighter days. Meanwhile, on St. John the Baptist's Day, we swore to avenge ourselves upon our enemies. As the blood of the holy Baptist watered the foundation of the glorious temple of Christianity, so we hoped that ours should prove the cement of that new temple which should be built in place of Solomon's, in the land which had been the cradle of our order. Years, however, passed away, and all our enterprises failed. King, Emperor, and Pope, were all against us, and, with untiring severity, enforced the edicts for our annihilation. Even the people refused to sympathize with us, for the misdeeds of some of our more unworthy brethren; their pride and luxury had estranged the hearts of the poor. At this juncture I was despatched by our Master to sound the popular voice, and gain information respecting the sentiments of the French nation towards us. The result of this mission proved our expectations hopeless. Sad and dispirited, I was preparing to return, when I chanced to make the acquaintance of Blanche, and her family. Now that I saw the hopes of our order utterly annihilated, and that my weak arm and small ability were powerless to help and assist it, the thoughts of returning to exile, far from the dear land of my fathers, to waste existence on some iron-bound coast washed by the northern ocean, became daily more and more insupportable. I decided then to remain and to marry Blanche; but I broke no oaths, for I had as yet taken none. An old priest, attached to the order of the Temple, being at this time about to visit our exiled brethren, I wrote a letter to the Grand Master, declaring my resolution, and returning my insignia, which I despatched by him. All these were received by Aumont, but he sent me no answer. This is the amount of my offending; it is for you to judge of it. Against the order I have never sinned; for no living soul has learned from me its existence, far less its statutes, signs, or passwords. Even my wife is ignorant on these subjects; for never by a single syllable have I betrayed my brethren. You now see, Sir Guy de Montfort, that my transgression has not been very great; nevertheless, I am ready to suffer punishment. My wife, it is true, will become a widow, and my boy a fatherless orphan; but their sorrow will, after a time, pass away; and, meanwhile, I do not regret the five happy years I have spent with Blanche, even though I pay for them so dearly with my blood."

"You have deeply moved me," replied Guy, after a long silence; "and, for all you have related, I cannot blame you. I am sorry to say, however, that, in your

defence, you have not alluded to the great crime with which you are charged, and on account of which I have been sent on this hateful mission. The priest faithfully conveyed to my uncle all that you had sent; but he added the intelligence, that you had been guilty of Simony. At one time, he had been chaplain to the Hospital of the Templars, whose ruins we are now contemplating. During the cruel persecution, he and the bailiff of the establishment buried a costly treasure in one of the vaults. It consisted of pearls and precious stones, which a pious Knight of the Temple had brought from the East to adorn the statue of the Blessed Virgin. The ruthless destroyers of our buildings never discovered the place of concealment, so well had the secret been kept. Several years passed away, and then the priest returned to the scene of his former ministry, and found you in possession of the ruins, which you had just then bought. In the silence of night, he revisited the spot where he had left the treasure, and, to his surprise, found it gone. Who could have been the robber, if not you?"

"The treasure is in my possession," calmly answered Perrail.

"You confess it!" exclaimed Guy; "now, then, repent, and pray God for mercy; for you must die! Strange it is, that you have not been annihilated by shame already! When you looked at these ruins, against whose noble possessors you so scandalously sinned, were you not afraid that the earth would open and swallow you up? Perjured and faithless Master! worse than the beast of prey, for you have wounded the mother that nurtured you! By your robbery you have profaned the sanctuary, and placed yourself on a level with those wretches who slew our martyred brethren. Pray, then, to that holy Trinity whose blessed sign we bear, and be obedient unto death!"

"I am so," replied Perrail, in great agitation; "follow me, however, before proceeding to the last act, otherwise it will be done in vain, for you will have lost the treasure. Do not hesitate; you may indeed trust me."

Guy, astonished at his demeanour, followed him in silence towards the ruins, and down a dilapidated staircase. They entered a vault, in the corner of which was a heap of rubbish. Perrail began to remove it, and Guy lent his assistance. A square black marble stone now became visible. With some difficulty Perrail lifted it away, and drew out of the cavity beneath a rich golden casket.

"The priest was mistaken," said he, solemnly, "when he maintained that he had searched the very place where he and the bailiff deposited the treasure. This is the spot, and the treasure never left its hiding place. The bailiff died in my arms, and confided to me the secret, while I was still in exile, and before I re-visited France. It was in order to preserve the riches of the order that I purchased these neglected ruins; and, finding the treasure still in safety, I covered the spot with yonder heap of rubbish, which, doubtless, served to mislead the priest, when he made his unsuccessful search. When the Lord of Craon, a valiant brother of our order, was about to sail and visit Aumont, on the rocky coast he had chosen for his abode, I gave him a letter to the Grand-Master, announcing the existence of the treasure, and requesting he would send some confidential person to get it removed. It was some time after his departure that the priest visited me, and I considered it useless to repeat the information to him, particularly as I knew not how far he was to be trusted, and had no idea on what errand he had come. Since that time I have received no intelligence from Aumont; and the treasure has consequently remained undisturbed."

"You make me ashamed," replied Guy, whose cheeks were dyed crimson; "I must believe you, although my uncle never received your first letter; for the Lord of Craon perished at sea in a violent storm, and only one sailor escaped to convey the melancholy news."

"Now I am happy," said Perrail, leaving the vault

along with Guy; "for you are convinced of my innocence, and will clear my character to my brethren. Take, then, this casket into your possession; draw your sword, avenge the order, and fly!"

"Man!" exclaimed Guy, deeply offended, "do you suppose I have the blood-thirstiness of the tiger? Would I murder you when my heart clears you of the guilt of apostasy, and my reason of the crime of simony? I could only execute my commission if I found you guilty. I was not sent to wreak vengeance on the innocent, and thus render myself unworthy of the Mastership, which was to be the reward of justice."

"Youth, worthy of a brighter destiny, come to my arms!" exclaimed Perrail, as he pressed the noble young Templar to his breast; "I thank thee for these tears, and for thy kind compassion; but the laws of the Templars must be executed, otherwise thou wilt fall a victim to the displeasure of thy brethren. Do, then, thy duty."

"Art thou mad?" exclaimed Guy; "friend, husband, father, thus to summon the destroying angel?"

"Brother," interrupted Perrail, "my course upon earth is about to end! A sure presentiment tells me so: since for these three successive nights I have been warned by a heavenly messenger.—Descending from the blue empyreal, a martyr's crown has been suspended over my head; and, with child-like peacefulness, I was awaiting it even when you arrived. Now, with the equanimity of a man and a Christian, I am ready to suffer death; therefore, brother, messenger of vengeance! strike, and do not linger. Here, amid the ruins of the house of my order, let me die by the hands of a friend and of a Templar."

"Away!" cried Guy, almost beside himself; "wilt thou constrain me to slay a righteous man? Trouble not thyself about my fate, whatever it may turn out to be. Banish thy gloomy anticipations, and live for thy wife and thy child. Pray for us, and be happy!"

At this moment they were interrupted by Blanche hastening, pale and breathless, towards them, scarcely able to carry her little boy in her trembling arms. "For God's sake, Gilbert, save yourself!" she cried, in her anguish. "The whole neighbourhood is in an uproar; an armed multitude are approaching our dwelling. They say that a Templar is concealed here; and the magistrates have sent officers of justice to apprehend him. Neighbour Remy hastened to the house by a short cut to give us warning."

"Treachery!" thundered Guy; whilst a horrible suspicion crossed his mind, and compelled him to draw his sword from the scabbard. "Traitor, who, with honeyed words of apparent honesty, allured me into the snare! Now all is made clear. What was it delayed thee so long this morning? Didst thou not inform the government of my concealment? Tremble, wretch! My arm can strike ere thy plans succeed!"

So saying, he aimed his sword at the head of Perrail; but Blanche darted between, in time to avert the blow; for the sight of her blooming loveliness, and the cries of the innocent babe, for the instant disarmed him.

"Calm yourself, brother!" said Perrail, "I am guiltless. The powers of hell have betrayed your secret, and not I. Think you I wish your destruction? No! I desire to save you. Follow Blanche through that door, which opens to the vaults of the Temple-court. A narrow foot-path will thence lead you to the corn-fields at the end of my estate. May God's blessing accompany you, and save you from your pursuers! In half-an-hour's time you will reach the shore. Meanwhile I shall delay the murderous wretches. Fly then! and may you reach your bark in safety! Guard well the casket, and greet the brethren for me."

Guy, oppressed with shame and sorrow, cast himself on the bosom of the noble Perrail; and after embracing him, took the hand of the terrified Blanche, and accompanied her to the place of safety.

"What do you want, friends and neighbours?" said Perrail, advancing towards the excited multitude; "wherefore do you besiege my house?"

"Deliver up the blasphemer—the heretic—the Templar whom you have concealed!" shouted the enraged mob.

"I have got no Templar here," replied Perrail, fearlessly. "You are mistaken."

"Do not believe him! He lies!" cried Renaud, an envious neighbour; "I myself saw him walking with the miscreant whom the foreign fisherman talked about. They took their way to yonder ruins. Concealed behind a hedge, I heard them speaking of a treasure which they were going to dig up."

"A treasure!" shouted the multitude eagerly, whilst desire of plunder glared from their greedy eyes; "Where? Where?"

"Listen to me," exclaimed Perrail, in vain striving to calm them. "Control your unworthy passions, and remember that you are men and Christians!"

"We don't forget it," cried the ringleader; "we know we are men; but the Templars are the children of the devil, whom they do not scruple to call their father. We are Christians, while the Templars are heretics, who despise Christ, and wear idolatrous images on their breast. They must be burned, for King and Pope have sanctioned it; and it shall be done."

"I do not care a straw for the Templar," growled forth Renaud, who understood the people he had to deal with; "but the treasure—it is the treasure that we ought to seek for."

"Yes! Yes!" shouted the mob. "Go on, Gilbert, and guide us, or it will cost thee thy life."

Against his will, Perrail, with a few friends, who gathered round him, was pressed forwards by the crowd towards the ruins of the hospital. At the very spot where Guy had taken leave of Perrail they halted, and the multitude once more furiously demanded the treasure. At his refusal to answer, the most eager divided themselves into parties, and explored the crazy ruins and dilapidated vaults, in the vain hope of discovering gold and silver. Renaud alone kept his eyes fixed upon Perrail, determined that his victim should not escape. "Fly!" whispered the brave man's friends; "we will cover thy flight."

"I remain in the hands of God," replied he, with equanimity; and did not even change colour when some of the ruffians returned with the intelligence that the place had been discovered where the treasure had been concealed.

"Dost thou deny it still?" thundered the voice of the malignant Renaud; "the empty nest is found, but where are the birds that were in it? where is the accomplice that carried them off?"

Perrail maintained an indignant silence. "The King's seneschal has the right to demand that question and not you," replied the faithful Remy, in a tone of defiance.

"To unmask a secret sinner, is the duty of every honest man," replied Renaud, "and Gilbert is such a person, for no man knows whence he comes; doubtless he has been a dependent of the accursed Templars, who misled our youth, wrung from us the fruit of the soil which we earned with the sweat of our brow, and spent the profits of our weary labours in luxury and debauchery. Is there one of you who has not just cause to avenge himself on the detestable knights? Thy garden, Nicholas, was forcibly taken from thee by their bailiff. Thy son, Matthieu, used to be forced to watch night after night, after a weary day's labour, that the rest of a certain luxurious knight might not be disturbed. And thy grandchild, honest William, was whipped by their commands until he died, for the small offence of catching a hare and getting it roasted. These deeds of cruelty, and a hundred others, we have seen with our own eyes, and yet, here stands a man who gives shelter to one of the accursed brood whom the King has banished, and with him divides the treasures of their heretical society! Look at him, how like an honest man he stands! How he even dares to smile! Neighbours, will you put up with this contempt? Perhaps he himself is a concealed

Templar ! Perhaps the wretch even bears their secret mark on his breast."

So saying, Renaud seized Perrail to examine him, who indignantly pushed him back ; but the insidious speech had already made a deep impression, and with a wild cry the enraged multitude darted on their victim.

Blinded by fury, a smith armed with a hammer struck a murderous blow on the head of Perrail. Bleeding, he sank to the earth, while the purple crown of martyrdom again hovered before his closing eyes. "Hiram !" he exclaimed, as his senses wandered. His lips moved, perhaps once more to utter the hallowed name of Jesus ; but in vain ! Darkness obscured his vision—the dew of death glistened on his brow, and the seneschal, who a short time after arrived, found the multitude, ashamed of what they had done, standing in speechless consternation round the corpse ; some of the more charitable striving to reanimate the unfortunate Blanche, who, returning at the fatal moment, had swooned away.

"Now, brethren, I have concluded my recital," said Sir Guy de Montford to the assembled Templars gathered together, as heretofore, in the vault of the ruined chapel of St. John, on the bleak and rocky coast from which the young knight had sailed a short time previously. "I could not slay him, because I believed him guiltless : let him, therefore, who believes himself without sin among you, cast the first stone at me ! I now fearlessly place myself before you, my brethren and my judges ;—do with me what seems best to you. I did not tremble when, with twenty swords at my breast, you tried my courage in these vaults, ere I set out ; and I do not tremble now before your poniards, for my conscience approves me, and I know that I have done right. If the rank of Master is only to be obtained by bloodshed, then I abjure it for ever, and separate myself from this association of cruelty, whose members, under the mask of benevolence and brotherly love, conceal fiendish hatred ; and who hide the assassin's dagger under the insignia of a peaceful handicraft."

Guy was silent, and there was for some moments a solemn pause, while the Grand Master sat in deep consideration, with his head leaning on his hand. At last, he raised his eyes towards the emblem of the Blessed Trinity represented on the canopy above his chair, and from the Divine fountain of wisdom imbibed lenity and prudence.

"Brother Perrail undoubtedly left us," at length he said ; "nevertheless we shall cherish no rancour against him on that account, for he did not break the oath to defend the rights of the order, but, on the contrary, lost his life in preserving Brother Guy from the destruction which threatened him. On another account also, we must still number Brother Perrail in our ranks ; he has shown the perfection of human benevolence ; and is not perfection the aim of our association ?"

"So let it be !" exclaimed the brethren with one voice ; while Guy replied, in altered tones, as soon as the uproar subsided, "My Lord and Master, your clemency has touched my heart, and filled it with gratitude. Let me now, however, conclude the story of the unfortunate Perrail, who fell a martyr to his fidelity to the Order. Being detained by adverse winds, I had time to learn the melancholy news. In the night I returned to the house of mourning, and persuaded the bereaved widow to accompany me, along with the corpse of her husband, and her orphan boy. I promised that friends of Perrail should protect her and her child, and for that purpose I have brought them hither."

"You did well, De Montfort," replied the Grand Master ; "the noble death of Perrail merits all the poor recompense we can offer ; let her therefore be conducted into our presence. And now, my brethren," he continued, turning towards the knights, "cover the emblem of the Blessed Trinity, and remove all our mystic symbols from the vault."

His orders were obeyed. Blanche was admitted. She

seemed bowed down with care and sorrow, as, conducted by Guy, she approached the venerable Grand Master, and would have sunk at his feet, had not he, touched to the heart, raised her in his arms ; then, gently laying his hands upon her head, he blessed her, and said : "Like thee, poor stricken one ! we call from the depths of our affliction to the Lord of hosts, and hope for a new Jerusalem, and a bright future of immortality. God is my witness, that, from this day henceforth, I shall look upon thee as my daughter, and upon thy orphan babe as my son, and, after my death, my nephew shall take my place in fulfilling this duty."

After saying these words, Aumont commanded the poor widow to be led away, and the dead body of her husband to be brought. The knights, with one accord, lowered their swords as the corpse was carried in, and over the coffin of their martyred companion was Guy de Montford, by grasp, step, sign, and brotherly kiss, received to the dignity of Master.

Near the chapel of St. John, the body of Perrail was deposited in holy ground. A heap of stones was his only monument, but, during many long years, his humble resting-place was visited with veneration by the members of the Order.

Poetry.

[In Original Contributions under this head, the Name, real or assumed, of the Contributor, is printed in Small Capitals under the title ; in Selections, it is printed in Italics at the end.]

THE FAR-OFF LAND.

THE rock, and wood, and field, and stream,
Are flickering 'neath the sunny beam :
Above me is the heaven of blue ;
Beneath, the boundless ocean's hue
O'er sea, and shore, and moss, and sweep ;
And onward nothing meets the eye
Save yonder gallant argosy,
Stretching, half seen, its lingering way
Beyond the forkings of the bay.

How lovely all ! how passing fair !
Safely the travell'd man might swear
That nought his wandering eyes had seen
So mild, so tranquil, so serene.
And yet, with fond and eager view,
I turn, and other course pursue ;
Catching, beyond the sea-girt strand,
Dark glimmerings of a distant land ;
Mountains, which fancy scarce can shape,
Bold rock, and far projecting cape,
And earth so mingled with the sky,
'Twere hard to tell the boundary.
I know not if that far-off land
Be some accursed and desert strand,
Where o'er the mountain's summit bleak
No sounds but of the tempest speak,
And the wild ocean's raving tide
Lashes its never-trodden side ;
Perhaps it lies unsought, unknown,
Some burning or some frozen zone :
Yet 'mid the soft and tranquil scene
Of sea, and sky, and forest green,
I reckon these, but inly sigh
That unacquainted coast to try.

Oh ! if some cherish'd hopes destroy
The tenor of thy present joy,
And bid thee, with inquiring view,
The onward vale of life pursue,
Where on the shadowy distance move
Fair undistinguish'd forms of love,
And round the dim horizon press
Imagined shapes of happiness ;—
Yet stay awhile ! thine eye has stray'd
To scenes which, view'd more closely, fade :
Take what thy power may now command ;
All onward is—the far-off land.

Rev. Edward Smedley.

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne*.

ANECDOTE OF A SCOTCH GIRL.

ONE day, in one of the crowded streets, I met a poor young girl, who seemed utterly bewildered; she stopped me to ask if I would tell her the name of the street she was in. Her accent was broad Scotch, and her look and air of perfect simplicity was, I perceived, not assumed, but genuine. I gave her the information she wanted, and asked her where she lived, and if she was in search of any friend's house. She said she did not live anywhere in London; she was but just arrived from Scotland, and knew nobody who had any house or lodging of their own in town, but she was looking for a friend of the name of Peggy; and Peggy was a Scotch girl, who was born within a mile of the place where she lived in Scotland. Peggy was in service in London, and had written her direction to some house in this street; but the number of the house and the names of the master or mistress had been forgotten. The poor girl was determined, she said, to try every house, for she had come all the way from Scotland to see Peggy, and she had no other dependence. It seemed a hopeless case. I was so much struck with her simplicity and forlorn condition, that I could not leave her in this perplexity, an utter stranger as she evidently was to the dangers of London. I went with her, though I own without the slightest hope of her succeeding in the object of her search, knocked at every door, and made inquiries at every house. When we came near the end of the street, she was in despair, and cried bitterly; but as one of the last doors opened, and as a footman was surlily beginning to answer my questions, she darted past him, exclaiming, "There's Peggy!" She flew along the passage to a servant girl, whose head had just appeared as she was coming up stairs. I never heard or saw stronger expressions of joy or affection than at this meeting, and I scarcely ever, for any service I have been able in the course of my life to do for my fellow creatures, received such grateful thanks as I did from this poor Scotch lassie and her Peggy for the little assistance I afforded her.—*Memoirs of R. L. Edgworth*.

MACDONALD OF KINGSBURGH.

MACDONALD of Kingsburgh, who married Flora Macdonald, was one of the most respectable men of his district. He was brought a prisoner, heavily ironed, from Skye to Fort Augustus. The excellent President Forbes represented to the Duke of Cumberland, that to execute so popular a man as Kingsburgh would excite a new rebellion. But he was so deeply involved in the escape of Charles Edward, that his death seemed to be certain. At Fort Augustus, whilst he was a prisoner, an order came to the officer on guard for the release of some prisoners. Amongst others, the officer called the name of Alexander Macdonald, asking Kingsburgh if that was not he. He answered, "That is my name; but I suspect there must be some mistake." The officer said, "What mistake? is not your name Alexander Macdonald?" Kingsburgh said that it was, but repeated his warning twice or thrice. At last he went out, and met a friend, who advised him instantly to quit the Fort. Kingsburgh said, "No, I must wait at the opposite ale-house, till I see whether the officer gets into a scrape." He waited: in two hours an officer came with a body of soldiers, and made the subaltern on guard prisoner, for having set at large so dangerous a rebel. Kingsburgh immediately ran across the street, and, saying to the officer, "I told you there was a mistake," surrendered himself. However the President Forbes saved his life.

REAL FAME.

SCOTT had tasted at our house the Yarmouth bloaters, then an article of less savoury notoriety than at present; allowed their superiority to the "Finnan haddies," and inquired where they were to be got. My mother, having undertaken the commission, applied to our fishmonger, Mr. B——, of Billingsgate, a most worthy and matter-of-fact Triton, whom no one would have suspected of an addiction to poetry or romance. Hearing that the half-hundred small fishes were to be sent as far as Sussex-place, he rather shook his head at the inconvenient distance. "Rather out of our beat, ma'am. There are plenty of places where they can be got good." "I am sorry for that; for I am afraid Sir Walter Scott will be disappointed, having learned that yours are the best—" "Sir Walter Scott, ma'am! God bless my soul, is Sir Walter in town? Tom, go and pick the very best half-hundred you can find, in that fresh lot from Yarmouth. Well, ma'am, and how is he looking? Why, if you had told me they were for him, I would have sent them to Jerusalem or Johnny Groat's house. Now mind, Tom, that the boy starts directly; remember, 24, Sussex-place, and no mistake about it."—This circumstance being recounted to Scott, he cordially exclaimed, "Well now, this is something like real, tangible fame. I like this more than all the minauderies of the old French countesses who used to bother me at Paris with their extravagant compliments, and were only thinking, I'll be sworn, of their own vanity all the while."—*New Monthly Magazine*.

ABSTRACTING entirely from the culture of the moral powers, how extensive and difficult is the business of conducting intellectual improvement! To watch over the associations which men form in their tender years; to give them early habits of mental activity; to rouse their curiosity, and to direct it to proper objects; to exercise their ingenuity and invention; to cultivate in their minds a turn for speculation, and at the same time preserve their attention alive to the objects around them; to awaken their sensibilities to the beauties of nature, and to inspire them with a relish for intellectual enjoyment;—these form but a part of the business of education; and yet the execution, even of this part, requires an acquaintance with the general principles of our nature, which seldom falls to the share of those to whom the instruction of youth is commonly entrusted.—*Stewart*.

MEN are qualified for civil liberty, in exact proportion to their disposition to put moral chains upon their own appetites; in proportion as their love to justice is above their rapacity; in proportion as their soundness and sobriety of understanding is above their vanity and presumption; in proportion as they are more disposed to listen to the counsels of the wise and good, in preference to the flattery of knaves. Society cannot exist unless a controlling power upon will and appetite be placed somewhere, and the less of it there is within the more there must be without. It is ordained, in the eternal constitution of things, that men of intemperate minds cannot be free; their passions forge their fetters.—*Burke*.

SHARPE'S London Magazine:

A JOURNAL OF ENTERTAINMENT AND INSTRUCTION
FOR GENERAL READING.

No. 5.]

NOVEMBER 29, 1845.

[PRICE 1½d.]

PROVIDENT SOCIETIES.

THE object of our Magazine being to advance the happiness and prosperity of the people by all prudent and moral means, we are glad to devote an early portion of it to the consideration of the best method of providing for the comfort of the working classes, when by old age or sickness the ordinary sources of provision are dried up. Now, we must begin with confessing that we are not disciples of that school of political economists who would represent man to be so complete and independent in himself, that, if he have only sagacity and energy, he need never be beholden to the charity of his neighbours. On the contrary, we believe it to be a fixed law of our being, that calamities and misfortunes, against which no prudence can possibly guard, shall befall us, for the twofold purpose of convincing man of his weakness, and of eliciting the kindly feelings of our nature from those who have it in their power to alleviate distress. Nevertheless, prudence is a virtue in the code of Christianity, as well as in that of political economy. And we believe that we can scarcely do a better service to our readers, than to assist them in exercising it in the best possible way for the benefit of themselves and their families. Not a few of our readers, perhaps, will entertain a prejudice against the whole system of Provident Societies, not so much on the ground of their engendering selfishness, as remembering the vice and intemperance of which they are often productive, to say nothing of the insecurity and failures to which they have been found liable. We admit, that whether we regard the tradesmen's provident association of the town, or the ordinary village benefit club, they appear chiefly to have been constructed for the benefit of the publican,¹ at whose house the members assemble. Again, a very small portion of the benefits which the mechanic, or the tradesman, or the labourer, may secure for himself by prudential means, is provided for by the ordinary societies. Sickness and funeral expenses (and the former, at least, only in the head of the family), for the most part are alone taken into consideration; whereas the system is capable of being applied to the securing, besides, a competent maintenance for old age, to the apprenticing of children, or setting them up in business, or enabling

them to emigrate; and should be made to comprise single women and children, as well as adult males.

"There are three principles (observes an able writer) which appear of first importance in forming a benefit society.

"First, that it be based on computations made by some eminent actuary, and enrolled under Act of Parliament. Next, that no portion of the funds shall, on any pretence, be expended in feasting, or at public houses. Thirdly, that the expenses of management shall be defrayed, if possible, out of funds distinct from the contributions of the members: that is to say, out of voluntary donations and subscriptions from honorary members, or out of the income of investments made by such donations."

To which we should be disposed to add, as a fourth rule, that the meetings of the society should not be held at taverns or public houses.

We will now give a sample of some of the benefits to be derived from these institutions (their proper name is *guilds*, from a Saxon word, meaning *to pay*) when properly conducted.

For a man 21 years old, the monthly payment to obtain 7s. 6d. a week in sickness, is 1s. 3d. a month for life.

To obtain the same up to 65, and 5s. a week, sick or well, working or not working, after that age, 1s. 9d.; that is, only 6d. more.

To obtain, from the age of 21, 10s. a week in sickness—1s. 7½d. a month for life.

To obtain the same up to 65, and 5s. a week, sick or well, working or not working, after that age, 2s. a month; that is, only 4½d. more. And in this latter case, there is included a sum of 4l. at death.

For the additional payment of one halfpenny, to obtain an allowance for life after 65, the monthly payment will cease at 60 years of age.

A payment of 1s. 8d. a month for a child under one year of age, will secure 16l. at the age of 14.

And if the child should live beyond that age, a sick allowance of 10s. up to 65 years, and 5s. a week, sick or well, afterwards for life, may be purchased, free of all monthly payments, with about the same sum of 16l.

If the child die under 14 years of age, the whole deposit will be returned.

Deferred life annuities of any amount up to 100l. may likewise be secured; and the money deposited will be returned, in case of death, to the family of the depositor.

¹ Of 346 Friendly Societies in the county of Middlesex, 311 are held in public houses.

Instead of monthly payments, an equivalent sum may be paid at once; by which means masters and mistresses may readily provide for faithful servants, or parents possessing a small sum of money may, at their deaths, secure a permanent provision for their children.

At the present moment but few such associations exist, but we expect shortly to see them founded in every part of the kingdom. The Church was of old the patron of all such industrial guilds; and we doubt not that ere long she will awake to this duty, as she has already awoke to the discharge of duties more directly spiritual. In the Archdeaconry of Chichester, in the town and county of Cambridge, the work has already commenced; and at Selby, in Yorkshire, there is an energetic layman, of the name of Hick, who is endeavouring to organize something of the kind, on a large scale. To all these fellow-labourers we wish success. And we apprehend that any two or three active, right-minded men, who felt interested in the matter, and would refer to the several quarters which we have named, would be able to accomplish the foundation of such an institution for their own neighbourhood, by incorporating it into some larger body, even if it were not strong enough to stand by itself.

One word more, by way of explanation. While we protest against meetings being held in public houses, and the expenses of festivities being defrayed out of the ordinary contributions of members, we are very far from being opposed to the celebration of an annual holiday or festival. Rather, we would make it an essential part of the system. Only let it be, at least in the country, a matter arranged in each parish by itself, so that it may not be an excuse for riot and intemperance. A genuine parish holiday, commencing with a festive religious service, embracing the practice of manly English games, and leading to the mixing of all classes together in friendly intercourse, would be one great instrument for the revival of good feeling in our rural districts.

On another occasion we shall hope to say something of the history and constitution of the early *Guilds*.

HENRIETTA MARIA, QUEEN CONSORT OF CHARLES I.

(Concluded from page 66.)

The king, soon after his return from Scotland, made his well-known unsuccessful attempt to arrest five of the most factious members of the House of Commons, from which the actual commencement of the civil war may be dated. An unfortunate exclamation, which escaped the queen in the presence of one of her trusted attendants—Lady Carlisle—but who was in fact a spy of some of the members in question, betrayed the king's intention, and they had warning in time to remove out of the way. When Henrietta found that her heedless prattling had done the mischief, she threw herself into the arms of her husband, and avowed her fault, blaming herself with most passionate penitence. Not a reproach did he give her; and she paused in her narrative to Madame de Motteville, in an agony of regret, to call her attention to his admirable tenderness to her: "For never," said she, "did he treat me for a moment with less kindness than before it happened, though I had ruined him."

The disturbances which followed this occurrence caused the king and queen to remove from Whitehall to Hampton Court. The parliament having sent a circular

to all the nobility, to arm and prevent the king from moving further, the queen proposed to her royal consort that she should depart for Holland, on the ostensible errand of conducting the little princess royal to her young spouse, the prince of Orange; but in reality for the purpose of selling her jewels to provide her consort with the means of defence. She embarked at Dover, Feb. 23, 1641-2. The king stood on the shore, watching their departing sails with tearful eyes, doubtful whether they should ever meet again. "As the wind was favourable for coasting," the queen declares, "her husband rode four leagues, following the vessel along the windings of the shore." Whatever political errors Charles may be chargeable with, yet, to every heart capable of enshrining the domestic affections, his name must be dear.

The Dutch republicans received the queen with little politeness, but with real effective liberality. Their high mightinesses at Rotterdam lent her 40,000 guilders, their bank 25,000, the bank at Amsterdam 845,000. Of merchants at the Hague, Fletcher and Fitcher, she borrowed 166,000. On her pendant pearls she borrowed 213,000 guilders; she put six rubies in pawn for 40,000 guilders; and altogether raised upwards of 2,000,000 sterling. She was one year in effecting this great work, during which time she sent valuable remittances of money, arms, and warlike stores to her royal husband, who had raised his standard at Nottingham soon after her departure, and commenced the warlike struggle with some success, at least wherever he commanded in person.

The unfortunate mother of Henrietta died in misery at Cologne the same winter. It had been the intention of the queen to continue her journey up the Rhine, to attend her parent's sick bed; but the Dutch burgo-masters interfered and wholly prevented her; and she, fearful of compromising the advantages she had gained, dared not pursue her intentions, lest her husband's interest should suffer severely.

On the 2d February, 1642-3, Henrietta, having accomplished her business in Holland, re-embarked for England. She encountered a severe storm, and was in considerable danger. Her ladies wept and screamed perpetually, but the queen never lost her high spirits. To all the lamentations around her, the daughter of Henry the Great replied gaily, "Comfort yourselves, *mes cheres*, queens of England are never drowned." The ladies, it is added, suspended their wailings to reflect, recollected that such a case had never occurred, and were greatly consoled. After a fortnight's pitching and tossing, the ship was beaten back on the wild Scheveling coast, and the queen landed safely at the port, close to the Hague, from whence they had set out. After a few days' rest and refreshment, she again set sail, minus two ships lost in the storm, and anchored in Burlington Bay, 20th February, 1642-3, after an absence of a year all but two days.

On the 22d she landed, under the protection of the Dutch admiral, Van Tromp, by sea, and a body of a thousand cavaliers on land. Intelligence of her arrival having reached the parliamentary admiral, Batten, who had been cruising off Newcastle, he entered Burlington Bay in the night, and by peep of dawn commenced an active cannonade on the house where she was sleeping, the parliament having voted her guilty of high treason, for obtaining supplies of money and arms for her distressed husband. She made her escape, not without much danger. The neighbouring houses were totally destroyed, and one of her servants was killed by a cannon-ball.

While Henrietta remained in Yorkshire she gained over many adherents to the royal cause. The captain of one of the vessels which had fired upon the house in which she slept at Burlington, having been seized on shore, was sentenced by a military tribunal to be hung. The queen hearing of it, ordered him to be set at liberty; an act of generosity by which the captain was

so deeply touched, that he came over to the royal cause, and persuaded many of his shipmates to join him.

The queen left Yorkshire at the head of a considerable army, and, after a triumphant march through the midland counties, she met the king in the vale of Keynton, near Edgehill.

A transient flush of success at this period brightened the prospects of the royal cause; and the queen was so elated at it, and at her supplies having been the means of obtaining it, that she would not hear of any means of terminating the civil war except by conquest. Thus by her influence the opportunity of making peace was lost for ever; and she afterwards confessed and bitterly lamented her error.

The court remained at Oxford until the approach of the parliamentary forces, rendering a battle inevitable, made it necessary that the queen, who was by this time near her confinement, should be removed to a place of greater security. Previously to the battle of Newbury, so fatal to his cause, Charles escorted his beloved wife to Abingdon, and there, on the 3d of April, 1644, with streaming tears and dark forebodings for the future, this attached pair parted, never to meet again on earth.

The queen's first destination was Bath, but she afterwards sought refuge in Exeter, where, amidst the horrors and consternation of an approaching siege, she was in want of everything. The king had written to summon to her assistance his faithful household physician, Theodore Mayerne; his epistle was comprehended in one emphatic line in French:—

"MAYERNE, —

"For the love of me, go to my wife.

"C. R."

And the faithful physician did not abandon his royal patrons in the hour of their distress. Henrietta likewise wrote to her sister-in-law, the queen regent of France, Anne of Austria, giving her an account of her distressed state. That queen sent her 50,000 pistoles, with every article needful for a lady in a delicate situation, and her own *sage-femme* to assist her in her hour of trouble. Perhaps the best trait in the character of queen Henrietta occurs at this juncture. She reserved a very small portion of the donation of the queen of France for her own use, and sent the bulk of it to the relief of her distressed husband. Boundless generosity was a leading feature of her character.

The queen gave birth to a living daughter at Exeter, 1st June, 1644, and in less than a fortnight afterwards the earl of Essex advanced to besiege the city. She sent to the republican general, requesting permission to retire to Bath for the completion of her recovery; but, in reply, he intimated that he should lead her prisoner to London, to answer to parliament for having levied war in England. The daughter of Henry the Great summoned all the energy of character which she had derived from that mighty sire, to triumph over the pain and weakness that oppressed her at this awful crisis. She rose from her sick bed, and escaped from Exeter in disguise, with one gentleman and one lady, and her confessor. She was constrained to hide herself in a hut, three miles from Exeter-gate, where she passed two days without anything to nourish her, couched under a heap of litter. She heard the parliamentary soldiers defile on each side of her shelter; she overheard their imprecations and oaths, "that they would carry the head of Henrietta to London, as they would receive from the parliament a reward for it of 50,000 crowns." When this peril was passed, she issued out of her hiding-place, and, accompanied by the three persons who had shared her dangers, traversed the same road on which the soldiers had lately marched, though they had made it nearly impassable. She travelled in extreme pain, and her anxious attendants were astonished that she did not utterly fail on the way.

Having reached Pendennis Castle, she embarked in a

Dutch vessel, which lay in the bay, and sailed for France. Her vessel was chased by a cruiser in the service of the parliament. Several cannon-shots were fired at it; and the danger of being taken or sunk seemed to her imminent. In this exigence, she took the command of the vessel. She forbade any return to be made of the cannonading, for fear of delay, but urged the pilot to continue his course, and every sail to be set for speed; and she charged the captain, if escape were impossible, to fire the powder magazine, and destroy her with the ship, rather than permit her to fall alive into the hands of her husband's enemies. At this order, her ladies and domestics sent forth the most piercing cries; she meantime maintaining a courageous silence, her high spirit being wound up to brave death rather than the disgrace to herself, and the trouble to her husband, which would have ensued if she had been dragged a captive to London. The cannonading continued till they were nearly in sight of Jersey, when a shot hit the queen's little bark, and made it stagger under the blow. Every one on board gave themselves over for lost, as the mischief done to the rigging made the vessel slacken sail. At that moment, a little fleet of Dieppe vessels hove in sight, and hastened to the scene of action. This friendly squadron took the queen's shattered bark under their protection, and the enemy sheered off. After encountering a severe storm, she landed in safety at near Brest, and was received with much enthusiasm by the French people.

The regency of France was now in the hands of Anne of Austria, the widow of Louis XIII. That queen had received important services from Charles I. during the time of his prosperity, and she evinced her gratitude by the kindness with which she treated his wife and family in this time of their distress. She gave to Henrietta the noble income of 12,000 crowns per month, which was continued till the civil war of the Fronde reduced the whole royal family of France to destitution. But Henrietta stripped herself of whatever was given her, and gradually sold all her jewels, to send every penny she could command to her suffering husband.

In the course of the year 1646, the queen had the pleasure of welcoming to her arms her little daughter, Henrietta, whom she had left an infant of but a fortnight old at Exeter. The escape of the child from the power of the parliament was effected by Lady Morton, her governess, one of the beautiful race of Villiers. She had been permitted by the parliamentary army to retire with the infant princess from Exeter to the nursery palace of Oatlands. The year after, when all royal expenses were cashiered, and the parliament meditated taking the child, to transfer it, with its brothers and sisters, to the custody of the earl and countess of Northumberland, Lady Morton resolved only to surrender this little one to the queen, from whom she had received her. To effect her escape, she disguised herself as the wife of a poor French servant, little better than a beggar. She likewise dressed the infant princess in rags, like a beggar boy, and called her "Pierre," that name being somewhat like the sound by which the little creature meant to call herself "princess," if she was asked her name. Lady Morton was tall and elegantly formed, and it was no easy matter to disguise the noble air and graceful port of the Villiers' beauty. She, however, fitted herself up a hump with a bundle of linen. She walked, with the little princess on her back, in this disguise, nearly to Dover, giving out that she was her little boy. Subsequently, Lady Morton declared that she was at the same time alarmed and amused at the indignation of the royal infant at her rags and mean appearance, and at the pertinacity with which she strove to inform every person she passed on the road "that she was not a beggar-boy and Pierre, but the little princess." Fortunately, no one understood her babblings but her affectionate guardian; Lady Morton had arranged all things so judiciously, that she crossed the sea from Dover to Calais in the common packet-boat, without awakening the least suspicion.

The war of the Fronde, which broke out in 1648,

stopped the payment of Henrietta's pension, and reduced her to the extremity of distress. An accidental visit of the cardinal de Retz, the leader of the Fronde, on a day when her last loaf was eaten, her last faggot consumed, and she herself destitute of the means of purchasing more, in all probability saved her from perishing of want. He found her without any fire, though the snow was falling diamally; she was sitting by the bedside of her little daughter, the Princess Henrietta; it was noon, but the child was still in bed. "You find me," said the queen, calmly, "keeping company with my Henrietta; I would not let the poor child rise to-day, for we have no fire." The cardinal immediately sent her assistance from his own resources, and prevailed upon the parliament of Paris to vote her a subsidy of 20,000 livres.

The affairs of the king had now become desperate, and his affectionate wife presented the most humble solicitations to both houses of parliament, to be permitted to pass over to England, and share his fate, whatever it might be. No attention was paid to her request. The accounts which she received of what was passing in England were so irregular, that she was long kept in the most cruel suspense as to her husband's fate.

We must pass over the details of the trial and execution of Charles, and proceed to the condition of his wife when the fatal intelligence was conveyed to her by Lord Jermyn. "She stood," says Père Gamache, her daughter's tutor, in a manuscript memoir quoted by Miss Strickland, "motionless as a statue, without words, and without tears. To all our exhortations and arguments, our queen was deaf and insensible. At last, ayed by her appalling grief, we ceased talking, and stood round her in perturbed silence, some sighing, some weeping, all with mournful and sympathizing looks bent on her immovable countenance. So we continued till nightfall, when the duchess of Vendôme, whom our queen tenderly loved, came to see her. Weeping, she took the hand of the royal widow, and tenderly kissed it, and at last succeeded in awakening her from the stupor of grief into which she had been plunged since she had comprehended the dreadful death of her husband. She was able to sigh and weep, and soon expressed a desire to retire from the world to indulge in the profound sorrow she suffered. Her little daughter was with her, and her maternal love found it hard to separate from her; yet she longed to withdraw into some humble abode, where she might weep at will. At last, she resolved to retire, with a few of her ladies, into the convent of the Carmelites, Faubourg Saint Jacques, in Paris."

"Often," says Madame de Motteville, "did Queen Henrietta say to me, that she was astonished how she ever could survive the loss of Charles, when she so well knew that life could contain, after this calamity, nothing but bitterness for her. 'I have lost a crown,' she would say, 'but that I had long before ceased to regret; it is the husband for whom I grieve—good, just, wise, virtuous as he was, most worthy of my love and that of his subjects: the future must be for me but a continual succession of misery and afflictions.'

"Queen Henrietta," continues her friend, "had enlightened and noble sentiments; in consequence, she keenly felt all that she had lost, and all she owed to the memory of a king and husband who had so tenderly loved her, who had given her his entire confidence, and had always considered her above all persons. He had shared with her his grandeur and prosperity, and it was but just, as she said, 'that she should take her part in the bitterness of his adversity, and sorrow for him, as if his death had taken place each day that she lived, to the last hour of her life.' In fact, she wore a perpetual widow's mourning for him on her person and in her heart. This lasting sadness, those who knew her were well aware, was a great change from her natural disposition, which was gay, gladsome, and apt to see all the ordinary occurrences of life in a bright and cheerful

light. From that hour she surnamed herself, '*La Malheureuse Reine.*'"

Henrietta's attachment to the Roman Catholic faith seems to have been strengthened during her widowhood into the most uncompromising rigour. She used every effort to win over her youngest son, the duke of Gloucester, to that faith, and treated him with unaccountable harshness, when she found that his constancy was not to be overcome. This struggle, with the differences in which it involved her with the other members of her family, and some unsuccessful efforts made by her to effect a matrimonial alliance between her eldest son and her niece, Mademoiselle de Montpensier, daughter of the duke of Orleans, are among the most remarkable incidents preserved regarding her until the Restoration.

On that event she resumed all her former activity of mind; and to assist her son in his restoration, she exerted herself to obtain for him a loan, or present, of 50,000 crowns from the duchess of Savoy, her sister; and she renewed every ancient tie and alliance in his favour.

After the Restoration she continued to reside in France, until accounts reached her of the marriage of the duke of York with Ann Hyde, daughter of the earl of Clarendon. She hastened to England, to use her influence and authority to prevent what she deemed so great a stain and dishonour to the crown. When she arrived she found James willing to accede to her wishes, and to disown his wife, doubts of whose fidelity had been artfully insinuated into his mind by his sister, the princess of Orange. But that princess, who soon after died of small-pox, having, on her death-bed, cleared the character of the duchess from the aspersions which she had caused to be cast upon it, James not only restored her to her place in his affections, but had the happiness of reconciling his mother to his wife. The reason for this change of feeling is not very clearly given. Perhaps the best explanation of it is to be found in the gradual triumph, in a naturally generous mind, (though perverted by prejudices of rank,) of reason, and good feeling, over pride and passion.

She was surrounded by too melancholy reminiscences in England to make a long stay desirable, and she returned to France in a few months. She returned again to England, however, in July 1662, when her son's marriage took place with Catharine of Braganza. She took up her residence in Somerset House, to which she had made very splendid additions and decorations. Here she continued for three years; but the foggy climate of England proving injurious to her health, she took a final leave of it in June 1665, and again returned to France. Here her health gradually gave way more and more, until she died on the 31st August, 1669. The immediate cause of her death was believed to be an overdose of opium, administered through the carelessness or ignorance of her physician. She was interred on the 12th of September, with her royal ancestors, at the magnificent abbey of St. Denis, near Paris. Her *éloge*, which was spoken by Bossuet, the celebrated bishop of Meaux, is regarded as one of the most eloquent productions of his pen.

Her character is thus summed up in the words of the venerable Father Gamache, to whose manuscript we are indebted for some of the most interesting particulars in the latter part of Miss Strickland's narrative:—"This great queen was indeed universally regretted, for she had established a real empire over all hearts; her cheerful temper, her gay and witty conversation, which enlivened all around her to her last hours; her graceful familiarity, and all those winning qualities, joined to a sincere piety, rendered her delightful to every one. The king of France regarded her, not only as his dear aunt, whom he had known from infancy, but as a real bond of peace between his country and Great Britain; and her son-in-law, his brother, the duke of Orleans, convinced of her rare prudence and sagacity, consulted her on every affair of moment, and gave her his most intimate confidence, as if she had been his real mother."

BEAUCHAMPS.—A TALE.

CHAP. III.

(Continued from page 38.)

"WELL, sir, a whole week passed by, and no tidings of Master Mark; we began to be anxious concerning the funeral; and Mr. Penrose did not know what to advise. He came up one afternoon, as usual, to know if we had got any news, and that time he staid to take his tea with Miss Deane. He might have been gone about half an hour, when a chaise came galloping into the courtyard at the back of the house. Andrew went out; you mind Andrew, sir? 'Thank God you be come, sir,' says he. 'I wish to Heaven I had never gone, Andrew.' I heard Master Mark speak these words as he came into the back hall. 'Where's my poor cousin? where's Mary?' She came out of the breakfast-parlour on hearing his voice, and met him in the front hall. Master Mark kissed her; and, after a few words had passed between them, led her back into the parlour. Then he told her how he had not reached Ross, nor got the last letter, till noon that very day; the party having gone further than at first they intended, to see some sight or another: besides which, Miss Tracey, his lady that now is, met with an unlucky accident, and sprained her ankle, which had delayed them on the road. I was in the oak parlour when Mr. Gifford came in; the coffin had been brought down stairs, and placed there that morning; he looked at the plate, and then spoke kindly to me, saying very handsome things about my long and faithful service; he had no doubt, he said, but that his aunt had acknowledged the same, and provided for me by her will; but it would be a satisfaction to him to contribute, by any means in his power, to the comfort of my latter days. Those were his words, as well as I can remember them; and I should wrong him if I did not say that he was as good as his words. I have this house, sir, rent free, for my life; and a bit of meadow-land besides, enough to feed a cow. He then explained to me, as he had done to Miss Deane, what had kept him on the road; but Miss Tracey's name came too often, by far, to please me.

"Mr. Gifford having had no dinner, and Miss Deane eating nothing, to speak of, for the last week, I had a trifle of supper got ready, and sent into the breakfast-room; and, being obliged to leave the oak parlour for something that was wanted, poor Andrew, who had been waiting at supper, said to me, 'If it was not almost a sin to think of such a thing at a time like the present, I should say, Hannah, we were not going to be long without a mistress here at Beauchamps.' I bade him hold his tongue, and not talk in that foolish way; for I felt pretty nigh certain that no such mistress as he was thinking of would ever come into that house.

"The next day the will was read; and the funeral took place that same afternoon. It had been Miss Deane's intention to follow her aunt to the grave; she told Mr. Penrose that such was her desire, and, so far from trying to put her off from it, he said it was a decent and respectful custom, too much laid aside amongst the gentry. However, when it came to the point, that is to say, after Mr. Gifford came home, she changed her mind; I never knew what her reason might be, and so I could not satisfy Mr. Penrose, who wondered not to see her amongst the mourners, and thought she must have been suddenly taken ill. We servants all attended, for Miss Deane would not suffer any one to remain with her. When I went up to her room afterwards, she told me she had written again to Mrs. Deane, and fixed for leaving Beauchamps the day after the morrow, as her aunt had told her that they should require no long notice, and that, come when she might, her room would be ready to receive her. I asked her what need to be in such a hurry, and how she intended to travel. She answered me, that she could not properly stay on at

Beauchamps, now that it was Mr. Gifford's house; and that, as for the journey, she should have no fear of travelling by the stage-coach; especially if her cousin would permit Andrew to go on the outside, and see her safe to Mrs. Deane's house. She spoke very steadily, till on my saying that I hoped we might see her back again, some time or other, she burst into tears, and said, 'Never!'

"When, according to her orders, I desired Andrew to make some inquiry the next morning about the coaches, the old man seemed struck all of a heap. 'But there!' says he, presently, 'it won't be for long; we shall soon have her back again; it is not worth while for her to take the canaries, at no rate.'

"That same evening Miss Deane and her cousin had a long talk together; and that settled everything. I went into her room, when she was going to bed, as I thought. She was upon her knees packing a trunk, and her back was towards me; I told her that I had given her message to Andrew, and that he would do her errand the first thing in the morning. She thanked me, but said that she need not trouble him; her cousin would not hear of her travelling in the coach, and insisted upon taking charge of her himself. She spoke low, and did not turn her head. I made bold to say, that I hoped everything had been made comfortable on the part of Mr. Gifford, in regard to her fortune; for I knew that my mistress, not wishing to leave away more than she could help from her nephew, had put Miss Deane down in her will for only 500*l.*; and I well remembered also what she had said afterwards, and the charge she had given Master Mark. 'There is nothing to be done, Hannah,' said she, turning half round as she spoke; 'I have no need of anything. My aunt's kind remembrance of me, with my own little fortune, the interest of which has been accumulating ever since I was received into this house, that is to say, nearly my whole life—' Her voice seemed to fail her, but she soon went on: 'I have sufficient for my decent maintenance; it is all I am entitled to; all that I desire; but it is not Mark's fault that I have no more—he has offered—he has said everything.' She could bear up no longer, but leaning her face upon the trunk, sobbed as if her very heart would break. I could not help saying that her fortune was but scanty for a young lady like her; and as it was plain that my mistress desired Master Mark should add something to it out of his own large inheritance (for my poor mistress had always been a saving person), I thought she had better let him act according to her aunt's wishes. 'Oh, no, she could not—her aunt did not know—Mark would need all that she had left him, to keep up the consequence of the family.' I wondered to hear her speak such words, but it was all, except tears and sobs, that I could get out of her. I begged she would leave off packing for that night, saying that I would help her in the morning, or do it all for her, if she would allow me. I then went and fetched a glass of camphor julep, which I made her drink; and seeing her a little more composed, I prayed her to undress, for that I should not leave the room till she was in bed; and so she would be keeping me out of mine, if she did not do as I wished. She said that she would, but begged of me to grant her a few minutes; she promised not to keep me long; so I shut the lid of the trunk, and sat down upon it; and Miss Deane, seating herself on the ground, just where she had been kneeling, laid her head on my lap, as she used to do when she was a little child and wanted me to tell her a story or sing her a song. 'I know,' says she, presently, 'that it is wrong to give way in this manner; it shows great want of submission to God's will. I have been taught my duty as a Christian, and now I must pray constantly for strength to perform it; then, in the end, all *must* be well; as good Mr. Penrose says, I have only to resign myself, without murmuring or misgiving, to the will of Him who careth for the fatherless, for His word is sure, and I shall never be forsaken.'

"The next day, as you may suppose, was both a busy

and a sad one for my poor young lady; but she bore up far better than I had expected. In the afternoon, I persuaded her to leave her packing to me, and she went round the village, visiting the poor folk, for the last time, and leaving with most some little remembrances. I'll be bound she is not forgotten to this very hour, though it is nigh upon twelve years ago. Mr. Gifford went up to Knightswood, the family having come down the evening before, and was there all the morning. By and by he came home, and asked for Miss Deane; I told him she had gone down to the village, and was not come in. 'I wished to speak to her,' said he, 'concerning her journey to-morrow. I had fully resolved on accompanying Mary to Kensington, and seeing her safe under the protection of Mrs. Deane, but I am obliged to give up this plan. I dare say you know, Hannah,' says he, 'that Sir William Tracey has been offended with his eldest son, Mr. Tracey, on account of his marriage; and indeed went so far as to talk of never seeing him again. It is a satisfaction to me to think that I have been, in great measure, the means of reconciling the father and son, and of prevailing on Sir William to receive Mr. Tracey and his wife at Knightswood; they are expected to-morrow; and Lady Tracey, and I may say all the family, are desirous I should meet them. I feel it impossible not to comply, and, such being the case, I propose that you, Hannah, should attend Miss Deane on her journey, and, if agreeable to all parties, remain a day or two at Kensington, to see her comfortably settled. I am sure this part of the scheme will please Mary, and I shall probably run up myself, in the course of a few weeks, and see how she goes on; so that I think, in every point of view, this arrangement is preferable to the first, and Lady Tracey, with whom I have been talking it over, is of the same opinion.' 'Oh, dear, dear!' thought I, 'what next?' But I make a terrible long story of it, sir, and may be you are tired of listening."

This was added in consequence of my moving impatiently in my arm-chair.

" 'Oh! heed him not,' the lady cried,
But send a page to see;
While the mass is sung, and the bells are rung,
And we feast merrily."

Thus, if Hannah could have understood the allusion, I should have been tempted to exclaim; as it was, I assured her, and with truth, that I was much interested in her narrative, and wished her, by all means, to proceed.

"Mr. Gifford, sir, set out to meet his cousin, but in less than ten minutes she returned by herself, having come in by the door at the end of the terrace. I found they had not met, so I told her what Mr. Gifford had been saying; for I thought she had better hear of it from me than from him. She changed colour, and made no answer just at first; but presently, with one of her pretty smiles, said, 'Well, I shall not have to take leave of you quite so soon, dear, good Hannah, and that is a relieve.'"

"How Miss Deane and Mr. Gifford parted I cannot say, for I neither heard nor saw anything of the matter; but part they did that night, it having been settled between her and me, that we should set off early the next day. I saw nothing of Miss Deane over night; she had begged of me to go early to bed, and, as every thing was prepared for the journey, I did not intrude upon her. She was up and dressed by seven o'clock, and I believe her last quarter of an hour at Beauchamps was passed in the little book-room. We were off before eight o'clock, and, travelling post all the way, got to Kensington sooner than I had reckoned upon. The ladies there, both mother and daughter, received our Miss Deane with great kindness; they both seemed sickly, and the old lady's sight was very bad; nor did they appear to be well off in the world; but they spoke in a very friendly way, and said they would do the best in their power to make Miss Mary, as they called her, comfortable. They invited me to stop a bit at Kensington; so I stayed two

whole days, and then came home in the coach. It was with a heavy heart that I left my dear young lady in such an inferior situation; the house was very small, and the garden scarcely so big as the herb-bed at Beauchamps; Miss Mary's bed-room was up two pair of stairs, and there was only one maid-servant, and a charwoman to clean on Saturdays. However, it could not be helped, you know, sir."

"No," I replied; "nor do I see, under the circumstances, that Miss Deane could have made any better arrangement. Is she still residing at Kensington?"

"Oh dear, no, sir; they all removed to Bath about two or three years after. Miss Deane wrote me word,—for I have the honour of a letter from her twice or thrice in a year,—that the Bath waters were recommended for her cousin, and so they intended leaving Kensington entirely. The poor lady did not live long—not more than a twelvemonth, I think, after they went to Bath. Miss Deane wrote to tell me of her death, and said besides, that, although her aunt's health was no worse, but of the two rather improved, she was losing her sight more and more; and, it was to be feared, would become totally blind."

"I suppose, Hannah, you did not remain at Beauchamps after Mr. Gifford's marriage."

"Me! no, sir; Heaven forbid! I stayed no longer than Mr. Gifford could suit himself with a housekeeper; quite a grand madam sort of a person she was; and Andrew left at the same time I did. I was sorry to come away from the old place, where I had lived in comfort so many years; but I could not abide the wasteful extravagant ways that came in after my poor mistress' death. No dinner in the parlour till six o'clock at the very soonest, and oftener not till seven. Andrew hated that worst of all. I remember, one day, the poor old man quite forgot that the dinner was not over, and never laid the cloth, nor thought a word of the matter, till he came into the kitchen to see if the water was boiling for tea, and found the meat roasting before the fire. By good luck, Mr. Gifford was not come home from shooting, and so there was no harm done; for, as to the meat being over-roasted, it was no more than happened most days that he dined at home; which were not so many, however, as he dined at Knightswood. Andrew, poor man, was grown very forgetful, that is the truth, which did not suit Mr. Gifford, and waiting at dinner in a new fangled way as little suited Andrew; and so they parted. He went to his own parish, and lives there still, though very cripply, as I hear, from the rheumatism."

"A week or two before I left, Mr. Gifford told me he was engaged to be married to Miss Tracey: it was no more than I expected, so I was not at all put out by the news. I thanked him for doing me the favour to tell me of it himself, and wished him many years of happiness. In the whole, I stayed on two months at Beauchamps; and during all that time there was only one thing happened to my content."

"And what might that be?" for I saw that Hannah paused only in order to be asked.

"Why, sir, the day after I came back from Kensington, Mr. Gifford sent for me into the dining-parlour. 'Hannah,' says he, 'had not your late mistress some jewels?' 'Not many, sir,' I answered; 'there is a handsome pair of diamond ear-rings,—two diamond rings,' and I was going on to mention the rest, but he interrupted me. 'Are there not some garnets?'—'Yes,' I said, 'a complete set.'—'And,' says he, 'they are handsome, are they not?' I told him I was no judge of such things, but I had always understood it to be a fine set, and I offered to go and fetch them; 'indeed, I would rather,' I said, 'that he should take all such articles into his own keeping.'—'Well! well!' said he, 'for your own satisfaction, you may put the rest of the trinkets into the japan cabinet, and I will take the key; but keep out the garnets, pack them carefully, and put me in mind to take them with me the next time I go up to London; I should wish my cousin Mary to have that set of garnets.'

I heard nothing more of his journey to London; but, before I left Beauchamps, I thought I would pack up the jewels, that they might be ready at the shortest notice; so I went into my poor old mistress' bed-chamber, and took them out of her bureau. I emptied the shagreen case, wiped off the dust that had worked into the creases of the satin lining, and then rubbed the setting of the garnets with a piece of soft leather. Now, you must know, sir, there was a fine dressy thing of a house-maid had come in the place of Dinah Wells; she was sister to one of the lady's maids up at Knightswood; and, to be sure, it was a sight to see how the cobwebs multiplied; and hung in all the corners, after this Letty came; she was laced so tight she could not have swept them down, if she had been so minded:—so she came into the room where I was employed with the garnets. 'La! Mrs. China,' says she, 'what fine things have you got there?' 'Cheney is my name,' said I; 'and, if it makes no difference, I should rather not be called out of it.' 'Most people call it China now-a-days,' answered she, tossing her head as she spoke. 'Do they?' said I. I did not make her any other answer; so she took up one of the ear-rings, and, turning it round betwixt her finger and thumb, 'Handsome, rather,' says she, 'but quite out of fashion; Miss Tracey will have to get them all new set.' 'She will never have need to do that,' said I. 'Never have need, Mrs. China? Why, you don't suppose that Miss Tracey could wear such a thing as this;' and she gave the ear-ring another twirl as she spoke. I answered her, that I did not know whether she could or not, but that, in respect to those garnets, she would never have the chance.

"Why, who do they belong to, then?" asked Letty.

"To your master," said I.

"Upon that, with a saucy laugh, she answered: 'What belongs to the master belongs to the mistress.'

"May be so," I said; 'but Miss Tracey is not going to have these garnets for all that.'

"The girl said no more, but flounced out of the room, slapping the door behind her. That evening, as I remembered afterwards, she went out, saying she was going up to Knightswood to see her sister. I took but little notice at the time; for, not having any particular place in the family, nor authority over the other servants, I did not trouble myself about their comings and goings; but I make no question that Letty did go to her sister, and told all that she had seen and heard concerning the garnets; and so, from the sister it went to the ladies: some one of whom, as I suppose, got the rights of the story out of Mr. Gifford. Certain it is, that, a day or two after, he called for me in a great hurry. 'Hannah,' says he, as soon as I got into the room, 'have you packed up those garnets?' 'Yes, sir, I have,' said I; 'the case is very securely packed in brown paper.' 'Then bring it here immediately,' was his reply. 'I am going to send a parcel to my lawyer's in town, and I can enclose the jewel-case; they will take care that it is safely delivered: Mary shall have her aunt's garnets.' He spoke the last words quite in a passion, like; however it was not my place to take notice, so I made no answer, but went to fetch the parcel, as he desired; and glad I was when, in the course of the day, I saw the groom set off with it under his arm, with orders to have it booked at the coach-office."

"You must have felt lonely when you first came to reside at Fordover," I observed, after a short silence.

"Not nigh so lonesome as I myself expected," replied Hannah. "Miss Deane had given me her birds; and, before I came away from Beauchamps, I asked leave of Mr. Gifford to take Carlo; for the poor dog seemed to be always in the wrong place, somehow, and got kicked about amongst the new servants. He made me very welcome to him, and so I took the dog away with me, and had him here till he died. Mr. Penrose, too, was very kind, and often called in to see me. Besides the dog, Mr. Gifford made me a present of a handsome piece of embroidery, the work of Miss Deane, and which my

poor mistress thought so much of, that she had it framed, and hung up in the oak parlour, just below the pier-glass. Mr. Gifford took it down, and desired me to keep it for a remembrance of his cousin Mary. I was not very like to forget her, poor dear! I hung it up over the mantel, but most times keep it covered over, on account of the smoke."

I had before noticed something, in form of a picture, reverently shaded by a small curtain of green silk, which now, with leave obtained, I undrew. "Ah!" I exclaimed, "surely I remember this!"

"I am thinking, sir, it was wrought about the time of your leaving the country."

I could not immediately reply; my thoughts were gone back to past times, whilst my eyes were fixed on a white Camellia, occupying the centre, in a mixed group of fruit and flowers. I recollected the day when, entering the oak parlour at Beauchamps, I found Mark engaged in criticising his cousin's work, especially the pattern from which she copied. One flower, in particular, a purple China-aster, excited his displeasure; it was vulgar, hideous, and contrasted ill with the red currants near which it was placed. Nothing, in short, could be worse. "Was it not possible," he asked, "to exchange this objectionable China-aster for something better,—a white Camellia, for instance? Could not Mary copy from nature?" Perhaps, if she had a Camellia; but there were none at Beauchamps, white, or of any other colour. I interposed, to assure Miss Deane that there were Camellias in abundance at Knightswood, and that I would with pleasure supply her with one on the shortest notice; but I was interrupted by Mrs. Gifford, who indignantly repelled the idea of Mary's work being indebted to the gardens of Knightswood—as if they had not flowers of their own, or could not have them, at least, if they thought it worth the while. Mark was annoyed, chiefly, I believe, on my account; and Mary endeavoured to smooth matters by suggesting the possibility of changing the colour of the China-aster, or even, perhaps, its very nature, by transforming it into a Crysanthemum; and no one, she affirmed, could object to a Crysanthemum, or think it vulgar. Mark, however, did not seem alive to the superior merit of Crysanthemums; and giving up Mary's work as a hopeless affair, took me into another room to exhibit his own more successful preparations for fly-fishing. Now, it so happened that Julia Tracey had been once possessed with a transient fancy for painting flowers from nature; to her, therefore, I applied, begging to know if in her collection there might chance to be a white Camellia. At first, she thought not; but on examining her portfolio, there came to light a half-finished flower of that description; the usual difficulty in shading the white petals had occurred, and Julia remembered giving up the drawing in despair. She offered, however, to make another trial, and finish the Camellia, on condition of my telling her for what, or for whom, it was required. This was soon, but not, as it seemed, satisfactorily explained. Julia looked very grave as she replied, that she would keep her word, though certainly it was not what she should have expected from me; she was not aware that I took so much interest in Mary Deane's employments; and the shade of jealousy which then crossed the fair Julia's mind led to a certain declaration before alluded to. After that disastrous occurrence, it was some time before I had the heart to present my offering at Beauchamps; in fact, I felt strongly tempted to retain the drawing myself, and anticipated, with something like hope, the probability of the white Camellia being a second time rejected by the toothy mistress of Beauchamps. It was not to be. Mary accepted conditionally; and I saw the drawing no more.

The Mermaid.

BY DR. JOHN LEYDEN.

On Jura's heath, how sweetly swell
The murmurs of the mountain bee !
How softly mourns the writhed shell
Of Jura's shore, its parent sea !

But softer, floating o'er the deep,
The mermaid's sweet sea-soothing lay,
That charmed the dancing waves to sleep,
Before the bark of Colonsay.

Aloft the purple pennons wave,
As, parting gay from Crinan's shore,
From Morven's wars the scamen brave
Their gallant chieftain homeward bore.

In youth's gay bloom, the brave Macphail
Still blamed the lingering bark's delay ;
For her he chid the flagging sail,
The lovely Maid of Colonsay.

And "raise," he cried, "the song of love,
The maiden sung with tearful smile,
When first, o'er Jura's hills to rove,
We left afar the lonely isle !—

"When on this ring of ruby red
Shall die," she said, "the crimson hue,
Know that thy favourite fair is dead,
Or proves to thee and love untrue."

Now, lightly poised, the rising oar
Disperses wide the foamy spray,
And, echoing far o'er Crinan's shore,

"Softly blow, thou western breeze,
Softly rustle through the sail !
Soothe to rest the furrowy seas,
Before my love, sweet western gale :

"Where the wave is tinged with red,
And the russet sea-leaves grow,
Mariners with prudent dread,
Shun the shelving reefs below.

"As you pass through Jura's sound,
Bend your course by Scarba's shore,
Shun, O shun, the gulf profound,
Where Corrivreckin's surges roar!

"If, from that unbottomed deep,
With wrinkled form and wreathed train,
O'er the verge of Scarba's steep,
The sea-snake heave his snowy mane,

"Unwarp, unwind his oozy coils,
Sea-green sisters of the main,
And, in the gulf where ocean boils,
The unwieldy wallowing monster chain.

"Softly blow, thou western breeze,
Softly rustle through the sail!
Soothe to rest the furrowed seas,
Before my love, sweet western gale!"

Thus, all to soothe the chieftain's woe,
Far from the maid he loved so dear,
The song arose so soft and slow,
He seemed her parting sigh to hear.

The lonely deck he paces o'er,
Impatient for the rising day,
And still from Crinan's moonlight shore,
He turns his eyes to Colonsay.

The moonbeams crisp the curling surge,
That streaks with foam the ocean green;
While forward still the rowers urge
Their course, a female form was seen.

That sea-maid's form of pearly light
Was whiter than the downy spray,
And round her bosom, heaving bright,
Her glossy yellow ringlets play.

Borne on a foamy-crested wave,
She reached again the bounding prow,
Then clasping fast the chieftain brave,
She, plunging, sought the deep below.

Ah! long beside thy feigned bier,
The monks the prayers of death shall say,
And long, for thee, the fruitless tear
Shall weep the Maid of Colonsay!

But downwards, like a powerless corse,
The eddying waves the chieftain bear;
He only heard the moaning hoarse
Of waters, murmuring in his ear.

The murmurs sink by slow degrees;
No more the surges round him rave;
Lulled by the music of the seas,
He lies within a coral cave.

In dreamy mood reclines he long,
Nor dares his trance'd eyes unclose;
Till, warbling wild, the sea-maid's song
Far in the crystal cavern rose;

Soft as that harp's unseen control,
In morning dreams which lovers hear,
Whose strains steal sweetly o'er the soul,
But never reach the waking ear.

As sunbeams through the tepid air,
When clouds dissolve the dews unseen,
Smile on the flowers that bloom more fair,
And fields that glow with livelier green;

So melting soft the music fell;
It seemed to soothe the fluttering spray—
"Say, heardst thou not these wild notes swell?"
"Ah! 'tis the song of Colonsay."

Like one that from a fearful dream
Awakes, the morning light to view,
And joys to see the purple beam,
Yet fears to find the vision true,—

He heard that strain so wildly sweet,
Which bade his torpid languor fly;
He feared some spell had bound his feet,
And hardly dared his limbs to try.

"This yellow sand, this sparry cave,
Shall bend thy soul to beauty's away;
Canst thou the maiden of the wave
Compare to her of Colonsay?"

Roused by that voice of silver sound,
From the paved floor he lightly sprung,
And glancing wild his eyes around,
Where the fair nymph her tresses wrung,

No form he saw of mortal mould;
It shone like ocean's snowy foam;
Her ringlets waved in living gold;
Her mirror crystal, pearl her comb.

Her pearly comb the siren took,
And careless bound her tresses wild;
Still o'er the mirror stole her look,
As on the wondering youth she smiled.

Like music from the greenwood tree,
Again she raised the melting lay;—
"Fair warrior, wilt thou dwell with me,
And leave the Maid of Colonsay?"

"Fair is the crystal hall for me,
With rubies and with emeralds set;
And sweet the music of the sea
Shall sing, when we for love are met.

"How sweet to dance with gliding feet
Along the level tide so green;
Responsive to the cadence sweet,
That breathes along the moonlight scene!

"And soft the music of the main
Rings from the motley tortoise-shell;
While moonbeams, o'er the watery plain,
Seem trembling in its fitful swell.

"How sweet, when billows heave their head,
And shake their snowy crests on high,
Serene in Ocean's sapphire-bed,
Beneath the tumbling surge to lie;

"To trace, with tranquil step, the deep,
Where pearly drops of frozen dew,
In concave shells, unconscious, sleep,
Or shine with lustre, silvery blue!

"Then shall the summer sun, from far,
Pour through the wave a softer ray;
While diamonds, in a bower of spar,
At eve shall shed a brighter day.

"Nor stormy wind, nor wintry gale,
That o'er the angry ocean sweep,
Shall e'er our coral groves assail,
Calm in the bosom of the deep.

"Through the green meads beneath the sea,
Enamoured we shall fondly stray;
Then, gentle warrior, dwell with me,
And leave the Maid of Colonsay!"

" Though bright thy locks of glistening gold,
Fair maiden of the foamy main!
Thy life-blood is the water cold,
While mine beats high in every vein.

" If I beneath thy sparry cave,
Should in thy snowy arms recline,
Inconstant as the restless wave,
My heart would grow as cold as thine."

As cygnet down, proud swelled her breast,
Her eye confessed the pearly tear;
His hand she to her bosom press'd—
" Is there no heart for rapture here?"

" These limbs, sprung from the lucid sea,
Does no warm blood their currents fill:
No heart-pulse riot, wild and free,
To joy, to love's delirious thrill?"

" Though all the splendour of the sea
Around thy faultless beauty shine,
That heart that riots wild and free,
Can hold no sympathy with mine.

" These sparkling eyes, so wild and gay,
They swim not in the light of love:
The beauteous Maid of Colonsay,
Her eyes are milder than the dove!

" Even now, within the lonely isle,
Her eyes are dim with tears for me;
And canst thou think that siren smile
Can lure my soul to dwell with thee?"

An oozy film her limbs o'erspread;
Unfolds in length her scaly train:
She tossed, in proud disdain, her head,
And lashed, with webbed fin, the main.

" Dwell here alone!" the mermaid cried,
" And view far off the sea-nymphs play;
Thy prison wall, the azure tide,
Shall bar thy steps from Colonsay.

" Where'er, like Ocean's scaly brood,
I cleave, with rapid fin, the wave,
Far from the daughter of the flood,
Conceal thee in this coral cave.

" I feel my former soul return;
It kindles at thy cold disdain:
And has a mortal dared to spurn
A daughter of the foamy main?"

She fled; around the crystal cave
The rolling waves resume their road;
On the broad portal idly rave,
But enter not the nymph's abode.

And many a weary night went by,
As in the lonely cave he lay;
And many a sun rolled through the sky,
And poured its beams on Colonsay.

And oft beneath the silver moon,
He heard afar the mermaid sing,
And oft, to many a melting tune,
The shell-formed lyres of ocean ring.

And when the moon went down the sky,
Still rose, in dreams, his native plain,
And oft he thought his love was by,
And charmed him with some tender strain.

And heart-sick, oft he waked to weep,
When ceased that voice of silver sound;
And thought to plunge him in the deep,
That walled his crystal cavern round.

But still the ring of ruby red
Retained its vivid crimson hue;
And each despairing accent fled,
To find his gentle love so true.

When seven long lonely months were gone,
The mermaid to his cavern came;
No more mis-shapen from the zone,
But like a maid of mortal frame.

" O give to me that ruby ring,
That on thy finger glances gay,
And thou shalt hear the mermaid sing
The song thou lov'st of Colonsay."

" This ruby ring, of crimson grain,
Shall on thy finger glitter gay,
If thou wilt bear me through the main,
Again to visit Colonsay."

" Except thou quit thy former love,
Content to dwell for aye with me,
Thy scorn my finny frame might move,
To tear thy limbs amid the sea."

" Then bear me swift along the main,
The lonely isle again to see;
And when I here return again,
I plight my faith to dwell with thee."

An oozy film her limbs o'erspread,
While slow unfolds her scaly train,
With gluey fangs her hands were clad,
She lashed, with webbed fin, the main.

He grasps the mermaid's scaly sides,
As, with broad fin, she oars her way;
Beneath the silent moon she glides,
That sweetly sleeps on Colonsay.

Proud swells her heart! she dooms, at last,
To lure him with her silver tongue,
And, as the shelving rocks she passed,
She raised her voice, and sweetly sung.

In softer, sweeter strains she sung,
Slow gliding o'er the moonlight bay,
When light to land the chieftain sprung,
To hail the Maid of Colonsay.

O sad the mermaid's gay notes fell,
And sadly sink remote at sea!
So sadly mourns the writhed shell
Of Jura's shore, its parent sea.

And ever as the year returns,
The charm-bound sailors know the day;
For sadly still the mermaid mourns
The lovely Chief of Colonsay.

AMERICA AND HER SLAVE STATES.¹

No. I.

AMERICAN REVOLT—PRINCIPLES OF ITS ORIGINATORS—
MODERN PRINCIPLES OF AMERICANS—THEIR ORIGIN.

IT is difficult enough, even in old monarchical states, to retain under one rule, and one system of legislation, nations diverse in their habits and their pursuits: under a republican government that difficulty is fearfully increased. The case of the United States is in point. We have so long been used to regard that vast assemblage of states as one people, that we are hardly aware how completely divided in territory, in pursuits, and in manners, the southern states are from their northern brethren. Following the course of the Potomac, from the Bay of Chesapeake until it runs into the Ohio, and then along that vast stream until it falls into the vaster Mississippi, with the exception of the one small state of Maryland, we have the line of demarcation between the northern free, and the southern slaveholding states. According to the population returns of 1840, four states, Maine, Massachusetts, Vermont, and Michigan—with a population of more than a million and a half—had not one slave among their inhabitants. Seven more states, New Hampshire, Rhode Island, Connecticut, New York, Pennsylvania, Ohio, and Indiana—combining a population of nearly seven millions—retained but one hundred slaves between them. Two other northern states, Illinois and New Jersey, still retained about a thousand slaves, among a population of above eight hundred thousand. Thus, to the northward of the river line before described, thirteen states, claiming nine millions and a half of the population of the United States, some entirely, some gradually, may be claimed as practical advocates and approvers of the cause of abolition. To the south of this river line lie twelve states of slaveholders, to whom one small state to the north of that line—Maryland—must be added to complete the slaveholding states. These thirteen states number little more than half the population of those to the north, unless to their four million and a half of whites be added more than half that number (2,480,000) slaves. In production and commerce the line of demarcation is equally clear. The southern states look to their cotton and their tobacco, the northern foster their young manufactures; the former export more than two-thirds of the exports of the domestic produce of the country, the latter export more than four-fifths of foreign produce exports. "Protect our young manufactures," cries the northern man, "and give us a high tariff, to aid us in combating with the matured productions of the old country." "A tariff for revenue, not for protection," exclaims the man of the southern states: "you northern men can neither supply me with what I require for my slaves so cheap as England can, nor consume so much of my cotton and tobacco." In interests so diverse as these, the elements of separation are too strong to be long restrained by a democratic government. Give but a little more strength to the southern states, such as the addition of Texas would cause, and the next

outbreak of nullification, so hardly compromised sixteen years ago, will convert grumbling into resistance, resistance into revolt, and revolt into separation.

The vanity of the American is a truly national feeling, equally shared by northern and southern men. When he visits another country, not content with following out the *nil admirari* system, or of damning a wonder by faint praise, he runs down everything he sees, and runs up its parallel in his own land. He cannot content himself with claiming a due admiration for the enterprise and industry of his country, and for the grandeur and beauty of his father-land, but he must have it admitted to be beyond all others excellent—the finest nation between the poles. Self-respect is the proper virtue of every nation and every human being. Without it no nation, and no individual, can rise to eminence, or endure through difficulties and dangers; but carried to an excess, it either tyrannizes over the opinion of the world, or excites ridicule from society. To a certain extent self-adulation was not unsuited to the rise of the republic: "*the necessity for it no longer exists.*"

"Good policy," says Sam Slick, "dictated the expediency of cultivating this self-complacency in the people, however much good taste might forbid it. As their constitution was based on self-government, it was indispensable to raise the people in their own estimation, and to make them feel the heavy responsibility that rested upon them, in order that they might qualify themselves for the part they were to act. As they were weak, it was needful to confirm their courage by strengthening their self-reliance. As they were poor, it was proper to elevate their tone of mind, by constantly setting before them their high destiny; and as their republic was viewed with jealousy and alarm in Europe, it was important to attach the nation to it, in the event of aggression, by extolling it above all others. The first generation, to whom all this was new, has now passed away; the second has nearly disappeared, and with the novelty, the excess of national vanity which it necessarily engenders will cease also."—Vol. i. p. 248.

We wish that we could believe this to be probable. Were the men of character and property, of whom America may justly be proud, the real rulers of the people, there would be little fear but that this, as well as many other of the distinguishing vices of the people, would gradually disappear, and the states be once more restored to their proper station among nations. There was a time when Washington, Franklin, and the virtuous of their contemporaries, were regarded as the examples of the people; when a breach of decorum in the legislature was sure of public reprobation; when the Senate was not the only body in which the respectable members of society were to be found, but when even the state legislatures—the present state bear-gardens—were supported and honoured by their presence. Distinguished individuals still ornament America, still consent to stand as candidates for her officers. "But these excellent persons," says Mr. Featherstonhaugh, "with exceptions so few that they are scarcely worth enumerating, are rarely participators in the government of the country; for where the popular party predominates, they are excluded by the possession of those very qualifications that fit them for that high purpose. That the root of this evil was planted in very early years no one can doubt to whom the opinions of Jefferson are known."

¹ Excursion through the Slave States, from Washington to the Frontiers of Mexico. By C.W. Featherstonhaugh. London: Murray. 1844.

* The Attaché; or, Sam Slick in England. Second Series. Bentley. 1845.
Lytell's Travels in America. London: 1845.

Few persons are aware how diverse the Americans of the present day are to those who followed the banner of Washington, and how completely they are the children of his compatriot Jefferson. Justifying or not the declaration of our colonists, no unprejudiced person can deny to Washington the character of the highest personal and political morality. Far different is his compeer and rival, Jefferson. No one has gone so far to poison the minds of his countrymen with principles utterly subversive of society, and that at a time when, from the excited state of men's minds, these deleterious principles were sure of the most extended and powerful effects on mankind. One-half, too, of the colonists of America were bred up to hail rebellion as their friend. The descendant of the English republican proved himself no mean pupil of his ancestor.

"The origin of the British colonists," says Mr. Featherstonhaugh, "may be divided into two classes; those enterprising and speculative adventurers who went to Virginia in pursuit of wealth; and the Puritans, who left their native country for the sake of enjoying freedom of opinion. The southern, or Virginian colony, became in all material circumstances a copy of the mother country. Religion was established 'according to the form and discipline of the Church of England;' each parish had its glebe and parsonage, and primogeniture and entails were the law of the land. Indeed, the broadest foundations appeared to have been laid for a loyal administration of the province, if the government at home, attending carefully to the development of its prosperity, had given to those individuals, distinguished for their intelligence and the stake they held there, a just share in the honours and advantages of their territorial government."—Vol. ii. pp. 375, 376.

It would have taken but little to have secured the loyalty of the southern colonists. To have shared a few of the colonial honours which were lavished on the needy hangers-on of the home nobility; to have been assured of the kind feeling of the mother country; to have seen their church fostered and supported, would have knit the southern Americans in an indissoluble bond to the home government. But when the direct contrary of all this was experienced by them, are we to be surprised that they so early sided with the naturally disaffected of the northern provinces? Naturally disaffected! Yes, the Puritan colonist of Massachusetts was naturally disaffected. His fathers had sought that land as refugees from spiritual tyranny, and had hastened to erect in their new country a spiritual tyranny of their own. The Puritan persecution of the Quakers, and the reputed witches, clearly showed that their religious freedom was freedom to think as the elders of the colonial churches thought; but persecution, most bitter persecution to whosoever should dare to question the dicta of the saints of Massachusetts. To them the Church was odious, as interfering with their spiritual rule: to them the State was odious, as able and willing to arrest their persecuting hands, and daring to contravene the edicts of the preachers. The love of spiritual and political independence became rooted in them, silent, indeed, for a time, until it burst forth in the rebellion of '75.

The commencement of the seven years' war with France, for the first time united the northern and southern colonists in the defence of their country. The defeat of General Braddock, in 1755, lessened the reputation of the British troops in the eyes of

the colonists; nor did the victory of the plains of Abraham restore that reputation; for the eight years that had elapsed, had accustomed the colonist to look upon his own colonial troops as the fit comrades in the field of the trained legions of the old country.

The victory of Quebec closed the war and the French dominion in America. During the whole of that contest the colonists had fought well and constantly for the maintenance of their possessions; had materially assisted the mother country in the subjugation of the French possessions. What was their reward?—the Stamp Act. It would have taken but little to have won the love of the colonists, at least of the best among them. They were conscious of the debt they owed to England for their defence; but they could not forget the assistance they had rendered in the arduous struggle; they could not forget that a colonial officer had rescued the defeated army of Braddock: and they weighed the services of Washington with the boon of self-taxation.

It is, strictly speaking, unjust to the memory of Mr. Grenville to speak of the "menace of the Stamp Act." That minister reasonably looked to the colonies for some contribution towards the annual expense of the American civil list, increased since the war five-fold. In this there was justice, but not prudence. In his announcing the Stamp Act among his resolutions of March, '64, and at the same time withdrawing that particular clause for a year, to give the colonists "the option of raising that, or some other tax," he was highly indiscreet; it revealed to the colonists the weakness of the minister's position. The greatest fault was the omission of rewards at the time he was pressing his demands. If the mother country had the legal right to ask for contribution from her colonists for services rendered, the colonists had an equitable claim on the mother country for their share in the war. But let us hasten on. The standard of rebellion was raised; the colonist who rescued the relics of Braddock's troops headed his fellows—the war lingered through mismanagement—the war closed—England retired from the scene of her disasters. There was at least this consolation: the government of the young republic was committed to one, whose public and private virtues seemed to guarantee the future character of the nation he was to organize and form.

Mr. Jefferson was to counteract the principles of Washington. A Virginian by birth, educated as a lawyer by one of the bitterest political opponents of the government, he astonished even the legislature of his native state, when he commenced his career as a legislator, by introducing a bill to make an opening, as he boasted, for the aristocracy of virtue and talent, by reducing entailed estates into estates in fee simple. Some few among the Virginian legislators ventured to oppose his levelling act: his answer was ready: "The eldest son could have no claim, in reason, to twice as much as his brothers and sisters, unless he could eat twice as much, and do double work." This reason was decisive, and entails were abolished in Virginia.

Such was Jefferson's first step. His next was naturally directed against the Church. All sects were to be on the same footing as her. First came the suspension of the laws regulating the incomes of the clergy; next came their abolition; whilst, to complete the overthrow, the overseers of

the poor were authorized to sell the glebe lands as they fell vacant. So far content with the success of his projects, the legislator turned from local acts to foreign diplomacy. In 1784 he joined Dr. Franklin at Paris, as joint representatives of the young republic. Two years after he came to England. Let us mark some of his various opinions.

His hatred of England :—

"Her hatred," he writes, "is deep rooted and cordial, and nothing is wanted with her but the power to wipe us and the land we live in out of existence."

His opinion of his own nation :—

"American reputation in Europe is not such as to be flattering to its citizens. Two circumstances are particularly objected to us: the non-payment of our debts, and the want of energy in our government. They discourage a connexion with us. *I own it to be my opinion that good will arise from the destruction of our credit.*"

It is high time for the good to arise, if it is to be consequent on the loss of national credit. The drab-coated men of Pennsylvania have long since done that to death; with as much prospect of witnessing the consequent elevation of their nation, as the Millerites of partaking in a special Millennium of their own.

His self-sufficient vanity :—

"If all the sovereigns in Europe were to set themselves to work to emancipate the minds of their subjects from their present ignorance and prejudices, a thousand years will not place them on that high ground (*repudiation and all included*) on which our common people are setting out. Ours could not have been placed so fairly under the control of the common sense of the people, had they not been separated from their parent stock, and kept from contamination, either from them or the other people of the old world, by the intervention of so wide an ocean."

After reading this elaborate statement more pithily expressed by Sam Slick, in "We beat all creation"—"The British can whip all the world, and we can whip the British," it is consolatory to feel assured, on Mr. Jefferson's authority, that Lynch law and repudiation are not chargeable on the old world,—those darling virtues of a race separated by an intervening ocean from the contamination of the older continents.

His humanity :—

"What country," he writes from Paris in 1787, respecting some risings in Massachusetts, "What country ever existed a century and a half without a rebellion? and what country can preserve its liberties, if its rulers are not warned from time to time that its people preserve the spirit of resistance? Let them take arms. The remedy is to set them right as to facts, pardon, and pacify them. *What signifies a few lives lost in a century or two? The tree of liberty must be refreshed from time to time with the blood of patriots and tyrants; it is its natural manure.*"

Years after he looks forward with confident hope to the time when the French "will bring to the scaffold kings, nobles, and priests, which they have been so long deluging with human blood." And "is still warm whenever he thinks of these scoundrels" (kings, nobles, and priests).

One more extract from Mr. Featherstonhaugh's specimens of Jefferson. We have already noticed the delight with which he contemplated, in the earliest years of the young republic, its loss of credit with the world; see now his defence of that conduct which caused that loss of reputation, and

will endure so long as America remains Jeffersonian at heart.

"He (Mr. Jefferson) insists that the use of the earth belongs to the living generation, and that the dead have no more right than they have power over it. In the application of this principle, he maintains, that no generation can pledge or encumber the lands of a country beyond the average term of its own existence, which term, by a reference to the annuity tables of Buffon, he estimates first at thirty-four years, and afterwards reduces to nineteen years. *By reason of this principle, founded in nature and the first principles of justice, he maintains that every land, and even constitution, naturally expires at the end of this term; and that no public debt can be contracted, which would be rightfully binding on the nation after the same lapse of time.*"

PROGRESS OF CIVILIZATION IN ENGLAND AND FRANCE.

MR. PETIT RADEL gives an enumeration of the number of books, or editions, published in different parts of Europe, from the time when the art of printing was invented, to the end of that century. They are as follows :—

Before 1500.

At Venice	2,759
Rome	972
Paris	789
Strasbourg.....	298
London	31
Westminster.....	99
Oxford	7
In Spain and Portugal	126

At a second period, from 1500 to 1536, they are as follows; and show no small increase for the time.

At Paris	3,056
Venice	2,229
Strasbourg	1,021
Lyons	997
London	198
In the rest of England.....	108
Spain and Portugal.....	147
At Cracow	294
Constantinople.....	80

The art of printing is certainly, of all inventions, that which nations would cherish most in proportion to their civilization; and yet the difference between the number of books printed in England and in France, at the periods now mentioned, belongs not so much to the general progress and state of the two countries, as to the special circumstances of these particular periods. It is true that England did not enter so early upon the career of social improvement as France; and the causes are obvious. The advantages which nature had bestowed upon the latter country, exempted her inhabitants from severe labour, and gave them greater leisure to flock together, and thus to begin the foundation of that easy intercourse which is advantageous to the first rudiments of society. France, too, lay nearer to the centre from which learning and the arts were spread over Europe; and the direct road they must take to England was through her dominions. But for these reasons, too—particularly the former—the civilization of England is, at this day, of a higher order. It is the result of more urgent necessity. Men are there drawn together by the hope of solid advantages, which, though they do not operate so early as gregarious instincts, or the prospect of mere pleasure, yet when once they are perceived and appreciated, are more binding and more powerful; and the advantage which France undoubtedly had in the beginning, is now more than compensated by the superior development of intellect which has, long since, been our inheritance. It would be difficult to say at what precise moment we began to take a decided lead in the concerns of the mind; especially as, like most other things, this too had its vicissitudes. In the time of Alfred we were, probably, wiser and better than the French, or so great a

prince never would have confided to the most unlettered among us, the duty of reciprocally sitting in judgment upon each other; a right which no French monarch ever thought of bestowing upon his people, and which his people never thought of exercising or demanding. During the civil and religious wars of that country, and the long train of perfidy and cruelty which accompanied them, we again had a vast and decided superiority. When York and Lancaster drew forth their battles in England, France, perhaps, took a momentary lead. But at the Reformation we again became superior; and, with the exception of the most frantic moments of our first Revolution, have never derogated for a single instant since that time. The age of Louis XIV. was indeed a brilliant epoch for France; and still more so for the monarch. It was an age of glory, of splendour, of luxury, of anything but national wisdom: and it stood the more prominent, because it was not preceded or followed by anything that can be compared to it. The even tenor of our constant pace has carried us farther in a wider road; and while we persevere in the same track, with as few interruptions to our general progress in political wisdom, in science, in literature, in the useful arts, as we have done for more than a century, our boast shall be, that we have no *Siècle de Louis XIV.* to be vain of; and, still more, our pride shall be, that of that, or any single age, we should think it humiliating to boast at all.—*Edinburgh Review.*

THE FLOWER GIRL.¹

A Tale for Children.

"WHAT lovely flowers! Do, mother, stop and look at them," exclaimed Helen Harwood, as she bent over a basket of plants, which a pale, slender girl was offering for sale, and inhaled their delicious perfume. "Just look! roses, geraniums, heliotrope, and mignonette, and that beautiful jessamine."

"Very pretty, indeed," said Mrs. Harwood, whose mind was at that moment engrossed with her shopping; "come on, my dear."

"Will you buy one of them, miss? they are very cheap," said the young girl; "I hav'n't sold any this morning, and I've asked a great many persons."

The gentle voice of the flower girl, and the tone of sadness in which the request was made, drew Helen's attention. "Buy them," she said, looking up; "why, no, I believe not to-day; but I should like them very much."

"They are quite cheap," repeated the girl, naming her price.

"Come, my dear," said Mrs. Harwood, who, having smelled the flowers, was moving on; but Helen's interest had been excited, and she lingered still beside the basket. The pale face, and attenuated hands of the flower girl, made Helen think she was not well; and the expression of her countenance gave token of a sad heart, and probably a weary lot of want and suffering.

"Three shillings, did you say, for this rose, and three for the jessamine?" said Helen, whose purse, never very heavy, felt unusually light at that moment.

"Only three; do buy them."

"I would," said Helen, with an appealing look at her mother, "if—"

"If you could afford it, I suppose you mean," said Mrs. Harwood. "I think you are the best judge yourself of that."

"The girl looks so much in want, I believe I will

afford one of those geraniums," whispered Helen. "Shall I tell her to go to our house? Perhaps Cornelia will take one."

"Yes, I have no objection, if you really wish them," replied Mrs. Harwood; and Helen, giving the girl a direction to call in Amity-street, at two o'clock, tripped after her mother, who had already reached the store where they intended to go.

True to her promise, the young flower girl came soon after Helen and her mother reached home, and being shown into the back parlour, displayed her fragrant treasures.

"I declare, I am quite undecided which to take," said Helen, after smelling each plant in succession a dozen times, and admiring them collectively: "I cannot make up my mind, they are all so beautiful. What a troublesome thing it is to be poor; if I had plenty of money, I would take them all."

"I suspect you don't know much what it is to be poor," said the flower girl, with a sigh, as she glanced round the plain but comfortable room into which she had been taken.

"I will take the jessamine, Helen," said Cornelia, "I know I shall like it best,"—and separating it from the others, the young lady paid the required sum, from a very pretty purse, which she drew from the pocket of her black silk apron; and Helen, after some further deliberation, during which she alternately bewailed her want of funds, and indulged her feelings of commiseration for the flower girl, decided upon the heliotrope; and taking her money from a plainer purse, but paying the girl something over her charge, a species of generosity which Helen had been known to practise before under similar circumstances, she carried the fragrant plant to the cheerful room occupied by herself and her sister, where she found Cornelia already disposing of her jessamine in the sunniest spot of the sunny window seat, beside the few but flourishing slips of myrtle and geranium, which Helen was carefully endeavouring to rear.

These sisters were the eldest of a large family, of limited income.

Cornelia, who was a tall, pretty looking girl of fifteen, or, perhaps, a few months older, and now considered herself a young lady, had kind feelings, but they were somewhat blunted by selfishness; and was generous or benevolent, when it did not interfere with her own interest. Helen, on the contrary, upon whom nature had bestowed but few advantages of face or figure—who knew that she was plain, and felt contented to be thought so—was the most self-sacrificing little body in the world; ever ready to yield her own comfort for the good of any one else, or give up her own wishes when they came in collision with those of another. Wherever she was, at home or abroad, Helen made friends, and became a general favourite. There was nothing moping or melancholy in her disposition, nor did she value pleasure the less, because willing to resign it for the sake of those she loved; she was a merry, light-hearted, laughter-loving girl, whose chief faults were a want of neatness in her general appearance, and an inordinate passion for reading, which latter propensity often interfered sadly with the needlework her mother expected to find completed in a given time; and Helen was too often found wholly engrossed with a volume of Miss Edgeworth's fascinating tales, while the stockings, which she really required, were lying unmended beside her.

(1) Abridged from a pleasing little volume of Tales for Children, entitled, "Fanny Herbert, and other Stories; a Holiday Gift." New York. Onderdonk. 1845.

It was now the beginning of November, and we find the girls busily arranging their flowers in their own room, and this room was the pleasantest in the house, for the windows opened towards the south, and through them such a flood of golden sunshine came pouring in, as to render a fire in the hearth, even in cold weather, almost unnecessary.

"I declare," said Cornelia, making room for Helen, who now brought her heliotrope to the window, "these little slips look quite mean and contemptible beside the new comers; why not toss them all into the street, and begin anew with your collection?"

"Oh! not for the world," said Helen, guarding the geranium which Cornelia playfully pretended to throw away. "Wait a few weeks, and you will see how much they improve. 'Don't you remember, that 'great oaks from little acorns grow?' Well, I expect to have a collection of plants equal to Mrs. Clayton's, if I have only patience."

"Poh!" said Cornelia, laughing, "Mrs. Clayton has fifty or sixty, I believe, and you have one heliotrope, one little rose-tree, a sprig of myrtle just peeping out of the ground, and three geraniums. Rather a small beginning."

"All beginnings are small," said Helen, good humouredly: "you, for instance, have only one plant."

"But then, I have no idea of making a collection," replied Cornelia; "I only bought this because it was pretty, and I thought it would make the room smell sweetly, and you told me about the girl who sold them. I don't love flowers as much as you do."

"I suppose not," said Helen, "and that is the reason you would not have as much patience to watch and water them. Now, for my part, I love every little green thing that grows, and would take any trouble to rear even these poor geraniums that you are laughing at."

"Well, then," said Cornelia, "since you don't mind the trouble, I will let you take charge of my jessamine, and allow you to wipe off the pots, if you please, and brush the dust out of the window. The greatest objection I have to flowers, is, that they are such dirty things, and I would never suffer them in a room that belonged exclusively to myself."

"I shall try to be very neat with mine, then," said Helen; and she proceeded immediately, with brush and duster, to remove the particles of earth and sand which caused her sister so much uneasiness.

Nearly a month passed away after the purchase of the flowers, and Helen, in her care of them, had almost forgotten the pale girl from whom they had been procured, when a friend called one morning to see Mrs. Harwood. She was one of those benevolent persons, who, in imitation of our blessed Saviour, "went about doing good," and in a silent, unostentatious manner, provided food for the hungry, and clothing for the destitute, and caused many a widow's heart "to sing for joy."

"I met with a case yesterday," said Mrs. Campbell, "which has interested me exceedingly. In the same building with my old Nancy, who has washed for me so many years, I was told there was a sick woman; and I went up a long, dark stairs, and groped through a dim attic, in the hope of finding her. I found a small room

with but little furniture in it, and the sick woman, wasted by a slow fever, lying upon a bed of straw. She was sadly emaciated, and seemed destitute of every comfort; while close beside her leaned a little girl. The family came, a year ago, from Canada, with the hope of doing better in New York; but scarcely had they reached the city, when the father was taken ill, and died suddenly, and, after various struggles, the mother sank under a weight of care, and has been reduced to the verge of the grave."

"And she has had no physician either, I dare say," said Helen.

"Not until last evening, when my good friend, Dr. Barnes, prescribed for her, and gives me a hope that, with care, she will recover."

"And she has a daughter beside the blind one, I think you said."

"A poor, slender thing of sixteen, or thereabout," said Mrs. Campbell, "who is half worn out already with care and watching; for little food and light slumbers will soon wear down the stoutest. Mrs. Wayne told me, that last month, before she became so very ill, Harriet would sit up a greater part of the night to finish a job of sewing which she had commenced, and then walk through the streets a greater part of the day with a basket of plants on her arm, which she was obliged to sell at so small a profit, as scarcely to make it an object."

"I do wonder if it is not the very same girl from whom we bought our flowers," exclaimed Helen. "Was she very pale, and very thin, and had she a pleasant, low voice?"

"Yes, all three," replied Mrs. Campbell; "and if you purchased your flowers a month ago, I have no doubt it was she."

"How strange that you should have discovered her," said Cornelia.

"How much I should like to do something for them," said Helen. "What can we do for them, mother?"

"We might go to see them, Helen, if we can do nothing else," replied Mrs. Harwood; "sympathy and kindness are always welcome to the poor, even if we can offer nothing more substantial."

"But *can't* we do something more?" said Helen, earnestly; "you know where there is a will there is a way."

(To be continued.)

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne*.

A NEW CITY.

THE following animated description of one of the last wonders of our day, the new city now rising at Birkenhead, is from the pen of a noble diplomatist, and will be read with interest:—

"I have made a very agreeable trip to Birkenhead, which is a place rising, as if by enchantment, out of the desert, and bidding fair to rival, if not eclipse, the glories of Liverpool. Seven years ago there were not three houses on that side of the Mersey,—there are now about 20,000 inhabitants; and on the spot where within that time Sir W. Stanley's hounds killed a fox in the open field, now stands a square larger than Belgrave-square, every house of which is occupied. At Liverpool

there are now ten acres of docks, the charges for which are enormous; at Birkenhead there will be forty-seven acres, with rates two-thirds lower, which will gradually diminish until (supposing trade to continue prosperous) they will almost disappear, and the docks become the property of the public at the end of thirty years. It would have been worth the trouble of the journey to make acquaintance with the projector and soul of this gigantic enterprise, a certain Mr. Jackson. With his desire to create a great commercial emporium proceeds, *pari passu*, that of improving and elevating the condition of the labouring classes there, and before his docks are even excavated he is building houses for 300 families of work-people, each of which is to have three rooms and necessary conveniences, to be free of all taxes, and plentifully supplied with water and gas, for 2s. 6d. a-week for each family. These houses adjoin the warehouses and docks, where the people are to be employed, and thence is to run a railroad to the sea, and every man liking to bathe will be conveyed there for a penny. There are to be wash-houses, where a woman will be able to wash the linen of her family for 2d.; and 180 acres have been devoted to a park, which Paxton has laid out, and nothing at Chatsworth can be more beautiful. At least 20,000 people were congregated there last Sunday, all decently dressed, orderly, and enjoying themselves. Chapels, and churches, and schools, for every sect and denomination abound. Jackson says he is sure he shall create as vigorous a public opinion against the public-house as is to be found in the highest classes. There are now 3,000 workmen on the docks and buildings, and he is about to take on 2,000 more. Turn which way you will, you see only the most judicious application of capital, skill, and experience,—everything good adopted, everything bad eschewed from all other places; and as there is no other country in the world, I am sure, that could exhibit such a sight as this nascent establishment, where the best interests of commerce and philanthropy are so felicitously interwoven, I really felt an additional pride at being an Englishman."—*Times*.

THE LATE KING OF PRUSSIA.

ONE fine day, in the summer of 1799, two English gentlemen, strangers, on their travels, rowed to the Peacock Island, uninformed of the royal family being there, and, consequently, of the interdiction; they had landed at a point of the island distant from the ferry, and were delightfully strolling about, when the then Count Marshal Von Massaw caught sight of them, and they were desired to quit the island instantaneously, by the way they came. They, however, deviated from the direct path to the boat, and were met by a gentleman and lady, unattended, and so artless in their dress and deportment, that the strangers had no presentiment of who they were. When they met, the unknown gentleman said, "How do you like the island?" Expressing themselves in rapture as to its position and ornamental culture, the unknown lady, with much affability, invited the strangers to accompany them, since, being well known, they could point out all that was remarkable. "We should be delighted," replied the Englishmen, "had not the marshal peremptorily ordered us to leave the island, the king and queen being here." "Matters are not quite so formidable," said the amiable lady; "come along with us, and we will undertake to excuse you with Mr. Von Massaw, who is our intimate friend." A lively conversation ensued, in which the lady spoke enthusiastically of England: in return, they both seemed to enjoy the free and critical remarks made by the Englishmen; but great was the latter's astonishment, on nearing the château, to find the royal servants stationed, and the marshal advancing to announce breakfast! Aware now that they had been in company of the king and queen, they would have apologized, but the winning affability of the queen calmed their apprehensions, and what little remained wholly ceased on the former saying, "Enter, gentlemen! you'll take breakfast with us!"—*Dr. Eglert*.

THE FABLED MELODY OF THE DYING SWAN.

THE melody ascribed to the dying swan has long been well known to exist only in the graceful mythology of the ancients; but as few opportunities occur of witnessing the bird's last moments, some interest attaches to Mr. Waterton's personal observations on this point, which we can ourselves corroborate, having not long since been present at the death of a pet swan, which, like Mr. Waterton's favourite, had been fed principally by hand; and, instead of seeking to conceal itself at the approach of death, quitted the water, and lay down to die on the lawn before its owner's door. "He then left the water for good and all, and sat down on the margin of the pond. He soon became too weak to support his long neck in an upright position. He nodded, and then tried to recover himself; and then nodded again, and again held up his head, till at last, quite enfeebled and worn out, his head fell gently on the grass, his wings became expanded a trifle or so, and he died while I was looking on. . . . Although I gave no credence to the extravagant notion which antiquity had entertained of melody from the mouth of the dying swan, still I felt anxious to hear some plaintive sound or other, some soft inflection of the voice, which might tend to justify that notion in a small degree. But I was disappointed. . . . He never even uttered his wonted cry, nor so much as a sound, to indicate what he felt within."—*Blackwood's Magazine*.

THE WATER USED IN THE DESERT.

BOIL Russia leather into a pretty strong decoction; let this get half cool, and you will have a fair specimen of the water to be drunk on a desert journey. It is a flavour that does not improve upon acquaintance with it.—*Lord Nugent's Lands, Classical and Sacred*.

NOT to mention the multitudes who read merely for the sake of talking, or to qualify themselves for the world, or some such kind of reasons; there are, even of the few who read for their own entertainment, and have a real curiosity to see what is said, several, which is astonishing, who have no sort of curiosity to see what is true. I say curiosity, because it is too obvious to be mentioned how much that religious and sacred attention which is due to truth, and to the important question, What is the rule of life, is lost out of the world.—*Butler*.

THEY who have pushed their inquiries much further than the common systems of their times, and have rendered familiar to their own minds the intermediate steps by which they have been led to their conclusions, are too apt to conceive other men to be in the same situation with themselves; and when they mean to instruct, are mortified to find that they are only regarded as paradoxical and visionary. It is but rarely we find a man of very splendid and various conversation to be possessed of a profound judgment, or of great originality of genius.—*Stewart*.

IN doing good, we are generally cold and languid and sluggish; and of all things afraid of being too much in the right. But the works of malice and injustice are quite in another style. They are finished with a bold masterly hand, touched as they are with the spirit of those vehement passions, that call forth all our energies whenever we oppress and persecute.—*Burke*.

[PRICE 14d.]

HOW TO CHOOSE A TRAVELLING COMPANION.

"Ostend, July 1st.

"PRAY is Mr. — related to you?"

"Why no, not exactly, but we are the most intimate friends possible. All our tastes suit—our characters fit to a nicety. We are going to make the tour of the Rhine together, and return by Paris. Nothing is wanting to complete the delights of such an expedition but the society of such a friend. Congratulate me; I am the luckiest man in the world!"

"Boulogne, Sept. 5th.

"Mr. — is your cousin, is he not?"

"My cousin? No, indeed! We are not even connexions."

"He is your intimate friend, then?"

"By no means!"

"But what is the link between you? You are always together."

"Oh—h—you see—he is my travelling companion. But I am happy to say we cross to Folkestone to-morrow, and then I shall see the last of him. Whichever hotel he selects, I shall go to the other. Never were the pleasures of a tour more effectually marred. We have not an idea in common. Wherever I want to stop, he wants to go on, and *vice versa*; and as he *never* gives way, I have been incessantly victimised, except in the *very* few cases where I made a stand and carried the point (for I hate contention), and then he was sulky for a week. People who think of nothing but their own pleasure, really ought not to travel."

And now, let us hear Mr. —'s version of the story.

"How do you do, —? Have you enjoyed your tour?"

"Humph—*comme ça*, you know; you see, I had my friend Crotchet with me, and he is not exactly the kind of fellow to travel with. He is accustomed to have everything his own way, and really he has such very odd fancies, that at first I could not help, now and then, offering a little gentle opposition. But I soon found it wouldn't do, and as there is nothing on earth I hate so much as quarrelling, I just held my tongue, and let him manage as he liked, except in a *very* few instances, when really there was no standing it. But if you come to talk of enjoyment, why, you know, there's not much enjoyment in perpetually giving up one's own wishes for the sake of keeping the peace."

Such and so great is the change which a tour of two months will generally work in the feelings of a man towards that much-enduring and much-inflicting being,

his travelling companion. There is nothing like a tour for testing dispositions, and unmasking characters. Madame de Genlis' vision of the Palace of Truth is realised; and that fabulous metamorphosis, foretold by cold and worldly philosophers as the inevitable result of matrimony, which causes the purest and strongest affection of the human heart to degenerate into an uneasy indifference or a perpetual contention, is far outdone, inasmuch as the time necessary for effecting the transmutation is incalculably shorter. It is curious to trace the steps, at first so gradual, afterwards so rapid, by which this dire result is attained. The polite and cheerful spirit, the celestial unselfishness, the enthusiastic desire to oblige, with which the journey begins! Everything is *couleur de rose*; the amiable tourists have literally no peculiarities, no wishes, no wants; every *contre-temps* is regarded as comic, and the utmost extremity of inconvenience only affords the theme of a joke, or the materials for a pun. She, who in her drawing-room on Chester Terrace was disturbed by the displacement of a ringlet, and absolutely unapproachable by stiff circumference of skirts, the folds of whose dress were as things sacred, and her *chaussure* a "sight to dream of, not to tell," laughs as she packs herself into the corner of a *calèche* or *diligence*, with her basket in her lap, and her bonnet squeezed against the cushion till it looks no-how; entreats you to settle yourself comfortably, and never mind her dress, for it is of no consequence; or walks recklessly down one of those odorous alleys with sloping sides of muddy pavement, and a nameless stream in the centre, which our brethren of the continent are pleased to call streets, and which, were it in London instead of Rouen, not she only, but even her brother, if he happened to be with her, would pronounce at a glance, to be "quite impassable for a lady." The *bon vivant* dines merrily on an omelette; the "family man" resigns that accustomed after-dinner nap which includes his whole idea of domestic happiness, without a sigh; the exquisite laughs at having to make his toilette while his dressing case is in the profane hands of the *douaniers*; and the "regular downright John Bull," (by which somewhat doubtful phrase is generally implied a man who goes through life with a steady eye to his own personal comfort, and a sturdy resolution to leave others to shift for themselves,) consents to sit bodkin, and put his feet on a bandbox.

But this blissful state lasts not long, and the disenchantment, once begun, proceeds with the accelerating velocity of a stone dropped from a precipice. And first, the superhuman sublimities of good-breeding are gently dispensed with. "Every one for himself on a tour," is said, at first jocosely, then good-humouredly, then firmly, then remonstratingly, then sourly, then sulkily, and at

last furiously. The dress is arranged fifty times in the course of a day's journey, and each time the wearer resumes her seat in a position easier to herself, and more offensive to her companions. You are requested "to hold her basket for a moment, just while she settles her bonnet," and woe be to you if you comply!—for she forgets to reclaim it. You must double your payments for dinner, and wait double time while it is cooking, though you are longing all the while to go and see the cathedral, for "dining on eggs, day after day, is too much for any man." It is nonsense to talk of an evening stroll, for Mr. Comfortable really cannot do without his nap, and if our friend John Bull finds the band-box in his way, he puts his foot through the lid, by accident. If you are only two, a civil war is inevitable, and it is rare that it continues civil to the end. If you are more in number, a system of mutual confidences against each other, incessantly given and received, will be found a most useful palliative, though not amounting to a remedy. It is a great satisfaction to the confider, and produces a temporary feeling of superiority in the confidant, which is highly conducive to good humour. He thinks, "Well, at any rate I am not put out by such a trifle as this; when I get angry, I have some reason for it." Moreover, it acts as a safety-valve, and as long as it works freely, the train advances without an explosion. But the time will come, when you are not on sufficiently good terms with any member of the party to make him the depository of your troubles, or to open your ears to his complaints; so you had better make the most of the privilege while it remains to you.

In selfishness, however, as in most of those sciences whereby man seeks to subdue surrounding elements to his will, and to make them minister to his pleasure, there are gradations of skill, and varieties of character. There is the high-bred and unconscious selfishness of the superior man, which attains its ends by so coolly taking them for granted that their fulfilment seems to arise, rather out of the involuntary submission of others, than from any effort of his own. If you are of a simple and unsuspecting temperament, there is no saying how long you may continue to act as the very spaniel of such a person, without once awaking to the perception of your own slavery. And in the higher and more perfect specimens, the tyrant is nearly as unconscious of his despotism, though this is somewhat harder to understand. Of this species, we have seldom encountered a female variety, but it is by no means uncommon in the nobler gender. Then there is the dogged, persevering, barefaced, stupid selfishness, which never advances beyond the childish argument, "I will have it, because I like it," and fairly bores you into the desired concession. There is the indefatigable and frolicful selfishness, which works by a perpetual succession of minute strokes, a mode of attack which iron itself is unable to resist, and in the contemplation of which, one's only comfort arises from the idea, too often fallacious, that it must in time wear itself to death. There is the valorous and impudent genus, which carries its point as though it were a practical joke, and sometimes bewilders you into laughing at the sheer fun of that from which you are suffering in sad earnest. There is the playful, coaxing, and decidedly feminine kind, which wins its way by smiles and sweet words, mounting every breach with a *pas de zephyr*, and sealing every triumph with a caress; and lastly, there is the deliberate, resolved, and most effectual system of tactics, to

be wielded only by a master hand, and by which those who have taken a double First Class in the art, may at once be recognised by the practised observer. We have reserved this kind to the last, and we desire to speak of it reverently, as the very chief and crown of the series, only to be appreciated by those who have suffered from it, and scarcely to be understood even by them. It acts indirectly, not by openly seeking the desired end, which indeed it rather professes to disregard, but by skilfully interposing so many obstacles, and suggesting so many evils in all other modes of action, that the unfortunate subject sees, he knows not why, that all paths save one are closed before him, and is constrained to pursue that one, apparently of his own accord, but, in truth, beset by vague and wondering doubts as to the reality both of his own freewill, and of the various difficulties which deter him from attempting a pleasanter way. The argument is a kind of *reductio ad absurdum*, as unanswerable as it is unsatisfactory. And here, too, we are compelled to adjudge the palm to the fairer sex, and to confess that when a man attempts this refined and elaborate method, he generally makes clumsy work of it. Not but what we have seen a few very creditable male examples of this class; but we are morally certain that if it should ever be our good fortune to witness so interesting an exhibition as a trial of skill between two professors of different sexes, of the very highest attainments and abilities respectively, the lady would carry off the crown. It is scarcely necessary to point out the innumerable facilities for development, the boundless field of exercise, with which each of these various kinds of selfishness is provided, if it exist in the person of your travelling companion. One origin is common to all, namely, the love and service of self. One result is characteristic of all, namely, that they bear fruit, varying in quantity and quality according to the vigour of the plant, and the adverse or favourable nature of the circumstances which surround it; but the methods of attaining this end are as dissimilar in their progress, and as varying in their speed, as the modes of growth by which an oak, a palm, and a blade of corn respectively arrive at maturity.

Do not travel with a near relation. You lose at least ten days of decorum and politeness by so doing; he is intimate with you from the very beginning, and the only barrier—a weak one, it is true, and never very durable—is removed before a blow is struck. Do not chuse a man much older than yourself—he has an advantage over you at the outset, which you will scarcely recover during the whole race. The week which is required to exhaust your natural and ingenuous respect for his grey hairs, will have sufficed to disembarass him of his involuntary sense of politeness towards you; and, at the end of it, he will start free from all shackles whatsoever, while you have still the scruples of ordinary good breeding to shake off. Avoid men of mild manners, and slow speech—they are invariably obstinate; and as they never lose their presence of mind, they are more likely than most persons to attain to the last and loftiest division of the class, which we have just been discussing. A bachelor is generally to be shunned; it is so completely the habit and practice of his life to study and to gratify his own tastes, that he has attained to a degree of proficiency, and acquired a quantity of information which it is not likely that you should possess at first starting. You may yield a number of points with-

out being aware of what you are really giving up; and when you gradually awaken to the position in which you have been suffering him to place you, you will have so much lost ground to recover before you are on equal terms. We were once of opinion that it was desirable to select a married man of some years' standing; because, being in the habit of constant submission, whether voluntary, enforced, or unconscious, at home, he was likely to be docile and manageable by instinct. But it has been suggested to us by high authority, that the same principle of human nature which converts the father into the tyrant, and the enslaved serf into the revolutionary despot, will assert itself in him, and impart an eagerness and a virulence to his strife for the mastery, a spiteful fanaticism to his worship of self, which it would be extremely difficult to resist. On the whole, therefore, in spite of what has been said above, we would rather recommend you to choose a bachelor;—but to be on your guard against him from the very first. And the best mode of enabling your ignorance to contend successfully against his experience, will be to yield *no point whatever*, trifling as it may perhaps appear, lest it should involve consequences which you do not perceive. You are safe in always contradicting and opposing, and though you may be fighting for matters of no importance, it is a fault on the right side, and better than running the risk of losing an advantage which you may hereafter endeavour to reconquer in vain. It is advisable to fix on a person who possesses some ascertained peculiarity which does not interfere with your own views of comfort; such as not being able to sit backwards in a carriage, or to eat some particular sort of food. By ostentatiously attending to this, and making a vast parade of always yielding him a front place, or providing him with a dinner to his taste, you establish a sort of right to require sacrifices from him in return, which, in skilful hands, may be used almost *ad libitum*, and with the best possible effect. Of course, great care must be taken in the choice of your weakness, that it does not jar with any similar tendency in yourself; though, in some cases, it might be as well to affect a slight degree of it, in order to make your concessions to your companion more meritorious, and more impressive. Your own observation will show you, very early in the business, which of the two great lines—the bullying, or the sneaking—it will be more politic to adopt. And having once chosen your line, let nothing tempt you to depart from it for a moment. In this game, steady perseverance is more than half the battle; and by it, you may sometimes baffle an antagonist of superior natural qualifications, who, less alive to the nature of the contest, suffers himself to be temporarily diverted from his original system of tactics. Watch eagerly for this blunder, pounce on it the moment it appears, and never suffer him to recover the advantage which he will lose by such an error, however brief in its duration. Yet, with all these precautions—with the most fastidious care in the choice of your companion, and the most sedulous and energetic pursuit of the best means of subduing him when chosen, we can by no means promise you that you shall eventually and permanently obtain the upper hand. The very highest point at which you may hope to arrive, may be compared to that state in a game of chess, in which one party never ceases checking his antagonist, who, with equal perseverance, baffles or evades each successive attack, till the battle is at length pronounced to be drawn.

You will perceive, however, that, in this kind of encounter, he who acts on the offensive has the pleasanter part; and it is this position which we would encourage and instruct you to grasp. Once yours, nothing but a want of vigilance in yourself, which we will not attribute to you, can enable your adversary to rob you of it; and, as in this game there is no regulation compelling the combatants to cease after a certain number of ineffectual checks, it is by no means uncommon for the defender to give up from pure weariness, and suffer himself to be reduced to a conquered and submissive state, without resistance.

The last fortnight or month of a tour generally presents us with a somewhat novel aspect of affairs. This is the period during which the contending parties, having measured their strength, and established their respective positions, become possessed with a lively spirit of revenge and spite, which is content to find its gratification in the annoyance of each other, without thereby seeking any immediate advantage to themselves. The methods and the weapons by which this is to be achieved, will, of course, vary with circumstances. Some, however, are always useful; and among these we may reckon that intimate knowledge of the peculiarities of your companion, which, in the first instance, we advised you to attain, with a view to your own interest. It stands to reason, that when you know a man's tender places, you are enabled to hurt him much more effectually and easily, than when you are ignorant of their geography. Besides, it is an excellent plan to affect constant ignorance of them. Suppose you know your companion to be nervous, for instance; it becomes then your business always to arrange and suggest every method of proceeding on your journey, which is likely to worry or alarm him. It is humiliating, inconvenient, and vexatious for him to be driven every day into an explanation of his peculiar weakness, while you, with raised eyebrows, and politely contemptuous tone, profess "that you had not an idea *this* arrangement would be disagreeable to him; you knew his peculiarities, certainly, but it had never occurred to you that *this* could interfere with them." Having said thus much, you may yield the point; but it is scarcely necessary to say what an advantageous position you have assumed for the day, for you can make him feel at every moment that, in order to indulge his foible, the plan of the journey has been changed, while the unfeigned surprise which you exhibit at this particular manifestation of the said foible, may be made civilly and incessantly apparent. Occasionally, if he be at all sensitive, he will agree to your suggested scheme, rather than place himself in so unpleasant a situation; and then, although the nature of your satisfaction be changed, the degree of it is, perhaps, heightened. You sit by and chuckle, from your secret consciousness of the annoyance which you have compelled him to endure, and which he vainly labours to conceal from you.

In this kind of warfare, the lady has a decided advantage over the gentleman. There is one peculiarity invariable in the gentler sex, which affords a means of annoying a husband or brother, as powerful as it is inexhaustible. Man is distinguished from the beasts, as "a reasoning animal." We will not here question the fitness of the appellation, though we could enumerate a variety of instances, chiefly among churchwardens and members of Parliament, with a slight sprinkling from the ranks of scientific theorists of modern times,

which would seem to suggest the propriety of establishing an intermediate class in the scale of creation. Were we, however, called upon to pronounce the characteristic of woman, as distinguished from man, we would call her a shopping animal. Now, in all the large towns she may shop, and surely it is unnecessary to say more. My female readers will at once feel how wide a field I have opened to them; nor is there a man who will read the passage without an involuntary shudder at the picture presented to him. The length of time which may be consumed in this occupation—the unanswerable arguments which may be adduced for its necessity—the inconvenient moments at which it may be introduced as a substitute for anything whatsoever which the gentleman may wish to do—and the quantity of *his* money which you may contrive to spend in the course of it—these are its great advantages; and the woman who requires instruction how to use these efficiently, is really unworthy of having advice wasted upon her. At the smaller and less interesting places, she always has it in her power to detain her companion by having a headache, and to worry him about her diet. In short, her facilities for undertaking the management of this latter period are innumerable; and were we to spend hours in collecting minute instructions for the guidance of her adversary, they could only avail him as a suit of worn and ill-constructed armour, between the plates of which the weapons of a skilful combatant may find passage at every moment.

And now, reader, we have done. How much do you think has been said in earnest? 'Tis a caricature, doubtless, and only meant to be laughed at; but is there not a good deal of truth in it after all? There may be—perhaps there is; but if you have not *some* friends in the world, (we do not say many, but assuredly more than one,) without whom the pleasures of the most charming tour that ever was contrived would be incomplete, and in whose society the weapons of selfishness are blunted, and her arm paralyzed, because, in truth, *your* happiness is only to be found in seeking *theirs*; if you have no such friends, we can only say, that we condemn even more than we pity you; and we hope that it may never be our lot to have so cold and morose a person for our travelling companion.

BEAUCHAMPS.—A TALE.

CHAP. IV.

(Continued from page 71.)

As I stood, with my attention apparently fixed on the embroidery, how clearly I remembered all these little circumstances! And those young, bright girls, Julia and Mary, to think that they should fade so much sooner than a few trumpery silken threads! The carnations and roses were as brilliant as when first wrought by the skilful fingers of Mary Deane, and would continue so, perhaps, long after those fingers had mouldered in the dust.

"It is a fine piece, sir," observed Hannah, who supposed me wholly engrossed with the merit of the performance; "Mr. Penrose used to say that it was better worth looking at than a many paintings."

"I am quite of his opinion; and Mr. Penrose himself—they tell me he is at Bath?"

"Yes, sir, he has gone to try what the hot baths will do for his complaint, which is something of a palsy, as I take it."

After a little more talk I got up to take leave, observing, as I did so, "that since all my old friends seemed to be congregated at Bath, it was quite time that I should go there likewise."

To Bath I went, and at the close of a drizzly, uncomfortable sort of a day, found myself established at the York Hotel. The following morning I waited on my aunt and cousins, who received me, as the present possessor of Knightswood, perhaps with a shade of embarrassment, yet kindly; indeed, the manner of Julia was so cordial, and she looked so truly glad to see me, that it went far to atone for the loss of that splendid beauty which had captivated my youthful fancy. Julia, at three-and-thirty, was indeed the wreck of her former self; altered both in regard to face and figure; the first had lost its bloom, the last its *embonpoint*, of which there never had been a thought too much; and though still an elegant-looking woman, she was, according to the common phrase, completely gone off. But what of that? Had so many years passed in a foreign climate produced no change in my own appearance? Was I the same well-looking young fellow who had vowed and protested in the orangery?

Julia was still unmarried, received me kindly, and, if a vestige of her former partiality had survived the wear and tear of fashionable life, how could I do better than endeavour to convince her that although the days of romance were over, there might be many of rational and domestic happiness in store for us? With such reflections, I returned to the hotel to dress, preparatory to dining with my aunt and cousins. I thought them at the time fraught with wisdom, nor am I at the present moment seeking to recant.

There was no other visitor, and never shall I forget the comfortable sensations of that first evening in the Circus. During my residence abroad I had indeed found friends, and some of more than common excellence, but none who had ever known me by my Christian name; here, I was once more *Henry*, and I felt that I had indeed come home; former grievances and offences were forgotten; even later impressions, such as old Hannah's recital had produced, faded from my mind; I cast my eye round the room—how cheerful, how thoroughly comfortable it looked! How preferable to the cold, deserted apartments of Knightswood! They have taken with them, thought I, all that gave pleasantness or grace to that abode. Whilst I meditated, Maria talked; she always had been a talker; formerly, her talk was of London, Almack's, archery parties, or the next *meet*; for both she and Harriet had been mighty riders in their day. Now, she discoursed on charity bazaars, sermons, pastoral aid, and presentation plate. The subject matter had changed, but the style was the same; that was still Maria, now evidently, in her own opinion, the most serious of her family. Julia said comparatively little, but that little tended to confirm my early belief in her better qualities. Superior to Maria in understanding, to Harriet in disposition, the world, supposing it to have disappointed, had, at least, failed to injure either the temper or the heart; Julia's mind had remained open to good impressions, and was capable of forming a right judgment of her past career.

So it appeared to me at a later period of our renewed acquaintance; in the mean time, my aunt was talking, and I not attending; it was necessary to collect my thoughts. Lady Tracey was recounting the perplexities consequent on her removal from Knightswood; the difficulty of fixing on a future home; her hesitation between town and country, between Bath and London; and lastly, the impossibility of finding a house anywhere exactly to her mind. Harriet seemed to have been the guiding spirit through the whole affair; she happily cleared a way through all its intricacies, and eventually established Lady Tracey in the Circus. But Bath is not a desirable residence in summer, for even an English summer may be occasionally hot. To some such observation of mine, Lady Tracey agreed; "but there could

be no difficulty in disposing of a few weeks; indeed, part of the ensuing summer would probably be spent abroad."

"Abroad!" I exclaimed, "and have you fixed on the precise where?"

My aunt replied, that they had not absolutely fixed, but thought of the German baths. She had been almost persuaded to believe they might be serviceable to her health: Harriet was quite of that opinion.

"Do you promise yourself much pleasure from this excursion?" I inquired, turning towards Julia, "Have you ever been out of England?"

"Only for a very short time, and then not farther than Paris."

"There is no spirit of enterprise in Julia," observed Maria. "She has no zeal in this, or any other cause."

"Why really," I replied, "the present cause seems hardly cause enough to excite any very strong emotion."

But Maria, without listening, continued. "I think it would be a charming scheme for you to accompany us, Henry. You will have nothing to do in the summer; no gentlemen ever have; and, of course, it will be much pleasanter for us. Such an addition to the party may even reconcile Julia to leaving England."

"I have no doubt," said Julia, taking upon herself to reply, "that when I am abroad I shall find much, both to amuse and interest me; notwithstanding which, I must confess that I should prefer staying quietly at home."

"And," said I, "after all my wanderings, I, too, must confess, like Julia, a preference for staying quietly at home."

"What a happy coincidence of opinion! You will agree charmingly together—I see that—whether abroad or in England."

Maria spoke with apparent thoughtlessness; but her sister looked annoyed, and seemed anxious, by some inquiry respecting the mode of travelling in Bengal, to turn the conversation.

In the latter part of the evening Maria summoned Julia to the piano forte, and they sang together a duet: then followed, on the part of the elder sister, a great deal of talking, and looking for a certain Irish melody, which I had formerly been fond of hearing Julia sing; but who now seemed resolved to remember nothing of the matter.

"It won't do, Maria!" The words were spoken in rather a low tone; but I heard them; and, from the peculiar smile and shake of the head by which they were accompanied, I guessed that Julia referred to something more than the lost melody.

Maria got up; she was on one knee, turning over a huge portfolio of loose music, and replied, rather angrily, "Something else will not do, that you may be assured of."

"Oh! yes, it will," said I, though not knowing in the least what she meant. "If you can't find an old song, give me a new one; I am in the humour to be pleased with anything and everything?"

"And with every body?"

"Yes, Maria, every body; especially with you and Julia."

Something, I forget what, that was soon after said, or sung, reminded me of Mary Deane, and, turning to the sofa, on which my aunt was seated, I inquired if she knew that her former acquaintance, Miss Deane, was living in Bath, and whether she had seen her?

To the first question, Lady Tracey replied in the affirmative; to the second, that Miss Deane had not called in the Circus; that she (Lady Tracey) did not know in what part of Bath Miss Deane resided, and that they had never met accidentally. At this point Julia joined in the conversation; she knew that Mary Deane and her aunt lodged on the South Parade: she herself wished very much to call on them, but had deferred doing so, in hopes that mamma would waive ceremony, and accompany her.

"You have another old acquaintance in Bath, whom you must visit," continued Julia.

"You mean Mr. Penrose? Yes, I shall certainly wait on him."

"And go soon, Henry, for he will be rejoiced to see you again."

"I will call at his lodgings to-morrow, in my way to Miss Deane, if you think he will not object to receiving an early visitor."

"Not in the least,—that is to say, after eleven o'clock."

"You seem remarkably well informed on the subject," observed Lady Tracey.

"Yes, mamma, I have been myself to see the good old gentleman several times."

"You have!" exclaimed her mother, in a tone which expressed both surprise and displeasure.

"Dearest mamma, I told you, if you remember, before I went the first time."

"Yes, and what I told you, ought, I think, to have prevented your doing anything so foolish and improper."

I confess that, considering Julia's age, to say nothing of that of poor old Mr. Penrose, I thought all this rather over-strained; so I remarked, "that at least there could be but one motive for such visits, and that a purely unselfish one."

People should never interfere in family tiffs; they are more likely to mar than to mend; so it proved in the present instance. Maria, with a provoking sort of smile, looked at Julia, who coloured; she was very evidently distressed; and I, as evidently, had said just the thing I ought not. "I am walking in the dark," thought I, "and must find out whereabouts I am, or I shall stumble at every step."

I found Mr. Penrose occupying part of an old-fashioned house near the Orange Grove; and the welcome he gave me was, like his habitation, old-fashioned and warm. At first we talked of my concerns, for so he would it; of India; the state of my health there; my homeward voyage; Knightswood, &c. And afterwards of his health; of the Bath waters; pumpings; douchings; time required for giving all remedies a fair trial; and this brought us easily and naturally to Fordover. He had been wishing much to see me; had a great deal to say concerning himself and others; some things, perhaps, that I should be surprised to hear. "It was next to impossible," I assured him, "that I could hear anything from such an old and valued friend as himself, that would not at least interest me." Thereupon, the good old man began with his own conscientious scruples regarding his parish: he should never again perform his duties in it; that was wholly out of the question; and he had pretty well made up his mind to resign the living. It was in the gift of Mr. Gifford; and if there should be no friend for whom he wished particularly to provide, (relation there could be none) he had entertained a hope that, upon his own recommendation, Mr. Norton, his present curate, might be appointed to succeed him. Then followed commendation of Mr. Norton, so warm, yet so discriminating, that I could no more doubt the merit of one party, than the sincerity of the other. "Could I resign my flock to his charge," said Mr. Penrose, "my mind would be at rest; I should have nothing more to be careful for in this world. And now, Sir Henry, if you can put faith in my recommendation, and have no private objection to interesting yourself in this affair, will you employ your influence to get it settled according to my wish?"

"My dear Mr. Penrose," I replied, "my influence, supposing me to have any, can hardly be of service in this matter. If Gifford has any strong objections, I could scarcely expect to overrule them; and if otherwise, your own influence must be sufficient. Are you not the oldest friend he has in the world? Were you not his first, and, as I have often heard him

acknowledge, best and kindest tutor? You wrong him, surely, in supposing that he would more readily oblige any one living than yourself."

Mr. Penrose paused before he replied. "There is, unfortunately, an opposing influence: your cousin, sir, Mrs. Gifford, has taken the field against me; and I fear that, with her consent, Mr. Norton will never become rector of Fordover."

"Her reason?" I inquired.

"That it is very fit you should be made acquainted with; I have no desire to conceal it. You may possibly have the same feeling on the subject as other members of your family, and therefore it is fair to apprise you, that if Mr. Norton should obtain such an increase to his income as the living of Fordover, I have no doubt of his proposing to Miss Julia Tracey; nor, to speak the truth, much doubt as to her accepting him."

Now, then, the mystery was explained; and my soul, as the Persians say, fell from the skies; at least it would have fallen, had there been time for it to mount so high. As it was, I will not deny that I heard Mr. Penrose's announcement with momentary annoyance; I was considerably surprised, and, if not positively disappointed, had a narrow escape of it.

"You are not pleased to hear this, Sir Henry; nor is it agreeable to the rest of the family; but wait till you have made acquaintance with Mr. Norton. I am confident that you will find him, on all points but fortune, worthy of your cousin; and I have a great regard for Miss Julia, too, I assure you, and think her a very charming person; she will be a fortunate one, too, in my opinion, if circumstances admit of her marrying Mr. Norton."

"Julia's happiness," I began, "if not the first thing to be considered in an affair of this nature, shall always be cared for by me; and she is at an age to be safely trusted in her own estimate of what will most contribute to that happiness; but I know the character of her sister, and if, as you intimate, she has set herself in opposition to this union, the odds are against us. I cannot tell what degree of influence she may have over Gifford, but it is unpleasant, and generally useless, to interfere between husband and wife."

"Still," said Mr. Penrose, "in a matter of Church patronage, a wife should not presume to dictate; it is highly unbecoming." Then, smiling at his own vehemence, he continued, "I speak like a testy old bachelor."

"And I, as a probable member of that fraternity, do not feel disposed to enter the lists against you; I will go farther, and say that there are few points on which a wife *should* presume to dictate. This, however, is little to the present purpose; what I have to suggest may, with your approbation, prove a more healing measure. I must, however, forewarn you in my turn; it will require a sacrifice on your part; you must continue rector of Fordover during your natural life. Mr. Ryder, the incumbent of Knight Magna, is likely to obtain a better piece of preferment; a circumstance which, as he cannot hold both, will oblige him to resign his present living. He called a few days ago to speak to me, as patron, on the subject. Neither the living nor the parsonage of Knight Magna are quite so good as those of Fordover; but both may be improved. In case of the removal of the present incumbent, could you consent to part with Mr. Norton?"

"No," replied Mr. Penrose decidedly, "I do not think that I could; it entirely alters the case."

"True, it does alter the case, but in my opinion advantageously. Consider, in the first place, how much it will be in your power to benefit any curate you may see fit to engage. What an advantage to a young clergyman to learn his professional duties under your guidance! You might, with God's blessing, train up another Mr. Norton to the ministry; and as to the emoluments of the living, they would be at your own disposal; yours to give, as much as to keep. Possibly

there may be some pious or charitable work you would wish to perform at Fordover; such as your successor, if a family man, might not have power to accomplish. Besides," I continued, receiving no answer from Mr. Penrose, "you must not think of Mr. Norton as the only good man in the world."

"A good man, sir!" replied Mr. Penrose, peevishly; "I want something more than a good man. I had a good man; Mr. Brown was an exceeding good man, but he preached half my congregation out of Fordover church into the meeting-house at Knight Magna."

"I am afraid, my dear sir, we are rather out of order in that parish; but give us Mr. Norton, and we shall amend our ways. With regard to my cousin, in case of her becoming his wife, I need scarcely observe how preferable to her would be a residence at Knight Magna; unless, as one can scarcely venture to hope, such a change should take place in her sister's feelings as would render their very close vicinity to each other desirable. At all events," I continued, after a moment's silence, "you will, I am sure, kindly weigh what I have said, and think over it. And if," added I, "which is possible, Mr. Ryder should be disappointed in his expectations, we will try what can be done in your way." I then took leave, for Mr. Penrose seemed weary, and as if he wished to be alone.

"So this was Julia's reason for wishing me to pay our old friend an early visit; and she thinks that I can assist Mr. Norton in regard to Fordover—but, Lord bless her! when did she ever know Harriet relinquish a point on which she had set her mind? A woman of that sort runs down her game; she keeps on and on, till her victim falls at her feet from very weariness. No. Knight Magna—that must be our object, if Mr. Ryder leaves. As to entirely rebuilding the parsonage, I am in doubt; perhaps they may not like to wait so long—it certainly ought to be made to front the other way."

Full of such thoughts and schemes, I would rather, at that time, have declined a visit to Miss Deane, or any one; but I proceeded, and in a few minutes found myself on the South Parade. Yes, there they were; at least, so I guessed; an infirm old lady in a Bath chair, and a younger lady walking by the side; yet it was possible they might not be the persons I sought. We met—we nearly passed each other, for I was irresolute—but the young lady chanced to turn her head; I caught her eye, and that glance confirming my conjecture, I ventured to address her.

There was no mistake; it was indeed Mary Deane, who, though not at the first moment recollecting me, was no sooner assured of my identity, than her countenance became radiant with those pretty smiles commemorated by old Hannah, and she immediately presented me to her aunt.

I attended them during the remainder of Mrs. Deane's airing, and afterwards to their lodgings. We talked of course, and that very soon, of Hannah; indeed, I was the bearer of a letter from her. Mary listened with an interest that made her fine dark eyes glisten with emotion; but her manner was perfectly composed, and, sooner than I expected, she turned the discourse from the neighbourhood of Beauchamps, to speak of her present protectress; the general advantages of Bath to persons circumstanced like themselves; particular recommendations of that locality—so cheerful, so warm and sunny for her aunt, (she did not say that at times the heat was almost insupportable to herself,) and so short a distance from the abbey.

Mrs. Deane was not slow in her own acknowledgments; she gave Mary some trifling commission to take her from the room, and, during her short absence, assured me, that she felt it to be the crowning mercy of a good Providence, which had watched over her during a long life, that this dear child should have been consigned to her care. "It was scarcely to be expected," she observed, with great simplicity, "that one so lovely and so loveable, one so likely to be sought after, should

have had a home to seek, or have found one, during so many years, under her roof."—"She is a dear, good, affectionate child to me," concluded the old lady, "and God will reward her for it in his own way and time."

Mary soon returned to the room, which her absence, and Mrs. Deane's blindness, had enabled me to survey with some attention. The furniture, though neat, was but that of a common lodging-house; yet an air of comfort, almost of elegance, pervaded the apartment. A few sprigs of myrtle and geranium filled a small flower vase, and decorated the table, on which also might be seen some of those fancy articles ladies delight to fabricate. Books, too, there were, such as Mary loved; the gradual collection of one, whose means scarcely permitted the indulgence. On a little table, in company with a venerable looking quarto Bible, I could perceive the Prayer-Book, my own gift; and above this table, suspended from the wall, was a small drawing in a maple frame. It looked like—what on close inspection it proved to be—Julia Tracey's *Camellia*. But why thus carefully preserved by Mary Deane? She had doubtless grieved with Mark over my expulsion from Knightswood—had felt for and pitied me; I seemed to understand it all.

Poor Mrs. Deane had few acquaintances in Bath. Neither her health nor circumstances admitted of her giving entertainments, and Mary, in consequence, had few opportunities of mixing in society. She must have partaken very sparingly of what are termed the pleasures of life; the warm affections of her young heart had been chilled; and her best years devoted to patient and unwearied attendance on the sickly and infirm; yet it would seem as if a life of obscurity and self-denial were more favourable to the preservation of beauty, than one of prosperity and worldly amusement; for although Mary, like Julia Tracey, had lost the bloom of youth, there was no worn or haggard look in the countenance, nothing of emaciation in the figure. "What a very pretty person is Miss Deane!" was my observation on rejoining the party in the Circus, and in reply to certain inquiries as to how I had passed the morning.

"Yes," said Julia, "she is a *very* pretty person, and one of the youngest looking, for her age, that I am acquainted with."

"Her age is nothing," remarked Maria; "but where, pray, Julia, have you seen her of late?"

"I found her sitting one morning with Mr. Penrose."

"Mr. Penrose, I observed, "seems to be in especial favour with you ladies; is he confessor general, or particular, Julia?"

With a conscious laugh, she replied, "Oh, by no means general; Miss Deane and I consider him as exclusively our own, and confide in him accordingly."

My aunt did not look sweetly on her youngest daughter; yet I found, when occasion offered for conversing with her on the subject of Mr. Norton, that time had produced its customary effect; that, in regard to her daughters, she was more indifferent to their establishment in life—in regard to herself, more solicitous of repose. We shall do well enough, thought I, if we can but bring Harriet to reason. My aunt is not, in her heart, much averse to this match; and nobody ever thought of minding Maria. At any rate, as the Giffords are expected in Bath, we must soon know the worst.

In the meantime Julia and I had more than one confidential discourse, generally in our way to, or from, the South Parade. I found her moderate in every wish; unworldly, to all appearance, in every thought; and she found, as she was well entitled to do, an assured friend in her cousin Henry. I have said that Julia called with me on Mary Deane; Lady Tracey also left cards; after which Mary was induced, chiefly by the persuasion of her aunt, to accept an invitation to dine in the Circus. There were present one or two other guests,

well-bred, agreeable people; and it gave me pleasure to see Mary's diffidence and disinclination to the visit gradually give place to more agreeable sensations. It was the triumph of natural good taste and good sense, aided by the fostering kindness of Julia, who, considering Mary as especially her own guest, paid her more than usual attention. Both appeared to advantage; but there was a something in Mary's air and manner so simple, so unusually truthful, if the expression may be allowed, combined with so much natural grace, that to indifferent observers she must have been the most attractive of the two. The following day was productive of two interesting events, and in the right order of time: the morning brought a letter from Mr. Ryder, acquainting me with the favourable termination of his affair, and the evening was distinguished by the arrival of Mr. and Mrs. Gifford. Mr. Penrose, good man, had resigned himself to his fate; it remained now to see how Harriet would submit to hers—how she would reconcile herself to the prospect of a brother-in-law, exemplary in his own character, and the choice of a sister who, in the account of the world, had not too much time to lose. Mark Gifford and I renewed our acquaintance with, I believe, equal pleasure, rejoiced in our near neighbourhood to each other, and looked forward to all but daily meetings.

He was ~~not~~ greatly altered in any respect; a little more consequential in manner perhaps, at least in the presence of his wife, but almost as young and handsome as ever; in youthfulness of appearance he had decidedly the advantage of us all. I availed myself of our first after dinner *tête-à-tête* to acquaint him with my knowledge of Julia's attachment, and my own designs in favour of Mr. Norton. He heard with surprise of the expected vacancy at Knight Magna, but seemed mostly struck with the extraordinary good fortune of Mr. Norton in finding two individuals, Mr. Penrose and myself, equally desirous of preferring him to a living. Under this change of circumstances, however, he expressed himself well satisfied with Julia's choice: "very glad that the affair should be brought to so happy a conclusion, especially through my means;" that is to say, without any annoyance to himself. "For his part, he did not think Julia likely to have a better offer; Mr. Norton was himself an exceedingly gentlemanlike person; and as for the rest, what did it signify? People could not expect all their connexions to be Plantagenets;" thus leaving me to infer that, in spite of his well-sounding name, Mr. Norton's escutcheon was of doubtful origin. Mark concluded by assuring me that he should do his best to make Harriet view things in the same light; as to the accomplishment, however, of this desirable object, he did not appear extremely sanguine; ladies being, so he averred, apt to form unreasonable expectations. The effect of Mark's communication was visible when I next entered the presence of his wife, by the token of a scowling brow, and cold ungracious manner; "It was the climax of folly," she observed to Maria, before I was well out of hearing, "just as Henry Tracey had returned to England—and unmarried." The pelting of this storm fell the most heavily on my aunt and Maria, certainly the two least guilty of sanctioning the present aspect of affairs. Julia was too well satisfied with them herself, too sure of Mr. Norton's fidelity, to need support; and Mark prudently kept out of the way. We spent most of our time together, and together we called on Mary Deane. If a slight blush suffused her cheek in shaking hands with Mark Gifford, it was all of emotion she displayed; her manner was unembarrassed, and whatever she might once have felt or suffered, it expressed nothing but a kindly interest in his welfare.

(To be concluded in our next.)

THE BEGGAR'S CASTLE.

A Story of the South of France.

THOSE ruins took my thoughts away
To a far eastern land,
Like camels in a herd they lay
Upon the dull red sand :
I know not that I ever sate
Within a place so desolate.

Unlike the relics that connect
Our hearts with ancient time,
All moss-besprent and ivy-deck'd,
Gracing a lenient clime,
Here all was death, and nothing born,—
No life but the unfriendly thorn.

“ My little guide, whose sunny eyes
And darkly lucid skin
Witness, in spite of shrouded skies,
Where southern realms begin,
Come, tell me all you've heard and know
About these mighty things laid low.”

The Beggar's Castle, wayward name,
Was all these fragments bore;
And wherefore legendary fame
Baptized them thus of yore,
He told in words so sweet and true,
I wish that he could tell it you.

A puissant seigneur, who in wars
And tournaments had renown,
With wealth from prudent ancestors
Sloping unbroken down,
Dwelt in these towers, and held in fee
All the broad lands that eye can see.

He never temper'd to the poor
Misfortune's bitter blast;
And when before his haughty door
Widow and orphan past,
Injurious words and dogs at bay
Were all the welcome that had they.

The monk, who toil'd from place to place,
That God might have his dole,
Was met by scorn and foul grimace,
And oaths that pierced his soul:
"Twas well for him to flee and pray,
"They know not what they do and say."

One evening, when both plain and wood
Were trackless in the snow,
A beggar at the portal stood,
Who little seem'd to know
That castle and its evil fame,
As if from distant shores he came.

Like channell'd granite was his front,—
His hair was crisp with rime,—
He ask'd admittance, as was wont
In that free-hearted time;
For who could leave to die i' the cold
A lonely man, and awful old!

At first his prayer had no reply,—
Perchance the wild wind check'd it;
But when it rose into a cry,
No more the inmates reck'd it,
Till, where the cheerful fire-light shone,
A voice out-thundered—"Wretch! begone."

"There is no path—I have no strength—
What can I do alone?
Grant shelter, or I lay my length,
And perish on the stone.
I crave not much—I should be blest
In kennel or in barn to rest."

"What matters thy vile head to me?
Dare not to touch the door!"—
"Alas! and shall I never see
Home, wife, and children more!"
"If thou art still importunate,
My scurfs shall nail thee to the gate."

But when the wrathful seigneur faced
The object of his ire,
The beggar raised his brow debased,
And arm'd his eyes with fire:
"Whatever guise is on me now,
I am a mightier lord than thou!"

"Madman or cheat! announce thy birth."—
"That thou wilt know to-morrow."—
"Where are thy fiefs?"—"The whole wide
earth."—
"And what thy title?"—"Sorrow."
Then, opening wide his ragged vest,
He cried, "Thou canst not shun thy guest."

He stamp'd his foot with fearful din;
With imprecating hand
He struck the door, and pass'd within,
Right through the menial band.
"Follow him! seize him! there and there!"
They only saw the blank night air.

But he was at his work: ere day
Began the work of doom,
The lord's one daughter, one bright May,
Fled with a base-born groom,
Bearing about, wheres'er she came,
The blighting of an ancient name.

His single son, that second self,
Who, when his first should fall,
Would hold his lands and hoarded pelf,
Died in a drunken brawl:
And now alone, amid his gold,
He stood, and *felt* his heart was cold;

Till, like a large and patient sea,
Once roused by cruel weather,
Came by the raging Jacquerie,
And swept away together
Him and all his, save that which time
Has hoarded to suggest our rhyme.

R. M. MILNES.

A NIGHT IN THE FOREST.¹

FROM THE GERMAN OF DE LA MOTTE FOUQUE. BY S. M.

(Concluded from page 44.)

WINDRUDA.

Thine eyes have kindled like the morning !

HAGENULPH.

Ha !

At such a moment meet we interruption ?
Hark ! In the wood a sound of armed men !
Rest in my hut, most dear and honoured guest,
Whilst I look forth.

CHARLEMAGNE.

Nay, sir ; if there be danger,
I must not see thee challenge it alone.

HAGENULPH.

Danger to thee, perchance, though none to me ;
The woods are full of stern and hunted Saxons.
Remain, my lord ;—persuade him, noble wife.

WINDRUDA.

Remain within, as thou art sworn my knight !

[Hagenulph issues from the hut, his sword in his hand, and closes the door behind him. Many armed Saxons come from the wood.]

HAGENULPH.

Whither so fast, my countrymen ?

A SAXON.

To thee !

I seek the traces of a Christian knight,
Who roves bewildered through these savage woods :
Methinks even now he sits beside thy hearth.

HAGENULPH.

And if it be so ?

SAXON.

Why, if it be so,
The avenging Gods demand their sacrifice ;
The great uncounted army of the dead,
Slain by the hands of these accursed Franks,
Cry for their prey, and vengeance ! Out with him !

HAGENULPH.

I think thou know'st he sits beside my hearth ?

SAXON.

Ay, by my faith ; 'tis therefore we are here.

HAGENULPH.

Then let me see the man who dares to harm him
Beneath the guardian shadow of my roof.

SAXON.

Thou mighty Saxon warrior, Hagenulph,
Wilt thou protect the scourge of Saxony ?

HAGENULPH.

He sits beside my hearth ; and so, good night. *[Going.]*

ANOTHER SAXON.

Yet one word more !

HAGENULPH *(returning)*.

True ; thou remindest me !
Make not such rude disturbance in the woods,
Breaking my thread of converse with my guest.

SAXON.

Thy guest ! Thou dream'st not whom thine arm protects !

HAGENULPH.

My dream, perchance, is truer than thy knowledge.

SAXON.

It is a knight of name among the Franks.

HAGENULPH.

It may be so, or it may not be so :
Speak plainly, if thou be'st a Saxon.

SAXON.

Well,

I do believe it is the king himself.

HAGENULPH.

Through this whole evening I have thought the same
Therefore depart in silence. 'Tis for me
Fitting to entertain him.

SAXON.

With thy sword !

Therein we swear thee true companionship.

HAGENULPH.

Ay, my good two-edged sword. I have it here
Ready for all who break the holy laws
Of hospitality. Of such a crime
This king is guiltless ; food, and drink, and couch,
Shall therefore be his fitting entertainment,
Not cutting steel. Good night ! I pray you go !

MANY SAXONS.

No, no, my lord ! We cannot suffer this.
Give up the tyrant ! 'Tis the question here,
If Saxony shall stand or fall for ever.
Give up the king ! Our wrath will have its victim.

HAGENULPH.

If Saxony must stand by deeds of shame,
'Twere better that she fell. Good night, my friends ;
For the third time and last, I say it to ye.
Good things are threefold, therefore now depart,
Unless your minds be set to seek for evil.

SAXONS.

Why, let it come, then ! Failing gentle means,
We must use force, We are the strongest, friends ;
Break down the door, I say ! Ha, break it down !
[They approach furiously to assail the hut.]

HAGENULPH.

What hath bewitched you, ye unthinking men ?
See now, this is the sword of Hagenulph ! *[They fight.]*

CHARLEMAGNE *(rushes out with his sword drawn)*.

The clang of arms ! Stand fast, my noble host,
'Tis easy work to drive this rabble hence.

[The Saxons are put to flight.]

HAGENULPH.

Softly, my lord ! Pursue not, through the darkness,
Amid the forest's shadowy battlements ;
A true knight's sword strikes ever best in freedom.

CHARLEMAGNE.

Thou'rt in the right. Moreover, our pursuit
Would leave thy gentle wife unguarded.

[They stand opposite to each other, leaning on their swords, and looking into each other's faces.]

Enter WINDRUDA from the hut.

WINDRUDA.

Here

I see two valiant comrades, fresh from battle,
Warm from the eager chase of flying foes ;—
Brethren in arms, my heart would gladly hail them.

HAGENULPH.

Not so, my love.

CHARLEMAGNE.

And, comrade, wherefore not ?

HAGENULPH.

'Tis true I am an honourable knight,
And, as thyself hast witnessed, and canst say,
The sword of Hagenulph is somewhat sharp ;
But yet thou standest far too high for me.

WINDRUDA.

Stands any man too high for Hagenulph ?
That must be an illustrious master truly.

HAGENULPH.

Methinks that such an one stands now before us.

CHARLEMAGNE.

What, think'st thou so, my hero ? Tell me, straight,
Whom tak'st thou me to be ?

HAGENULPH.

I do believe thou art the mighty fountain
Of Frankish victory and Saxon shame ;
And that men call thee Emperor Charlemagne.

(1) The conclusion of this translation was omitted from Part I., by an accident which was not discovered till too late to be remedied. Every effort will be made to avoid, as far as possible, continuing any article from one Part to another.

WINDRUDA.

This Charlemagne Is such his countenance?
Ay, ay, I can believe it; I have pictured
A hero of such aspect in my fancy.

CHARLEMAGNE.

And didst thou know, most true and loyal host,
How rich a prey thy fortress-hut contained,
Yet paused thy hand to slay?

HAGENULPH.

I greatly marvel
At such a question. Wert thou not my guest?
But could I meet thee on the battle-field
Close hand to hand; where I, as yet, have seen thee
Only a horseman in the distance; then
We were acquainted in another fashion!

CHARLEMAGNE.

Why so think I. In thee, as in myself,
My faith is strong. But this I say to thee,
My Hagenulph, I stand too high for thee
And thine aspiring—not because I am
King of the Franks—but thus, because I am
A Christian, and the servant of the Lord.

WINDRUDA.

If that be all, meseems ye still may be
Brethren in arms.

HAGENULPH.

How so, my gentle wife?

WINDRUDA.

Why, if by such a fair and gentle path
As he hath spoken, Christ would lead us all
Into the arms of the eternal Father,
How should a faithful heart refuse to follow!

HAGENULPH.

Thou speakest strange and startling words, my love.

WINDRUDA.

Oh, if I be thy love, then follow me
Where I would lead thy steps. With thee I fled
To the rough shelter of the wilderness;
Come thou with me to bright and rosy meadows,
To Paradise, the garden of our Christ.
Of that, and of full many beauteous things,
Our guest instructed me,
While thou wert holding converse with the Saxons.

HAGENULPH.

I follow thee. And noble king, I pray you,
Help forward this my gentle love and me
To fuller knowledge of the ways of Christ.

CHARLEMAGNE.

With my whole heart, my brother!

*Enter Frank knights, soldiers, and woodmen, all
speaking at once.*

God be thank'd!

The king! The king! And there, a Saxon knave!
Lay hands on him and take him.

HAGENULPH.

Royal brother,

Hear'st thou the angry boasting of these men?
Methinks we shall have need of our good swords.
Go in, sweet wife, till we have dealt with them.

CHARLEMAGNE.

It needs not now. Peace there, my soldiers, peace!
See, I have hunted down, for God's dear service,
This knightly stag and this most tender doe;
No prince did ever take a costlier prey.
But thou, my gentle hostess, why so pale!
There is nought now to fear.

WINDRUDA.

To fear!—Oh, no;

The wife of Hagenulph is not so fearful.

CHARLEMAGNE.

How?—nay, I guess! The flashing of thine eye
Hath burned into mine heart, like lightning. There,
Before our faces, stands the murderer!

WINDRUDA.

What murderer meanest thou, my noble lord?

CHARLEMAGNE.

Him who did slay thy brother by the stream.

WINDRUDA.

I cannot lie. 'Tis true, he stands before me.

CHARLEMAGNE.

That churl with matted locks?

WINDRUDA.

The same, my lord;
He with the glaring eyes and bushy brows.*

CHARLEMAGNE.

Draco, come forth! Know'st thou this noble lady?
See, his cheek whitens with the sense of guilt!
He is condemned. Disarm him, lead him hence,
And knit him to the nearest willow-tree;
No more shall he behold the golden sun.—
Yet hold!

Windruda, fair avenger, I did promise
To give the guilty wretch into thy hands.
Lo, there he stands! Judge thou, and take thy vengeance.

WINDRUDA.

Sir, sir, thou ladest me with bounteous gifts;
[*She stands silent awhile.*]
Yet are they heavy in these feeble hands.
Thanks, noble sire! The criminal is pardoned.

CHARLEMAGNE.

Pardoned. I heard not rightly.

WINDRUDA.

Yes, my lord.

Didst thou not tell me thus?—"Much Christ hath taught,
But his first law was love to all mankind,
And free forgiveness of our enemies."
Fain am I to ascend that wondrous mountain,
Upon the top of which smiles Paradise.
True, the first step is somewhat difficult,
Yet feel I, as my spirit stirs within me,
The path grows smoother as it rises higher.

CHARLEMAGNE.

Ah, thou choice flower, in God's own garden planted!
Sweetly and richly shalt thou bloom henceforth
Beside the waters of the land of Aix.
Draco, be free, but fly the path of Charles;
Where'er we meet thy life shall pay the forfeit,
Because it is my place to judge my people.—
Follow me now; morn sparkles brightly o'er us;
Dear friends, 'twill now be mine to play the host.

HAGENULPH.

There stands your horse, my noble lord. And here
My faithful Lightfoot, my good battle-steed,
Who, were he driven from his master's side,
Would die of grief. I pray you tell me this—
Is it forbidden by the laws of Christ
To tend such noble creatures, and to love them?

CHARLEMAGNE.

Nay, Christ was love itself, which, as a fountain
Pure and unsullied, waters all things living.

HAGENULPH.

Right earnestly I long to be a Christian.

CHARLEMAGNE.

Yes, friend, in thine and in Windruda's heart
God's hand hath showered his seed abundantly;
Scarce hath Heaven's door sent forth its quickening rain,
When, lo! the harvest brightens on the plain.
Come, follow me, my children!

[*Exeunt omnes.*]

Reading for the Young.

THE FLOWER GIRL.

PART II.

"THAT is right, Helen," said Mrs. Campbell,
"never be satisfied with doing a little, when there
is a possibility of doing a great deal. Many people
lose the time in useless regrets that they can do no

good in the world, which might be employed in the actual work of serving their fellow-creatures, if they would only rouse themselves, and apply their energies to the task. You must go and see Mrs. Wayne, by all means.

Helen waited impatiently till her mother was at liberty, and they set out for Mrs. Wayne's. They had little difficulty in finding the house; and after groping their way up the dark stairs, were admitted to the miserable room in which the sick woman lay. A few chips were smouldering on the hearth, and the apartment was cold and comfortless. Mrs. Wayne lay on a hard bed, and Harriet sat at the window, sewing; but the most distressing object in the room was the blind child. She was probably eight years old; but scanty food, a close room, and no exercise in the open air, had made her cheek pale, and wasted her slender frame in so pitiable a degree, that she appeared much younger.

Mrs. Harwood, after mentioning her name, and explaining the reason of her visit, sat down by the bed-side, and listened to a tale of suffering, poverty, and sorrow, told in simple language, that found its way at once to the hearts of those who heard it. She saw that the poor woman and her children were objects worthy of her care and kindness; and Helen, the ardent, generous Helen, set no bounds to all she intended to do for them. When they came away, she silently slipped a piece of silver into the hand of the little girl, wishing it had been ten times as much, and promising to come the next day and bring something which her mother had thought would be a comfort in sickness.

Next day, as soon as her usual tasks were over, Helen prepared to execute a design which had occurred to her the preceding night.

"Mother," said she, going into the pantry, where Mrs. Harwood was occupied, "did you notice how thinly that poor child was dressed yesterday? She had only a light muslin frock on; and with that little bit of fire in the hearth, it made me cold to look at her."

"I did not observe her dress particularly," said Mrs. Harwood.

"You were talking with Mrs. Wayne, and did not think so much of Eliza, but I did, and for this cold weather it was really awful."

"Well," said Mrs. Harwood, smiling at Helen's earnestness, which she knew was the prelude to one of her "grand plans;" "I wish we could do something to make the poor child more comfortable."

"That was just what I was thinking about all the way home," said Helen, "and last night it occurred to me how it might be done. If you will give me that old merino dress of Emeline's, I will sponge it off, and mend the sleeves, and sew on some hooks and eyes, and make quite a decent thing of it, and I do believe it will fit that blind child exactly; for though she is a good deal thinner than Emmy, and I suppose not so tall, yet I think it will do nicely—don't you?"

"I should think not," replied her mother, laughing; "at least, I should not imagine you could, without some altering, make the dress of a tall, fat girl, fit the person of a short, thin one. However, my dear," she added, seeing Helen looked a little damped, "you are at liberty to try. I really commend your ingenuity, and will give you the frock very cheerfully, if you can do anything with it."

"I will try, at any rate," said Helen, "even if I should not succeed."

Helen skipped lightly up stairs, and from an old trunk in the attic, soon drew forth the well worn and faded merino, and applied herself most industriously to the task of repairing it—rubbing off the spots, which were neither "few nor far between"—darning here, and piecing there, while a most enticing volume lay within her reach all the time; till at last it was completed, and she held it up in triumph, saying, "Look, mother—look, Cornelia—is not that a good job?"

"Very good, indeed, Helen, and I must praise your patience and perseverance," said Mrs. Harwood.

As soon as dinner was over, Helen pinned up her intended gift, with a few other articles that Mrs. Harwood could spare, and carried them herself to the blind child.

The pleasure which they gave the little girl, who passed her hand over the dress to ascertain its form and texture—the thanks of Mrs. Wayne, and the joy which sparkled in Harriet's eyes—fully repaid Helen for her morning's work. When tried on, too, the dress fitted more nicely than she had hoped it would; and after the bestowal of another shilling, which Cornelia had desired her to give, Helen returned home—her cheeks glowing with exercise—her heart beating with the satisfaction of having done her duty, and her spirits as gay and lightsome as a bird.

But Helen's interest in the family of Mrs. Wayne did not end here. She was constantly thinking of something by which they might be benefited; and, for so young a girl, it was surprising to observe the many expedients by which she effected her purpose. Mrs. Wayne had now so far recovered, as to be able to assist in the sewing which Mrs. Campbell had procured for Harriet; but for this the payment was so small, as scarcely to provide them with necessary food and fire; and Helen's purse, never very bountifully supplied, was now completely drained. When Christmas came, however, a gold piece found its way most mysteriously into her pocket, which mystery was easily solved, by the remembrance that grandpapa was paying them a visit, and had exhibited some of these very pieces a few days before; and this addition to her income proved a very seasonable relief to our generous but improvident Helen. Her protégée, the flower girl, was, at that time, greatly in want of shoes; and Helen felt so happy in being able to supply them, that even the pretty muff for which Cornelia had exchanged a little golden coin similar to her own, had not the power to excite her envy or regret; although, it must be confessed, she did occasionally wish that some one would buy its fellow, which lay most provokingly in the furrier's window, that she passed every day, and seemed to ask her, as plainly as a muff *could* speak, to walk in and purchase it, when she had all the inclination, but not the ability to do so.

In the mean time the heliotrope, and Cornelia's beautiful jessamine, continued to flourish, in the warm and sunny window where they stood, while the geraniums, rose-tree, and myrtle, lifted their green heads aspiringly, as if they longed to rival their new associates—and Helen watched them all with pride and pleasure. The heliotrope was in full bloom, the rose-tree had six or eight buds just ready to burst open, and the geraniums were preparing to expand their crimson blossoms also, when the girls received an invitation to a party given by their friend Anna Clayton.

After some hesitation, Mrs. Harwood gave her consent, and the invitation was accepted.

"We must dress with as little expense as possible," said Cornelia.

"I know that," said Helen, "and I think our white dresses would do."

"With scarlet sashes?"

"Yes, if you like."

"The cheapest plan we can fall on," said Cornelia, "and I suppose the best: they set well, and only want washing; but then we must have shoes and gloves."

"I have shoes that will answer," said Helen, "but no gloves."

"And I want both; but have very little money."

"May-be I can spare you some of mine," said Helen, taking out her purse, and emptying the contents on the table. "I have—let me see—four, six, eight, ten—ten shillings left of my Christmas-piece. And you—"

"Have a dollar, which aunt Sarah gave me the other day, for some little jobs I did for her."

"That will buy your shoes, and I have enough for our gloves."

"Oh! will you lend me as much as will get them?" said Cornelia; "I will return it with the first money I have."

"We shall both get a luck-penny when uncle John arrives," said Helen. And this being settled, the girls carried their dresses down stairs, to Diana, with a request that she would do them up in her "best style;" and then came back, to look over sundry boxes of ribbons, and other nick-nacks, and consider in what further way they might improve their appearance at Mrs. Clayton's, on the following evening.

"I wish," said Cornelia, after tying up several bows of pink, and blue, and green ribbons, and disposing them about her trim little person, "that we had some artificial flowers: a wreath of pink buds, for the hair, would be so pretty!"

"Ah! we must not think of that," said Helen.

"How would natural flowers answer?" asked Cornelia, glancing towards the window. "Wreaths of jessamine, for instance, with heliotrope and geranium interspersed; they would be charming—would they not?"

"Do you think so?" said Helen, thoughtfully, as if she were trying to decide whether the pleasure of wearing a wreath would compensate for the loss of her beloved flowers.

"Oh, beautiful!" said Cornelia, delighted with the thought; "nothing could be prettier. Come, Helen, I will give the jessamine, if you will add the others; and I will make the wreaths just before we go."

"It seems atmost a pity to destroy them, just when they are looking so well," said Helen, going to the window, and gazing with evident admiration upon her favourites.

"Dear me! what on earth are they good for, except to be used in that way?" replied her sister. "I would as lief tear mine all to pieces, if I wanted to wear it."

"I would not," said Helen, "because the pleasure of wearing them would only last a few hours, and then be over entirely. But, I'll tell you what I will do," she added, seeing Cornelia looked disappointed—"I will give you enough for a wreath for yourself."

"Oh! it was not only for myself that I spoke,"

said Cornelia, turning away; "I thought you would like one too. I don't wish you to break your plants just to please me."

"Well, then," said Helen, "if you think so, I will wear a wreath just to show my willingness to part with them." And Cornelia, satisfied at having effected her own, though at the expense of her sister's wishes, recovered her good humour, and went on to describe the manner in which the wreaths should be arranged.

The girls had determined upon a walk together, the next morning, in search of gloves, when their mother was suddenly called to the bedside of a sick friend, living in a distant part of the city, and a double portion of household duty falling, in consequence, upon them, Cornelia was obliged to go alone, leaving Helen in charge of the house and children.

She had scarcely been gone when Helen was told that a girl wished to see her. It was Harriet Wayne. The moment Helen saw the face of the flower girl, she knew that something had occurred. Harriet's eyes were swollen, and red with weeping, and when she began to speak, her tears flowed afresh. Helen gave her a seat close by the fire, for she was shivering with cold, and eagerly asked what had happened; and, as well as her broken words would allow, Harriet explained, that the person from whom their little room was hired, had become importunate for the rent, which was now three weeks in arrears; that her mother not having been paid for her work, had occasioned the delay, and their landlord declared, if the money was not forthcoming by five o'clock, they should be turned into the street.

"And I am in so much misery, I don't know where to turn, or what to do," said the poor girl. "We have worked so hard, mother and I, and Liza too, and sold all our best things one after another, to raise the money, and gone without food, and done our best to pay; and now, though he knows all that, he means to turn us out of doors. I think part of the money would satisfy him, till mother gets paid for her work. He has never been so impatient before: but his wife has seen you and Mrs. Harwood on the stairs, and he thinks we have rich friends, who will do anything for us we ask, for he said if we could get doctors when we were sick, and wood when we were cold (Mrs. Campbell sent us a load last month), we could get rent, if we liked, in the same way."

"What a horrid creature!" exclaimed Helen, "to think of leaving you without a shelter, and that poor little blind child so helpless; he will be punished for it some day himself, I know. But how shall I get you some money?" she continued; "I have not one farthing left—I gave the last to Cornelia about an hour ago, What shall I do?" And as she glanced round the apartment in her perplexity, her eyes rested upon the stand of flowers.

To sacrifice them to the necessities of Harriet and her mother, was the thought and determination of an instant; and although there was also a momentary struggle in Helen's breast at the idea of parting with them, together with the reflection of what Cornelia might say upon her return, yet she quelled them both immediately: her generous feelings would not permit her to retain even her cherished plants, when she might, by their means, dry the tears, and lighten the burden of the

afflicted; and Cornelia, she felt sure, would easily forgive her, when she knew all the circumstances. Sending Emeline, therefore, for a large basket, she placed her own flowers carefully in it, and after affixing a price to each, and cheering the grateful and astonished girl with the hope of selling them all in a few hours, and thus securing a part, at least, of the landlord's demand, Helen accompanied her down stairs, bent her head once more over her fragrant treasures, inhaled for an instant their sweet perfume, and when the hall door had closed upon them, covered her face with her hands, and burst into tears.

But Helen's tears flowed not long. The consciousness of having performed her duty—the satisfaction arising from the thought of having soothed the sorrows and relieved the wants of a suffering fellow-creature, speedily dried them.

Harriet Wayne, in the meantime, with her basket of flowers, and a lightened heart, had pursued her way through several streets in the vicinity, and inquired at many of the finest dwellings, and not a few of the humbler ones, without obtaining a single purchaser. She was on the point of returning to Helen, hopeless and weary, when the door of a handsome house in Broadway was opened by a waiter, and Harriet determined to make one more effort; she therefore ascended the steps, and in a low voice made her request.

The man, who was busy at the time, answered her gruffly, they had "enough of such trumpery in the house already."

At this moment a lady descended the staircase, and as she crossed the hall, caught a glimpse of the sad face, and heard the mournful and apologizing tone of the flower girl.

"Who is there, Robert?" she asked.

"Only a girl with plants, ma'am."

"Did you tell her I would not buy them?"

"Yes, ma'am."

"Poor thing! has she gone!"

"Yes, ma'am."

But Harriet had not gone. The soft voice and kind expression of the stranger lady, with that direful necessity which gives strength and energy to the weakest, inspired her with courage, and stepping into the hall, she said—

"It would be a great charity if you would take them, ma'am; and they are very cheap."

"You look pale and tired, my poor girl," said the lady; "sit down—are you sick?"

"I am sick with trouble, ma'am," replied Harriet, her eyes filling with tears.

"That is the worst kind of sickness," said the lady, kindly; "and will the sale of these flowers relieve you?"

"Oh, yes! it will help me to pay a debt, and keep my mother and little sister from wanting a home to-night."

"I have more plants now than I can attend to," replied the lady; "but if so much depends upon your disposing of these, I believe I must take them."

Harriet expressed her thanks, and modestly named her price for each.

"Set them upon the table, then," said the lady, taking out her purse, "and Robert will carry them away presently. But what is this?" she continued, as Harriet lifted the rose-tree from the basket,—"Helen Harwood! how came that name upon this pot? I hope you have come honestly by the flowers."

"Honestly!" exclaimed the girl, looking up in surprise at the person who addressed her: "Oh, yes! I am poor, ma'am, very poor, but dishonest I hope I shall never be."

"Then how came you by a flower-pot with Helen Harwood's name upon it?"

"I did not know it was there," said the girl, "but if you please, ma'am, I will tell you all about it;" and immediately commencing her simple, but sorrowful story, she told of all Helen's kindness to herself and her blind sister—of the landlord's imperative demand—of all she had suffered in consequence of it; and concluded with the generous surrender which her young benefactress had made to meet the emergency.

Mrs. Clayton, for it was none other than Helen's friend, listened with astonishment to the flower girl's history. She could scarcely believe that a young girl of fourteen could be capable of such perfect disinterestedness. She thought, would her own Anna have acted thus, and been willing to sacrifice any of her darling possessions under similar circumstances; and paying for the plants so liberally, as to secure the full amount requisite for the landlord, desired Harriet to say nothing on her return to Mrs. Harwood's, except that she had sold them; promising that Helen herself should be no loser by the transaction.

When Cornelia returned from shopping, and entered her own room, her surprise and chagrin at the sight of the empty flower stand, and the consequent loss of her anticipated wreath, may be imagined; nor did she hesitate to express her disappointment, or even to upbraid her sister for what she had done, although Helen assured her, that nothing but such a sacrifice on her part could have saved Mrs. Wayne and her children from utter misery. But Cornelia, whose kind feelings were too frequently blunted by selfishness, felt at present particularly vexed—her appearance, upon this evening, being a matter of special importance; nor was it until she had discovered that a wreath, composed of jessamine alone, would be equally becoming, that her smiles and good humour were restored.

To give a lengthened account of the display at Mrs. Clayton's—to tell of the lights, the music, and the gaily-dressed company, would be an almost impossible task; for on all sides were fair and happy faces, and the sound of merry voices; and young hearts were throbbing with pleasure, and light steps tripping in the dance; and Cornelia's anticipations might have been more than realized, had she not found herself among the most plainly attired of the guests; and save the warm greeting bestowed upon them both, by Mrs. Clayton and the smiling Anna, but little noticed in the gay and brilliant throng.

Of the two, however, Helen was the least affected by these outward circumstances. Admiration she never expected, and consequently was quite indifferent; and as Mrs. Clayton was particularly attentive, she soon forgot all the annoyance her dress might have occasioned, and enjoyed the entertainment as much as some of those upon whom she had gazed at first, with a little, *very little*, envy.

Helen, too, carried within her heart that talisman of happiness, the memory of a good deed, and the sunshine of an approving conscience gave lustre to her eye, and animation to her countenance. She little dreamed who had been the purchaser of her

flowers, for Harriet had strictly maintained the secrecy enjoined by Mrs. Clayton. But when supper was announced, and the company proceeded to an adjoining room, great was Helen's astonishment; for in the centre of a table, richly spread with tempting viands, appeared the cherished plants; and while she stood in mute surprise, Mrs. Clayton said aloud, "You find old friends, Helen, where you least expected to do so. They have accomplished the benevolent purpose for which they left you, and to-morrow morning will return to your safe keeping."

"Oh! Mrs. Clayton, was it you who bought them?" exclaimed Helen, forgetting, at the moment, by how many strangers she was surrounded; and then checking herself, she stepped into a recess near her, from which she might, unobserved, survey her recovered treasures, and feel convinced that she was really wide awake, and not in a delusive dream.

The story of the flower girl, and Helen's generosity, soon circulated among the guests, Mrs. Clayton having purposely mentioned it to those near her; and Helen soon found herself so much of a heroine, that she was not sorry when her father whispered it was time to bid good night and return home.

The next morning came Robert, Mrs. Clayton's coloured waiter, with the recovered flowers, to which had been added as many from her kind friend's valuable collection as Helen could take charge of. A superb japonica now filled the spot previously occupied by Cornelia's jessamine, which, stripped of its fragrant blossoms, and shorn of all its beauty, was thrust into an obscure corner, to make room for its elegant successor; while Cornelia herself was taught the lesson, that human beauty is, at best, only a perishing flower, but the benevolent feelings of the heart, when cherished and warmed into life and action, have a loveliness that is unfading, and a fragrant odour that can never pass away.

Poetry.

[In Original Poetry, the Name, real or assumed, of the Author, is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

EARL SINCLAIR.

*Translated from the German of Oehlenschläger,
by MRS. HAWKER, MORWENTON.*

EARL SINCLAIR sailed from Scottish land,
Far Norway to brave;
He sleeps in Guldbrand's rocky strand,
Low in a gory grave.

Earl Sinclair sailed the billowy sea,
To war for Swedish gold:
"God speed thy warrior-hearts and thee,
And quell the Northmen bold!"

The moon beam'd in her cloudy cave,
The night winds rushed along;
And wild beneath the thrilling waves
Came up the mermaid's song:

"Home, Scottish man, my warning trust,
A doom is on thy way;
If thou shalt touch dark Norway's coast,
Thy fame is fled for aye!"

"How leathsome sounds thy boding song!
I hate thee while I dread:
Were thou my castled towers among,
The rack should be thy bed!"

He sailed a day, and two, and three,
He and his warrior band;
The fourth sun saw him pass the sea,
And touch the Norway land.

On Romsdal's shore his heart was fain
To triumph or to fall,
He and his twice seven hundred men,
The trusty and the tall.

Ah, stern and haughty was their wrath,
Cruel with sword and spear;
Nor hoary age could check their path,
Nor widow'd woman's tear.

With many a death the babes they slew,
Though to the breast they clung;
And awful tidings, sad and true,
Echoed on voice and tongue.

On rock and hill the beacon glared
That told of danger nigh;
The Northman's breast was boldly bared,—
The Scot must stand or die.

The warriors of the land are far,
They and their kingly lord;
Yet shame to him that shuns the war,
Or fears the stranger horde.

They move—they meet—the Yewmen host,
Their hearts are stern and free;
They gather on Bredaligh's coast—
The Scot shall yield or flee.

The Langè flows in Leydè-land
Where Kringen's Arches bind,
Thither they march, the fated band,
A silent tomb to find.

The forest holds each feeble frame
Far from the warrior-foe,
And kelpies of the waters came
And shrouded them with snow!

In onslaught first Earl Sinclair died,
And ceased his haughty breath;
Stern sport for Scottish men to hide,
God shield them from the death!

Come forth, come forth, ye Northmen true
Light be your hearts to-day!
Fain would the Scots the waters blue
Between the battle lay!

The ranks yield to that fiery storm.
On high the ravens sail:
Ah me! for every quivering form
A Scottish wife shall wail!

They came, a host with life and breath:
None, none return'd to say,
How fares the Poeman in the strife
Who wars with Norway!

There is a mound by Langè's tide,
The Northman gazes near:
His eye is bright, but not with pride—
It glistens with a tear!

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne.*

GEORGE THE THIRD'S VISIT TO WEYMOUTH, ON RECOVERING FROM HIS ILLNESS IN 1789.

"The journey to Weymouth was one scene of festivity and rejoicing. The people were everywhere collected, and everywhere delighted. We passed Salisbury, where a magnificent arch was erected, of festoons of flowers,

for the King's carriage to pass under, mottoed with, 'The King restored,' and 'Long live the King,' in three divisions. The green bowmen, (foresters habited in green, and each with a bugle horn,) who had met his Majesty at the entrance of the New Forest, and, according to an old law, had presented him with two milk-white greyhounds, peculiarly decorated, accompanied the train thus far; and the clothiers and manufacturers here met it, dressed out in white loose frocks, flowers, and ribbons, with sticks or caps emblematically decorated from their several manufactories. And the acclamations with which the King was received among them!—it was a rapture past description. At Blandford there was nearly the same ceremony. At every gentleman's seat which we passed, the owners and their families stood at the gate, and their guests or neighbours were in carriages all round. At Dorchester the crowd seemed still increased. The houses there have the most ancient appearance of any that are inhabited that I have happened to see: and inhabited they were indeed! every window sash was removed, for face above face to peep out; and every old balcony, and all the leads of the houses, seemed turned into booths for fairs."

"July 15th.—Gloucester House, which we now inhabit, at Weymouth, is situated in front of the sea, and the sands of the bay before it are perfectly smooth and soft. The whole town, and Melcomb Regis, and half the county of Dorset, seemed assembled to welcome their Majesties. . . . The King is in delightful health, and much improved spirits. All agree he never looked better. The loyalty of all this place is excessive; they have dressed out every street with labels of "God save the King!" all the shops have it over their doors; all the children wear it in their caps, all the labourers in their hats, and all the sailors in their voices; for they never approach the house without shouting it aloud, nor see the King or his shadow, without beginning to huzza, and going on to three cheers. The bathing-machines make it their motto over all their windows; and those bathers that belong to the royal dippers wear it in bandeaus on their bonnets, to go into the sea; and have it again in large letters round their waists, to encounter the waves. Flannel dresses tucked up, and no shoes nor stockings, with bandeaus and girdles, have a most singular appearance; and when first I surveyed these loyal nymphs it was with some difficulty that I kept my features in order. Nor is this all. Think but of the surprise of his Majesty when, the first time of his bathing, he had no sooner popped his royal head under water than a band of music, concealed in a neighbouring machine, struck up 'God save great George our King!'"

"One thing, however, was a little unlucky;—when the Mayor and burgesses came with the address, they requested leave to kiss hands. This was graciously accorded; but the Mayor advancing, in the common way, to take the Queen's hand, as he might that of my Lady Mayoress, Colonel Gwynn, who stood by, whispered, 'You must kneel, sir!' He found, however, that he took no notice of the hint, but stood erect. As he passed him in his way back, the Colonel said, 'You should have knelt, sir!'—'Sir,' answered the poor man, 'I cannot.'—'Everybody does, sir.'—'Sir, I have a wooden leg!'—Poor man! 'twas such a surprise; and such an excuse as no one could dispute. But the absurdity of the matter followed;—all the rest did the same; taking the same privilege, by the example, without the same or any cause!"—*Miss Burney's Diary.*

THE FUCHSIA TREE.

MR. SHEPHERD, the respectable and well-informed conservator of the Botanical Gardens at Liverpool, gives the following curious account of the introduction of that elegant little flowering shrub, the Fuchsia, into our English green-houses and parlour windows. Old Mr. Lee, a nurseryman and gardener, near London, well known fifty or sixty years ago, was one day showing his

variegated treasures to a friend, who suddenly turned to him, and declared, "Well, you have not in your collection a prettier flower than I saw this morning at Wapping."—"No! and pray what was this phoenix like?"—"Why, the plant was elegant, and the flowers hung in rows like tassels from the pendant branches; their colour the richest crimson; in the centre a fold of deep purple," and so forth. Particular directions being demanded and given, Mr. Lee posted off to Wapping, where he at once perceived that the plant was new in this part of the world. He saw and admired. Entering the house, he said, "My good woman, this is a nice plant, I should like to buy it."—"I could not sell it for no money, for it was brought me from the West Indies by my husband, who has now left again, and I must keep it for his sake."—"But I must have it."—"No, Sir!"—"Here," emptying his pocket, "here are gold, silver, copper;" (his stock was something more than eight guineas.)—"Well-a-day! but this is a power of money, sure and sure."—"Tis yours, and the plant is mine; and, my good dame, you shall have one of the first young ones I rear, to keep for your husband's sake."—"Alack, alack!"—"You shall, I say, by Jove!" A coach was called, in which was safely deposited our florist and his seemingly dear purchase. His first work was to pull off and utterly destroy every vestige of blossom and blossom-bud; it was divided into cuttings, which were forced in bark-beds, and hot-beds; were re-divided, and sub-divided. Every effort was used to multiply the plant. By the commencement of the next flowering-season, Mr. Lee was the delighted possessor of 300 Fuchsia plants, all giving promise of blossom. The two which opened first, were removed into his show-house, A lady came;—"Why, Mr. Lee, my dear Mr. Lee, where did you get this charming flower?"—"Hem! 'tis a new thing, my lady—pretty, is it not?"—"Pretty! 'tis lovely. Its price?"—"A guinea—thank your ladyship;" and one of the two plants stood proudly in her ladyship's boudoir. "My dear Charlotte, where did you get?" &c. &c.—"Oh! 'tis a new thing; I saw it at old Lee's; pretty, is it not?"—"Pretty! 'tis beautiful! Its price?"—"A guinea; there was another left." The visitor's horses smoked off to the suburb; a third flowering-plant stood on the spot whence the first had been taken. The second guinea was paid, and the second chosen Fuchsia adorned the drawing-room of her second ladyship. The scene was repeated as new comers saw, and were attracted by the beauty of the plant. New chariots flew to the gates of old Lee's nursery-ground. Two Fuchsias, young, graceful, and bursting into healthy flower, were constantly seen on the same spot in his repository.

He neglected not to gladden the faithful sailor's wife by the promised gift; but ere the flower-season closed, 300 golden guineas chinked in his purse, the produce of the single shrub of the widow of Wapping; the reward of the taste, decision, skill, and perseverance of old Mr. Lee.

THE greatest of modern philosophers (Bacon) declares that "he would rather believe all the fables in the Legend, and the Talmud and the Alcoran, than that this universal frame is without mind."—*Stewart.*

BIOGRAPHICAL NOTICE OF NIEBUHR.¹

We have of late been led to feel great compassion for those poor victims—celebrated men. Daily does the press, in order to gratify the caprices of a restless and insatiate curiosity, deliver them up to our tender mercies, bound hand and foot,—stripped naked, both mind and body. They know not what it is to have rest or privacy; their abode is thrown open to every prying eye; their life is like a book from which the covers have been torn off, and the pages scattered in the path of the casual finder. Solitude has no shade deep enough to shut out the broad daylight of publicity; and the household gods have not wings large enough to overshadow them within the domestic sanctuary. But the celebrated man dies: surely the inquisition which has so harassed him during life, will pause before his grave. Not so. No sooner are his eyes closed, than, at the very moment, relations, friends, legates direct and collateral, begin to ransack his manuscripts; to collect

his notes, his unfinished letters, the fugitive thoughts he has put upon paper in some dream of fancy, the few unconnected pages he has dashed off as a refuge from the vapours. In vain does some voice of a true friend interpose to cry, "All this is not worthy of him; you do not represent him really as he is, in those scattered fragments that you are so lightly handing down to posterity. This is the most vulnerable point of his mind; this is one of his momentary dreams, one of his mistakes. You have no right to divulge thus what he would have kept secret,—to revive what he would have buried in oblivion. Your zeal to serve him is treachery to him; your respect for all that he has written, or tried to write, is profanation."

It matters not. The celebrated man must submit to this degrading honour. The inmost folds, the most secret recesses, of his moral and physical nature must be invaded; the most minute analysis must be made of his impulses, of his whims, of his passions, of his moments of excitement and his moments of depression. The mighty Homer must be seen asleep. Now, I

(1) Translated from the *Revue des Deux Mondes*.

surprise, and almost fear. Now he is busied with the internal policy of Prussia—now gives lessons to the Prince-Royal—now takes an active part in the labours of the Scientific Academy of Berlin, and of a philosophical society, of which Spalding, Savigny, and many other learned men were members. And, while thus devoting the greater part of his hours of labour to the social and scientific interests of Prussia, he still keeps an eye of uneasy observation on the movements now making in other countries. A passage, in one of his letters on the Norwegian constitution, shows what was at this time his political bias.

"I am curious to see the constitution of Norway; probably it will be but a bungling piece of work, like that of Spain. The constitution-mongers are taking fresh courage; but their workmen so spoil their systems in working them up, that for some years their labours have fallen into discredit. The first point, the essential point, ought to be to make the people manly, noble, disinterested. What use is a representative system, if we want men capable of representing a country? This is the root of which the other should be the fruit; and when were fruits ever gathered from a tree that had no root? Let every statesman, every government, first labour to educate the people, to render them intelligent, manly, generous. To dream of succeeding in this by mere regulations, is but fastening the horses to the back of the carriage, and expecting that they will draw it as well."

In the midst of his success as a writer and a statesman, in the midst of domestic tranquillity and happiness, Niebuhr was suddenly stricken to the heart; his wife, his still young and beautiful wife—his wife, the only woman he had ever loved, was taken from him by death. He mourned her long; but the very happiness which she had conferred upon him rendered his loneliness intolerable, and, with her memory still fresh in his heart, he married again, and set out with his bride for Italy, having just been appointed ambassador at Rome. His abode in that country was quite painful to him: he arrived in the old Latium with the remembrance of its ancient heroic inhabitants; and the great images of the past made the present appear paltry and insipid. Besides, he looked in vain for scientific labours, for literary society; he met nothing but formal parties, official dinners, the etiquette of the diplomatic world, the frivolous conversation of the drawing-rooms; and all this could only be distasteful to that thoughtful and elevated mind. Nor did he take any pains to conceal his unfavourable impressions. His weariness of everything around him was apparent in every line that he wrote from Rome to his sister-in-law and friends. "Life is so dull in Italy—you can scarcely conceive how dull. What avail to me the works of art? I have unfortunately, like our ancient Romans, too little enthusiasm for art to live for it alone, and find in it compensation for all that my individual nature vainly seeks. In a place where the contemplation of the living world is painful, how can the mind, which delights and exults in studying the human heart,—how can it find, in the study of painting, of sculpture, of architecture, all that it needs? Who can live upon spices and perfumes alone? The Italians are a nation of walking corpses; they are to be pitied, and not despised, for they have been plunged thus low by inevitable misfortune. Intellect, science, every idea that makes the heart beat warmly, every noble energy, is banished from its soil. Seek not there for hope, desire, effort, or even mirth; for I have never seen a people so little mirthful. At Venice, at Florence, indeed, we have found a few persons alive to a sense of their degradation,—aware, to a certain degree, of what they had once been, 'from what height fallen'; but, here, there is no trace of such a feeling; we meet with only a listless, aimless discontent, without hope, or even desire, of another order of things. Here might you form an accurate idea of what the Greeks were under Augustus and Tiberius."

At length he left Italy, and joyfully returned to Prussia, taking up his abode at Bonn, one of the prettiest and most cheerful towns in Germany. At liberty once more to pursue his favourite studies, he again ascends the professor's chair; he resumes those lectures on history which he had, with such regret, discontinued for so long a time, and an ardent and studious youth eagerly flock to him for instruction. His writings—his erudite researches—had given him a high rank in the literary world; his diplomatic services had obtained for him the esteem and the confidence of his king; and he had earned a moderate independence. To complete his happiness he has a house filled with well-chosen books, where his friends flock around him to converse upon the arts and sciences, and where he sees his lovely children growing up about him.

This tranquil happiness was first disturbed by a fire, which reduced his dwelling to ashes, and destroyed a part of his books and manuscripts. Niebuhr bore his loss with firmness and resignation. But, some months after, the revolution of July broke forth in France; and this fierce convulsion, with the excitement it created in Germany, produced in the mind of Niebuhr an anxious disquiet, which harassed him during the remainder of his life. As soon as the first tidings of the three days of July reached him, he began to study the character of that protest of the people thus written in blood, and his anxiety was deepened. Believing that the revolutionary movement would not be confined to France, he expected that it would bring on the most destructive war that modern times had yet known.

Every day, at the hour when the courier arrived at Bonn, he experienced fresh agitation. He hastened to the public rooms to read the journals. He followed with intense interest the trial of the French ministers; and the speech of M. Sauzet was one of the last things he seemed to dwell upon with complacency. "Read," said he to his friend, M. Claussen, "read the speech of M. Sauzet, he must be a man of great power;—but I feel very unwell." The fact was, that in returning from the public room on the very evening he had first read the speech, he had caught cold. He was first attacked with a violent cough; then fever ensued; and four days after inflammation set in so violently, as to leave no hope of recovery. His wife was taken ill at the same time, and forced to leave him, after having attended on him with anxious solicitude. "Unhappy children," said Niebuhr, when he learned this additional misfortune, "to lose both parents at once. Oh, my children, look up to God; for God alone can protect you." He expired on the 2d of January, 1831; and his wife, who had tottered, in the extremity of her weakness, to his bedside to whisper to him a last word of love, to press for the last time his hand, died nine days after. Both were buried in the same grave. The present King of Prussia, with pious hand, erected a monument to their memory.

BRETON TRADITIONS.

THE following tale is from a series of the local and popular traditions of Lower or Western Brittany, collected by M. Emile Souvestre, a popular French writer, and professing to be taken down from the mouths of the peasants themselves, and to be given, as nearly as possible, in the manner, and even in the words, of the narrators. A slight notice of the locality, and its inhabitants, may, perhaps, add to the interest with which the story will be read.

In the first place, it may be observed of Lower Brittany, comprehending the four ancient dioceses of Tréguier; St. Pol-de-Léon, or Léon; Cornouailles, or Quimper-Corentin, (the former being the name of the

district, the latter of the cathedral town); and Vannos; that it is, in respect of language, the Wales of France; the uneducated portion of the people not speaking French, but a Celtic dialect, so little dissimilar to that of the principality, that it is even said the Welch and Bretons are not wholly unintelligible to each other. The affinity was probably still greater between the Breton language and the ancient Cornish tongue, now extinct, but which was spoken by a few old people almost within the reach of living memory.

Nor do the marks of a common origin cease here; many of the traditions themselves exhibit a striking agreement with the popular superstitions of the British Celtic races, including those of Ireland, and the Highlands. And even the name of Cornwall, (in French, Cornouailles, in Latin, Cornu Galliæ,) is common to the English county with one of the Breton districts, and is, in both cases, to be traced to the same circumstance of locality, being in both employed to designate the horn, or projecting extremity of a country inhabited by a Gallic or Celtic people.

Of all the provinces of old France, Brittany is that in which time and events seem to have produced the least effect on the character of the population. In their adherence to ancient usage, their wild superstition, and their tendency to enthusiastic devotion, the Bretons exhibit yet another testimony to their Celtic origin. It may be worth noticing, as an indication of the degree in which their daily thoughts seem to have something of an ecclesiastical tone, that, throughout the collection of tales, of which the following forms a specimen, the territorial division most ordinarily referred to is that by dioceses and parishes.

ROBIN RED-BREAST.

(A Legend of the country of Tréguier.)

LONG, long ago, ere the acorns were sown which have since furnished timber for the oldest vessels of the port of Brest, there lived in the parish of Guirek, a poor widow, called Ninor'h Madek. Her father, who was very wealthy, and of a noble race, had left, at his death, a manor-house, with a farm, a mill, and a forge, twelve horses, and twice as many oxen, twelve cows, and ten times as many sheep, to say nothing of corn and flax. But Ninor'h was a helpless widow, and her brothers took the whole for themselves. Perrik, the eldest, kept the house, the farm, and the horses; Fanche, the second, took the mill and the cows; the third, named Riwal, had the oxen, the forge, and the sheep; nothing was left for Ninor'h but a doorless shed, on the open heath, which had served to shelter the sick cattle.

However, as she was getting together her little matters of furniture, in order to take possession of her new abode, Fanche seemed to take compassion on her; "Come," said he, "I will deal with you like a brother and a Christian. Here is a black cow; she has never come to much good, and, indeed, gives scarce milk enough to feed a new-born babe; but May-flower can look after her upon the common; you may take her with you, if you will." May-flower was the widow's daughter, now in her eleventh year; she had been called after the colourless blossom, from her extreme paleness.

So Ninor'h went away, with her little pale girl, who led the poor lean cow by an old cord; and she sent them out upon the common together. There May-flower stayed all day, watching her black cow, which, with much ado, contrived to pick a little grass between the

stones. She spent her time in making little crosses with blossoms of the broom, or in repeating aloud her prayers to the Virgin.²

One day, as she was singing the Ave Maria Stella, as she had heard it in the church of Guirek, all at once, she noticed a little bird, perched upon one of the flower-crosses that she had planted in the earth, and cheerfully warbling, turning his head and looking at her, as though he would have spoken. Not a little surprised, she gently drew near and listened, but still without being able to distinguish what the bird said. In vain he sung louder, flapped his wings, and fluttered about before May-flower; not a whit the wiser was she for all his manoeuvres. And yet, such pleasure did she find in watching him, and listening to his song, that night came on without her being able to think of anything else.

At last the bird flew away, and when she looked up to see what was become of him, she beheld the stars twinkling in the sky. With all speed she started off to look for her cow; but, to her dismay, poor blackey was no where to be found on the common. In vain she called aloud, in vain she beat the bushes, in vain she went down into each dark hollow, where the rain-water had found a bed. At last, she heard her mother's voice calling her, as if some great misfortune had happened. All in a fright she ran up, and there, at the edge of the heath, in the way homeward, she found the widow beside all that remained of the poor cow; her horns, that is, and her bones, the latter well picked by the wolves, which had sallied forth from the neighbouring woods, and made a meal of her. At this sight May-flower felt her blood run cold. She burst into tears, for she loved the black cow she had tended so long, and falling on her knees, exclaimed, "Blessed Virgin, why did you not let me see the wolf! I would have scared him away with the sign of the holy cross! I would have repeated the charm that is taught to the shepherd boys, who keep their flocks upon the mountains.

Art thou wolf! St. Hervé shend thee!
Art thou Satan, God defend me! 3"

The widow, who was a very saint for piety and resignation, seeing the sorrow of the little girl, sought to comfort her, saying, "It is not well to weep for the cow as for a fellow-creature, my poor child; if the wolves and wicked men are against us, the Lord will be on our side. Come, then, help me up with my bundle of furze, and let us go home."

May-flower did as her mother said, but sighing at every step, and with the big tears trickling down her cheeks. "My poor cow," said she to herself, "my poor, good, gentle cow! and just, too, as she was beginning to fatten a little."

The little girl had no heart for supper; and many times in the night she awoke, fancying she heard the black cow lowing at the door. With very restlessness she rose before the dawn, and ran out upon the heath, bare-footed, and half-dressed. There, at the self-same spot was the little bird again, perched upon the cross of broom-flowers. Again he sang, and seemed to call her; but, alas! she was as little able to understand him as she had been the night before; and she was turning away in vexation, when she thought she saw a piece of gold glittering on the ground. To try what it really was, she put forth her foot to it; but, lo! it was the gold-herb; and scarcely had she touched it, when

(2) The Breton shepherds make little crosses of thorn-branches, on the spikes of which they stick broom-blossoms and daisies; it is not uncommon to see whole rows of these crosses along the hedges.

(3) This form of exorcism is supposed to originate in a story related of St. Hervé. A wolf having devoured an ass belonging to his uncle, the saint compelled the savage beast to dwell peacefully thenceforward in the same shed with the sheep, and to perform all the duties of the defunct ass. A similar story is related of St. Malo, another Breton saint.

(1) Spenn gwenn, or white thorn, to this day a family name in Brittany.

she distinctly understood all that the little bird said.¹

"May-flower," warbled he, "I wish thee well; May-flower, listen to me."

"Who art thou?" said May-flower, wondering in herself that she could understand the language of an unbaptized creature.

"I am Robin Red-breast," replied the bird. "It was I that followed the Saviour on his way to Calvary, and broke a thorn from the crown that was piercing his brow.² To recompense this act, it was granted to me by God the Father that I should continue to live until the day of judgment, and that every year I might bestow riches upon one poor girl. This year I have chosen thee."

"Can this be true?" cried May-flower, in a transport of delight; "and shall I then have a silver cross for my neck, and be able to wear wooden shoes?"

"A cross of gold shalt thou then have, and silken shoes shalt thou wear, like a noble damsel," replied the bird.

"But what must I do, dear kind Robin?" said the little maid.

"Only follow me."

It may well be supposed that May-flower had no objection to make; so Robin Red-breast flew before, and she ran after him. On they went, across the heath, through woods, and over fields, till at last they came to the open downs, over against the seven isles.³

There Robin stopped, and said to the little girl,—"Seest thou aught upon the sands down there?"

"I see," replied May-flower, "a great pair of birchen shoes, that the fire has never scorched, and a holly staff that has not been cut with the hook."

"Put on the shoes, and take up the staff."

"It is done."

"Now walk upon the sea to the first island, and go round about it till thou shalt come to a rock, on which grow rushes green as the sea."

"What then?"

"Gather some of the rushes, and twist them into a cord."

"Well, and that done?"

"Then strike the rock with the holly staff, and there will come from it a cow; make a halter of the rushen cord, and lead her home to thy mother to comfort her for that you have lost."

All that Robin Red-breast had told her, May-flower did. She walked upon the sea, she made the cord of rushes, she struck the rock, and there came out from it a cow, with eyes as soft as a stag-hound's, and as sleek as the mole that burrows in the meadows; her udder, covered with a white down, almost reached the ground.

May-flower led her home to her poor mother, whose joy now was almost greater than her former sorrow.

But this was nothing. When the widow began to milk Mor Vyoc'h,⁴ (for so had Robin Red-breast named the creature), behold the milk flowed on and on beneath her fingers, like water from a spring!

Ninore'h had soon filled all the earthen vessels in the house, and then all those of wood, but still the milk flowed on.

"Now, Holy Mother, save us!" cried the widow; "certainly this beast has drank of the waters of Languengar!"⁵ In fact, the milk of Mor Vyoc'h was inex-

haustible; she had already yielded enough to satisfy every child in Cornouailles.

In a little time, nothing was talked of throughout the country but the widow's cow, and people crowded from all parts to see it. The rector of Pèros Guirek came, among the rest, that he might know whether it was not a snare of the Evil One; but after putting his stole upon Mor Vyoc'h's head, he pronounced her clear of all suspicion.

Before long, all the richest farmers were persuading Ninore'h to sell her cow, each one bidding against the other; her brother Perrik among the rest.

"Come," said he, "I am your brother, as a good Christian you must give me the preference. Let me have Mor Vyoc'h, and I will give you in exchange as many cows as it takes tailors to make a man."⁶

"Is that your Christian dealing?" answered the widow; "nine cows for Mor Vyoc'h! she is worth all the cows in the country, far and near, high and low. With her milk I could supply all the markets in the bishoprics of Tréguier and Cornouailles, from Dinan to Carhaix."

"Well, sister," replied Perrik, "only let me have her, and I will give you our father's farm, in which you were born, with all the fields, ploughs, and horses."

This proposal Ninore'h accepted, and was forthwith put in possession; turning up a sod, taking a draught of water from the well, kindling a fire on the hearth, and cutting a tuft of hair from the horses' tails, in token of ownership.⁷ She then delivered Mor Vyoc'h to Perrik, who led her away to a house which he had at some distance off, towards Menez-Brée.

A day of tears and sadness was that to May-flower, and as at night she went the round of the stalls, to see that all was right, she could not help again and again murmuring, as she filled the mangers,—

"Ah, Mor Vyoc'h is gone! I shall never see Mor Vyoc'h again!"

With this lament still on her lips, she suddenly heard a lowing behind her, in which, as by virtue of this gold-herb her ears were now open to the language of all animals, she distinctly made out these words:—"Here I am again, my little mistress."

May-flower turned round in astonishment, and there indeed was Mor Vyoc'h.

"Ah! can this be you?" cried the little girl; "and, what, then, has brought you back?"

"I cannot belong to your uncle Perrik," said Mor Vyoc'h, "for my nature forbids me to remain with such as are in a state of mortal sin, so I am come back to be with you again, as before."

"But then my mother must give up the farm, the fields, and all that she has received for you."

"Not so; for it was already hers by right, and had been unjustly taken from her by your uncle."

"But he will come to see if you are here, and will know you again."

"Go and gather three leaves of the cross-wort,⁸ and I will tell you what to do."

May-flower went, and soon returned with the three leaves.

has the property of promoting the flow of milk in such as drink of it. The young married women frequent it for the benefit of the consecrated waters; and the story goes that, once upon a time, a man tasting it in jest, was punished for his profanity by suddenly finding himself in the condition of a nursing mother; and many were the masses and prayers that were said before he was delivered from his trouble.

(6) In Brittany, as in England, it takes nine tailors to make a man.

(7) This form of taking possession is extremely ancient; in all the legislative systems of "the antique world," the transfer of landed property was effected by symbolical tradition, that is, by the handing over to the new owner of some visible and palpable portion or symbol of the land itself. And as Brittany is the very chosen home of old customs, it has happened that even quite lately, at a farm near Léon, all these forms of taking possession were gone through, not as having any legal efficacy, but in compliance with ancient usage.

(8) The Vervain.

(1) The legend of the gold-herb, which must be gathered, according to common credence, bare-footed, *en chemise*, without the aid of any iron tool, and whilst one is in a state of grace, comes evidently from the Druids. It is the selage of the ancients, and is said by the Bretons to glitter like gold before the eyes of those who, at the moment, may fulfil the conditions for perceiving it, and who, by touching it with the foot, are instantly enabled to understand the language of all animals, and to converse with them.

(2) The story of the Red-breast that broke a thorn from the cross of Christ is current through the district of Cornouailles.

(3) A cluster so called, lying off the northern coast of Brittany, not far from Tréguier.

(4) Mor Vyoc'h signifies *sen-cow*.

(5) The Breton peasants believe that the fountain of Languengar

"Now," said Mor Vyoch, "pass those leaves over me, from my horns to my tail, and say three times in a low voice, Saint Ronan of Erin! Saint Ronan of Erin! Saint Ronan of Erin!"⁽¹⁾

May-flower did so; and as she called on the Saint for the third time, lo! the cow became a beautiful horse! The little girl was lost in wonder.

"Now," said the creature to her, "your uncle Perrik cannot possibly know me again, for I am no longer Mor Vyoch, but March Mor."⁽²⁾

On hearing what had come to pass, the widow was greatly rejoiced, and early on the morrow proceeded to make trial of her horse, with a load of corn for Tréguier.

But guess her astonishment when she found that the more sacks were laid on March Mor's back the longer it grew, so that he alone could carry as many sacks as all the horses in the parish.

The tale of the widow's wonderful horse was soon noised about the neighbourhood, and among the rest her brother Fanche heard of it, who thereupon lost no time in going to the farm, and when he had seen March Mor, begged his sister to part with him, which, however, she would by no means consent to do till Fanche had offered her in exchange his cows and his mill, with all the pigs he was fattening there.

The bargain concluded, Ninor'h took possession of her new property, as she had done at the farm, and Fanche led away March Mor.

But in the evening there he was again, and again May-flower gathered three leaves of the cross-wort, stroked him down with them three times, from his ears to his tail, repeating each time "Saint Ronan of Erin!" as she had done before to Mor Vyoch; and lo! in a moment the horse changed into a sheep, covered with wool as long as hemp, as red as scarlet, and as fine as dressed flax. March Mor was become Mor Vawd!⁽³⁾

Full of admiration at this new miracle, the widow came to behold it; and no sooner was she within sight than she called to May-flower, "Run and look for a pair of shears, for the poor creature cannot bear this weight of wool."

But when she began to shear Mor Vawd, she found the wool grow as fast as she cut it off; so that he alone far out-valued all the flocks of Arhez.

Riwal, who chanced to come by at that moment, was witness of the wonder, and then and there parted with his forge, his sheep-walk, and all his sheep, to obtain possession of Mor Vawd.

But see! As he was leading his new purchase home along the shore, the sheep suddenly rushed into the sea, swam to the smallest of the seven islands, and passed into a chasm of the rocks which opened to receive it, and straightway closed again.

This time May-flower expected him back at the farm in vain; neither that day nor on the morrow did he return.

The little girl ran to the common. There she found Robin Redbreast, who said to her, "I have been waiting for thee, my little lady. Mor Vawd is gone, and will return no more. Thy uncles have been punished as they deserve. For thee, thou art now a rich heiress, and mayest wear a cross of gold, and silken shoes, as I promised. My work here is finished, and I am about to fly away far hence. Only do thou remember always that thou wast poor, and that it was one of God's little birds that made thee rich."

To show her gratitude May-flower built a chapel on

(1) This appeal to St. Ronan is explained by the fact of his having been suspected of assuming the form of divers animals, by the aid of sorcery. It must be remembered, that the druids and bards were supposed to have the power of transforming themselves to any shape at will. The bard Taliesin boasts, in one of his songs, that he could appear as a cock, a stag, or a dog.

(2) March Mor—literally, sea-horse.

(3) Mor Vawd seems, curiously enough, to mean, literally, sea-calf.

the common, on the very spot where Robin Redbreast spoke to her for the first time. And the old men, from whom our fathers heard this tale, remembered offering waxen tapers there in their early childhood.

Fables from the German.

THE HARES AND THE FROGS.

THE HARES began to be discontented with their uncertain mode of life. "Do we not live," said one of them, "in incessant fear of men, dogs, beasts, and ravenous birds? Are we not a prey to all these, as soon and as often as it pleases them? And is it not better once for all to die, than to live in a constant anxiety, more tormenting even than death itself?"

The words of the speaker were approved, and it was determined that they should all drown themselves immediately, and together. A neighbouring pond was to become their grave, and they hastened thither with great speed. The great noise of their running, and their appearance itself, frightened a multitude of Frogs, and caused them to run to the shore, and to spring into the water with the utmost haste.

"Ha! what was that?" cried one of the chief of the Hares. "Ah! I see that there are animals who are in fear of us, even as much as are we of our enemies: our circumstances are not yet so wholly desperate! We might, I think, defer a little this water-death!"

A proposal which was followed, and which has preserved the race of the hares until this day.

Even in heavy tribulation, let not discontent transport thee beyond thyself. Look around among thy fellow men, and thou wilt certainly find some, with whose destiny thou wouldst not exchange.—*Meissner*.

THE SHELLS.

A FATHER returned from the sea-coast to his own home, and brought with him, for his son, some beautiful shells, which he had picked up on the shore. The delight of the boy was great. He took them, and sorted them, and counted them over. He called all his play-fellows, to show them his treasure; and they could talk of nothing but of the beautiful shells. He daily found in them new beauties, and gave each of them a name. But, in a few months, the boy's father said to himself, "I will now give him a still higher pleasure; I will take him to the coast of the sea itself. There he will see thousands more of beautiful shells, and may choose for himself." When they came to the beach, the boy was amazed at the multitude of shells that lay around, and he went to and fro, and picked them up. But one seemed still more beautiful than another, and he kept always changing those he had gathered for fresh shells. In this manner he went about changing, vexed, and out of humour with himself. At length, tired of stooping, and comparing, and selecting, he threw away all he had picked up, and returning home weary of shells, he gave away all those which before had afforded him so much pleasure.

Then his father was sorry, and said, "I have acted unwisely; the boy was happy in his small pleasures, and I have robbed him of his simplicity, and both of us of a gratification."—*Krummacher*.

MEROPE.

"I HAVE something more to ask you," said a young Eagle, to a learned melancholy Owl. "Men say there is a bird, by named Merope, who, when he rises in the air, flies with his tail upwards, and his head towards the ground. Is that true?"

"Certainly not!" answered the Owl; "it is only a foolish tradition of man; he is himself a Merope, for he would fly to heaven without for a moment losing sight of the earth."—*Lessing*.

THE TWO AMBASSADORS.

At the period when the city of Arezzo was under the sway of Bishop Guido, the people of Casentino had occasion to send two ambassadors, asking of him certain articles they were desirous should be granted them. Having been informed of the particulars of their mission, they were told to hold themselves in readiness for their departure on the ensuing morning. Preparing their luggage in all haste, the two ambassadors accordingly set out on their way; and they had not travelled many miles before one of them, addressing his companion, said, "Do you recollect all the particulars which they informed us of in so hasty a manner?" And the other replied, that he feared he hardly did. "But," said his companion, "I relied chiefly upon you." To which the other rejoined, "And I trusted to you:" while each regarding the other, exclaimed, "We are in a pretty scrape, then! What shall we do?" At length the one said, "I will tell you what: let us go on to the next inn, and perhaps, after a good dinner, we shall remember them better—yes, we shall be sure to remember them." "That is well said," added his companion; and jogging on together, half asleep and half awake, about three o'clock they contrived to reach the first inn. As it was a matter so nearly connected with their embassy, they ordered dinner directly, racking their brains, in the mean time, to recover some of the articles they had lost. Having taken their seats at table, they, luckily, found the wine good; and so it was, that they were more pleased with this circumstance, than sorry for the mission they had forgotten. Indeed it was so excellent, that they repeatedly emptied their glasses, toasting all their friends in town, until, so far from recollecting their embassy after dinner, they had forgot even to talk about it, and, in course of time, they both dropped asleep.

On rousing themselves once more, one of them inquired of the other whether he had yet succeeded. "I know not," was the reply; "but I know that our host's is the best wine I ever drank: the truth is, I have never thought about it since dinner, and now I hardly know where I am." "And I declare it has been the same with me," answered his friend; "what in the world shall we do? However, we will stay here to-day and to-night; for the night is always favourable to memory. We cannot fail to recollect the whole." To this the other agreed: and they stayed there the remainder of the day, repeating the experiment of the wine, frequently finding themselves in the clouds, where, however, they found nothing of their mission. The same story was repeated at supper, and they afterwards found their way to bed. At breakfast, the next morning, the inquiry was as vainly repeated, both declaring, that they had not so much as dreamed about the matter; and that they had not got the most distant notion of it, having never slept so sound in all their lives. "Come, then," cried one, "let us mount horse again, and see what that will do: it will come when we are not thinking about it on the road."

So they again set out; occasionally asking each other, as they went, "Well, have you got it yet?" "No: have you?" "Not I, indeed." And in this way they journeyed along till they came to Arezzo, where they alighted at one of the first hotels. There they retired into a private room, for the purpose of putting their heads seriously together, as it

was quite time to recollect what was their business. But I am sorry to add, it was all in vain; and such was their hopeless condition, that one said, "Come, let us go, and encounter the worst at once." "But," said the other, "what shall we say? what do we know about the matter?" "Well, but we must go through with the business: so let us go and do our best." So, trusting to fortune, they requested an audience of the bishop, saying they had some matters of importance to communicate to him; and, being introduced into his presence, they made a very low obeisance, and remained silent. Upon this, the bishop, with great dignity, approached them, and taking them by the hand, said, "You are welcome, gentlemen; what tidings of import may you bring?" Each of the ambassadors now looked at the other, and bowing, said, "Do you speak." "No, sir," was the reply; "do you speak, sir; I cannot think of it;" till at length, the boldest of the two, addressing the bishop, observed: "We come, my lord, as ambassadors from your poor servants of Casentino; and I can assure your grace, that both those who send us, and we who are sent, are equally devoted to you; but, please your grace, we are all of us men of fact, but of few words: our mission was entrusted to us in haste; and, whatever may be the occasion of it, either our assembly must have informed us wrong, or we have, in some way, misunderstood them. Nevertheless, we humbly recommend both them and ourselves to your grace's good offices; though what possessed them to send us on such a mission, or ourselves to come, we cannot exactly say." The good bishop, like a wise man, only patting them on the shoulder, said, "Well, well, my friends, it is all right; go home, and say to my dear children of Casentino, that I shall always be happy to serve them every way in my power; so much so, that henceforward they need be at no expense in appointing ambassadors to my court: let them only write to me, and I will reply, agreeably to their wishes."

The bishop then taking leave of them, our ambassadors resumed their way, saying, as they went, "Let us take care not to fall into the same error on our return." "But," said one, "we cannot easily do that; we have got nothing to remember." "Yet we must have our wits about us," returned the other; "for they will ask what we said in our oration, and what was the reply. For if the good people were to suspect that our embassy, like many others, was all a joke, they would never employ us again: and farewell to our occupation—it is gone." To this the more politic of the two replied, "Oh, leave that to me; we will continue in office, trust me! I shall say what shall make them in good humour with themselves for an age to come. I will tell them of the letter, and how he thinks himself highly honoured by their alliance." "That is well thought," said the other; "and let us spur along a little, that we may get in time for dinner at the same inn—you know where." "That is well thought," echoed the other; and, mending their pace at the idea, they soon dismounted, all in a heat, and, without waiting for dinner, called out for some of the same wine. "Good sirs," replied the waiter, "we have some better than ever;" and the ambassadors kept him pretty sharply employed in drawing the bottles, until the stock of wine began to get low. Grieved to hear this, these patterns of diplomacy were compelled to mount again, and the next stage or two brought them into the presence

of their employers. They talked in so bold and lofty a tone of the orations they had delivered, and of the bishop's gracious manner, that some of the audience compared them to Tully and Quintilian; and, the thanks of the assembly being unanimously voted to them, they were afterwards promoted to other offices of great honour and emolument. Nor will this appear very extraordinary, if we reflect on the sort of people, of a higher rank than our heroes, whom we every day see entrusted with public missions, and who are about as much suited to their business, as a common trooper taken from the ranks; and yet, they write long letters, assuring the government that they are busied day and night in the affairs of the nation, and that all the lucky events which fall out, are wholly to be imputed to their skill. Did they tell truth, however, they would own, that they had as little merit in bringing them about, as a cabbage, or any other vegetating substance; though they are richly recompensed, and promoted to the highest honours, in consideration of the ingenuity with which they contrive to wrong their country.¹

BEAUCHAMPS.—A TALK.

CHAP. V.

(Concluded from page 87.)

Mrs. GIFFORD ought to have accompanied us, but she was not, as has been intimated, in the most gracious humour, and before she could at all recover herself, the arrival of Mr. Norton, ostensibly to visit his rector, completed her disgust, and she resolved on an immediate return to Beauchamps. Harriet would fain have carried her husband away with her, but Mark had made up his mind to stay out the week for which they originally came, and would only engage to follow at the end of that time. Mr. Norton arrived in Bath a few hours after Mrs. Gifford's departure; his first business was to call on me, his next to wait on Lady Tracey; in the course of the following four-and-twenty hours he was visiting in the Circus as one of the family: I am afraid Mr. Penrose had but little of his company. A very short absence from his parish was all, however, that Mr. Norton could, at that time, allow himself; so difficult is it for a man with anything more than a nominal profession to find time for courtship; and, accordingly, he and Gifford left Bath together, on such friendly terms as became the new position in which they stood towards each other; Mark thus leaving to his lady the whole task of doing the unpleasant. Harriet prided herself on a good many things, perhaps above all others on *consistency*; it was a favourite word with her, and no wonder, since it closed the door to all misgivings. For myself, I continued for several weeks in an unsettled state, hovering between Knightswood and Bath; Mark Gifford, more than once, expressed his astonishment: what could induce any man, who had a horse to ride, and knew how to ride him, to leave the country in fine open weather (meaning, of course, dull and drizzly weather) he had no idea; he declared that my visits to Bath were more frequent than Norton's; for his part, he could not understand it. In the meanwhile, Mr. Norton

was zealously endeavouring to get his own place at Fordover supplied to the rector's satisfaction; whilst that point remained unaccomplished, he seemed to bear a grudge against his own improving prospects; and when reluctantly he consented to join Mr. Ryder and myself in a walk round the glebe of Knight Magna, gave such evident symptoms of considering the time as worse than lost, that I foresaw the entire charge of his worldly prosperity must eventually rest upon Julia.

In the course of the ensuing spring, however, all things connected with the change of duties began to shape themselves into order; a new and promising curate was engaged for Fordover, a new rector presented to Knight Magna, and some progress was made in new modelling the old parsonage.

Julia Tracey's engagement, when once declared, was, of course, canvassed in a variety of ways, by her friends in general, and her Bath acquaintance in particular; some spoke of it as a *pis aller* on her part; some, as a grievous mistake on that of Mr. Norton; whilst a third, and more lenient party, discovered immediately, by the colour of her dress, or the shape of her bonnet, that Miss Julia Tracey would make an admirable clergyman's wife.

"Well," said I, after some remark of this nature had been repeated by Maria, "I hope and believe she will; but I shall never desire to be told of it."

"What do you mean?"

"Why, exactly what I say; if Julia endeavours, according to my expectation, to do her own work quietly and unostentatiously, we shall hear very little of the matter; if, on the contrary, she gets to be talked about, I, for one, shall conclude she does too much."

"I do not understand how a clergyman's wife can do too much in her parish."

"In her husband's parish, I presume you mean. Well, I incline to believe she may; at all events, though very willing that Norton should have a helpmate, I am not anxious to provide Knight Magna with a *rectoress*."

"Do you not think," inquired Julia, "that where there is what you call a *rectoress*, it is very much the fault of the rector?"

"Sometimes, no doubt."

"Besides, when you have been longer amongst us, you will find that other parties are more to blame than either; and that both the clergyman and his wife have often much to endure from the interference, or, in other ways, vexatious conduct of their lady parishioners; even my own limited circle of acquaintance comprehends many such offenders, each and all of whom would fain be *rectoresses*."

"That is an unfortunate state of things; but we shall manage better at Knight Magna. There will, at least, be no lady, rich, or fanatical, to insult the rector, or provoke the indignation of his wife."

"No," replied Julia, with an expressive smile, "I have no fear of that; Lady Tracey will come, not as a hindrance, but a blessing; and the sooner she comes the better."

"You have not favoured us with your opinion," said I, addressing Mary Deane, who had been present during the foregoing discussion; "yet I thought, more than once, that you were about to speak."

"I am scarcely competent to give one; but I was thinking that the wife of a clergyman can have no such easy part to perform, as is generally supposed; especially if belonging herself to a high class in society."

(1) From Roscoe's Italian Novelists.

How much, in that case, she must fear to secularise her husband, or to bring, by means of her own family connexions, too much of the world into his quiet parsonage! of course, I am supposing her to be a very conscientious person."

"Is that a hint for me?" inquired Julia.

"No, for we have before conversed on the subject, and I know that you agree with me; indeed you understand my meaning better than I can express it."

"Well, I agree with you, so far as to allow that clergymen's wives do sometimes seem to consider themselves and their husbands too much in the light of ladies and gentlemen *only*; as persons qualified to receive and return visits, entitled to live in a certain style of gentility, and to have everything about them as comfortable and well appointed as their means will admit; but I cannot promise to come up, even in imagination, to your standard of perfection, or to have the fear of *secularising* perpetually before my eyes."

"I think, Miss Deane, we may defy my cousin Julia to do her worst; I cannot conceive a more unpromising subject for conversion to worldly-mindedness than our friend Norton; it would be far more easy to imagine him addressing his newly-married wife in the language of George Herbert."

"I believe," replied Mary, "I remember the passage to which you allude."

"Do you, indeed? I should have supposed Izaak Walton too old and too quaint an author for your perusal."

"For many years of my life I had no choice but between old books or none; and in spite of their quaint dry style, and unpleasant looking print, I doubt if any reading has since afforded me so much enjoyment."

"As you both so well remember this matrimonial charge, perhaps one or the other will have the goodness to repeat it for my edification."

"Miss Deane will, I hope."

But Mary, with a blush, declined; alleging her fear of not repeating the passage correctly.

"Then I must rely on my own memory, which I am sure will serve me as to the sense, though it may not extend to the exact order of the words. 'You are now,' said the Rev. George Herbert to his wife (the daughter of a gentleman both of family and fortune), 'a minister's wife, and must so far forget your father's house as not to claim precedence over any of your parishioners; for you are to know that a priest's wife can challenge no place, nor precedence, but such as she may purchase by her humility; and I am sure that place so purchased do best become them.'"

"You see," said Mary, addressing Julia, "that if you thought me unreasonably austere, I was at least advocating no new doctrine."

"But I did not;—I believe, that is, you recommend not a particle more austerity than you would yourself practise."

"Ah! I do not know; I have mixed too little in the world to be a fair judge of difficulty or expediency. One is often at a loss—I am sure it would be so in the case we have been supposing, to determine how far even a right principle ought to be carried."

"I suppose," observed Maria, "there is not much danger of carrying right principles too far; but this Mr. Herbert's principle cannot be a right one, for you see, everybody is agreed in thinking that a clergyman

ought to marry as soon as possible; in fact, what is a clergyman without a wife?"

"What is he?" I repeated; "why, a bachelor, I suppose."

"A bachelor! what a queer old-fashioned expression! But he is much worse than that. A clergyman who does not marry might as well be a monk at once; it is quite papistical. I assure you, Henry," continued Maria, with great earnestness, "that I know a most talented man, a magnificent preacher too he is, and he declares that if the clergy generally were not to marry, they would take to living in dens and caves, feed on roots, and go about with long beards, and hair neither brushed nor combed."

"My dear Maria! this would indeed be dreadful. But pray explain, for I confess I do not understand how the anathema of this talented gentleman applies. What have the infelicities of a single life (rather highly coloured, you must allow,) to do with the endeavours of a married clergyman to guide his wife in that which he considered the path of duty?"

"And who, do you imagine, in these days, would consent to be so guided? What chance would there be for any clergyman who adopted these strange notions to marry at all? He must put up with some farmer's daughter for his wife, or, at least, the daughter of a poor curate, who might think it preferable to going out as governess; but no lady, with the habits and ideas of one, would consent to give up her proper place in society; I am sure, if Julia allows herself to be talked into anything so nonsensical, I shall blush to hear of it."

"I am afraid," replied her sister, "there is no likelihood of Julia's putting any one to the blush by her too great humility."

"I do not feel so sure of that; such strange ideas seem to have got into your head of late, that I would answer for nothing. It is possible you may be found some day notably employed in darning stockings, or up to your elbows in flour, making apple dumplings. Will it not be a charming sight, Henry?"

"Oh, that must depend upon two circumstances; the necessity of the task, and the skill displayed in its performance. However, to speak seriously, you may believe that it never can be my wish to see Julia, or any other lady, degraded into a mere household drudge, or affecting useless singularity; but surely it is not degrading the parson's wife (forgive the homeliness of the term) to wish that she, like her husband, should choose a more excellent way than that of every-day life amongst ourselves; and, in consequence, that she should be content to live habitually,—now mind, I do not say uninterruptedly—apart from a very worldly world; for in truth, my dear cousin, I fear its pomps and vanities are much more real, as well as far more tempting, than the dens and caves you were pleased to threaten us with, but now."

"The very mention of them a second time alarms Miss Deane," observed Julia; for Mary now rose to take leave; "or is it a vision of my bad cookery which makes you look as if you had already staid too long?"

Mary laughed, as she replied, that it was of her aunt's dinner she was thinking; not to delay which she must hasten home.

"Oh! true," replied Julia, glancing at her watch; "three o'clock is, I know, Mrs. Deane's dinner hour; and it is now—I will not tell you how much—past two. Well, I shall dismiss Henry at the same time, for Maria is presently going out with mamma, and I have a letter to write."

The marriage of Julia and Mr. Norton took place one fine morning in the month of May; but, conscious of my own ignorance in regard to such matters, and not knowing right from wrong, whether the wedding was graced by the presence of too many or too few, or whether the breakfast table had too much or too little upon it, I shall confine my observations to the appearance of the

bride. Julia, during the last few months, had improved in health, and in her bridal attire she looked both young and handsome—handsome enough to remind me of former times, young enough to be the wife of a man, who, whatever his real age might be, looked considerably older than herself. The Nortons went immediately to Knight Magna, where it had been an object of agreeable interest to me to get things into order, and make such improvements as the time permitted. The rest was to be left to Julia's choice and discretion; for, although her husband had taste enough to see that an Elizabethan Parsonage, with sloping roof and tall chimneys, was a more picturesque object than a canister-shaped building inclosed in a verandah, he displayed such complete ignorance with regard to interior arrangements, that we considered it most safe to entrust him only with the building of the new School-house. He, good man, acquiesced most readily in the decision; for no one could think more humbly of his *savoir faire*, in matters of domestic convenience, than he did himself.

Having established Julia at the Rectory, it was my next concern to provide a lady for the Mansion. At what time I began to think, that of all ladies none would suit me so well as Mary Deane, I do not intend to specify; neither shall I mention the exact number of weeks which intervened between my seeking and obtaining. It was a double business, for there were two ladies to be sought and won; and truth obliges me to confess, that I found the aunt more ready to accept me than the niece. Not that Mary pretended not to like me, when she knew all the time that she did; she was never, in her whole life, guilty of affectation or insincerity; but she was troubled with doubts and scruples, which, originating in her own modest and disinterested nature, prevented her seeing the general fitness of things, or judging fairly of her own qualifications for conferring happiness. She yielded, however, at last, thereby saving both herself and me a world of trouble; since, to persevere till she did so, was my first and last determination. On my next return to Knightswood I had the satisfaction of acquainting Hannah with the joyful news of our engagement, and the still more joyful hope of its speedy termination. Her happiness was beyond what I can attempt to describe; nothing but my own could, I believe, exceed it. Even to hear talk of such a thing, she observed, made her feel almost young again; whereupon I had little difficulty in persuading her that she was at least quite young enough to take a journey to Bath, in order to be present at the ceremony. It was further agreed, according to a plan devised by Mary, that Hannah should remain with old Mrs. Deane during our wedding tour, and finally attend her to Knightswood, where the poor blind lady was in future to find a home.

If Mary and I had few friends to rejoice in our union, there were at least none who had power to impede it; that Lady Tracey or Maria should in their hearts approve of a bride who brought neither dowry nor connexion, was not to be expected, but they were ready with their outward civilities, and the latter even accompanied Mary to the altar. Perhaps none, in their different ways, took greater interest in the event than Mr. and Mrs. Gifford; in the lady it revived a subject of bitter discontent, and filled up the measure of my offences. Harriet could only forgive my accession to the family honours on condition of my sharing them with her sister; and I have never stood clear of blame in that matter, although Julia herself wanted me not. "As to Mary Deane, she did not know how it was, but she never could endure her." Mark, on the contrary, was eager in his congratulations; he neither could nor would be restrained from expressing his satisfaction; and, when all was done and over, warmly declared, that no marriage, since his own, had ever afforded him so much pleasure. The saving clause was well put in, but failed to soothe the wounded feelings of his wife. Alas! a proud and intolerant spirit still presided at

Beauchamps; and the faults of old Mrs. Gifford (redeemed in her by some sterling good qualities) showed yet uglier in Harriet. And what wonder that it should be so! The tendency of a mere worldly education had been to harden the heart, and increase natural defects of character; instructed in everything rather than the self-denying requirements of a Christian course of life, resting upon anything rather than the promises which should be its support, and taught to view all things with a reference only to worldly advantage,—the result was such as might naturally be expected, such as might justify one in believing that ignorance itself could produce no worse. But let us turn from Harriet to gentler spirits—Julia and Mary. They took to each other kindly from the first, and every succeeding month has seemed to strengthen their mutual regard. In fact, notwithstanding the merits of their respective husbands, they are of opinion that neither could possibly get on without the other. Mary is supposed to be less versed in the science of entertaining company, arranging dinner parties, and such like affairs, than Julia, who, in return for her hints on etiquette, receives from my wife lessons in domestic economy.

Nothing could be more favourable to the advance of each in knowledge, than the providential decree which placed them in their present positions; Julia, as Lady Tracey, could have had little to learn, whilst Mary would have entered on her duties at the Rectory perfect in habits of usefulness and self-denial; and let no one, from the latter admission, infer that Norton, under such a change of circumstances, might have been the gainer. What can be better than the best? and that, in her husband's eyes, is Julia. Norton, as an article of faith, may believe in the natural imperfection of his wife, and I suppose he does; but it is a belief general, descending not to particulars. Saint-like in his own life and conversation, he yet is mortal man; and Julia's devotion to himself makes whatever she does, or leaves undone, to be "wisest, virtuouslest, discreetest, best." Even when she deludes herself with hopes of a visit from our old friend, Mr. Penrose, because he has promised, if he ever shall have strength for the journey, to be her guest at Knight Magna, Norton does not deceive her; and when I hint at the hopelessness of such expectation, he only answers me that Julia has set her mind upon it. No clouds have hitherto obscured the sunshine of married life at Knightswood, or Knight Magna: Harriet has been absent; her vexed spirit sought first the immediate and natural relief of the London season, and finding at its close her cure still incomplete, she made arrangements for accompanying Lady Tracey and Maria abroad. Paris had been substituted for the German baths, but beyond Rouen the party advanced not. Harriet there found the masters she required for her girls; and the society of the place, which included some old acquaintance, proved sufficiently agreeable to arrest, from time to time, their further progress. Mark, though by no means rejoicing in the scheme, gave a reluctant consent, and accompanied his wife and daughters across the water; not, however, without conditioning for the acceptance of Julia's offer to take charge of two younger children, destined to remain at home. Fine little boys they are; and when freed from the restraint of embroidered vests, were delighted to trundle their small barrows after the old gardener, himself an incumbrance bequeathed by the flyers to their successors. Every day was adding to their stock of horticultural knowledge, when, lo! the enlargement of the drawing-room, by means of throwing out a bow towards the garden, gave a sudden change to their thoughts, and inspired them with a vehement taste for masonry. They have become, in consequence, happier and dirtier than ever. Meanwhile their father soon wearied of Rouen; with true John Bullism he resented the necessity of speaking French; longed for his own home, his farm, and his dogs; called himself a hundred fools for having left them; and finally, at the

end of three weeks, returned to Beauchamps. There he waits, without visible impatience, the summons of his lady, whom he has engaged to re-conduct to England. Yet Gifford is certainly fond of his children—he believes himself to be fond of his wife; and if not a perfectly happy man, he has at least no plea for considering himself a disappointed one. Brought up from childhood to identify his own importance with that of Beauchamps, and, I need hardly observe, to over-value both, the impression remained, in a great degree, indelible. The discipline of a public school might repress, the excitements or the studies of college life for a time supersede, but the settled ambition of his heart was to raise an ancient, though decayed, family to that rank amongst the provincial aristocracy, which he supposed it to have originally occupied. The Giffords, whatever else they might have lost, had retained their acres; the last lady of the manor brought some money into the family, and saved a good deal more, so that, at her decease, Mark found himself in possession of wealth, with an unincumbered and improvable estate. He wanted, in short, nothing but an alliance of the right sort to realize his brightest hopes; and the advances of the Tracey family proved, under such circumstances, irresistible. One sacrifice was indeed inevitable, but the price once paid, all other desires of his heart were fulfilled; and, as disappointment came not, so neither did repentance; why, in the reckoning of the world, should it come? The game of life, however, at Gifford's age, is usually not more than half played out; and, amidst all its manifold changes, there yet may come a time for retrospection.

Unpleasant rumours have lately reached us respecting Maria; she is said to be receiving the addresses of an Irish gentleman, a Roman Catholic; and her letters to Julia, in their altered and unprotestant-like tone, give some probability to the report. As, however, the first mention of such a falling away on the part of a Church-of-England lady proved a serious shock to the principles of Mr. Norton, and drew, even from his mild nature, a grave rebuke of all aiders and abettors in such slander, the subject has never been renewed in his presence. We wait, not without anxiety, but in submissive silence, for further intelligence.

A word or two more of ourselves, and I have done; yet what can I say that you have not already imagined? The apartments of Knightswood are no longer cheerless and deserted, and you will conclude that Gifford and the Nortons are our most frequent guests; also, that old Mrs. Deane has every comfort that her infirm state of health can require, or enable her to enjoy. Hannah has returned to her own cottage, where the frequent presence of Lady Tracey seems to obliterate all past resentments. She is pleased to see her sometimes accompanied by the little Giffords; and declares herself, let us hope truly, in peace and charity with all the world.

That, in our general hospitalities at Knightswood, we satisfy the expectation of our neighbours, or fully replace those to whom we have succeeded, I dare not affirm; but I am sure that we are happy in ourselves, and in those amongst whom we chiefly live. With such friends, above all, with such a home, I can have but one remaining wish, and that it rests with you to gratify. Linger not at the Cape, but come to England—come to Knightswood. If you can, get up by the way a little taste for ecclesiastical architecture, in order that you may take some interest in our plans for rebuilding the Church of Knight Magna; but at all events come. You are partial enough on one subject to satisfy even my wife; orthodox enough to be approved of by Norton; and rich enough to be tolerated at Beauchamps.

AMERICA AND HER SLAVE STATES.

No. II.

AMERICAN WATERING PLACES, AND THEIR COMFORTS— SLAVES, SLAVERY, AND SLAVE DRIVERS.

THE work of Mr. Featherstonhaugh is no mere collection of hurried notes, gathered together in a few months' run in the states by railroads and steamboats; but the deliberate reflections of a traveller who passed between four and five years in the country, and then allowed three more years to pass over before committing to the press the results of his long residence. His volumes are devoted to that half of the states much less visited by travellers, the southern slave-holding portion; and curious indeed is the picture he presents to us of the manners of the cotton lords, from Baltimore to the borders of Texas. Passing over some rather cool impositions on travellers, we extract our author's account of the old German settlers of the valley of Mount Jackson, a race still unaffected by the progress of America. Our author was assured by the nephew of one of these settlers, whose education at Pennsylvania had made him entertain but a poor opinion of the old race,—

"That, with few exceptions, they all believed in witchcraft to this day; and that, only last year, the country people refused to come to Mount Jackson with eggs, and other products of their farms, because a strange dog, with a wild look, had driven some cattle into the Shenandoah. It was universally argued by them that this dog was the devil; and a young lawyer, who was not disposed to tranquillize his neighbours, had gone so far as to say, that he had met him one evening in his natural shape, with two eyes of flaming fire, and each of them larger than his head. Upon this, Hans determined not to stir from home; and the markets continued to be bad as long as the dog was known to be about. Our fellow-passenger also told me, that an uncle of his, who was worth 80,000 dollars, asked him, when he returned from college, what he had learnt there that he could not have learned at the German school. His nephew told him, that, amongst other things, he had learnt that the sun did not go round the world, but that it stood still, and the world went round it. Upon which the old man said, 'You dink so, because de beobles at de college tells you so; but I doesn't dink so, because I knows petter, and I ought to know petter.'—Vol. i. pp. 16, 17.

These old-fashioned people, hard-working, unostentatious, and consequently rich, have a profound hatred and contempt for their mercurial fellow-countrymen; dislike paper-money, and hoard up gold; object to pay taxes, and condescend to combine with the democratic minority of the Americans for electioneering purposes, and thus to throw the power of the state into the hands of their own party. Pennsylvanian repudiation is due, in a great degree, to the prejudices of these colonists.

We, good, grumbling people, are not a little apt to find fault with our club, or our inn, if the tingling bell does not bring immediate attention; a few days at a Virginian hotel, at the Warm Baths of the Alleghanies, would teach us a lesson of patience. A long low dining-room, a small public parlour, sufficient to hold about a fourth of the visitors, and a few small bed-rooms for the married, comprise the entire accommodation of the house; as for the single, they must be content with a range of wood cabins, with hard beds, and pincushions for pillows, so small, that a Kentuckian put nine of them into his pocket for a bet. The food is bearable, the attendance bad; a few bustling, noisy

slaves, who never stop when called to, and are to be caught by no other means than sticking your fork into a tender part of their bodies. Beautifully clear and sparkling as the waters of the warm springs are, the gregarious bathing of the people renders the baths far from pleasant. It is by no means pleasant to be in the same pickle with the most extraordinary looking, tobacco-chewing, expectorating, nondescript, however good the pickle may be; and a private bath is not always to be commanded.

If the accommodation at the dancing Colonel Fry's hotel, at the Warm Springs, was bad, that at the White Sulphur Springs was some degrees worse. Look on the picture of the place, where they had not room to stow a cat, much less a human being:—

"The establishment of the White Sulphur Springs seemed to consist of a pack of unpromising-looking huts, or cabins, as they are called, surrounding an oblong square, with a foot-walk in the centre, railed off from a grassy plot on each side of it. At the entrance into the establishment, which has very much the air of a permanent Methodist camp meeting, you have, on the left, a miserable-looking sort of barrack, badly constructed of wood, with a dilapidated portico. Nothing can exceed the frowzy appearance of this building, which contains the grand dining saloon, where daily between three and four hundred persons assemble to a kind of scramble for breakfast, dinner, and supper. A few of the cabins had a comfortable-looking appearance, and these were the private property of genteel families residing in various parts of Virginia, but who have a right to occupy them only in person, and not by proxy. This oblong square descends rather rapidly towards the south-west to the spring, which is surrounded by a small colonnade, with seats around it, generally filled by persons, many of whom are indifferently dressed, and are constantly smoking and spitting. Others are quietly waiting, with emaciated sallow faces, made ghastly with fever and ague, until the time comes to drink another glass of the sulphurated water, the gaseous effluvia of which extends far around. From these springs, other rows of cabins are visible, of an inferior kind, but all having a very unprepossessing look. One of these rows is called *FLY ROW*, from the myriads of flies which continually infest it. Other rows have still more objectionable names."—Vol. i. pp. 54, 55.

So much for the exterior appearance of the lodgings at the White Sulphur Springs! The interior is by no means more prepossessing; witness the comforts of No. 29, Alabama Row, in the solitary room of which Mr. F. obtained admission only by the threat of personal castigation to Mr. Andersen, the managing man of the hotel:—

"The room was an oblong, about 12 feet long, and very narrow, and, consequently, very inconvenient. The row was built against the side of a hill; and the room, which extended the whole width of the row, had two doors. The western one opened upon the hill, and you could step out upon it immediately; but the eastern, or principal entrance, was by a steep flight of broken and dangerous wooden steps. Furniture there was none inside, except two low bedsteads, coarsely put together with rough planks; and the narrow wooden frame on which I was to sleep was so broken-backed, that it tilted up in the middle. Finding it utterly impossible to sleep there, I had to get up again, after I had lain down, and make a tolerably even surface, by filling up the inequalities with articles from my own wardrobe. The mattress was full of knots, and what was the thing that was intended to be my pillow, I never ascertained; but a gentleman informed me that he and his wife having, after the usual vexatious delays, got into some room

resembling ours, as soon as they had lain down for the night, found their pillow not only very disagreeable from a sickening odour that came from it, but gifted with some curious hard knobs in it that were moveable; as it was out of the question to sleep upon it, he threw it on one side, and had the curiosity to examine it in the morning, when he discovered that they had not only put in a handful or two of dirty live feathers, but the necks, with the heads to them, of two chickens and a duck."—Vol. i. pp. 61, 62

The pleasures of "*Compulsion Row*," and its half-finished cottages, are, perhaps, one shade preferable to the questionable pillows of that of Alabama; if we except the comfort of hearing, through the space between the half-raised party wall and the roof, the drawling, sickening, ungrammatical holdings forth of a set of self-righteous neighbours, who varied their conversation about temperance societies, and the saints, with the usual accomplishments of drawling and spitting. How strange it is that even the love of dollars has not persuaded some one to raise a decent house at these justly celebrated springs, the very mine of wealth to an enterprising capitalist! Can it be true that comfort, cleanliness, and civility, would not only be lost upon, but absolutely distasteful to, the mass of the American visitors; and that they prefer pigging together in these wretched cabins, and doing their job-work at dinner, to decent rooms, and wholesome meals; whilst the few who care for these things are too idle to interfere, or too few to have any effect upon the society among which they exist! Repudiating, spitting, whittling, and nigger-driving, seem creature-comforts to the mass of the Americans.

Apropos of whittling. Every writer on America, from Basil Hall to Sam Slick, has had his hit at the American custom of whittling, or stick-shaving. Be the employment what it may, judging or arguing, legislating or smoking, out comes the knife, and gradually the legs and arms of tables and chairs, or any other bit of wood at hand, gets thinner and thinner, as the pile of shavings rises higher and higher at the feet of the operator. Will it be believed that this same unlicensed whittling is but in humble imitation of a prince of tyrants—ay, the free and enlightened Americans humbly follow the amusements of a Darius, a Cambyses, or a Xerxes. "When," says Ælian, "the king of Persia goeth on a journey, he carrieth no book wherewith to while away the tedium of the journey; nor doth he encourage deep or serious meditation; but he has with him in his chariot a thin tablet, and a small knife; and so, by scraping the former with the latter, doth dissipate the tedium of the journey."

But, to return to the society at the White Sulphur Springs, and its memorable huts, its wretched dinners, swarms of lodgers, faro table, and countless majors and colonels without commissions. Captains are seldom found in America above the position of tavern-keepers, whilst lieutenants do not exist but on the muster-roll of the militia. A reward might freely be offered for any one who had seen a live specimen of a lieutenant in the states. Our traveller varied in his titles; one called him doctor, because he geologized; another called him colonel; and a third, judge. The following is a good story, whether true or not:—

"A well-known gentleman, at Winchester, in this state, related an amusing anecdote to me on this sub-

jeet. Crossing the Potomac into Virginia, with his horse, in a ferry-boat, the ferryman said, 'Major, I wish you would lead your horse a little forward,' which he immediately did, observing to the man, 'I am not a major, and you need not call me one.' To this the ferryman replied, 'Well, kurnel, I ax pardon, and I'll not call you so no more.' Being arrived at the landing-place, he led his horse out of the boat, and said, 'My good friend, I am a very plain man; I am neither a colonel nor a major; I have no title at all, and I don't like them. How much have I to pay you?' The ferryman looked at him, and said, 'You are the first white man I ever crossed this ferry that wa'n't jist nobody at all, and I swar I'll not charge you nothing.'—Vol. i. p. 84.

Passing through Fincastle, our traveller came to the bank of the New River, at the time when America's sons were practically falsifying the first article of their declaration of independence. "All men are equal," says the theory; "All men are equal, except niggers," says the practice. Three hundred slaves, who had bivouacked the previous night in chains, were now hastening to cross the river, on their road to the sugar plantations of Louisiana, where the average of life for a sugar-mill slave is *seven* years. The utmost vigilance is required at such a place as that where our traveller met with the gang. The slave-driver knows well he has no mercy to expect, if his prisoner once gets the upper hand. The poor black, cheated and deluded as he is by fine promises, is too well aware of his future fate not to watch for every opportunity of escape. So long as the borders of the free states are within reach, the watch cannot be too strict, the flattery too gross, the stories of lands of plenty too high coloured. Gradually, as the bounds of the non-slave states are left behind, the danger of revolt diminishes, escape becomes useless where all are banded together to restore the prisoner as "*property*." There is much misrepresentation on the case of slavery in America. It is useless to deny the cruelties of the slave-drivers, but it is unfair to charge those cruelties on many, very many, of the slave-holders of the south. Mr. Featherstonhaugh's remarks seem so just and pertinent that we extract them at length:—

"All christian men must unite in the wish that slavery was extinguished in every part of the world; and from my personal knowledge of the sentiments of many of the leading gentlemen in the southern states, I am persuaded that they look to the ultimate abolition of slavery with satisfaction. Mr. Madison, the ex-President, with whom I have often conversed freely on this subject, has told me more than once, that he could not die in peace, if he believed that so great a disgrace to his country was not to be blotted out some day or other. He once informed me, that he had assembled all his slaves—and they were numerous—and offered to manumit them immediately; but they instantly declined it, alleging that they had been born on his estate, had always been provided for by him with raiment and food, in sickness and in health, and if they were made free, they would have no home to go to, and no friend to protect and care for them. They preferred, therefore, to live and die as his slaves, who had always been a kind master to them. This, no doubt, is the situation of many humane right-thinking proprietors in the southern states; they have inherited valuable plantations, with the negroes born upon them, and these look up to their master as the only friend they have on earth. The most zealous, therefore, of the abolitionists of the free states, when they denounce slavery, and call for its *immediate* abolition, overlook the conditions upon which

alone it could be effected. They neither propose to provide a home for the slaves when they are manumitted; nor a compensation to their proprietors. Without slaves, the plantations would be worthless; there are no white men to cultivate them; the newly-freed and improvident negroes could not be made available, and there would be no purchasers to buy the land, and no tenants to rent it. The abolitionists, therefore, call upon the planters to bring ruin upon their families without helping the negro. In the mean time the abolitionists, not uniting in some great practical measure to effect the emancipation of all slaves at the national expense, suffer the evil to go on increasing. The negro population amounts now to about two millions; and the question, as to the southern states, will, with the tide of time, be a most appalling one, viz. whether the white or the black race is to predominate.

"The uncompromising obloquy which has been cast at the southern planters by their not too scrupulous adversaries, is therefore not deserved by them; and it is but fair to consider them as only indirectly responsible for such scenes as arise out of the revolting traffic which is carried on by these sordid, illiterate, and vulgar slave-drivers—men who can have nothing whatever in common with the gentlemen of the southern states. This land traffic, in fact, has grown out of the wide-spreading population of the United States, the annexation of Louisiana, and the increased cultivation of cotton and sugar. The fertile lowlands of that territory can only be worked by blacks, and are almost of illimitable extent. Hence, negroes have risen greatly in price, from 500 to 1,000 dollars, according to their capacity. Slaves being thus in demand, a detestable branch of business—where sometimes a great deal of money is made—has very naturally arisen in a country filled with speculators. The soil of Virginia has gradually become exhausted with repeated crops of tobacco and Indian corn; and when to this is added the constant subdivision of property which has overtaken every family since the abolition of entails, it follows, of course, that many of the small proprietors, in their efforts to keep up appearances, have become embarrassed in their circumstances, and, when they are pinched, are compelled to sell a negro or two. The wealthier proprietors, also, have frequently fractious and bad slaves, which, when they cannot be reclaimed, are either put into gaol, or into those depôts which exist in all the large towns, for the reception of slaves who are sold, until they can be removed. All this is very well known to the slave-driver, one of whose associates goes annually to the southwestern states, to make his contracts with those planters there who are in want of slaves for the next season. These fellows then scour the country, to make purchases. Those who are bought out of gaol, are always put in fetters, as well as any of those whom they may suspect of an intention to escape. The women and grown-up girls are usually sold into the cotton-growing states, the men and the boys to the rice and sugar plantations. Persons with large capital are actively concerned in this trade, some of whom have amassed considerable fortunes. But, occasionally, these dealers in men are made to pay fearfully the penalty of their nefarious occupation. I was told, that only two or three months before I passed this way, a 'gang' had surprised their conductors, when off their guard, and had killed some of them with axes."—Vol. i. pp. 128—130.

THE STRUGGLE OF GENIUS WITH PAIN.

PAIN is not entirely synonymous with evil, but bodily pain seems less redeemed by good than almost any other kind of it. From the loss of fortune, of fame, or even of friends, philosophy pretends to draw a certain compensating benefit; but, in general, the permanent loss of health will bid defiance to her alchemy. It is

universal diminution, equally of our resources, and of our capacity to guide them; a penalty unmitigated, save by love of friends, which then first becomes truly precious to us; or by comforts brought from beyond this earthly sphere, from that serene Fountain of peace and hope, to which our weak philosophy cannot raise her wing. For all men, in itself, disease is misery; but chiefly for men of finer feelings and endowments, to whom, in return for such superiorities, it seems to be sent most frequently, and in its most distressing forms. It is cruel fate, for the poet to have the sunny land of his imagination, often the sole territory he is lord of, disfigured and darkened by the shades of pain; for one whose highest happiness is the exertion of his mental faculties, to have them chained and paralysed in the imprisonment of a distempered frame. With external activity, with palpable pursuits—above all, with a suitable placidity of nature, much, even in certain states of sickness, may be performed and enjoyed. But for him, whose heart is already over keen, whose world is of the mind, ideal—internal; when the mildew of lingering disease has struck that world, and begun to blacken and consume its beauty, nothing seems to remain but despondency, and bitterness, and desolate sorrow, felt and anticipated to the end.

Woe to him if his will likewise falter, if his resolution fail, and his spirit bend its neck to the yoke of this new enemy! Idleness and a disturbed imagination will gain the mastery of him, and let loose their thousand fiends to harass him—to torment him into madness. Alas! the bondage of Algiers is freedom compared with this of the sick man of genius, whose heart has fainted, and sunk beneath its load. His clay dwelling is changed into a gloomy prison; every nerve is become an avenue of disgust or anguish; and the soul sits within, in her melancholy loneliness, a prey to the spectres of despair, or stupified with excess of suffering, doomed as it were to a life in death, to a consciousness of agonized existence, without the consciousness of power, which should accompany it. Happily, death, or entire fatuity, at length puts an end to such scenes of ignoble misery; which, however, ignoble as they are, we ought to view with pity rather than contempt.

Such are frequently the fruits of protracted sickness in men otherwise of estimable qualities and gifts, but whose sensibility exceeds their strength of mind. In Schiller, its worst effects were resisted by the only availing antidote; a strenuous determination to neglect them. His spirit was too vigorous and ardent to yield even in this emergency. He disdained to dwindle into a pining valetudinarian; in the midst of his infirmities, he persevered with unabated zeal in the great business of his life. As he partially recovered, he returned as strenuously as ever to his intellectual occupations; and often, in the glow of poetical conception, he almost forgot his maladies. By such resolute and manly conduct, he disarmed sickness of its cruellest power to wound; his frame might be in pain, but his spirit retained its force, unextinguished, almost unimpeded. He did not lose his relish for the beautiful, the grand, or the good, in any of their shapes. He loved his friends as formerly, and wrote his finest and sublimest works when his health was gone. Perhaps no period of his life displayed more heroism than the present one. *Carlike's Life of Schiller.*

Amongst his irregularities, it must be reckoned that he (Rousseau) is sometimes moral, and moral in a very sublime strain. But the general spirit and tendency of his works is mischievous; and the more mischievous for this mixture: for, perfect depravity of sentiment is not reconcilable with eloquence; and the mind (though corruptible, not complexionally vicious) would reject, and throw off with disgust, a lesson of pure and un-mixed evil. These writers make even virtue a pander to vice.—*Burke.*

Poetry.

[In Original Poetry, the Name, real or assumed, of the Author, is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

THE TWO GRIEFS.

NO. II. — LAMENT OF THE CHRISTIAN.¹

By S. M.

I GIVE thee to thy parent dust,
Thou loved and wasted form,
I murmur not, for God is just,
And I am but a worm;
I kneel upon thy grave, while prayer
Bursts from mine aching heart,
Ah, Saviour, reunite us, where
We cannot part!

Thou Merciful! My tears are balm,
My very grief is bliss;
How shall I thank Thee, for a calm
So deep and still as this?
The full assurance of my faith
Is built on Thy true word,
I know that there is life in death,
Life with the Lord.

Thou not condemnest that my tears,
So fast, so bitter, flow—
No, I may pour into Thine ears
The fulness of my woe;
I come as to a Friend, whose heart
Its humanness hath kept—
Who shall forbid my tears to start,
Since Jesus wept?

Thou know'st how hard it is to give
The love of years away,
Thou know'st 'tis bitterness to live,—
Yet not for death I pray;
I pray for patience—strength to bear
The burthen Thou hast given,
And faith to cheer my fainting prayer
With thoughts of heaven.

Yet, if a rebel thought oppose
Thy Spirit's pure control,
Oh, charge it on my mighty woes,
Not on my feeble soul!
By Thee, my weakness strength shall win,
In Thee, my soul shall live,
My grief Thou pitiest, and my sin
Thou wilt forgive!

Oh Faith, lift up my drooping love!
Tell of the promised Home,
The union, earth's chill clouds above,
Where parting cannot come!
In hope I kneel, for strength I pray,
And peace is surely won,
As from my bleeding heart I say,
Thy will be done!

(1) The passage in Mrs. Hemans's Journal, which suggests the contrast between the feelings of a Christian and an educated Heathen, under the greatest of earthly afflictions, as a fit subject for poetry, is to be found among the extracts from her private memoranda, given in her Life, by her sister. Another of these memoranda suggested the poem in "German Ballads and Songs," (Preside Library,) entitled "Odin's Sacrifice." The reader is requested to correct a misprint in "The Lament of the Heathen Sage;" to which, of course, the present little poem must be considered as a companion. The last two lines of the third verse should have stood thus:—

"Thy clear, bright, living eyes—oh mockery!
It is impossible that thou shouldst die!"

the word "why" at the end of the first line being an error; and in the third line of the 5th verse, *love* is erroneously printed for *lore*.

THE WIDOWER'S GARLAND.¹

HERE rests a mother. But from her I turn,
And from her grave.—Behold—upon that ridge,
That, stretching boldly from the mountain side,
Carries into the centre of the vale
Its rocks and woods—the cottage where she dwelt;
And where yet dwells her faithful partner, left
(Full eight years past) the solitary prop
Of many helpless children. I begin
With words that might be prelude to a tale
Of sorrow and dejection: but I feel
No sadness, when I think of what mine eyes
See daily in that happy family.
—Bright garland form they for the pensive brow
Of their undrooping father's widowhood,
Those six fair daughters, budding yet—not one,
Not one of all the band, a full-blown flower.
Dearest, and desolate of soul, as once
That father was, and filled with anxious fear,
Now, by experience taught, he stands assured,
That God, who takes away, yet takes not half
Of what he seems to take; or gives it back
Not to our prayer, but far beyond our prayer;
He gives it—the boon produce of a soil
Which our endeavours have refused to till,
And hope hath never watered. The abode,
Whose grateful owner can attest these truths,
Even were the object nearer to our sight,
Would seem in no distinction to surpass
The rudest habitations. Ye might think
That it had sprung self-raised from earth, or grown
Out of the living rock, to be adorned
By nature only; but, if thither led,
Ye would discover then a studious work
Of many fancies, prompting many hands.
Brought from the woods, the honeysuckle twines
Around the porch, and seems, in that trim place,
A plant no longer wild; the cultured rose
There blossoms, strong in health, and will be soon
Roof-high; the wild pink crowns the garden-wall,
And with the flowers are intermingled stones
Sparry and bright, rough scatterings of the hills.
These ornaments, that fade not with the year,
A hardy girl continues to provide;
Who, mounting fearlessly the rocky heights,
Her father's prompt attendant, does for him
All that a boy could do, but with delight
More keen and prouder daring; yet hath she,
Within the garden, like the rest, a bed
For her own flowers and favourite herbs, a space,
By sacred charter, holden for her use.
—These, and whatever else the garden bears
Of fruit or flower, permission asked or not,
I freely gather; and my leisure draws
A not unfrequent pastime from the sight
Of the bees murmuring round their sheltered hives
In that enclosure; while the mountain rill,
That sparkling thrills the rocks, attunes his voice
To the pure course of human life which there
Flows on in solitude. But, when the gloom
Of night is falling round my steps, then most
This dwelling charms me; often I stop short,
(Who could refrain?) and feed by stealth my sight
With prospect of the company within,
Laid open through the blazing window:—there
I see the eldest daughter at her wheel
Spinning amain, as if to overtake
The never-halting time; or, in her turn,
Teaching some novice of the sisterhood
That skill in this or other household work,
Which, from her father's honoured hand, herself,
While she was yet a little-one, had learned.
Mild man! he is not gay, but they are gay;
And the whole house seems filled with gaiety.

(1) See Engraving, page 97.

—Thrice happy, then, the mother may be deemed,
The wife, from whose consolatory grave
I turned, that ye in mind might witness where,
And how, her spirit yet survives on earth!
Wordsworth.

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—Montaigne.

HYDER ALI'S REVENGE.

WHEN, at length, Hyder Ali found that he had to do with men who either would sign no convention, or whom no treaty and no signature could bind, and who were the determined enemies of human intercourse itself, he decreed to make the country possessed by these incorrigible and predestinated criminals a memorable example to mankind. He resolved, in the gloomy recesses of a mind capacious of such things, to leave the whole Carnatic an everlasting monument of vengeance, and to put perpetual desolation as a barrier between him and those, against whom the faith, which holds the moral elements of the world together, was no protection. He became, at length, so confident of his force, so collected in his might, that he made no secret whatsoever of his dreadful resolution. Having terminated his disputes with every enemy and every rival, who buried their mutual animosities in their common detestation against the creditors of the Nabob of Arcot, he drew from every quarter whatever a savage ferocity could add to his new rudiments in the arts of destruction; and compounding all the materials of fury, havoc, and desolation, into one black cloud, he hung for a while on the declivities of the mountains. Whilst the authors of all these evils were idly and stupidly gazing on this menacing meteor, which blackened all their horizon, it suddenly burst, and poured down the whole of its contents upon the plains of the Carnatic. Then ensued a scene of woe, the like of which no eye had seen, no heart conceived, and which no tongue can adequately tell. All the horrors of war, before known or heard of, were mercy to that new havoc. A storm of universal fire blasted every field, consumed every house, destroyed every temple. The miserable inhabitants, flying from their flaming villages, in part were slaughtered; others, without regard to sex, to age, to the respect of rank, or sacredness of function—fathers torn from children, husbands from wives, enveloped in a whirlwind of cavalry, and amidst the goading spears of drivers, and the trampling of pursuing horses, were swept into captivity, in an unknown and hostile land. Those who were able to evade this tempest, fled to the walled cities; but, escaping from fire, sword, and exile, they fell into the jaws of famine.—Burke.

THE greatest of modern philosophers (Bacon) declares that "he would rather believe all the fables in the Legend, and the Talmud and the Alcoran, than that this universal frame is without mind."—Stewart.

Nature's Farewell.

"The beautiful is vanished, and returns not."
COLERIDGE'S *Wallenstein*.

A YOUTH rode forth from his childhood's home,
Through the crowded paths of the world to roam;
And the green leaves whisper'd, as he pass'd,
"Wherefore, thou dreamer, away so fast?"

Knew'st thou with what thou art parting here,
Long wouldst thou linger in doubt and fear;
Thy heart's free laughter, thy sunny hours,
Thou hast left in our shades with the spring's wild flowers.

Thou mayst come to the summer woods again,
And thy heart have no echo to greet this strain;
Afar from the foliage its love will dwell:
A change must pass o'er thee; farewell, farewell!"

On rode the youth; and the fountains and streams
Thus mingled a voice with his joyous dreams:—
"We have been thy playmates through many a day,
Wherefore thus leave us? oh, yet delay!

Listen but once to the sound of our mirth;
For thee 'tis a melody passing from earth!
Never again wilt thou find in its flow,
The peace it could once on thy heart bestow.

Under the arch by our mingling made,
Thou and thy brother have gaily play'd;
Ye may meet again where ye roved of yore,
But as ye have met there—oh, never more!"

On rode the youth; and, the boughs among,
Thus the wild birds o'er his pathway sung:—
"Wherefore so fast unto life away?
Thou art leaving for ever thy joy in our lay!

Thou wilt visit the scenes of thy childhood's glee,
With the breath of the world on thy spirit free;
Passion and sorrow its depths will have stirr'd,
And the singing of waters be vainly heard.

Thou wilt bear in our gladsome laugh no part—
What should it do for a burning heart?
Thou wilt bring to the banks of our freshest rill
Thirst which no fountain on earth may still!

Farewell!—when thou comest again to thine own,
Thou wilt miss from our music its loveliest tone.
Mournfully true is the tale we tell—
Yet on, fiery dreamer;—farewell, farewell!"

And a something of gloom on his spirit weigh'd,
As he caught the last sounds of his native shade;
But he knew not, till many a bright spell broke,
How deep were the oracles nature spoke!

From Poems by the late Mrs. HEMANS.

LUCY COOPER.

(An Australian Tale.)

CHAP. I.

It is not the custom of this country to advert to the offence for which a prisoner has been transported. Many reasons induce me to observe a profound silence on this point, whilst I detail the eventful scenes in the life of Lucy Cooper, after her arrival in Australia. The name of the village in England where she was born, and even that of her family, are concealed on the same account. Lucy Cooper was the name by which she chose to be distinguished here, and I have adopted it under the impression that the truth of my narrative, and the impressive lesson it conveys, will suffer no material diminution from the change.

It was early in the year 1836, that the *Pyramus*, a convict ship, from Deptford, dropped her anchor in Sydney Cove. The morning had been obscure and moist, and the light on the South Head was first perceived about three o'clock. Towards five, the bold promontories of Sydney Harbour, now distinctly visible in the daylight, and distant about a mile asunder, lowered on

either bow; the middle head, within them, appeared to terminate the shallow bay; when, suddenly, an opening to the southward presented a channel for the further progress of the ship, which almost immediately opened to the westward, and displayed the noble waters of this celebrated port. The pilot had already assumed the direction of the vessel, which he had boarded from his whale-boat manned by four stout New Zealanders. The rain had gradually increased, until it assumed the settled character with which it is observed to descend in these latitudes, frequently for three or four days together, whilst the women had been ordered below, as well to secure them from the weather, as to prevent their hindering the crew in the important duty of working the ship. To those unhappy prisoners, therefore, two hundred and twenty-seven in number, the magnificent scenery of the Australian shores afforded no other joy, than the poor consolation that their perils by sea were terminated, and the privations and discomfort of a five months' voyage about to be exchanged for miseries yet untried. Under the most favourable circumstances, females on board ship experience annoyances which are unknown to the other sex; and the amusements of which they are capable, are still fewer than those which break the monotony of a sea life to men. But, under the restrictions of a prison-ship, with a miserable diet, and a scanty provision of things of humblest necessity, together with poor clothing, and the crowded decks, it needed only the profligacy of more than two hundred bad women, confined together within the narrowest limits, for such a protracted period, to render the *Pyramus* a dreadful place of confinement and distress. It was with pleasure, therefore, that the women made preparations to go on shore. What little improvement in their costume their humble means afforded, was soon effected; and the prisoners were mustered and handed over to the authorities. A large proportion of the women were immediately assigned to private service; and, amongst the rest, Lucy Cooper was allotted to the family of a barrister of some eminence, who immediately sent to have her conveyed to his country house.

Although every sentiment of piety had been almost extinguished by a succession of events that, for eleven months, had crowded upon each other with painful and confused rapidity; and the abandoned wretches, by whom she was surrounded, omitted no occasion to ridicule and insult the least tendency to promote decency and order, still more any reverence for the laws of God or man; the force of early habit prevailed so far, that, when Lucy set her feet once more upon the "dry land," an involuntary murmur passed her lips, expressive of her thankfulness to God. The landing-place projects far into the sea, being composed of massy stones, and affording a safe and easy footing. It leads to the northern extremity of the town, from whence the sea and land view are equally beautiful; and here a man was waiting, with a dray and four bullocks, ready to receive his fellow-servant, who was safely lodged among some packages of grocery, butcher-meat, and a basket of bread.

The slow pace of the bullocks, as they pursued their way down George Street, which is the principal street of Sydney, gave the stranger an opportunity of gazing at the rising opulence of this new capital. St. Philip's Church, the eldest born of the Church of England in the colony, was seen at the summit of a hill to the right, a few hundred yards removed from George Street; and still further on, to the left, the spire and church of

St. James were very conspicuous. The shops were full of business; the streets resounded with the hum of men; and evidence of the English origin of the place was no where wanting. Gradually, however, the houses ceased to be continuous; open fields, which are now covered with the habitations of men, succeeded; and the turnpike-gate, of English aspect and construction, proved the limit of the town. The roads were deep in mud and clay; deep ruts and pools swallowed up the wheels, and the gutters on either side of the streets rolled their headlong torrents down the brick-field hill. The rain fell continuously, and gave no signs of intermission. To wrap herself in a coarse great coat belonging to the driver, and to take refuge beneath the folds of a heavy tarpaulin which lay upon the dray, was a natural and obvious measure. Dejection and low diet made the young woman shrink and shudder on the jolting vehicle, and a few scalding tears coursed one another down her cheeks, as the helpless, homeless, friendless nature of her position forced itself upon her thoughts. But Lucy's meditations were soon interrupted. The dray stopped by the road-side, where a red bull's portrait indicated the presence of a public-house, one only of the very many which abound in the neighbourhood of Sydney. Here, without any attempt at concealment, an official of the inn picked a few stitches in the seam of a sack of flour deposited at the side of the dray; and having permitted the meal to flow forth in a full stream, which he received into a stable pail, he quickly disappeared with the plunder down a gateway. The driver looked on with apparent indifference, until the same person reappeared, bearing in each hand an overflowing glass of rum. The driver handed one of them to Lucy, and bade her "take a ball" to keep out the wet; at the same time he poured the contents of the other down his throat, and proceeded to light his short and blackened pipe. Lucy Cooper, however, without tasting the coarse and acrid stimulant, returned the glass to her fellow-servant, who testified no small amazement at her refusal to exhaust it, but showed no unwillingness to finish what his new acquaintance had left undone.

The bullocks resumed their plodding pace; the flour trickled from the dray into the mud; the rain continued to descend, and Lucy shrunk back into her shelter. At this moment a horseman, buttoned and cloaked up to the chin, suddenly drew up his powerful beast, and called upon the driver to stop his team. He swore vehemently at the man, and bade him secure the sack. "But stay," said he; "what scheme is this, Joe? Who cut the sack?"

"I don't know, sir," was the reply.

"Well," said his master, "I will make you know to-morrow morning, if you don't find out to night. Let us see,—the seam is opened, and your track is marked upon the road by a long white line. Get home as fast as you can, and I will follow you."

Joe sounded his heavy bullock-whip, and his sluggish cattle again set forward. But his master, intent upon tracing a clue so obviously presented to his scrutiny, trotted back to the Red Bull, whither the evidence of the flour guided him, and, taking to the gateway without inquiry or delay, seized upon John Ostler in the stable, with the pail of flour in his hand. A constable was immediately procured, who, at a single word from the horseman, carried off the ostler and his pail to the nearest watch-house, which in this colony stands open day and night for the reception of visitors. Although this scene passed with as little noise and delay as possible, the landlord from within was alarmed, and with many bows and scrapes to the horseman, begged to know what was the matter.

"I will tell you," said he, "to-morrow morning at nine o'clock. You will not give me the trouble, I am sure, to send for you. At the police-office, to-morrow morning."

"Yes, your worship," said the publican, and bowed the magistrate out of his stable-yard, who once more set

spurs to his horse, and plunged down the steep road towards home, scattering the mud and slush in all directions. He rode by the dray without further notice, and was soon out of sight. Three or four successive hills and valleys were passed on a road of ample width, enclosed on both sides by a four railed fence, and through a thickly wooded country, partly cleared and partly lumbered with trees, some standing, some fallen, and occasionally smouldering with a fire that had continued burning for many weeks. In this manner they passed Annandale and Elswick, and finally turned up a narrow lane, some three furlongs in length, at the end of which lay the garden and cottage residence of Feversham. In a secluded part of the road, Joe, having first looked around him to see that he was not observed, drew near the side of the dray, and explained to Lucy that the horseman who had thus preceded them was their master, and that he was apprehensive of the consequences of the robbery that had been committed. "Master," said he, "is a wide awake chap, and will spare neither of us; but, my girl," he continued, "shut your eyes and see nothing; shut your ears and hear nothing; shut your mouth and say nothing; or you will lead but a so so life, I can promise you." Lucy made no reply, but inwardly determined to use all the discretion she was mistress of, in dealing with her master and her fellow-servants, until she should learn with some certainty the true nature of her position.

Feversham house, built on the ground floor, after the fashion of this colony, was a quadrangle, open in the centre, and surrounded on three sides by a wide verandah, sustained by white columns of wood at due intervals. The south side, which in this hemisphere is rarely cheered by the sun, was occupied chiefly by the offices, and was without the shelter afforded to the other sides. Here Joe assisted Lucy to alight; and the poor girl, feeble with the privations of the voyage, ill-fed, and drenched with rain, could hardly summon strength to walk into the kitchen, whilst Joe proceeded to unload his dray, and deliver his cargo to Mrs. Caveat, who was waiting with her keys to see it safely deposited.

"I am afraid, ma'am," said Joe, "this here sack is bursted, and the flour lost; how's ever, there aint much on it gone."

"Ah! Joe, Joe, you are always meeting some misfortune. The Doctor is just come home, and says he will put a stitch or two between your shoulders to-morrow."

"Aye, aye," said Joe, "my back must suffer for it, I know. Whatever happens, the scourger is the man to set all to rights."

Two or three more of the men came up to assist in getting the dray unloaded, which was no sooner done, than the oxen were unyoked and turned into the paddock, the dray left standing at the kitchen-door, and the men retired to their huts to waste the day, which was wholly unfavourable for labour in the open air, and therefore spent in sleep, as soon as their scanty rations had been cooked and devoured.

Mrs. Caveat now returned to the kitchen, where an old and ill-favoured Irish woman was engaged at the washing-tub, stealing glances at the new comer, but without attempting to show her any kindness.

"What is your name, young woman," said Mrs. Caveat. "I am afraid you are very wet. But take off your shoes and stockings, and change your clothes, if your bundle contains a change, at least. Walsh shall give you a basin of hot tea and a damper, and then you shall tell the Doctor what happened upon the road; and mind you tell the truth, or you will begin by getting into trouble. The Doctor will be your friend if you deserve it; but he never pardons those who treat him ill." Mrs. Caveat left Lucy by the fire-side, which glowed in the midst of an Australian summer, with three or four logs of "iron-bark" lying on the bricks, and ministering flames to the blackened sides of a huge cauldron suspended from a ponderous bar in the

chimney, and neighbored by a boiler with a brass top, designated here as a "kitchen." The roof was unceiled, the rafters black with smoke; the window was not glazed, but furnished with the necessary complement of iron bars, a check curtain, partly drawn, and a wooden shutter of the clumsiest construction. The dresser and the shelves exhibited the shattered remnant of what had once been a costly service of crockery ware, now reduced by reckless servants and intruding poultry to the true colonial condition of shabby-genteel. A huge settle, a heavy but crippled cedar table, and a few three-legged stools, completed the furniture of the kitchen. Walsh, who, in obedience to her mistress's orders, had made a cup of tea, now pointed to the smoking beverage as it stood upon the table, and bade Lucy make it as sweet as she pleased. But Lucy looked for milk, which Walsh quickly understood, and said, "You will get no milk here, until you find the way to help yourself; all you prig you have; and if you go without, it is your own fault. Do not snivel, but drink your tea, and eat your bread; master will send for you in about an hour's time, when he has dined and taken his wine. But if he gets anything out of you against Joe, you will have reason to be sorry as long as you live. Take my advice, and keep your own counsel."

The forlorn and wretched girl was overwhelmed with her own miseries, rendered doubly oppressive by the circumstances of the weather and her situation. She could form no opinion of the extent and nature of the danger which threatened Joe or herself, and felt almost indifferent about whatever might befall her. However she gradually recovered her cheerfulness, and was replying to certain inquiries of her repulsive acquaintance, when a smart lad, in a pink jacket, who had been attending on his master at dinner, put his head in at the kitchen door, and said, "Now, then, Miss Newcome, it is your turn. Come this way, and show yourself. Joe is in it, and you have begun early. Mind your answers, and don't blow upon him. Come round by the verandah: these is the bed rooms; here is master's, and this is the dining-room." They had reached the north-east corner of the cottage; an outer door was opened, and Lucy found herself in the presence of Dr. Caveat. The room was covered with a magnificent Turkey carpet; there were three or four large paintings, done in a good style, upon the wall; a sideboard with a profusion of glass and plate; the windows were curtained, and every thing combined to testify to the wealth and consequence of the owner. Dr. Caveat had not removed from table; Mrs. Caveat, if she was entitled to the name, sat by his side; and a parcel of briefs and legal documents lay loose among the glasses and the fruit.

The Doctor, without looking round, began the conversation. "You are just landed, I believe," said he; "have you had a tolerable passage?"

"We were five months, and had a great deal of bad weather, sir."

"Had you any sickness on board?"

"A good deal, sir."

"How many deaths?"

"Thirteen deaths, sir; amongst the rest"—Lucy began to sob.

"Amongst the rest?"—continued the doctor, in a tone of inquiry.

"Amongst them, sir, was my poor sister."

"What was her age?—How old are you?"

"I am twenty, sir; my sister was twenty-one."

"Were you well treated?—Have you any complaints to make?"

"None at all; we were as well treated as our condition allowed, and better, I am sure, than we deserved."

"Well, I rejoice to hear you say so. My inquiries have hitherto been productive of some good, at any rate. Your name," continued Dr. Caveat, examining a scrap of paper which had been forwarded with the prisoner, whose description it bore, "your name, I see, is Lucy Cooper."

Lucy acknowledged her name in a quiet way, and without speaking.

"Well, Lucy," said the Doctor, whilst he sipped his wine, "do you remember seeing me upon the road?"

"I should not have known you again, sir," Lucy faltered out.

"You had halted at the Red Bull, had you not?"

"We stopped for a minute at a public-house, but I did not notice the sign, sir."

"What had you to drink?" demanded the Doctor.

"I drank nothing, sir," was Lucy's answer.

"I see," said Doctor Caveat, "you have already acquired the colonial accomplishment of keeping a secret. If you drank nothing, tell me girl, what did Joe drink?"

"I cannot say, sir," was Lucy's answer.

"Cannot and will not are all one," said Doctor Caveat, "but Joe shall tell us in the morning himself, if whipcord can make him speak. As for you, young woman, I was in hopes, from your youth and inexperience, to have found you faithful to my interest, and attached to my family—when you became acquainted with us, I mean—but you will choose your friends, I suppose, and go your own ways in spite of any thing I can offer you."

"Indeed, sir," replied Lucy, "I feel the want of a friend, and hope that my good conduct will recommend me to your consideration."

"Enough, enough, young woman," interrupted Mrs. Caveat, startled at a word or two that Lucy uttered, and not greatly pleased with the gentle tones in which they were conveyed; "if you have nothing further to communicate to the Doctor, you may go back to the kitchen. Walsh will find you something to do."

It would seem that the examination which had taken place had been diligently reported in the kitchen by him in the pink jacket, and had produced a favourable effect upon the company there assembled, which now consisted of Jenny Muckle from the laundry, an old Scotchwoman, Betsy Shindles, the cook, a young Londoner of three-and-twenty, the foresaid Anne Walsh, and Tom Collins, in the pink jacket, who had been born in the colony, and brought up in the Male Orphan School at Liverpool. These assigned women of the Doctor's, and the privileged boy, who had the run of the whole house from the kitchen upwards, and also visited the men's huts whenever he pleased, and who thus formed an easy mode of communication between all hands, and on that account had acquired the honourable appellation of Pug Mischief, were all regaling themselves upon that choice luxury of Australia, a cup of tea; and were calculating the probability of an amour between the Doctor and Lucy; the desirableness of a change in the executive by the removal of the acting Mrs. Caveat, and the suitableness of her prospective successor to the wants and wishes of the community there assembled.

Jealousy and the elder women were not unacquainted, notwithstanding all the disqualifications of original ugliness, and the dilapidations of a lengthened colonial service in the ranks of vice and debauchery; ceaseless exposure to the sun by day, and the visitations of mosquitoes by night; but with Betsy Shindles, who had already made some progress towards intimacy with her learned master, and whose hopes were accordingly raised much higher than the due value of her merits justified, that unpleasant feeling rose in her throat with suffocating power, and she gave vent to her uneasiness by staring at Lucy, and turning up her nose at her.

"I am glad you did not split upon Joe," said Walsh, "though I believe his luck's against him."

"Yes, he is booked for fifty before breakfast to-morrow," added Tom Collins.

"They'll curl his hair for him, pair fellow," said Jenny Muckle, turning her tea into a soup-plate that stood upon the dresser, and blowing upon the steaming surface; "we ne'er blow upon one another, lassie; that's aye the rule, and so you'll find it."

"Bring your pannikin, girl, and take your tea," said Walsh, who had been cooking the beverage since Lucy

first came in, "and see you get your rashions (rations) served out to you."

"Rashions," said Lucy, glad to say something, and yet unwilling to speak of master or servant, "what are rashions?"

A loud laugh followed this betrayal of ignorance, which a week's residence in the land would have rendered impossible.

"There is an innocent," said Shindles; "we must send her for some pigeon's milk."

But Walsh was inclined to patronize Lucy, and took upon herself to explain. "Your rashions is your week's whack."

"My what?" said Lucy.

"Well," said Tom Collins, "she is fresh, that's certain; I must teach you, Lucy, all about your rashions, and a thing or two besides."

"As if," interposed Betsy Shindles, "the ladies of the Pyramus were dumb, and did not enlighten one another. Such innocence won't do with me. I am not so flat, nor she neither, as all that comes to."

But the tea-party was broken up by the entrance of Mrs. Caveat into the kitchen, whereupon the ladies suddenly dispersed in various directions to resume the drudgery of their calling, which was now augmented a hundred fold by the deluge of rain streaming through the roof in various places, and soaking under the doors, whilst the unpaved courts were ankle deep in mud, the eaves dripped in torrents, the rain descended perpendicularly; there was no wind, no motion among the trees, no noise of any kind to break the dull monotony of a weeping day, in the midst of which the poor shoeless and drenched women paddled to and fro about their several occupations.

It was not any addition to Lucy's comfort during this first day at Faversham, that no employment was allotted to her to occupy her thoughts, and distract her mind from the intense feeling of loneliness and desertion which overwhelmed her. At length, however, the night came on, and very early in the evening, the women of the household crawled up a steep ladder into a close and heated cock-loft, subject alike to the rain and the influence of the sun, where, upon a stretcher bedstead and a straw mattress, each of the assigned servants wrapped herself in her blanket and horse rug, and after a long and tedious gossip fell asleep.

But, if the previous day had been rainy in the extreme, the following morning was as delightful and splendid. Long before sunrise, the whole of the eastern firmament glowed with rosy brightness. There was not a single cloud to be seen. The sloping sunbeams now poured their radiance from the Annandale ridge, lighting up ten thousand jewels in the grass, wet with the blessing of yesterday. A bed of monthly roses, which nearly closed the north verandah, glistened with the drops, and bore as many flowers as leaves; the garden plots were full of the choicest plants, English and Australian, whilst the cleared land rose in many an undulating slope, till in the distance it was closed by the bush, full of gigantic trees and smaller shrubs. The cows were slowly returning to their pasture in the bush, having been early brought to the pail, or, in Colonial phrase, having been early bailed up, a process which consists of securing the head of the beast between two stout posts, and oftentimes accompanied by securing one of her hinder feet with a leg rope. Nothing can be finer than the early morning; but the heat soon becomes more and more oppressive, until towards ten o'clock a breeze generally rises and mitigates the ardent ray. But servile occupations and the enjoyments of nature are somewhat incompatible; the wearied wretch rises from his bed little refreshed by sleep, which swarms of mosquitoes interrupt; and the day brings with it only a succession of toil, and a new series of annoyance and temptations. Something, moreover, had evidently occurred during the night, as was manifest by the whispering of certain of the women, and the uneasy attention which every circumstance obviously

excited. At length, when Doctor Caveat left his room, it was understood, without further reserve, that Joe, the driver, had run away from his master's service in the night, or, in the Colonial phrase, had taken to the bush, accompanied by a younger man named Burton, who had chosen to go with him, although under no immediate provocation. Dr. Caveat's service was peculiarly severe; the toil, perhaps, was not heavier nor of longer duration than elsewhere, but there were no circumstances of alleviation, no kindness of manner, nor forbearance. Punishment followed offence infallibly; it was always more severe than the demerit, and not unfrequently quite undeserved. Doctor Caveat was looked upon, therefore, with much dislike; to which the contrast of his practice with his opinions gave additional weight; for he always advocated liberal opinions, proclaimed the natural rights of the people, and was a decided and uniform opposer of all the measures of government. Besides all this, he exacted with watchful rigour the full labour of his men, at the same time that he took every unfair advantage of them in the quality and quantity of their rations: for these reasons, his character was widely known from one end of the Colony to another; and there was, perhaps, not a single ironed gang in New South Wales, in which his name and conduct were not freely discussed and rendered odious. It is not to be wondered at, therefore, that Joe should have come to the resolution he had taken, amidst the encouragement of his companions, and under the well-grounded apprehension of a punishment hardly less severe than that in store for him, should it be his fate to be re-captured and dealt with accordingly.

SIR RICHARD WHITTINGTON, KNT.

WHO is there that has not heard of the renowned Sir Richard Whittington, the thrice lord mayor of London, and, probably, the only one who was thrice buried? His name is a household word; we learned to lip it with the imperfect accents of early childhood, when the adventures of himself, and of his immortalised cat, were to us as a pleasant tale. In after years, still mindful of our early impressions, we think of him with yet greater admiration, for his industry, his integrity, his munificence, and his piety: still do we remember the industrious servant, the prosperous merchant, and the munificent benefactor to that city, over which he thrice presided as chief magistrate. Other nursery tales lose their interest with us, as we grow up; the impossibility of some, and the fact of our not feeling any sympathy with others, cause them to become to us as forgotten dreams; save when we hear them mentioned by our children. But the story of "Whittington and his Cat" possesses attractions for all, of a peculiar nature.

It is well remarked by Mr. Thoms,¹ that "the nursery story of 'Whittington and his Cat,'—the main incident of which is one of the most remarkable and wide-spread in the whole circle of legendary lore, as the reader may learn from Keightley's 'Tales and Popular Fictions,'—affords striking evidence of the influence of national character upon the popular tales of a country. Neither in the *Bibliothèque Bleue* of the French, nor in any of the German *Volksbücher*, is there to be found any similar tale, developing, as this obviously does, the two grand principles of action which distinguish the merchants of England,—integrity and perse-

¹) Stow's Survey of London, edited by W. J. Thoms, Esq. F.S.A. 1842; p. 91.

verance. Tales of love, and tales of war, are there in plenty; but a tale in which the success of the hero is made to depend upon the happy issue of a commercial enterprise, could only be expected to have its rise among a people, whom Buonaparte, in the bitterness of his heart, designated 'a nation of shopkeepers.'

"The earliest narration of Richard Whittington's adventures, is in Johnson's 'Crown Garland of Golden Roses,' 1612; but a still earlier allusion to the 'famous fable of Whittington and his Puss,' is in the play of 'Eastward Hoc,' written soon after 1603; and the popularity of the story is shown by Granger, ('Biographical History of England,' i. 65,) who, describing the print of Whittington, engraved by Elstrake, in which he is represented in a collar of SS., with his right hand on a cat, adds:—'The cat has been inserted, as the common people did not care to buy the print without it: there was none, originally, in the plate, but a skull in the place of it. I have seen only two proofs of the portrait in its first state, and these were fine impressions.'"

Of how much fabulous matter the history of Sir Richard Whittington—and, chiefly, that pertaining to his cat, (certainly the most celebrated one that ever existed,)—might be divested, we cannot now determine. Born of humble parents, and left an orphan at a tender age, it is probable that a great part of his boyhood was occupied in such manual labour as he was capable of undertaking; save the portions passed in the school of a monastery, if the neighbourhood possessed one of those places, which formerly filled the gap now occupied by our hospitals and our public schools—where he would lay the foundation of that learning which was eventually to be of service to him, as a merchant-prince, a worshipful knight, and the head of the most opulent and powerful corporation in the world.

We need not his quarrel with the cross cook, nor his memorable resting near the foot of Highgate-hill, nor his listening to the sound of the Bow-church bells, and returning to the city, nor his cat and its eventful exportation, nor the grim-visaged emperor of Morocco, nor the mice which the aforesaid awful face failed to scare from his table;—we need none of these to give to Whittington a charm and an interest, which are not equalled in the history of the whole of the other lord mayors of London. He stands alone. As he succeeded (after a period of seventeen years) Sir William Walworth in the mayoralty, we may conclude that he was a cotemporary of him, who also stands out from the long list, and occupies a prominent place in the city annals, and in English history, as having knocked from his horse the rebel, Wat Tyler. Before proceeding, we may just premise, that Whittington's history commences in the latter end of the long reign of Edward III., A. D. 1326—1377.

We see Richard Whittington leave his fatherless home, and, with a tearful eye, turn his back on the pleasant village which had given him birth,¹ his

little bundle of clothes hanging over his shoulder, — to seek his fortune in London, whose streets of "golden pavement" he longed to see. After a long and a weary journey, he finds himself on the summit of a hill; and, stretched out before him, in the south, is a city, more vast and mightier than any he had seen in his travels. The glorious array of the unnumbered towers and spires, overtopped by the cross on the spire of the cathedral church of St. Paul,² looked dim in the dense cloud of smoke resting over them; and his heart tells him, *that* is the city of his destination; but little wots he that he is, eventually, to become its chief magistrate. Passing through the village of Iseldon,³ his impatience brings him along Aldresgate; and he soon finds himself in the bustling centre of the city, at the end of West-Cheape,⁴ near the cathedral of St. Paul. How magnificent does it appear to him! (exceeding in dimensions any we now have in England,) its loftiest part crowned, then as now, with the symbol of redemption. Here, then, is Richard Whittington, in the heart of London,

"Unknowing and unknown."

How sinks the heart of the poor orphan-boy, in the throng and crowd of that busy thoroughfare! Nothing is so impressive as the *solitude* of a vast city, to the poor and indigent stranger. Of the numberless persons who pass him, none are like the old familiar faces of his native village; and he is now oppressed with feelings of a greater loneliness and desolateness than he had hitherto felt, even when crossing the dismal heath and the gloomy forest, on his journey hither. He enters the church, and his heart is relieved of much of its sadness, as he joins in the same services to which he had been accustomed at his home.

He was soon fortunate enough to enter into the service of Hugh Fitzwaren, a merchant of London. But here he was persecuted by an elder fellow-servant; and at length, weary of his sufferings, he resolved to leave London, and bend his steps back towards his native village. This he did, on the morning of the feast of Allhallows, now known among us as All Saints' Day.

Before he commenced the ascent of the long hill of Highgate, he sat down by the way-side to rest himself. The south wind, which was then blowing rather fresh, bore on its wings the sound—that for some time had been familiar to his ears—of the bells of the parish church of St. Mary-le-Bow; and, as he listened to their well-known tones, he half fancied—as others have done—that there was speech and language in the harmonious peal. Listening, with a saddened spirit, to the bells, he imagined they repeated the distich, which is now so familiar to all:—

"Turn again, Whittington,
Lord Mayor of London."⁽⁵⁾

Those bells, and that fancy of the poor youth, were the means of his attaining the eminence to

yet current in that neighbourhood. But the long distance from London, (nearly 300 miles,) the bad state of the roads, and the great inconvenience of travelling, in his time, render it very improbable that Whittington was born in Cumberland.

(2) The height of the spire of the fine old church of St. Paul, when Whittington came to London, was 520 feet. The magnificence and extent of that pile, which was destroyed in the great fire, A. D. 1666, may be inferred, from comparing its dimensions with those of the present building, erected by Sir C. Wren. The height of the present cross is only 356 feet.

(3) Now Islington.

(4) Now Cheapside; formerly called West-Cheape, to distinguish it from East-Cheape.

(5) At that time the peal contained only six bells.

(1) Hugh Todd, D. D., sometime prebendary of Carlisle, in his MS. "History of the Diocese of Carlisle,"—speaking of the parish of Great Salkeld, Cumberland,—says, that in his time, (circa 1660—1728) it was reported, that Sir Richard Whittington, third lord mayor of London, was born of poor parents, within that parish; that he built the church and tower from the foundation; and that he intended presenting three large bells to that parish, which, by some mischance, stopped at Kirkby-Stephen, in Westmoreland, on their way to Great Salkeld. A similar tradition is

which he succeeded in after years. He still listened, and still did the merry peal seem to repeat the same couplet in yet more distinct tones. This was "the tide in his affairs," which led to fortune. Gathering up his stick and his bundle, he *did* "turn again;" and hope inspirited him as he wended his way back to the smoke-covered city. Here he remained in the service of the same kind master under whose roof he had before dwelt, gradually rising in his estimation and confidence.

We may now recur to a later period of his history. In a few years we find him married to his master's daughter, the fair mistress Alice, a worthy wife for such a husband. In process of time, he rose to wealth and importance as a British merchant; and after serving the office of sheriff of the city of London, he was thrice elevated to the dignity of Lord Mayor. He enjoyed the confidence of Richard II., and of Thomas of Woodstock, Duke of Gloucester, for whose good estate the master, fellows, and others of the college which he founded, were enjoined to pray. He appears to have died between 1419 (the last year of his mayoralty) and 1422, as in the latter year we are told that "the west gate of London was begun to be built by the executors of Richard Whittington."¹

He was buried in the church of St. Michael-de-Paternoster, near Tower Royal. We learn from Stow, that "this church was new built, and made a college of St. Spirit and St. Mary, founded by Richard Whittington, Mercer, four [three] times mayor, for a master, four fellows, masters of arts, clerks, conducts, chorists, &c., and an alms-house, called God's house, or hospital, for thirteen poor men, one of them to be tutor, and to have sixteen pence the week; the other twelve, each of them to have fourteen pence the week for ever, with other necessary provisions, a hutch with three locks, a common seal, &c. These were bound to pray for the good estate of Richard Whittington, and Alice his wife, their founders; and for Sir William Whittington, Knight, and dame Joan his wife; and for Hugh Fitzwaren, and Dame Molde his wife; the fathers and mothers of the said Richard Whittington, and Alice his wife; for King Richard II.; and Thomas of Woodstock, Duke of Gloucester; special lords and promoters of the said Richard Whittington."² This foundation was suppressed at the Reformation, by the statute of Edward VI. As his charities were not allowed to remain, so neither did they allow his bones to rest in peace. Stow says, "This Richard Whittington was in this church³ three times buried; first, by his executors, under a fair monument; then in the reign of Edward VI., the parson of that church, thinking some great riches (as he said) to be buried with him, caused his monument to be broken, his body to be spoiled of his leaden sheet, and again, the second time, to be buried (!!); and in the reign of Queen Mary, the parishioners were forced to take him up, to lap him in lead as afore, to bury him the third time, and to place his monument, or the like, over him again, which remaineth; and so he resteth."⁴

The infamous treatment which the body of Whittington received from the mean-hearted "parson of that church," in the reign of Edward VI.,

and the apparently disgraceful and slovenly manner in which he was again buried, seem to have rendered it imperative on the parishioners of the time of Queen Mary, to exhume the remains, and to re-inter them with decency. Nor is this all. It appears that his monument was "broken," if not utterly destroyed, as is implied in the words, "to place his monument, or the like, over him again."

Of some of the other charities of Whittington, honest Stow can tell us:—"In the year 1421 [he] began the library of the Grey Friars, in London, to the charge of four hundred pounds. His executors, with his goods, founded and endowed Whittington College, with alms-houses for thirteen poor men; and divinity lectures, to be read there for ever. They repaired St. Bartholomew's Hospital, in Smithfield; they bare some charges to the glazing and paving of the Guildhall; they bare half the charges of building the library there;⁵ and they built the west gate of London, of old time called Newgate," &c.⁶

Whittington's College, (or alms-houses,) was rebuilt about twenty years since, within five hundred yards of the place where he is said to have sat and heard the bells of Bowchurch. It consists of a chapel, houses for the chaplain and the matron, and twenty-eight residences for the inmates. In the centre of the ground fronting the college, is a statue of the founder, represented as a boy, sitting, and lifting up the fingers of his right hand, attentively listening to the bells. He is dressed in a tunic, with a belt round his waist, and he has his bundle and stick. One shoe is taken off, apparently to ease his foot. Some miscreants have broken off some of the fingers and toes, and his stick is also broken.

We never pass the place, near the foot of Highgate-hill, pointed out by the stone that bears his name, and which is traditionally said to be the spot where Whittington, the friendless boy, sat and rested himself, but we remember his eventful history; we think of the manifold troubles of his early life, and the years of opulence and dignity of which they were the precursors. The blessings of Providence, which so remarkably attended him, he gratefully acknowledged, as we have seen, in works of benevolence, of alms-deeds, and of pious munificence. "He delivered the poor that cried, and the fatherless, and him that had none to help him. The blessing of him that was ready to perish came upon him: and he caused the widow's heart to sing for joy. . . . He was eyes to the blind, and feet was he to the lame."⁷ The nursery tale, commemorating his life, which is so eagerly listened to in childhood, may be the means of inciting many, as they grow up, to such industry and integrity as characterised the life of Whittington. Other men may have done like virtuously, and also have been thrice Lord Mayor;⁸ but the nursery tale has embalmed his memory more surely than the spices and the swathing of the Egyptian mummies; and the very children have learned his fame. So long as London retains its unapproachable pre-eminence,

(5) It appears, from Stow, that their library was robbed by Edward, Duke of Somerset, lord protector, who sent for the books, "with promise to be restored," "but they were never returned."

(6) Stow's Survey, ed. 1842, p. 41.

(7) Job xxix. 12, 13, 15.

(8) Henry Fitz Alwin, the first mayor, filled the office from 1st of Richard I., until the 15th of the reign of King John, upwards of twenty-one years. On the other hand, the year 1484 was remarkable for its three sheriffs, and three lord mayors, "by means of the sweating sickness, &c."

as a city of merchant princes—so long as Britain remains an empire, and the mistress of the seas—so long as the English is a living language—so long will the memory of Sir Richard Whittington live in the hearts of Englishmen, a pleasing example of the distinguished manner in which the Almighty does occasionally bless the labours of his servants.

WOMAN'S WILL;

OR, THE NEW PALFREY.

(From the German of Langbein.)

SIR HUGO had reached his fiftieth year unmolested by any passion save an ardent one for a flowing goblet. Instead of love passages, his delight was in tournaments, whence he always returned victorious. At length, he was flung from the saddle of his indifference by the beardless tilter, *Love!* He saw Angelica, the fairest maiden of the land, forgot his grey hairs, and, unmindful of the incongruity of an union between May and December, led her to the nuptial altar. Fortunately, Angelica was modest as she was fair, and her firm virtue repulsed the numerous butterflies that swarmed round the opening flowers of her beauty. Sir Hugo knew the tried virtue of his consort, and therefore was she to him dear and precious as the apple of his eye.

One morning he rode out to pay a visit to a neighbouring brother-in-arms, his honest squire, Conrade, trotting after him. Scarcely had they proceeded half way, when the knight suddenly stopped, and cried—

"Come here, Conrade; a most tormenting thought has just occurred to me. This is the very day that Father Nicholas comes to the Castle to say mass for my dear wife and myself, and I am not at all inclined to have him in my abode during my absence; so gallop back, and desire your lady, in my name, not to admit the priest."

Conrade paused, and shook his head, as if in doubt, and replied, "Excuse me, noble sir, but perhaps the Lady Angelica, if left to her own discretion, will do what you wish."

"A curse on your *perhaps*," exclaimed the knight; "I make all sure by giving the order."

"Do you think so?" replied the squire; "now I, in my simplicity, believe exactly the contrary. Take the advice of your faithful servant for once in your life; let things take their course, and give no orders upon so delicate a point."

"A fig for your delicacy!" cried Sir Hugo, angrily; "what absurd fancies have you got in your head to-day? Do you think an hour's ride back a task so very tedious?"

"Oh! if it comes to that, sir," rejoined Conrade, "I have no more to say." He put spurs to his horse, and rode back to the Castle.

Angelica saw him galloping up, and cried, in terror, from the window, "What has brought you back in such haste? Has any accident happened to my lord?"

"None whatever, gracious lady," answered Conrade, "but the noble knight was apprehensive that some accident might happen you, if by any chance you took a fancy to ride Sultan."

"I ride—ride the large greyhound!" exclaimed Angelica, in utter astonishment. "I believe you are drunk or mad. . . . It is impossible that your master can have sent me so ridiculous a message."

"Ay, but he did, though," pursued the squire; "and my noble master said, at the same time, that he knew Sultan would bite terribly, not being accustomed to be made a pony of; and he therefore begs that you will not attempt to divert yourself in that way." Having said this, he again mounted his horse, and galloped off to rejoin his master.

"Am I awake, or do I dream?" ejaculated Angelica. "The folly of Sir Hugo is so strange, that I am almost tempted to believe it all a wild dream. What does he mean? Is it not enough that I have hitherto tried to read his every will and wish, and when known, obeyed them implicitly; and do I deserve that he should stretch his power so far, and play the capricious, haughty tyrant? Now, I see that to be too submissive, too softly compliant, is not the way to treat him: the worm that crawls the dust is trampled upon. But no, sir knight, it is not gone quite so far with us yet; in spite of you, I will ride Sultan; and you may thank yourself, as, but for your message, such a thing would never have entered my head."

Her soliloquy was here interrupted by the entrance of a servant, who informed her that Father Nicholas had arrived, and was in the ante-chamber. "I cannot receive his visit to-day," said the consort of Sir Hugo, "for my lord is absent. Give this as my excuse to the reverend Father, and beg of him to return to-morrow."—"With all due respect to Father Nicholas," continued she, when left to herself, "he shall not spoil my pleasant ride. Now, if my pony were but here! He must have an easy gait, and his teeth—I do not fear: he is as quiet as a lamb. Oh! how I shall delight in this twofold pleasure of showing the surly old fellow that I care neither for him nor his orders; and of trying a pastime that is, at least, a novel one!" Through every corner of the house resounded now her cry of "Sultan! Here, boy! Sultan! Sultan!"

The immense, but docile animal sprang from a bone upon which he was feasting, and was at her side in an instant. Caressing him till she got him into a room, the door of which she shut,

"Now, friend Sultan," cried his fair mistress, "no growl, no bite, and all is safe." With her snow-white hand she continued stroking and patting his huge back for some minutes, and then in the hope that, if only through gratitude, he would comply with her fancy, she mounted her new steed. He showed his teeth a little, in some doubt what all this meant, but she soothed him again into a good humour, and patient endurance of the novel burthen; but he thought this quite enough, and did not stir from the one spot. Angelica was naturally not much pleased with being thus stationary; she therefore gently goaded him with her leg, but to no trot would Sultan condescend; he remained motionless as before, while something very like a growl escaped from his immense and fear-inspiring jaws. Out of all patience, she now exclaimed,—

"You shall feel the spur then, you lazy brute!" and drove her heel into his side. He now growled audibly, but stirred not an inch; she repeated her blow. This was too much for canine patience; he made a spring, and as she fell at full length upon the floor, he turned and bit her hand. The dismounted rider bedewed the floor with a few tears, and then sprang up to turn out of the room the uncourteous brute who had thus rudely shown how little he understood play.

Towards evening Sir Hugo returned, and inquired with suspicious haste whether Father Nicholas had been there.

"Oh yes, he was here," answered Angelica, "but I ventured to refuse him admittance."

The knight cast a triumphant glance at his squire, and whispered him, "Now, old Wisdom, do you see the use of my orders?"

Conrade, who, as may be supposed, had said nothing of the alteration he made in the substance of his embassy, shrugged his shoulders with a smile, unperceived by his master, who had turned again to his consort, and now first perceived that she wore a bandage upon her soft hand. He immediately inquired the cause.

"Sultan bit me," said Angelica; "and it is all your fault, Sir Hugo," added she, sobbing.

"My fault!" cried the knight.

"Yes, your fault, and nobody but yours," retorted his

spouse. "If you had not sent me word by Conrade not to ride the nasty mischievous brute, such a mad trick would never have entered my head."

In mute astonishment the knight hurried out to seek an explanation from his squire, who had slipped away when Angelica began her complaint. "What message did you bring your lady?" demanded he.

Conrade now confessed the truth.

"Were those the orders I gave you, scoundrel?" said the enraged Sir Hugo.

"Certainly not," replied the squire; "but you will own that I have made my point good. You may now see how it would have been had I given your order about the young priest. My noble lady is a model for her sex, and almost an angel; but still she is a daughter of Eve, who seems to have bequeathed to all her lineal female descendants her own spirit of perverseness. And we have only to remember the Lady Angelica's pleasant ride upon Sultan, to be convinced that it has lost none of its vigour in the *descent*."

THE LUNATIC ASYLUM.

(Translated from the French.)

It is nearly thirty years ago, when I was a judge of the State Council, that I received a commission to inspect the prisons and hospitals of several departments. The fulfilment of this duty took me to the town of —, to visit the Lunatic Asylum there. I had surveyed the portion of the building where the men were confined; the steward and physician had accompanied me from cell to cell, pointing out, with all the coolness of habit, every variety in this mournful spectacle. These excellent men, whose lives were patiently devoted to their melancholy duties, who had dedicated themselves with zeal to this work of humanity, seemed to be shewing me the rooms of a museum, and explaining objects of natural history. They gratified my curiosity; they related to me acts of insanity which I had not the opportunity of witnessing; they recounted fits of frenzy of some of the wretched beings whom I beheld calm and prostrate in a corner of their cell; they encouraged the conversation of those lunatics, who were so tractable as to be allowed to wander about their cells.

Their cheerful manner of speaking to them bore almost the appearance of gaiety, and I, who am far from being capable of such self-sacrifice, such devotion; I, who in my whole life shall not do as much good as they did in a day, could not conquer my emotion: feelings of repugnance and pity froze my heart, and made my hair stand on end. I longed to finish this sad visit, and to get out of this painful abode. We went into the hospital of the women: I was first conducted into a room where the Sisters of Charity were attending as superintendents to the duties of the infirmary. After some words addressed to the Superior, we were about to proceed on the new round, when we saw a young sister approach the physician, and ask him timidly, and in a faltering voice, "How is he to-day?" I looked at her attentively; she appeared to possess beauty, but had a countenance of deep melancholy. The physician replied, "What can you expect?—there can be no change." Then, turning to me, "She asks," he said, "after one of the lunatics in whom she is much interested." And the steward added, "It is the one in No. 17, at the end of the passage; I pointed him out to you." In fact, I recollected a young man, that I had seen tied to his bed, struggling with his bonds and shrieking fearfully.

"Why is she interested in this wretched man?" asked I.

"It is a very melancholy story, sir," answered the physician.

The Sister of Charity, perceiving that we were speak-

ing of her, retired directly. An expression of absolute despair was depicted on her face.

The Superior then addressed me, saying, "Sir, if you wish to know the terrible affliction which brought Sister Margaret here, and which induced her to take this vocation, I will let you read the account written by herself. When she came to us, the poor girl had not strength to tell us her history. She had written it circumstantially, and put it into my hands."

I hastened to conclude my visit; my imagination was affected by what I had seen and heard. The mournful countenance of the Sister of Charity was constantly before my eyes. I felt no longer any interest or sympathy in the distressing sights around me. I completed mechanically my affair of inspection. When I came out, the Superior placed a roll of paper in my hands. I returned home directly, and read the following narrative:—

"I am the only daughter of a well-known physician, in the Province of —. He had the reputation of a learned, skilful, and honourable man. He had particularly devoted himself to the study and care of mental maladies. After the death of my mother, he had even founded an asylum for the insane, and occupied himself there, as much from benevolence as from love of his profession. The house was large, and the garden extensive; the unfortunate patients were not numerous, and each of them could be attended with the greatest care. As for me, I inhabited a separate part of the building, with my father: he did not choose me to witness the frightful spectacle of violent insanity. I never approached the body of the building where the lunatics subject to rigorous treatment were confined; still I sometimes heard their cries, and never without shuddering. But those who were harmless, or whose convalescence was certain, were allowed to walk in the garden. They were left almost at liberty; often they even approached our part of the building, and could easily have opened the trellis-gate which separated the garden from the little inclosure reserved for ourselves. They were not allowed to come in, but the keepers were not there; besides, it was my father's wish that these poor creatures should be treated with extreme gentleness.

One day that I was seated on a bank, where I was accustomed to read or work, I found a young man, that I did not know, there. I immediately drew back, and even felt a species of alarm. 'Ah! madam,' he said to me, 'it is a very cruel fate to inspire such repugnance, that even compassion is stifled.' These words made a painful impression on me. I should have reproached myself for giving pain to a being already so unhappy: the idea of causing in him a sensation which might increase or renew his malady, also arose in my mind. I had heard my father say, that frequently a painful impression, however transient, might bring on attacks of insanity, and renew mental disorder. 'Sir,' said I, 'do you wish to speak to my father?' He understood that I feigned to take him for a stranger. 'I belong to the establishment, madam,' he replied, 'I am one of those unhappy men whom your father hopes to cure; you know this well. I alarm you; but tranquillize yourself, I hurt no one. It is even said, that I am more rational latterly. To prove it to you, I leave you; I ought not to be here; it is forbidden—is it not?' He arose, and withdrew quietly, leaving me much disturbed. I told my father of this meeting. 'He really is very gentle,' said he, 'and the disease of his mind does not appear very serious. I even hesitate whether I should not receive him into the house. In the eyes of most people he would have passed for sane, as much as those who are at liberty; but I have been so much accustomed to these unfortunate maladies, that I feel assured this case will increase, and get worse; therefore I have put him under a salutary discipline, and, above all, kept him away from every circumstance under which his reason has become disturbed.' I asked my father, with some interest, in what his madness consisted. 'It will appear strange, yet it is not without example; he

thinks himself mad, he proves himself to be insane, and is in despair. Nothing can dissuade or console him; no occupation, no study can succeed in diverting him. He believes himself incapable of doing anything; he cannot follow reading, and says that he cannot understand—that the connexion of ideas escapes him; this, in fact, is the case. He himself came and asked to be admitted among my patients. "I ought to be there," said he, "that is my proper place; I am not fit to be among rational people." He asked to see the rooms; he chose his own; had all his furniture taken there, made all his arrangements, and took possession of them on the appointed day. This is about three weeks ago. Since that time I think him better. His regular way of living agrees with him. Out of this place, the rallying of his friends excited him. This idea became rooted because it was combated. Here no one mentions it to him, and he mentions it to no one. I never try to prove to him that he is sane; but, without as yet avowing it, he compares himself with the other madmen. The disorder of their ideas strikes him, and, by returning to himself, he begins to be persuaded that, in fact, he is not like them.

"These details interested me. On the following days, I sometimes asked my father after this young man. 'His malady has changed its character a little,' he told me one day. 'He has fits of frenzy; but that is not a reason for despairing of his cure; only I must not leave him in the neighbourhood of other patients, whose attacks might produce on him a contagious effect. I am inclined to give him a room in our wing. If during some days he has no fresh attack, I will decide on doing so. This young man interests me; I am determined to cure him.'

"About a week afterwards, I was seated on my bank, when I saw him quietly open the gate of our inclosure. As he was entering, one of the keepers ordered him, in a harsh tone, to return to the garden, and even advanced to take him. A sort of shuddering came over the patient, and a light gleamed in his eyes, and he appeared shocked at this rudeness. I felt frightened—his eye was fixed upon me; he understood my sensations, and grew calm immediately; his looks became submissive, humble, and dejected; he quietly obeyed the keeper, when my father, who had seen everything from the window, called out, 'No, leave him alone; there is no harm in it.' The young man turned back. 'Oh! how kind you are,' he said. The sound of his voice dissipated my fears: he came near me, and sat down on the bank. 'I have suffered much,' he said, 'since the last time I came here; my illness has made terrible progress. I know it too well; your father would not believe me. All is over for me: I have a horror of life, such as Providence has destined me to. I do not know how I dare appear before you; I am ashamed of my state. Can you conceive it, madam—it was necessary to bind me, and I tried to kill them? Oh! they were too harsh to me; that straight waistcoat—my arms bound—their threats and violent language. Your father does not know all.' He became excited by these painful recollections: I looked at him—he became quiet. 'My father thinks you really much better,' I answered; 'he says that you will recover from these attacks, and this fever.' 'Call things by their right names,' he exclaimed: 'do not spare me. I have still sense to understand your precautions; they wound me. Openly compassionate the poor madman.' 'You do yourself much harm, sir. If you would not give way to your melancholy, and to your exaggerated ideas, you would not be so ill as you are. I am sure that it is only affliction, and that you have been unhappy.' 'Yes, I have been unhappy; I have been forsaken and betrayed. I found myself alone in the world, with no one to pity or to understand me: my reason gave way. It is here, in this asylum for madmen, that, for the first time, I have found pity and sympathy. Thanks to you and to your father, who speak so gently to me, and whose looks are a balm to my heart, that calms me, and makes me think that I am like other

people. Without being afraid, I felt uneasy as soon as he began to talk. He excited himself; his speech became short and abrupt; the tone of his voice became elevated. Something vague and confused seemed to take possession of his thoughts. My father came and joined us. His presence laid a restraint on him; he became like a child before a master that he respects. 'I am very glad that you have paid us a visit; you may come and see us from time to time, but you must be quiet and well-behaved—understand me—or I shall not allow you to be with my daughter.' He came from time to time; his attacks did not return, and, by degrees, he left off speaking of his madness. More connected remembrances of his childhood and his youth returned to his mind; his father had died insane, and this thought had always haunted him, dreading that the malady was hereditary. He related his solitary life in the country; his melancholy disposition; the time passed at college, where the raillery of his companions made him wretched; the little taste that he had for the amusements of youth, and the life of the world; how he always thought that he was considered disagreeable and ridiculous; how every one conspired against him; how he became a prey to sorrow, by indulging ideas of which at times he recognised the falseness. In short, the history of a timid, distrustful, unhealthy mind; predestined, one may say, to lose reason.

"I did him good; I felt it, even more than he said it, and it was a source of great happiness to me. I listened to him, without ever contradicting him, taking interest naturally in all that he told me. I took care to interrupt him carelessly, when his conversation showed too much excitement; and I never allowed him to confuse or hurry his ideas. Often, to amuse him, and to break the thread of some melancholy discourse, I took my guitar and sang. This was a great pleasure to him, and a certain way of calming him. The poor young man compared himself to Saul, furious, composed by the song of David. He wept at the thought, and I wept also. My father thought him well enough to give him a room in our wing. He became every day more attached to him, and flattered himself with the hope of effecting a complete cure. From that time he joined our family circle, and grew very tranquil. He was of a very gentle disposition; his manners were pleasing and retiring. He passed many hours of the day with us, especially with me, on account of my father's occupations. He did not like to be much alone; in fact it did him harm: solitude heated his imagination, and affected his head. He took to some studies, but he was not able to give continued attention to reading; the train of his ideas, at all times confused, perplexed him, and threw him into a state of agitation. He confided to me all that he felt; he liked to talk of himself and his impressions. The activity of his mind was never employed on any other subject; he appeared kind and affectionate, and yet it was always himself that he was thinking of, not egotistically, but it seemed that his mind had not strength enough to carry him beyond that. Even when there was no sign of insanity about him, there was no discernment in his observations on himself.

"He took pleasure in talking of his melancholy, his distrust, his discouragements, his wounded self-love, his disappointments in life; but I never perceived in him any energy to conquer this unsatisfied disposition. I was especially on my guard not to let him talk too much; my father had particularly recommended this, and I should have been aware of its danger myself. Neither animated discussions nor long discourses were good for him. I tried to amuse him; I played to him; I let him join in my occupations. We attended to the flowers in the garden. The exertion of digging and watering was of service to him. Sometimes, when my father had time, we went into the country, and took rather long walks. This mode of life removed, by degrees, every symptom of his malady. His language and his mind became daily calmer; his countenance

acquired a happy and frank expression. I rejoiced in observing his progress. Without being aware of it myself, he occupied all my thoughts; whether from uneasiness or interest, I was kept in a state of constant excitement. Every word, every action, every look, every movement, was influenced by the desire of not doing him harm, or by the pleasure of doing him good. I could not seek in him what a woman seeks in a man that she loves; he was far from affording me an idea of protection, of support and superiority. It was something of what one feels for a weak and suffering being—a sort of maternal love; my tenderness did not go beyond this. We had lived for nearly two months in this manner, and he had been going on well, steadily, when I perceived a change in his manners. There had never been the slightest familiarity between us. I am naturally reserved; besides, there existed between him and me a thought which never admitted of intimacy; whatever my affection might be, there was always a little fear remaining. As for him, he was still more afraid of himself than I could be of him; but he could not do without me. If he went up stairs for a quarter of an hour, he came down again, as if uneasy at finding himself away from me. About this time he began to avoid me, as much as his irresolution would permit. I perceived that he constrained himself to leave me; he sought to be alone, and I was often obliged to go and seek him myself. I made my father remark this; he appeared not so much struck by it as I was; and, after some days, said to me, 'Our patient is decidedly restored to health; his cure is complete; he must return to his home.' These words troubled me; the thought that he would have to leave us had never occurred to me; my days had passed, and my mind had been engrossed, in occupations of an exciting nature; entirely absorbed in the present. I had not dreamt of the future—I had never calculated the time that was passing, nor the events likely to ensue.

"On the following morning, my father spoke to him; I was not present; he must have done so with gentleness and affection, for he was much attached to the poor young man. After my father's conversation with him, he remained some time alone; when he felt secure of finding me by myself in the drawing-room, he came down and took a seat by me. I perceived that he was struggling for self-command, and that he was determined to be calm, and he succeeded in appearing so. 'Madam,' said he, 'you know your father's wish; he says that I can and ought to go, and leave this home, where more than life has been restored to me, where I feel so well, so happy, so rational.' (He said the last word in a tone that touched my heart.) 'Do you think this very prudent? Is not this exposing me to a relapse? Here, near you, with your attentions, nothing fatal can happen to me. It is you who have cured me, you are my good angel, the guardian angel of my infirm reason. Far from you there is only trouble and sorrow. Your father is so kind; why has he changed towards me? does he wish to destroy me? Oh! I feel assured that he will succeed.' 'Do not speak thus,' I answered: 'have I not often said the same to you? You have never been out of your mind—my father had no cure to effect—we have dissipated your melancholy fancies; you have been with friends who love you, and that has removed your distrust, and overcome your exaggerations. It is your character and mind that want discipline. Is not this true? You must not take delight in making yourself unhappy. Promise me not to do so—promise me, your nurse and your friend. You must often come to see us; I shall scold you if you are not tranquil and contented.' 'Yes, I will come often, every day; but that is not the same thing as living under the same roof, and seeing each other every hour in the day. If a sad thought occurred to me, if I was attacked by a fit of melancholy, I immediately went to you; your aspect, your looks, the sound of your voice, diffused calm and consolation. Now I shall sink into my gloomy reflections; they will prey on my heart, as formerly; they will be stronger than

my will or my reason. All security is at an end; I shall tremble for myself, and this fear will alone suffice to throw me back into my former state.' 'But you cannot remain all your life in this house. You must be no longer our patient, but our friend,—an esteemed friend, who will have a distinguished course to pursue, regular occupations, and a solid mind to cultivate. What has hitherto injured you is idleness, and indolent solitude. Exert yourself; no longer allow yourself to be tormented by groundless imaginations and melancholy, which proceeds only from *ennui*.' 'Always rational! always kind! always what suffices to reassure and cure me! Yes,' he said, rising, 'I am utterly unworthy, I only deserve the contempt of the indifferent, and the pity of the compassionate. I am a despicable being. The world regards me as a wretched madman. Who can I ask for esteem and affection? I will escape from my shameful condition! I will deserve happiness! Who would now have anything to do with me? who would connect themselves with the fate of an unhappy lunatic? Yes, I have still sense enough to know that I can pretend to nothing but compassion. Adieu! I go,—you wish it, as well as your father, and nothing can be more reasonable. It must be so.' I took his hand, I made him sit down by me, he grew calm; and when he was better, I let him go, without saying a word.

(To be concluded in our next.)

THE HISTORY OF SIR JOHN FASTOLF.

In chivalrous times, such as were those of our King Henry V., less pains were taken to record the lives of great men than is now thought necessary, because, being less scarce, they were the less marvelled at, though not the less esteemed. For this reason many, both laymen and ecclesiastics, who were men of unstained sanctity or unfailing valour, are little known to us. Among these, not the least distinguished in his day was Sir John Fastolf; and it is because, in many points at least, we have fallen from the virtues of his class, and because we stand in need of such examples, that the following notices of his life are offered to the reader.

Sir John Fastolf was born at Great Yarmouth in Norfolk in the year 1380, of honourable parents. He was not yet of age when his father died; and was buried in St. Nicholas' Chapel, in the Priory Church of Yarmouth. It was an usual method of education in those days to place youths, especially such as aspired to knighthood or any military rank, as wards in the family of some nobleman, or man of rank and consequence. In most instances their morals and conduct were made the especial guidance of the master of the family. Thus Leopold, archduke of Austria, used to examine his pages respecting their manners; and regarded more their innocence and piety than the nobility of their birth. Each castle was peopled with a crowd of pages and esquires, who were sent there as to a school of chivalry, and were trained under the first masters, kept expressly for that purpose.¹ According to this custom, John Fastolf became a ward in the family of the duke of Norfolk, and was there trained up in such exercises both of mind and body as probably stood him in good stead in after life. To this course of education he was subject probably only so long as he remained a minor; for it appears that he was in attend-

(1) *Mores Catholici*, No. IV.

ance on Thomas of Lancaster, afterwards duke of Clarence, in Ireland, in 1405 and 1406. And he is supposed to have accompanied that nobleman when he was sent thither as lord-lieutenant four years before, in Fastolf's twenty-first year. While he was yet in Ireland, two years after this period, he married Millicentia Lady Castlecombe, a lady of great beauty and fortune, daughter of Sir Robert Tibetot, lord-deputy of Ireland, and widow of Sir Stephen Scrope. This event does not seem to have abated the activity or success of his political life; for soon afterwards he was appointed to some considerable posts of trust in Gascony, and went to reside there.

From this time Sir John Fastolf's life seems to have been for some years a series of brilliant and well-merited successes. That the honours which were heaped upon him were deserved by his military prowess and skill, is sufficiently attested by his victories; and there is every reason to believe, from the scanty records of his actions, especially towards the close of his life, that he was no less distinguished for the milder virtues. In 1415, Sir John, in conjunction with the earl of Dorset, was entrusted with the government of Harfleur. The same year was rendered memorable by that brilliant victory which was the crowning triumph of the English arms in France. The great battle of Agincourt, fought on the 25th of October, 1415, is so well known, that it is needless to describe it; but there are some circumstances connected with it which it is well to dwell upon, as pointing out the probable source of a victory so wonderful, that it can hardly be accounted for by human causes—a victory in which the vanquished were to the victors in the proportion of five to one, and the former, moreover, fresh and vigorous. "God's arm, strike with us! 'tis a fearful odds," is the pious prayer put by Shakspeare in the mouth of the earl of Salisbury, the victor in thirteen battles, and "mirror of all martial men;" and God's arm did strike with them, for that spirit of faith and piety, of which Sir John Fastolf was a bright example, seems to have been common to the whole English army. The night before the battle, which the French spent in festivity, was passed by the English in prayer; and at daybreak the king himself summoned his soldiers to mass, that the holy rite might consecrate their actions in the field. The English fought with a bravery such as can only be inspired by a firm trust in Him whom they had not forgotten to serve in the hour of danger; and Sir John Fastolf is said to have been among the bravest. An ancient manuscript states that the duke of Alençon was taken prisoner by him, and agreed, by way of ransom, to build a castle at Caistor in Norfolk, of which we shall have occasion to speak again.

Upon the death of King Henry V., the duke of Bedford was appointed regent during the minority of the young king. The favour which Sir John had met with at Court was founded on real merit, and was not, therefore, affected by the change of sovereigns. The new regent made him grand master of his household, and seneschal of Normandy, and in 1423 he was constituted lieutenant for the king and regent in that province, in the jurisdiction of Rouen, Evreux, Alençon, and the countries beyond the river Seine; and also governor of Anjou and Maine. Besides other castles, he captured in 1425 that of Sinesingle, from which he was dignified with the title of baron; and in the same year, (the

forty-sixth of his age,) took S. Ouen D'Estrais, near Laval, the Castle of Gravelle, and other places of strength. About this time, his great merits and indefatigable services in France having gained him much reputation, he was elected in England a Knight of the Garter. He was invested with the order while yet in France, and a commission was issued to the earls of Warwick, Salisbury, and Suffolk, to receive his oath.

Perhaps the most distinguished exploit of his life, was his victory in the memorable battle of Herrings, in 1428. It happened that the English army was encamped before Orleans, during the time of Lent, and stood in need of provisions. A convoy of herrings, and other similar food, was despatched for their use, but attacked by the French on the road, when Sir John Fastolf, at the head of about two thousand five hundred men, totally defeated four thousand; or, as some even of the French historians say, nine thousand of the enemy, and succeeded in conducting the convoy in triumph to the English camp.

In the following year, an event occurred which seems, for a time, to have sullied the hitherto brilliant career of this illustrious knight. Most of the English had been seized with a panic, on witnessing the military achievements of Joan of Arc, the enthusiastic Maid of Orleans; and, indeed, she was a formidable enemy to those who gave credit to her pretensions, and believed that her opponents were fighting against heaven. Shakspeare makes her set forth these pretensions in language of the highest enthusiasm:—

"Lo, whilst I waited on my tender lambs,
And the sun's parching heats displayed my cheeks,
God's mother deigned to appear to me,
And, in a vision full of majesty,
Willed me to leave my base vocation,
And free my country from calamity." (2)

She further asserted, that the beauty which she was allowed to possess was conferred on her in this vision by the Blessed Virgin; and displayed a sword, "decked with five flower-de-luces on each side," which she declared she had taken from S. Katharine's churchyard, at Touraine. It was no wonder, then, that many were little disposed to conflict with such powers; and Sir John Fastolf, whose mind, to judge from his actions in later life, was singularly open to religious impressions, seems not to have escaped the dispiriting panic. In the battle of Pataie, the enemies of "La Pucelle" felt that she was, as she herself asserted, "assigned to be the English scourge," and Fastolf was among those who fled. For his share in the disasters of this day he was deprived of the honours with which he had been invested but four years before. "For doubt of miscalculating at this brunt," says Hollinshed, "the duke of Bedford tooke from him the innage of S. George, and his garter."

But it was not one disaster that could overthrow a reputation such as Sir John Fastolf had acquired in England and abroad. There were many, perhaps, who were in no wise affected, like him, by the supposed divine mission of the Maid of Orleans; but even these did not venture to attribute a want of personal courage to one who had sufficiently proved his prowess, when earthly powers were all he had to contend with. The regent himself soon repented of his severity, restored him the garter, and in 1430 preferred him to the

(1) Shakspeare. Henry V.

(2) Shakspeare. Henry VI.

lieutenancy of Caen, in Normandy. Nor was this the only mark of favour and confidence which showed how entirely the disasters of Pataie, or at least his share of them, were obliterated by his other services. Two years afterwards, he was sent ambassador to the Council of Basil, was subsequently appointed to negotiate a peace with the French, and, in the same year, shared with Lord Willoughby the command of an army sent to assist the duke of Brittany against the duke of Alençon. Soon after this he visited England for a short time, but was again with the regent in France in 1435; and, in the same year, was appointed one of the ambassadors for concluding the peace with the French. In this year the duke of Bedford died; having first given a final and satisfactory proof of his esteem for Sir John, by constituting him one of his executors. Richard, duke of York, succeeded to the regency, and imitated his predecessor in his regard for the knight, granting him an annuity of 20*l.*, out of his own estate, in return for his good services in the field and in council. With these honours and rewards he reposed, for about four years, at his government in Normandy.

It was in 1440 that he finally retired from Normandy to his native country, from a life of active warfare to one of tranquil piety. Two accounts are given of the foundation of his "sumptuous castellated mansion" at Caistor, near Great Yarmouth: according to one already mentioned, the duke of Alençon built it as his ransom, after the victory of Agincourt; another states that King Henry V. granted his license to Sir John himself, to build it "as strong as himself could devise." A manuscript, still extant, by William de Worcester, Sir John's officer-of-arms, or herald, states the dimensions of the great hall, which was forty-nine feet in length, and twenty-eight in breadth; and the existing remains of the Castle bear witness to its ancient splendour. This residence, which after his death withstood two hot sieges, through the quarrels of his executors,¹ seems, during his lifetime, to have been the seat of peace and hospitality alone. The piety of its owner was displayed in his benefactions to St. Nicholas Priory Church, to the two universities, and to other similar institutions. To Cambridge he bequeathed a considerable legacy, for rebuilding the schools of philosophy and civil law, and was especially liberal to St. Mary Magdalene College, Oxford, from the affectionate regard he had for Bishop Waynflete, its pious founder.² He died very rich; possessed of large estates in Norfolk, Suffolk, Yorkshire and Wiltshire; but bequeathed most of them to charitable purposes. In November, 1459, (his eightieth year,) his body was interred in a chapel erected by himself, in the abbey of St. Benet in the Holme. His pious life, attended by almost unvaried prosperity, looks like a fulfilment of the promise set forth in the Psalter:—"He walked not in the counsel of the ungodly, nor stood in the way of sinners: his delight was in the law of the Lord." Therefore he was "like a tree planted by the water-side: his leaf withered not, and whatever he did, it prospered."

NORTH-AMERICAN INDIAN TRADITION OF THE DELUGE.

THE following tradition was related to the writer by the chief of one of the tribes of Chippeway Indians, a very intelligent man, who spoke English with ease, having long resided in British Canada.

Once upon a time Aniúna Boojóo, who was a very famous hunter, and is the principal object of admiration and worship among the Indians, from whom they learnt to hunt, and who taught their conjurers and medicine (or mystery) men all their arts, was out in the woods seeking game. After some time he reached the borders of a lake, on the opposite side of which was a large flat rock, upon which were many red lions, basking in the sun. He observed in the midst of the herd a very fine white lion. He had often seen red lions before, but this was the first time that he had seen a white one; and he was very desirous of obtaining its skin, for the purpose of making a tobacco pouch. Now, an Indian generally is contented with a musk-rat's skin for a pouch: but Aniúna Boojóo was so proud, that nothing would satisfy him but the hide of this white lion. He crept through the woods with the utmost care, in order to avoid alarming the herd; but he could not succeed in coming near enough to them to shoot the lion: and when evening arrived they left the rock and retired into the wood, and he was very greatly disappointed. He would not, however, relinquish his object; but began to think how he might be more successful the next day. At length he said to himself, "I see I shall never get that white lion's skin unless I can be upon the rock without frightening the herd;" so he determined to change himself into an old tree, and stand upon the middle of the rock, which he did before it was light in the morning. As soon as the day was hot the lions returned to bask in the sun, as before, and the white lion was amongst them. But one of the old ones, who was more cunning than the others, said, "I do not remember that old stump of a tree upon this rock; it must be Aniúna Boojóo, who has changed himself into it." To which another replied, "Oh, nonsense! If it is he, he cannot bear to be squeezed." Upon which he went up to him, and squeezed him so severely, that Aniúna Boojóo could scarcely refrain from crying out. "You see I was right; it is only an old stump;" and the herd, being satisfied, lay down in the sun. He then watched his opportunity, and raising his bow and arrow shot the white lion, but did not kill him; and the red lions, escaping into the lake, carried their chief off with them, to his great mortification. He now began to roam through the wood in hopes of finding him, when at length he heard an old woman's voice singing and wailing most mournfully. He went to her, and addressed her, "Well, Granny, what is the matter?"

"Oh, my son! have you not heard what Aniúna Boojóo has done?"

"No, Granny; what has he done?"

"He has shot our chief, the white lion; and I am going to cure him."

"But, Granny, what are you doing with those four strings?"

"Oh, I am tying one to the north, and one to the south, and one to the east, and one to the west; and then, whichever way Aniúna Boojóo goes, we shall catch him and kill him."

"And how are you going to cure the white lion?"

"I am going to sing certain songs, and to give him what I am gathering."

He then learnt the songs which she was going to sing, and the direction for finding the "lodge" in which the sick lion lay; and having done this, he killed the old woman, cut off her head, and skinned her; and then getting into the skin, and putting on her head and clothes, he went to the lodge, singing the songs which

she had taught him; and the lions, being deceived by his appearance, and feigned voice, admitted him without suspicion. He then raised his bow and arrow, and shot the lion through the heart, and killed him, and immediately took off the skin, and escaped. But the lions had power to make the water of the lake rise, and it soon rose to the place on which he was standing. He went to some high ground, but the water still rose and pursued him. He climbed into a high tree, and the water continued to rise, until he was standing on its very summit, and it had reached to his chin. He began to fear that he should be drowned; when, at length, he perceived that the water rose no higher. But all the world was drowned, and he knew not what to do, until he saw a beaver, to which he called—"Come here, good beaver, and dive, and bring up some earth, if you can, and I will make a new world, upon which you shall live, and be much happier than in the old one." So the beaver complied; but he dived so deep and long, that he was suffocated, and rose again, dead. He then saw a sea otter, to which he made the same request; and he also complied, and with the same result. He began almost to despair, when he saw a musk-rat, (musquash,) which is a very quick and good diver; and he made the same request and promise to it. The rat dived, and was long down, and at length rose, apparently dead; but Aníña Boojdo shook it, and rolled it in his hands, and blew upon it, and breathed into its mouth; and, after a while, it began to breathe again, and opened its eyes. Then he examined its claws with great care, and found a very small portion of earth sticking to them, which he took and rolled in the palm of his hand, frequently breathing upon it. And as he did so it increased until it was the size of his hand; when he laid it upon the water, and drew his finger round the edge, until it was large enough to bear the rat, which he then placed upon it. This walked continually round and round, until it increased, so as to bear the weight of an otter; and so on, until it would support all large animals: and thus Aníña Boojdo made the world again.

(One of the Islands in Lake Superior is thought by the Indians to be the commencement of this new world.)

Reading for the Young.

RIVER STEAMERS.¹

PLEASANT it is, after the labours of a sultry day passed in London's vast city, or in traversing her bustling streets, to take refuge in one of the many little steam-boats which now almost crowd her silent highway, the river Thames. The bell rings—let us hasten on board. Gently we glide towards the Surrey shore, threading our way among other steam-boats, huge cumbrous barges, and smaller craft. We pass under the vast centre arch of the Southwark Iron Bridge. On we go. Blackfriars Bridge appears, with its rows of heads. We lower our chimney to pass under. Another beautiful bridge meets our admiring gaze. This is the Waterloo, or Strand Bridge. Old Somerset House, with its massive stone-work close to the water's edge, is passed, and we are at Hungerford Wharf. Hungerford Suspension Bridge, now completed, arrests our attention. We glide through West-

minster Bridge, with the turrets and pinnacles of the old abbey in view; the new houses of parliament, seeming as if they rose out of the water, call forth passing observations; and still we paddle on, to Vauxhall, or, it may be, to the green fields of Chelsea, before we quit the boat. We have still time to ramble round the old hospital, and talk to some of its inmates. But daylight is departing; another steam-boat takes us on board. She carries a lantern at her prow, as do all the others; looking like glaucous meteors on the dark water. Again a short voyage, and we are, once more, in narrow Thames Street. Nor have I told you one quarter of what we have seen.

Another fine evening tempts us on the water. This time we are going to visit Greenwich. Unmooring from the wharf, our vessel swings round into the middle of the stream, and we have a complete view of London Bridge, with its five noble arches, spanning the river. Now, fairly on our way, we glide past the Custom House on our left, with its esplanade in front, dotted over with citizens and merry children. A little further on is the far-famed Tower of London. The crowd of shipping thickens as we proceed, looking like a very forest of masts; and, every now and then, the order shouted to the engineer below, "Ease her!" "Stop her!" tells that some heavy barge, drifting slowly past, or sailing vessel, clearing out of the river, has come athwart our track. And now we are above the famous Thames Tunnel, that wonder of the world! This is Wapping, with its thickly clustered houses, on our left, and on the opposite shore is Rotherhithe. Now we pass the western entrance to the West India Docks, communicating by a canal, more than a mile in length, with the eastern entrance. To the left of this canal, stretching into the form of a crescent, is the Isle of Dogs, so called, from one of our kings having kept his hounds there. Those large buildings on the right belong to the Government Victualling Office at Deptford. But see! the domes of Greenwich Hospital are in view, with the noble old trees of the park in the back ground; we rapidly approach the quay, and have but just time to notice, in passing, the hulk of an immense man-of-war, called the Dreadnought, now used as a refuge for sick and disabled seamen of all nations. We step on shore, and are surprised at the great extent of the buildings comprising the Government hospital; admiring, as we view them more closely, its domes, its colonnades, and rich architectural ornaments; the naval school finely closes in the view, crowned by the trees and observatory in the park. The right wing of the hospital, (looking at it from the river,) was built by Charles the First; subsequent monarchs added the remainder. Nearly five thousand individuals, including the children at the naval school, officers, and nurses, find a comfortable asylum within these walls; and, wherever we turn, the pensioners, in their grotesque dress, meet the eye. But we must spend a day here, if we would view the interior arrangements of the hospital and other objects of interest.

THE WOODMAN AND THE FOREST.

A FABLE.—See Engraving p. 128.

A COUNTRY fellow came one day into the forest, and looked about him with some anxiety; upon which, it is said, that the trees, with a curiosity natural to some other creatures, asked him what it

(1) This and the Fable which follows are extracted from the Juvenile Museum of Entertainment, published by Harvey and Darton, Gracechurch Street; a very pretty and tastefully got up book, containing, in a series of short articles, much useful and interesting information for young people. To each of these is attached an excellent illustration, of which the engraving in page 128, (which has been obligingly lent us by the Publishers,) is a specimen.

was he was in want of. The woodman replied, that he only desired a small piece of wood, in order to make a handle to his hatchet. This seemed so modest a request, that the trees unanimously decided that he should have a piece of good, sound, tough ash. But the woodman, as soon as he had received it and fitted it to his purpose, began to lay about him most unmercifully; hacking and hewing, and laying prostrate some of the noblest trees in the forest: upon which the oak is said to have spoken thus to the beech, in a low whisper: "Brothers, we must take our fate for our pains."

MORAL.—Though we are commanded to forgive and love our enemies, yet we are not foolishly or inadvertently to put the means of injuring us into their power.

THE CID AND HIS CREDITORS.¹

THIS little incident in the life of the Cid Ruy Dias of Bivar is taken from the well-known Spanish Metrical Chronicle of the great hero. Muller's Ed. § 39.

"What a pleasure it is," said the poet Shenstone, "to pay one's debts!" And he gives seven good reasons for the pleasure; which reasons it is of less consequence to transcribe, because they are best discovered by making the experiment.

It will be seen by the gallant Cid's own candid confession, that he did not think his conduct in this transaction altogether fit for imitation; he seems to have somewhat too confidently also taken money for the hide, before he had killed the bear. But he seems to have been in no danger of forgetting, what some great men have forgotten in later times, that a reputation, however brilliant, is worth nothing to a man who does not pay his debts.

Would you hear of brave Rodrigo,
The good Cid Campeador,
How he strove with envious Fortune,
When he rode against the Moor?

Banish'd, lost, despoil'd, heart-wounded,
By his King cast off, he stood:
But to bear without repining,
Is the test of gentle blood.

One sole doubt it was that vex'd him,—
That one doubt, it vex'd him sore,—
How he might supply his charges
For his road against the Moor.

Would the wealthy Jews of Burgos
Aid him from their golden hoard?
Thus bespoke them brave Rodrigo
Seated at his friendly board:

"Lend me, sirs, a thousand florins,
For a twelvemonth and a day:
Listen to my good assurance,
Ere your prudence answers nay.

"Lo, I give to your fair keeping
Coffers twain:—the wealth they hold,
If it once were spread before you,
Ye would count it worth your gold.

"If I send you not more florins
Ere a twelvemonth and a day,
Break these precious coffers open,
Loan and interest they will pay."

Honest Riquel and Menezes
Each away their coffers bore,
And they bring the thousand florins
For the road against the Moor.

Out, alas! that soul of honour,
So shall stoop to Fortune's hand!
For the noble Spaniard's coffers,
They were fill'd with shifting sand.

(1) From *Lays of Faith and Loyalty*; or, *Narratives in Verse*, selected from History, by Edward Churton, M. A. Cambridge, Walters. 1845. A volume of poems of very considerable merit, founded upon historical incidents illustrative of the virtues of faith and loyalty. They are intended chiefly for the young.

Days and months pass on unheeded,
And Rodrigo, brave as bold,
Banish'd, wrong'd, despoil'd, heart-wounded,—
Needs him still both steel and gold.

But when once Valencia's city
Fell to his victorious sword,
Little reck'd he then of Fortune,
Nobly he redeem'd his word.

"Haste," he said, "good Alvar Fanez,
News of my success to bring
To my loving wife Ximena,
And to my most gracious King.

"Take two hundred Moorish horses
All in glittering harness bright,
To my King a kingly present
From a true and constant knight.

"And to my right-honour'd masters,
Riquel and Menezes old,
Bear two hundred marks of silver,
And two hundred marks of gold;

"And entreat their gracious pardon
For the small deceit I plann'd;
With a heavy heart I did it,
Bow'd beneath Misfortune's hand.

"Though it seem'd that in those coffers
Nought but shifting sand was stor'd,
Yet within that sand was buried
Good Rodrigo's golden word."

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne*.

ORIGIN OF THE ROYAL SOCIETY OF MUSICIANS.

NEAR the beginning of the last century, an eminent German oboist, named Kaitch, came to England, where his performance was for a long time in great request; but, being of improvident habits, he died in great poverty, leaving his family destitute. Soon afterwards, Festing, the famous violinist of that day, with Weidemann the flute-player, and Vincent the oboist, happened to observe two interesting little boys, who had an appearance above their condition, driving milk-asses down the Haymarket; and found, on inquiry, that they were the orphan sons of poor Kaitch. Struck with pity for the children of their brother professor, these musicians instantly raised a subscription for their relief; and it was to the consideration suggested by this circumstance, of the necessity of establishing a fund for the benefit of the families of indigent musicians, that the profession owes the existence of "The Royal Society of Musicians," which excellent and most useful institution was founded in the year 1738.

SAGACITY OF A DOG.

DURING the American war, Captain Gregg, and a brother officer, returning from hunting, were fired upon by an ambush of Indians. Both fell, and the Indians coming up, struck them on the forehead with the tomahawk, and scalped them. Captain Gregg, in describing the operation, said, he felt as if molten lead were poured on his head; yet he had the hardihood to lie still, suppressing his breath, to make them suppose he was dead. When they had left him, he felt as if something cooling were applied to his burning head; this was caused by the coldness of the tongue of his dog, which was licking it. The dog, after fawning upon him, left him, and disappeared in the woods. Captain Gregg, in attempting to rise, found he was wounded in the back by a musket-shot, and severely bruised on the forehead by

The Woodman and the Forest.

See page 126.

the stroke of a tomahawk, which would most probably have knocked out his brains, had not its force been broken by his hat. He crawled to his brother officer, who lay dead near him, and opening his waistcoat, laid his throbbing head upon his warm bosom; for the sticks and stones among which he lay were torture to him. Here he expected death to put an end to his sufferings. In the mean time, the dog hastened home to the captain's friends, and by his manner showed that some accident had befallen his master. They followed the dog, which guided them to the scene described, where they arrived just in time to save the life of Captain Gregg, who, under the care of a skilful surgeon, ultimately recovered.

BATHS AND WASH-HOUSES FOR THE LABOURING CLASSES.

THE baths and wash-houses for the labouring classes in the parish of St. Pancras, now in course of erection around the base of the extensive reservoir belonging to the New River Company, in the Hampstead-road, have been thrown open for the inspection of the public. The site for this building, occupying about 7,000 square feet, has been handsomely presented to the Committee by the New River Company, at the nominal rent of 5s. per year, and the sum raised by voluntary contributions for the purpose of the erection amounts to about 600*l*. The building (the entrance to which is in George-street, Hampstead-road) extends around the east, south, and northern sides of the reservoir, and the arrangements made, and rapidly progressing towards completion, will provide thirty single baths, twenty for men and ten for women, five vapour baths, and two large plunging baths. In the washing department, accommodation is provided for sixty-four washing compartments, &c. The

whole of these compartments are exceedingly commodious, having steam-pipes, and all other necessities for boiling and cold water, as occasion may require. The plunging baths are very capacious, the larger being sixty feet long and thirty feet wide, and the smaller forty feet by twenty. To a poor man or woman, the charge for a separate cold bath, containing sixty gallons of water, will be one penny, and a warm bath twopence, fresh water and clean towels being provided for each bather. There are a few higher priced baths, differing only from the others in having more expensive fittings. The charge for the use of a double washing-tub, with an ample supply of hot and cold water, of the coppers, drying-room, and ironing apparatus, will be at the rate of one penny for three hours. There is but little doubt the establishment, when completed, will prove of great benefit to the poor of the neighbourhood. The establishment is expected to be got into operation in the course of a few weeks, although it is stated that 300*l*. more is required to effect its completion.—*From a Newspaper.*

No. 9.]

DECEMBER 27, 1845.

[PRICE 1½d.]

ON, I give my spear to thee ;
'Tis too heavy now for me :
Take the battle-sword and shield ;
Mount my steed, and forth to field.

See these whiten'd locks ; the helm
Fifty years have cover'd them ;
Every year a fight hath made
Blunt my battle-axe and blade.

Old Count Rudolph, for reward,
Gave me axe, and spear, and sword ;
I had served the Count alway,
And despis'd Prince Henry's pay.

When, in Freedom's cause, the blood
Fall'd his right arm, Rudolph stood,
And the might of his left hand
Did alone the Franks withstand.

Gird thee now to meet the fray;
Conrad comes in stern array:
O my son, thy arm must be
Strength and solace now to me!

Never draw this sword in vain
For thy sires on battle-plain;
Watch and dart with eagle's might;
Be a thunderbolt in fight.

Seek the battle's heaviest shock;
Meet it firm as ocean rock;
Spare the suppliant, lying low;
Hew in twain the stubborn foe.

When thy banner floats in vain
O'er thy faint and staggering train,
Then do thou, a steadfast tower,
Brave the gather'd foemen's power.

By the sword thy brothers died,—
Seven sons,—their country's pride;
Sunk in grief, thy mother lay,
Dumb and stiff, and pass'd away.

I am feeble now, and lone;
Yet would thy disgrace, my son,
On thy father's heart-strings fall
Seven times heavier than all.

Fear not, then, though death be nigh,
On thy God in faith rely;
So thou bravely fight, my boy,
Thy old father dies with joy.

A Song of the Thirteenth Century.

DETACHED THOUGHTS

FROM

JEAN PAUL RICHTER.

"Of differing themes the veering song was mixed."

WHO has followed and examined reality, even to its deepest valleys, like the twin stars of poesy, Homer and Shakspeare? As art ever labours in the school of nature, so were the richest poets of old her most attached and industrious children, transmitting her portrait to succeeding generations. If we would picture to ourselves a truly great poet, we must grant to genius a metempsychosis through all nations, times, and circumstances, and send him to circumnavigate the world. What higher and bolder representations of its infinite form would he not project? The poets of the ancients were men of business and warriors, before they were bards; and the epic poets in particular steered the helm through the waves of life, before they took up the pencil to describe the voyage. It is with the children of the mind, as the Romans thought of the children of the body—they must touch the earth, if they would learn to speak.

The prayers about the happy consciousness that rewards good actions, have themselves performed none; else they would have experienced, that, in proportion to the cultivation of the moral taste, it becomes more delicately susceptible of falling

below its high standard; and, therefore, the best men reproach themselves more than the worst.

When the heart is made the altar of God, then the head—the mental faculties, are the lights on that altar.

He who, when calm and cool, presses his rights to the utmost, will, when actuated by passion, over-step them.

The good man feels no injustice so strongly, as that done to others; that committed against himself, he sees not so clearly; the bad man feels only injury to himself.

This deep and irrepressible craving, this singular pining of the soul for yet untrodden lands, comes upon us, not as we might expect, in times of suffering, (for then the soul has no power to expand—it only asks removal of present pressure,) but in joy, and that only in joy of a certain kind. The enjoyment of food, of drink, of warmth, and refreshing coolness, of motion, of rest, call for nothing beyond the highest degree of that enjoyment—it asks no ascending into the infinite; on the contrary, rather a falling back into contraction. But, in the enjoyment of the sun's noon-tide radiance—of the crimson splendours of its setting, and of the moon's silver beams—in the contemplation of the sublime in nature, and the sublime in art—in the giving way to tender sensibility—in the sweet tears of happy emotion—in all, and through all this, is to be traced the yearning after something higher; and the overflowing heart overflows, and yet is not filled. The heart in joy resembles those birds of passage, which, though caged in warm apartments, still, at the season when their fellows migrate, pine for, and pant to wing their flight to the distant land of genial warmth and radiant beauty.

This indefinable feeling in human nature is especially developed by the power of an art, the peculiar properties of which, and superiority to all other arts, we know not rightly yet. I speak not of poetry, or of painting, but of music. Why do we forget, while acknowledging that music heightens joyous and sad emotions—yea, itself produces them—that the soul loses itself in the magic of its sweet sounds, as in a labyrinth—that more mightily, more powerfully, than any other art, it makes us experience, momentarily, rapid transitions from joy to sorrow—why, while conscious of all this, do we forget its still higher property—its power of making us pine for some other land, and of drawing from the soul a sigh, full of yearnings for the future, which yet do but seem yearnings for some familiar long-loved home of the spirit?

Why music should thus, above all other arts, thrill upon the inner man, is beyond my power to explain. Singularly do its material movements erect themselves into certain regular forms of sounds, which are carried forward to the finely-fashioned nerves; but from these, to the soul's depths which music stirs so powerfully, we have still a vast interval.

But to what end is it that man, while growing at the root which draws him down, and is fully satisfied in the earth, must also be growing at the stalk, which presses upwards to heaven's air and light? To what end serves this double direction in man? Manifestly not merely to his earthly happiness. Would Heaven do that which is forbidden to us, subject the higher to the service of

the lower, and plant flowers only to strew them upon the dunghill? Can the instinct which we feel so strongly within after a higher world, a deeper love—can the idea of the divine, of the moral, be implanted within us, only to enhance the pleasures of earthly life, and, like tropic fruits and spices, to give more relish to the joys of sense? But no, it is exactly the contrary. The sharpest and deepest sorrows are the lot of the nobler spirits; and the finely-fashioned nerve that most quickly thrills to the breath of heaven, is most alive to the touch of pain.

But surely these indistinct and undefinable apprehensions of a more noble birth-right were not given us in vain; and yet, if disappointed hereafter, they avail us little here below. What instinct of the millions of different animals has been suffered by Infinite Goodness to fall short of its promise, even to the unconscious and unexpected? and shall the Divine instinct of the soul be suffered to be objectless and aimless by Him who shapeth all things to their uses? Then, too, what a distinction is there between the mere instinct of the animal, and that plan of a future world that is drawn upon the soul of man! The animal instinct has more feelers, the human more antennae. Animal instinct utters its prophetic promises, and its requisitions, with a dim vagueness, and draws and impels to the end it has in view, in the dark, with an invisible hand: as, for instance, in the secret powerful impulse to build the nest, and lay up a store for the insect brood, for unknown and totally dissimilar offspring. In man, on the contrary, the instinct of immortality has its fulfilment, even here below, for what we call hope of it, and desire after it, is but the development of that immortality. Our pure joys are but the commencement of that happiness for which we pant; and, though the heart lie low upon this earth's horizon, like the mass of cloud that, with its varied colouring, does but portend rain, and gives no presage of fine earthly days, yet is this very cloud the beginning of the rainbow which spreads itself over the dark earth, and the glowing tints of which are the bright beams of that very sun, of whose future undimmed glories it is the promise.

More truths than we look for are to be found in the old comparison between the development of the soul and that of the butterfly; for, in the caterpillar, instinct finds the plan of the future fabric which it has to work out. In the caterpillar lies hid, according to Swammerdam, the chrysalis; and this, again, contains the butterfly, with its folded wings, and antennae. And this pale imprisoned form goes through its successive labours, casting its skin, spinning for itself new bonds, and immuring itself in the cocoon, only that it may, at length, break forth to freedom, and, leaving behind it its slough, and renouncing for ever its coarse diet of leaves, sport henceforth amid the flowers; feed upon honey, and live for love. Oh! how do these similitudes speak the desires of the soul! How gladly would it, in its pupa state, be permitted to burst the chrysalis, and widely, fully expand those soft tender wings, that are bruised in its dungeon-tenement! For is not this the consummation for which it bears a thousand sufferings—for which it undergoes privation and pain? Surely, it were a waste of energies, a harsh contradiction, if the butterfly, after its long imprisonment in the unsightly larva, after all its

painful casting off of its skin, its narrow swathing-bands, the dark dungeon of an almost torpid pupa, should come forth—nothing; or come forth in corruption, with its foul slough hanging around it as a shroud.

But men can believe all this—ready to believe all against God, but slow of heart to receive all that would speak of His infinite wisdom and infinite goodness! One cloudy day is sufficient to obscure from our view a whole life full of divine sunshine; and the short, dark hour of death shuts out from us the long, bright future. We do, indeed, live in a wonderful night of existence; and these anticipations, these presentiments are our moonlight. But does not this pre-suppose a Sun!

How calmly may we commit ourselves to the hands of Him who bears up the world—of Him who has created, and who provides for the joys even of insects, as carefully as if He were their little father!

No one learns to think by getting rules for thinking, but by getting materials for thought.

Every one has in his youth something of a poetic genius—its folly and its enthusiasm. The poetic genius itself lives in an eternal youth.

I have never had such a peculiar feeling of the narrowness of the human heart, as when, in one afternoon, I have had to write six friendly letters to six different persons.

It does not follow that he who deceives us, considers us, therefore, as fools. He ascribes his success rather to his resistless powers.

There are comforters by profession, to whom nothing worse could happen than that others should be consoled: they could then talk the less.

If self-knowledge be a path to virtue, virtue is a much better one to self-knowledge. The more pure the soul becomes, it will, like certain precious stones that are sensible to the contact of poison, shrink from the fetid vapours of evil impressions.

The pursuit of pleasure makes us as earthly-minded as engrossment in business.

We would rather discover truth than hear it.

Domestic life is the most delightful, because it repeats our childhood.

In order not to be made servile by the great, let us place before our minds a still greater.

Man despises the man most with whom he is most frequently brought into contact; for instance, the publisher the author, &c.

A single odour awakens a whole host of old associations; it has more influence than even the eye upon the imagination.

We have a certain complacency in witnessing an air of defiance in a criminal before his judges, because he thereby lessens our consciousness of subjection to authority.

We sympathize more readily with excess of sorrow than with exuberance of joy. Sympathy increases with the former, not with the latter.

Our dislike to the sight of our faults we vent upon the way in which our friend has discovered them to us. If he have done it boldly, we cry out against his abruptness, his roughness; if delicately,

gently, we exclaim at his duplicity, his dissimulation.

The face only expresses talent and habit of thought and feeling. The eye indicates the present; of the whole man this alone is transparent.

Moral science, no less than the other sciences, is subject to the limitations of our finite capacities; but as no one endeavours to reach the highest point, we are kept in ignorance of where its boundary lies.

To say, "Man may seek truth not so much in order to find it as to exercise his faculties in the search, and to strengthen his mental powers," is to say, "Take food, not that you may be nourished thereby, but that your teeth may be sharpened."

It is a matter of indifference to us what little minds think of our understandings, but not what they think of our dress.

Admiration profits not the object so much as the subject of it. While rejoicing that a man is great, we have also reason to rejoice that we are able to appreciate his worth.

The death of our beloved gives us our first love again. By death we are taught truly to love: the dear one, no longer subject to our caprice or his own, remains a spotless, glorious object of love; and time, instead of taking away from his attractions, gives to him additional charms. Thus the heart is always a gainer, give it but free room and full liberty to love.

LUCY COOPER.

(An Australian Tale.)

CHAP. II.

THE ill-managed household were now engaged in various directions and several occupations. The master mounted his gig, and, attended by Pug Mischief on horseback, drove away to his Chambers in Sydney. A sort of pause took place in the bustle which had reigned over the house, which, if it could not be called peace, owing to the occasional gusts of Mrs. Caveat's temper, was yet much more like it than before; and the newcomer set earnestly to work to accomplish the labour appointed for her morning's exercise, which was to scour the verandah that adorned three sides of the house, now crusted with the tenacious clay and dirt of the previous rain. The poor girl was well disposed, and indeed anxious, to cultivate the goodwill of her mistress, but her strength and patience were severely tried at first starting. She had collected her pail and scrubbing-brush, her sand and flannel, from all quarters, after no small demur; she had drawn the water from a well hardly less than thirty feet deep, in a tin can attached to a frayed and knotted rope, losing from the leaky vessel at every haul a full half of its contents; the remains of a windlass were scattered about, in evidence that there had once existed such a contrivance for drawing water, but now serving no other purpose than to litter the yard, and embarrass the movements of all who had occasion to visit the well. In England, there would have stood a pump over the closed aperture, with a stone sink or cistern, or, at least, a large tub to receive the waste water; but it was not so here, where shiftiness and contrivance in the moral and phy-

sical concerns of life hasten the deterioration of character already on the decline. All these preliminary difficulties were now overcome, and Lucy was upon her knees intent upon her task. The first interruption was from Mrs. Caveat, who rebuked her extravagance for going about in shoes and stockings, which were at once rejected, in compliance with her commands. Ere she had well resumed the labours of the scrubbing-brush, the old Irishwoman, with savage violence, swept away her pail, declaring she had been looking for it every where, and that she wondered how she dared make free with any thing belonging to her. To renew her search for another pail,—to return to the deep well and leaking can, and again to fill it, wore fresh hindrances and fresh trials of her temper; but Lucy reflected that she was helpless, and that her situation was none other than she had brought upon herself, and, however distressing, not to be compared to the sufferings of some whom she had left at home, broken-hearted by her conduct. She wiped away a tear, and once more essayed her formidable task; and when it was at length accomplished, she felt the full effects of the morning sun, and the steaming breathless atmosphere, in a state of weakness and dejection which she had never before experienced. But, although she was quite exhausted, the day was far from spent, and, whilst the day lasted, she could expect no intermission of her toil. What might have been the next employment of her strength, it is impossible to say, for the arrival of Mrs. Caveat's sister in her carriage put an end to all the settled labours of the day, without affording the slightest relief to the servants. Mrs. Batboat had come to spend the day with Mrs. Caveat; and, from her open carriage, which was stained with yesterday's mud, and drawn by two greys, whose coats and caparisons might have looked better had they been cleaner, there issued the said Mrs. Batboat, in a silk gown, streaked a little with butter and gravy, but, as it was almost new, there was still plenty of room left for future impressions; two shoes which never had been pairs, whereof one had been green, but had turned yellow in the course of her slatternly nursery, and the other was burst at every seam. And after Mrs. Batboat, there descended Miss Jemima Batboat, whose dumpy resemblance to her dumpy mamma, at eleven years of age, was very singular; Master Freddy and Master Percy Batboat came next, in new blouses and red belts, and, finally, Master Johnny Batboat, borne in the arms of a red-headed Irish wet nurse.

Such were the visitors whose invasion put all the household to the rout. Whilst preparations were being made for luncheon, on a large scale; whilst the sisters overwhelmed each other with incessant questions, which, as they had met but two days before, could not have been very various or very important; whilst the boys and girl hurried over the house, seeking what they could devour or destroy, and the red-haired Kitty was recruiting her strength with a glass of bottled porter, which the anxious mother had demanded, first of all for herself, and then for her adjutant; Master Johnny Batboat was transferred to Lucy, to be promenaded in the verandah before the drawing-room windows.

"Don't set him down, young woman; mind his dear legs," said his mamma. Master Johnny was eighteen months old, and could not walk.

"Here," continued Mrs. Batboat, "give him this piece of cake, and see you don't choke him."

But Master Johnny, who could neither talk nor walk, had set his heart upon something else, and refusing all Lucy's offers of plum-cake, made Feversham re-bellow with his cries.

Meantime the three interesting children inside, who had run against every chair, and overthrown the fire-irons, and trod upon the dogs, came rushing into the drawing-room with shouts of admiration, each with a kitten in hand, and followed by the old cat, with anxious cries. As they had left every door open, the fowls had got possession of bed-rooms, breakfast-parlour, and the

Doctor's study; from which they were not expelled without considerable loss—one old French cock having retreated through a pane of glass, and a white hen having consumed the wafers and spilt the ink in the Doctor's standish.

The uproar and demolition now took a different turn; for, whilst Mrs. Caveat and Mrs. Batboat, with soothing words, would fain have moderated the eagerness of the young people, whole plates of biscuit and plum-cake shrunk beneath their attacks, in which Kitty Anderson also was encouraged to take her share, under the rational persuasion that she was only consuming Master Johnny's ration, for whose special behoof the said Kitty had been procured from the factory at Parramatta, and duly fed with all nourishing viands.

The visit being at length concluded, when the two ladies thought it time to prepare for Dr. Caveat and Mr. Batboat's return from business; and having previously arranged and appointed a grand picnic for that day week, the carriage was ordered round to the door, the party once more resumed their seats, and disappeared among the loquat trees.

Since this tale of Australian manners is not altogether intended to amuse the reader at the antipodes, but aims also at the higher object of furnishing him with accurate information on a subject much misrepresented and little known, I give a statement of the rations as they are supplied to a government woman, which is the proper phrase for a female prisoner; the word *convict* being always applied and accepted in bad part, and as a term of reproach.

The rations for a week, therefore, are as follows:—12lbs. of wheat, or 9lbs. of wheat and 3½lbs. of maize meal, 7lbs. of beef or mutton, or 4½lbs. of salt pork, 2 ounces of salt, and 2 ounces of soap.

In addition to which the master is bound to keep his assigned women sufficiently clothed, and in return has a full right to all the services which he can exact from them, backed by the severities of the police. Much, therefore, of the convict's condition depends upon the character of the family into which he is assigned; his personal comfort materially depends upon it; his moral amendment, and the gradual rekindling of religious and devotional feelings, after they have lain apparently extinct for many years, are oftentimes the precious fruits of a wholesome and humane treatment, not less beneficial to the master than to the servant. Such instances have fallen under my observation repeatedly; and I have been delighted to see obdurate sinners give way to gentleness and mercy, assisted, I firmly believe, by the soothing effects of a bland and genial climate. The great temptation here is drunkenness; whoever has escaped from the fascinations of this vice has almost achieved the victory; a return to decency and order is henceforth easy; after a few years, the prisoner becomes entitled to a "ticket of leave," which is the proper phrase for a permission granted to him by the Governor to hire himself to a master for the wages he may be able to obtain, and, in short, under certain restrictions, to put him exactly on the footing of a free man, during his good behaviour. A conditional pardon, by which he is restored to all his civil rights within the colony, but which prevents his ever leaving it, and a free pardon, by which even this latter restraint is removed, are both in the gift of the Governor. The great high-way to freedom being thus opened, the instances of individuals who have raised themselves to great wealth, and unquestionable respectability, are of constant occurrence. But there is a reverse to this picture, so revolting to humanity, that a sense of duty alone compels me to refer to it. Thousands upon thousands never rise from their degraded and stupified condition. Totally lost to every sensation of goodness, to all emotions of religion, they toil on until death overtakes them, with all its consequences.

If Lucy Cooper escaped further degradation in the house of Dr. Caveat, it was not owing to any direct principles of virtue and religion, but rather to the sug-

gestions of a strong natural understanding, guided by a light no longer acknowledged indeed, but which still exerted a powerful influence upon her mind. Temptations of all kinds beset her; some from her fellow-servants, which were deprived of much of their effect by their very coarseness; some from the character of the circumstances by which she was surrounded; and some from the bitter recollection that she had no longer any character to sustain, and that her restoration to her former state was impossible: but chiefly from the solicitations of Dr. Caveat, whose selfishness was to be gratified by her acquiescence, and who was not accustomed to lay any restraint upon his self-indulgence, nor to experience any opposition to his desires. The Doctor was a man who wholly disbelieved in the existence of anything that was good in itself; the attributes and being of a God were far above out of his sight; he felt that his own motives were all selfish, and he concluded that there was no higher principle in the world. In short, if he ever thought at all of the existence of a Superior Being, he thought wickedly that that Being was such an one as himself.

With these persuasions, he addressed himself with a peculiar plausibility to all the popular notions of the day; and whilst he declaimed against the tyranny of Government, and the oppressions of the rich, he was, as we have already seen, cruel and unfeeling to his dependents; upholding every pretence of humanity and benevolence, he turned the abuses of the law to his own advantage, at the expense of every broken-hearted wretch who fell into his power. Yet this same Dr. Caveat, who despised all the obligations, and violated all the duties of society, was generally received and caressed; whilst those few, whose instinctive horror of his principles and actions led them to avoid his conversation; could not venture to cut him altogether, and treat him according to his demerits.

To complete his portrait, there was a coarseness of exterior, well marked in his features and person, which suited entirely with the inner man.

Lucy Cooper was beginning to be sensible that her master had turned his designs towards her, during the first week of her services at Feversham; and, much in the same way, she had been molested by several of the male prisoners of the establishment, all of whom she had repulsed; besides being unceasingly tormented by the boyish pretensions of Pug Mischief, whose pertinacity and craftiness were perpetually in operation.

A week of extreme toil and suffering was now hastening rapidly to a close, to be wound up by the grand picnic, for which due preparation had been made. In this country, disappointment in the weather, although not quite so constant as at home, does sometimes take place. But, on this occasion, the day was splendid in the extreme, refreshed by a gentle, cooling breeze, such as we sometimes read of in our English poets, but seldom enjoy in reality.

The first of the party who had arrived upon the ground, were that same Mrs. Batboat and her children whom we have already noticed. Some hampers were secured within and about the carriage, which was cleaned up and polished with great diligence. Mr. Batboat did not arrive until an hour after; but we may as well describe him, with his generation. He was a heavy, good-natured man; and, although not wholly uneducated, he was altogether dumb in society, and made no other use of his mouth than to eat and drink to the uttermost. His great fat face was fringed with a full-set beard, continued under his chin, after that fashion which is called a Newgate frill; and he wore a grey serge coat, and waistcoat and trowsers of the same, made large and comfortable, and surmounted by a beaverless brown felt hat, low in the crown and large in the brim. Whilst Mrs. Caveat and Mrs. Batboat were spreading a sort of awning, composed of carpets and counterpanes, hung from the branches of the trees, and continued with stout cords, as occasion required, and were proceeding to

unpack the several delicacies that had been provided, assisted by Pug Mischief, as a matter of course, and by Lucy Cooper at the Doctor's special orders; Mrs. Whytlog and her two daughters, all on horseback, rode up the ascent, under the escort of her nephew, Captain Lappitt; and as these were bustling bodies, who were used to marshal pic-nics, great satisfaction was expressed at their arrival; although, I am quite sure, Mrs. Batboat whispered to Mrs. Caveat, that she knew very well Mrs. Whytlog would spoil everything. Turkeys and hams, roasted fowls and tongues, pickled salmon and ducks, a huge sirloin of beef, pigeon pies and oyster patties; a profusion of pound cake, tarts and jellies; piles of oranges, and loquats; port and sherry, champagne and claret, Dunbar's porter and ale in bottles, were successively produced, together with a large segment of a Cheshire cheese, in a leaden case, and a profusion of American cracknels. At a little distance, under a huge tree, Pug Mischief was diligently engaged heaping fuel round a cauldron of potatoes, which were to be produced *pro re nata*, as the doctors say, in the course of the entertainment. The company now began to arrive: Mrs. Barnett's family came in a four-wheeled carriage, and Mr. and Mrs. Barnett in a gig; Colonel Dinnit, Major Macnab, and Captains Pewter, Snatch, and Griggle, came in the regimental omnibus, from which also emerged certain subalterns, whose names are not recorded. The ladies of the regiment followed in a phaeton; and the band, which had arrived some time before, were stationed in the bush, which was close at hand.

Next came, in long array, the whole generation of the Fatherleys, not forgetting Mr. Fatherley's sire, a green old man of eighty-three; the tribe consisted of seventeen, of whom fourteen were under age, and Mrs. Fatherley looked hardly less young and sprightly than her daughters. In truth, they were "a sight to be seen;" all comely, graceful, and handsome, all endowed with a due portion of common sense, and all free from personal blemish or moral reproach. They were well-behaved, orderly, and unobtrusive; and, if pleasure is to be gleaned at pic-nics, it is probable that they came in for considerably more than their full contingent. There were several childless couples there; to wit, Mr. and Mrs. Cross; Mr. Flank and his little Lady; and Mr. and Mrs. Crowdy; and these all came in gigs. There were a baker's dozen of young men, unmatched, of all ages and complexions; but all expert at something. There was young Mr. Peppercorn, in the costume of his youth; which readers of his own standing will recognise as drab smalls, and gaiters to match; for thirty years he had rejoiced in this exploded fashion, and still flourished amongst the unfading flowers: he could carve a fowl, and blow the flute. Eight more of the young men could blow the flute, but could not carve a fowl. Three of them had long exhibited a favourite *pas de trois* in that interval between the dances, which is devoted to the supper table; these were Messieurs Parry, Perry, and Pirie, and no party was thought to be perfect without the Messieurs P—. Other people dropped in during the festival, whose wealth entitled them to take liberties, or whose impudence bore them out in doing things differently from the rest.

But it is time to tell the reader what sort of a place had been selected for the pic-nic. It was the very summit of a ridge of cleared land, on which a few trees had been left, with more than usual taste, as being themselves handsome, and peculiarly becoming to the spot. The country lay open to the view, in one unbroken circle; the chief grace of which were the unbroken waters of Botany Bay, and the projecting heads of Cape Banks and Solander, stretching far away to the southward.

In the same direction, but considerably nearer, lay Newtown, not then, as now, distinguished by the white tower and spire springing from the midst of interminable forests of gum-trees, the sweetest spot in New South Wales. From this high ground also might be perceived the spire of St. James's Church, in Sydney; the road to

Parramatta appeared at intervals, to the north and west, where the horizon was bounded by Mount Tomah, and the distant range of the Blue Mountains.

Here, then, the numerous party assembled to do honour to the ample entertainment provided by Mrs. Caveat and Mrs. Batboat; and right merrily did the guests eat and drink, and enjoy themselves, whilst the servants, in spite of Mrs. Caveat's vigilance, made free with dainty and wine, as their luck served. Pug Mischief was particularly fortunate; many of the best tarts fell to his share, and he contrived to taste of nearly every bottle. The Doctor's arrival, in the course of the feast, served for some check upon his voracity; but, after a while, his thirst got the better of his caution, to that degree, that Lucy had no small difficulty in leading him away from observation, and depositing him in a shady thicket, where he was soon plunged in total forgetfulness. He was occasionally asked for, it is true; but some reason was assigned for his absence, which, for the present at any rate, passed current. Meanwhile the course of affairs among the leading people went on very gaily. There was abundance of laughter, provoked doubtless by sallies of the choicest wit, and jokes of the most approved performance: nothing could exceed the pleasantness of the young men, and the complaisance of the young ladies, except the goodness of the wines, and the cookery of the viands. Toasts were proposed, and speeches were made, according to the genuine formulary which, time out of mind, has been employed to set forth the unworthiness, gratitude, and thankfulness of the speakers; and when, at length, the setting sun reminded the founders of the feast that it was time to adjourn to Mrs. Caveat's drawing-room, certain of those who had come from far, thoughtful, it may be, that the following day was Sunday, took their leave of their host and hostess, and went their way. But a brilliant scene was waiting those that remained, in the lighted apartments of FEVERSHAM, to which Dr. and Mrs. Caveat led the way, while Mrs. Batboat kindly undertook to superintend the business of collecting plate and glasses, and all the other scattered remnants of the feast. The servants, however, were not quite sober, and made mistakes; much of the property was conveyed away, and, in colonial language, *planted*: some of the neighbouring denizens of the bush had gathered round to see what was to be seen, and to take what might be safely appropriated. But Mrs. Batboat was versed in all such matters, and fought her way through her arduous task with great perseverance.

The company within doors were now busily intent upon quadrilles and whist; the great drawing-room at FEVERSHAM, with its pretty columns, and hired chandeliers, could hardly contain its numerous guests, when Dr. Caveat determined upon putting into execution a little project of his own, which had occupied his leisure thoughts throughout the week. Encountering Lucy, as though by accident, he bade her go up to assist Mrs. Batboat in her employment. The shades of evening were now rapidly gathering, and Lucy hurried her pace, as she perceived that she was followed. Her purser hurried likewise, and was fast gaining ground, when lo! a horrid oath was heard to proceed from the Doctor's mouth, as he stumbled over the body of some one stretched upon the ground, and falling headlong, found himself side by side with Pug Mischief, whose pink jacket was only just discernible in the gloom.

Whilst Lucy regained the house, terrified and breathless, a scene ensued between Dr. Caveat and the drunken orphan from the Male Asylum, which, as it consisted of a tremendous beating, and the most offensive epithets, on the one side, and the helpless entreaties of Pug Mischief on the other, whom pain and peril rapidly restored to his senses, we shall follow the Doctor home, and observe how, with Mr. Batboat, and a few more worthies of the same stamp, this night, which the reader will soon perceive to have been a most memorable one, was lengthened even till the morning, in deep gambling, deep drinking, and sabbath-breaking. Long after the

company had begun to disperse, and carriage after carriage had taken its way down the Lequat avenue—when light after light had become extinguished, and Mrs. Caveat had retired to bed—the Doctor's study still resounded with drunken hilarity, till, by degrees, it reached the climax of madness and blasphemy, and gradually died away as the sun rose over Anandale.

THE LUNATIC ASYLUM.

(Concluded from page 123.)

"I HAD understood for some time what was passing in his mind. I did not like to dwell on it. Did I know what I felt myself? All my feelings were confused; I had given myself up to them without examination; reflection had not enlightened me. On the morrow he was no longer with us; the house appeared to me deserted, and the day very long. My hourly interest was gone; a tedious vacuum succeeded to constant excitement. Perhaps it was not happiness that I regretted, but I found my mind unemployed; I did not know what to do with my time and thoughts. He came to see us. My father had named an hour in the day in which, being usually at liberty, he could be with us. His presence did not embarrass me; I had nothing that I wished to hide, and yet I felt constrained. Our friend was much more so: I saw that he was distressed, and struggling with some great inward uneasiness,—agitated by thoughts that he wished to conceal and conquer. We could not keep up the conversation; his countenance resumed its sad and alarming expression; I could no longer divert him, or relax the springs of his dis-tempered imagination.

"My father said to me one day, 'These visits do him more harm than good. If we do not take care, he will have a relapse. I will tell him not to come here for some time.'—'I think that you will wound him deeply,' I answered. 'Do you not fear that this emotion will injure him?'—'We must, for this reason, seek some excuse for forbidding him. You shall go and pass some weeks at my sister's in the country: on your return, we shall see what is to be done.'

"My father went in the evening to tell him this unwelcome news. The following day, a letter was brought to me; the address was in his handwriting; I opened it, and read—'The resolution that you have taken,—a resolution so cruel and unexpected,—overthrows all my wise determinations, and precipitates me into measures which will, I know, endanger my life. I summon all the resolution of which I am capable to lay open to you a heart which ought to remain closed to every human being,—closed to you, I see plainly. I will only say what is needful: my words must be circumspect and prudent. If I do not show calmness and reason; if I do not appear like others, all is at an end with me. Margaret, I owe you everything, and I do not dare remind you of it. Your kindness, your care, are perhaps connected in your mind with ideas of alarm and repugnance. The moment when I saw you for the first time; the time that I have passed with you; those hours of a happiness so new, so improbable,—I must chase them from my remembrance. What I was then must never be recalled by us; forget the past, it alarms me; I have a horror of thinking of it. Let us, then, be ignorant of how I knew you, why I love you more than any person in the world could love. Still you have often told me, that I was only unhappy; yes, you alone have consoled me. And why should there be repugnance to him whose tears you have dried?—to him whom you saved from despair? Ought it not, on the contrary, to be a tie between two beings,—to have understood and sympathized with each other? As to me, I feel it, I cannot live without you; without you, there is no peace or happiness for me. I was going to say, reason; but such a word, pronounced by me, has too

frightful a meaning. No, Margaret, I am sane—master of myself: I shall always be so. I have strength to support the trials of life; there is, however, one not to be risked. I implore you, do not injure me more than you have benefited me. It is impossible for you not to have some regard for me; pity alone could not be so charming, so tender. The wretched are taken care of, but not cured, if they are not loved. Your sympathy saved me from an abyss: do not plunge me into it again. Love me—after the good that you have done me, you have no right to abandon me: it would be a refinement of cruelty, of which you are not capable. I conclude; my head burns:—no, Margaret, that is a mistake: I am cool and tranquil; it is with deliberation, and with all the calculation of prudence, with the knowledge of the present, and the examination of the future, that I beg to consecrate my life to you, and to take charge of your welfare. This proposal that I make to you is a perfectly reasonable one. It is such as any one would make, who had read in your eyes, and touching looks, all the angelic feelings of your soul. I write a letter to your father, and give you the charge of it.'

"I delivered it to him. It was as follows:—'I hope, sir, that the request that I am about to make will not surprise you. I owe you much; if you will, give me your attention, I shall owe you a thousand times more. I love your daughter. It was impossible for me to have resided so long in your family, and that my heart should not be affected by the deepest feelings towards her. Till this day, she has been ignorant of my sentiments. It is right that you should be informed of them at the same time. My fortune is considerable; you are aware that I am of an honourable family; as to my character and sentiments, you are acquainted with them. I have been a member of your family: shall I be so for ever?'

"After having read this letter and mine, which I had also given to him, my father did not speak for a few minutes. He then looked at me earnestly and tenderly. 'What shall we do,' he said, 'to spare him? This is what I feared.' I made no answer. 'How, my child,' he continued, 'can there be a moment's hesitation? I do not know what your tenderness of heart may dictate or suggest, but my duty as a father cannot admit of a doubt. Entrust the life of my beloved child to a wretched being, whom, with all my efforts, I have not been able to recover from his melancholy condition—who is on the verge of relapsing into complete lunacy! The thought fills me with horror. I should be more mad than himself, if such an idea could for an instant occur to me.' I remained mute and dejected—nothing could have made me utter a word. I do not know what instinct, what inward conviction, gave me a sort of certainty, that I should have run no risk in uniting myself to him; that our lives would be peaceful and happy; that I had something in me which could sustain tranquillity and reason in his poor mind; that he was lost if this only chance of happiness was refused to him. But how could I say all this—against probability, against common sense, and all appearances? How could I say it to my father, so prudent, so wise, so kind and good to me? He was right, I knew it. I could not deny it; at the bottom of my heart, a voice told me the contrary. I ought to have had the courage to resist him. Now I am full of remorse for not having entreated, implored my father; for not having extracted a consent, which could only have endangered myself; and I did not even see that danger . . . He went to see him, and tried to persuade him that other engagements had been contracted, that his word had long been pledged to another family. These precautions did not in the least soften his refusal. The scene was violent; my father confessed this to me, without entering into particulars. He was very miserable, very much absorbed by this fatality; in accordance with his character, he did not speak of it to me. I lived in constant wretchedness. Soon after, I learnt that fresh attacks of frenzy had occurred. I asked my father what he knew on the subject.

'It is too true,' he said; 'and I expected it. I am so much accustomed to this malady, that I had no doubt it would recur. I cannot see him, my presence would agitate him. I cannot either think of having him back among the other patients; all that he would see would recall impressions of which the effect would be injurious. But I inform myself most carefully of his state. His attendants acquaint me with everything. I prescribe what is to be done; and if his madness continues, as I fear, I shall see to having him taken to an asylum, fifty miles hence. I know the principal doctor there very well; he will be well taken care of.' This prudence of my father's, which was not harshness, this calm kindness, made me feel timid and silent. I dared not give way to my feelings. What could I say? What could I ask? Calm reflection told me that there was no disputing the will of Providence. I prayed to God, —I implored a miracle; I dreamt that it was granted. I hovered between resignation and hope,—I agitated myself painfully when I gave myself up to my own thoughts—I became calm, when I sought for comfort in prayer.

"One day I went out of doors, and walked sadly away from the town, when suddenly I perceived our friend, who had been taken out for air, during an interval of calmness and reason. His hair was long and in disorder, and his eyes were wide open and dull. His mouth had an expression that would have been convulsive, had it not betokened exhaustion. He looked towards me. A feeling of shame became evident in his face. He was humbled to appear thus before my eyes; however, he took courage, and revived at the sound of my voice. I was much agitated; I did not know what words to address to him. I was more afraid of wounding his feelings than of injuring him; the idea of his madness did not even occur to me. After some sentences painfully uttered, he appeared to overcome the feeling of our mutual embarrassment and constraint. 'Well,' he said, 'you condemned me; indeed, how could I have such a hope—such presumption! It is too true, I could not have been cured when I conceived so strange a project—marry a madman!' and he began laughing in a frightful manner. 'Have I deserved that you should speak thus to me?' I answered. 'Have you not seen my affection and regard?' 'Yes, your kindness, your compassion, your charity—but affection—Ah! there *could* be none for me. I am taken care of—the duties of humanity and religion are fulfilled towards me—but this is all; and even this wearies people. I have been driven away—banished: you, so good, so pious, you have shut your doors on an unhappy man; his misfortunes make him revolting to you. If I have relapsed into this dreadful state, who is the cause of it? Tell me.' These words were too cutting; I was not mistress of my feelings; I melted into tears, and sobbed aloud. As for him, he seemed renovated; he raised his head—his eye sparkled. 'I am unjust and cruel,' continued he. 'No, you have not refused me; no, you did not wish my death. It is not you who have thrown me back into this horrible state; no, *you* could not have been so harsh. I had divined feelings in you, which assured me that I might seek my well-being at your hands. It is your father who kills me; it is *he* who is without compassion; it is his cruel prudence which has inflicted this blow. Margaret, I implore you, tell me that you would have consented; say that the refusal did not come from you. Give me this assurance; it is the only way to calm me. This thought will appease my sufferings, and soothe my mind; if I can say, She loves me, it will be sufficient to render all my life calm and happy. Say only the words, *It was my father!*' A feeling of alarm tightens my heart, when I think of the answer that I might have uttered. O my God! it was thy goodness that saved me from so fearful a remembrance! What danger I incurred! How dreadful might I have become to myself! I regained my strength a little. I reproached

him, but with gentleness, for his ingratitude towards my father. I essayed to give him a glimpse of hope for the future; I endeavoured to bring him to himself. His keepers entreated me to go; they saw some violent crisis coming on. The woman who accompanied me led me hastily away. In effect he had a fit of frenzy more violent than ever. From this day lucid intervals almost ceased. They told me that he had neither reason nor consciousness. How shall I terminate my recital! how approach the horrible catastrophe! My father continued his care of him; almost every day he went to his house, to inform himself of his symptoms, and give directions to his attendants; but he took care never to be seen by him. Once, through the grate of his window, he perceived my father, who was come to pay his usual visit. They had forgotten to fasten his door; he darted out exclaiming, 'It is he, my enemy, my murderer!' He leapt down the staircase before any one had time to reach him. The unhappy man had seized a knife; he threw himself on my father, and stretched him at his feet. . . . My father was brought home, bathed in blood; the steel had reached his heart. He had only a few moments to live; he could hardly speak. 'My beloved child! my poor Margaret!' he uttered. And I read in his eye that his last thought was one of satisfaction—that he had not exposed me to the blow, by which he had perished. There is no language for the grief I suffered; it will end only with my existence. God willed it; He sent me this trial; may He soon reunite me to my father! By repenting these words, by dwelling on this thought, by a total self-denial, I have been able to nerve my heart against despair, and at times to dry my tears: I find a strength and peace, which come from Heaven, for which I do not reproach myself. I lean on the idea of fate, which is not that of chance, but of Providence. Sometimes, I am in a kind of stupor, which seems like insensibility: to such a state of mind exertion is necessary. I will devote myself to the service of the poor and the sick; God will not condemn that. It shall be especially to the care of this fatal malady, the only image that exists in my mind.

"I informed myself of the fate of the unhappy and blind instrument of this dreadful misfortune. He had not had a glimpse of reason or intelligence from that time. He never knew any one. It seemed to me that I ought to thank God for this. At other times, I reproached myself for this thought. He was transported to the asylum, where my father had wished to send him. It is there that I wish to be employed by the Superiors of the order into which I hope to be admitted; I shall obey them without murmuring. Will it be wrong to feel that I have a duty to him, whom my father attended with so much affection? I know that I can neither wait upon him, nor see him, but I shall be near him. I shall be acquainted with his sufferings. I shall watch over this human being, whose mind is already gone; and see that he has everything that can soften his physical sufferings. If he gets well, I beg that I may be sent from the place where he is."

I gave back to the Superior the manuscript of the Sister of Charity. She told me that none of her pious companions was more devoted, more regular, in their zealous and pious office. "But," she said, "her endeavours are beyond her strength; she tries to stifle the grief that preys upon her; there is not a minute in the day that she does not think of it, but she never speaks of it." Six months after I received the following letter:—

"SIR,—You took so much interest in Sister Margaret, that I must tell you that her sad existence is ended. God has taken her to himself. The poor young man who was confined in the asylum, grew more and more violent. About a fortnight since a brain fever came on. It was necessary to acquaint Sister Margaret of this. She begged me to dispense with her services; she had not strength for them. She went to chapel, and

remained in prayer all day, and almost all night. The young man died on the following day. The body was taken to the church. When we came there to sprinkle the holy water, she wished to take her turn; in passing by the bier, she fainted. Two days after, she died like a saint, in my arms."

LORD HILL.¹

APART from the great military operations in which Lord Hill played a conspicuous, though not the chief part, his life cannot be said to have been an eventful one, in the ordinary sense of the word. It presents no surprising changes—no ups and downs—no sudden reverses, or starts of prosperity; none, in short, of the usual elements of a romantic career. Neither do we find in it to atone for poverty of external incident, much of a diversified history of the inner man. There is no remarkable development of passion, sentiment, or even intellectual power, to be traced out in it; little from which we can draw new illustrations of the working of the human mind, or from which we can derive much help in untwisting the mazes of the heart. For interest of the former kind his course was too uniformly prosperous and too gradual in its progression; and for the latter his character was too simple, and, it may be, the range of his faculties too limited.

It does not by any means follow from this that the life of Lord Hill is one which need not have been written. There is something in human life to interest us beyond variety of adventure, intensity of passion, or restless activity of intellect; something from the contemplation of which we may derive as much benefit as from the highest gratification of curiosity, or even from the deepening of our insight into the springs of human action. As there are roads which appear dull and unromantic only because they are smooth and level, but which are on that account all the more delightful to travel on; so there are men whose lives seem to lack interest only because they are not diversified by deviations into error; and whose character appears to possess nothing to repay the trouble of penetrating into its depths, only because the road thither is perfectly direct and open.

The leading idea which runs through the life of Lord Hill is that of "duty," duty performed unaffectedly, unostentatiously—almost unconsciously—without the slightest parade of heroism, doing all, and more than all, to which the ambition of being reckoned heroes prompts vainer men. He appears to have done his duty simply because there it was before him, the work which he had to do; not because of the praise which he should gain even from his own approving conscience, or from any persuasion that it would be a noble achievement. They are, in every respect, a lower order of men who must be stimulated to patriotic exertion by such reflections as "*Dulce et decorum est pro patria mori.*" Such as he was care little for the pleasure, and are at the time unconscious of the honour.

A few words which fell from him, on the subject of his religious feelings, shortly before his death, appear to us strongly to illustrate the whole of his character, on other points as well as on that of religion. "With regard to my religious feelings, I have not power to express much, and never had; but I do trust I am sin-

cere; and I hope for mercy." This want of power "to express much" on matters of deep and serious concernment, like the "tardiness in nature" which froze the words of affection on the lips of Cordelia, is very far from being an evidence that much is not felt; it rather proves that that which is felt is accompanied by a severe truthfulness of character which shrinks from the slightest approach to the simulation even of what it most approves; by a sensitive delicacy of mind which revolts at exposing the sacred feelings of the heart, as at a profanation; by the habit of fixing the mind's eye directly and exclusively upon that which has to be done, and not encouraging it to turn about and contemplate itself in the doing of it. Such men will not speak of their own feelings; and indeed, were they willing, have little to say about them, because they have paid little attention to them. They may be heroes, but they cannot speak heroics. They may be religious, but they cannot express religious feelings. A man of such a stamp was Lord Hill. His character was simple, unaffected, undemonstrative; a man of action rather than of reflection; and of either rather than of words.

Lord Hill was born at Prees, in Shropshire, 11th August, 1772, of an ancient and most respectable family, of which several members had attained considerable eminence. He was a nephew of the celebrated and eccentric Rowland Hill, minister of Surrey Chapel. Not this excellent man only, but several other members of the family, were marked by a depth of religious feeling which verged, in some degree, upon enthusiasm.

Hill's disposition, as a boy, was singularly amiable. His delicate health frequently prevented him from joining in the athletic exercises of his more robust companions; and all his spare time was devoted to his garden, and his pet animals. His garden was most productive; and he constantly won the best prizes at the Salop Horticultural shows. His fondness for tame animals of all descriptions, and his delight in exhibiting and watching them, were very remarkable.

When very young, his sensibility was so excessive, that he fainted at the sight of a cut finger. When reminded of this in after life, by a friend, who expressed some wonder how he could have acted with the coolness and vigour he displayed as a soldier, in the midst of the dreadful scenes of carnage surrounding him, "I have still," he replied, "the same feelings; but in the excitement of battle all individual sensation is lost sight of." "Just before he joined his regiment for the first time," says his biographer, "he sickened at the sight of a human heart preserved in spirits, shown him by his medical attendant: and after he had entered on his military duties, he was unable to look at a prize-fight, between Humphries and Mendoza, near the windows of his lodging, and was taken out fainting from the room. No common observer would have imagined for an instant that the army could have been his choice; yet, as every one knows that bully and coward may be almost placed in the list of synonymes, so gentleness and bravery, sensibility and courage, and, we may add, humility and piety, are capable of a similar classification."

His parents were desirous that he should adopt the law as a profession; but the army was his own choice. He was appointed to an ensigncy in the 38th regiment, in 1790, in his eighteenth year, and was made lieutenant in the 53d, in March 1791. His character at this time is thus described by the officer under whom he served, in a letter to his uncle, Sir Richard Hill:—"It will be satisfactory to you, and to Mr. Hill, his father, to learn from me, that, as an officer, his talents, disposition, and assiduity, are of the most promising nature; and that his amiable manners, sweetness of temper, and uncommon propriety of conduct, have not only endeared him to the regiment, but procured him the most flattering

(1) *The Life of Lord Hill.* By the Rev. Edwin Sydney, A.M., Chaplain to Viscount Hill. London: Murray, 1845.

attentions from an extensive circle of the first fashion in this country."

In 1793, Lieutenant Hill raised an independent company in his native county of Shropshire, and, in consequence, obtained his commission as captain. Soon afterwards he proceeded to Toulon, and was employed as aide-de-camp to Lord Mulgrave, General O'Hara, and Sir David Dundas. The impression he made on these officers, while on the staff of each, in succession, was of the most favourable kind; and General O'Hara emphatically predicted his future distinction in the service. While at Toulon he had an opportunity of greatly distinguishing himself, and was highly commended by his superior officer for his intelligence, activity, and courage. There he formed an acquaintance with the late Lord Lynedoch, then Mr. Graham, and serving as a volunteer. When this gentleman raised the 90th regiment, in 1794, he offered Hill the majority of it, on his raising a certain quota of men, which he did. The regiment was afterwards augmented to a thousand strong, and Hill became its lieutenant-colonel.

In 1800, Colonel Hill accompanied his regiment to Egypt, under the command of Sir Ralph Abercromby. He was wounded in a skirmish, which took place on the 13th of March, 1801, by a musket-ball, which struck the peak of his helmet, and was, in consequence, not present at the action of the 21st, in which Abercromby was killed. The wound was not very serious, and he recovered in time to bear a distinguished part in all the subsequent operations of the British army in Egypt.

In August 1803, Colonel Hill was appointed brigadier-general on the staff in Ireland, and was stationed at Loughrea, having under his immediate command some light infantry corps formed from the militia of Ireland; also having charge of the whole western part of the country. Ireland at this period was threatened with the invasion of the French, and was much disturbed by disaffection in the country. Several reports of the appearance of the French kept the people in a state of constant excitement. He established with some difficulty, and in the face of considerable opposition, a system of signals throughout the country, by which, in the case of a descent, the alarm might be carried with certainty and speed to head-quarters. He maintained a constant watchfulness over the motions of the disaffected; while his own kind and conciliatory deportment contributed greatly to the preservation of peace. It is little to the credit of the government of the day, that he had much difficulty in obtaining repayment of the money he expended in these operations.

In 1805 General Hill was sent in command of the British force which was despatched that year to the Weser; which, however, speedily returned without finding any opportunity of acting with effect in cooperation with the allies. It was at this time he formed the acquaintance of the Duke of Wellington, then Sir Arthur Wellesley.

In 1808 General Hill accompanied Sir Arthur Wellesley to Portugal. The events of the campaigns in the Peninsula belong to the history of the country rather than to the life of any individual; and we shall not follow General Hill's biographer through them further than to say, that we everywhere find him advancing with the same unpretending steadiness in the path of duty. One achievement in particular gained him the highest honour, and led to his receiving the decoration of the Bath in the beginning of 1812. It is thus detailed:—

"Towards the middle of October (1811) Girard's division crossed the Guadiana at Merida, and inflicted the greatest annoyances on the northern district of Estremadura, in consequence of which, General Hill proposed to operate against him in conjunction with the Spaniards under Castanos. His principal objects were, first, to drive the enemy from Caceres; secondly, to force him to recross the Guadiana; and thirdly, to endeavour to cut off the retreat of the whole, or part, of

the hostile forces posted at Caceres, before they could be augmented or supported. As no ulterior advantage could be derived from the first object without the accomplishment of the second, this became the chief consideration in the general's disposition of his troops. Lord Wellington fully approved his design, if it could be undertaken 'without risking the safety of Campo Mayor and Orguela,' which he was assured might be done, as both these places were considered secure from assault; but the general was instructed not to pass Caceres with his head-quarters, and main body; and when he had driven off Girard, he was to replace the Comte de Penne Villaur at Caceres, and bring back his troops, who had endured the greatest sufferings from the weather, towards the frontier. The French retired from Caceres on the 26th; but their pursuers had no certain tidings as to the direction they had taken, and therefore the suffering British and Portuguese soldiers were halted by their considerate leader for that night at Malpartida, while he himself used efforts to discover the route of the retreating enemy. His information rendered it certain that they were gone to Torremocha; and he endeavoured, by taking a shorter road than theirs, to intercept and bring them to action. While on his march, General Hill discovered that Girard was at Arroyos de Molinos, and not aware of his movements; which at once induced him to decide on overtaking and surprising the whole force of the French, or at all events, compelling them to an action.

"The weather was wretched in the extreme; but the soldiers did not fail, in a long forced march, instantly undertaken in the most perfect quietude, that no symptom of their approach might alarm the enemy. By the evening of the 27th they were at Alcuéscar, within four miles of their unconscious foes. Every conceivable precaution was resorted to. The light companies were thrown into the villages, to prevent the natives from alarming the enemy; and the cavalry, artillery, and infantry, were disposed of in the neighbouring fields, with the strictest orders not to cheer the cold and gloomy night with a single fire; the flickering of which might give indication that they were near. The wind blew furiously; the rain fell in torrents; and the patient soldiery had no protection from the storm, except the drenched coverings of their tents, which the gale had thrown down; but their patience and confidence in the leader they loved deserted them not. They were warmed by the flush of expectation that the morning would recompense them for all their toils; and the first streaks of dawn had not appeared in the horizon, when the various columns fell in, without a single note of a bugle, or the beat even of one solitary drum. The ground was admirably chosen, with a view to concealment; they filed quietly through the village, and having crossed an intervening mountain, found themselves, just as the day began to break, within half a mile of Arroyos, where Girard was yet in security, ignorant of their presence and his own danger. At this instant, a violent hail-storm, pouring on the rear of the allies, caused the faces of the French piquets to be turned from them; but, just as they were ready to make the decisive movement, the clouds cleared away, the sky became serene, and the hostile corps was preparing for their march, in expectation of a propitious day. The decisive moment had arrived. General Hill was himself inspired, as was every brave man he commanded, with the enthusiasm of the scene. The usual calmness of his demeanour, rendered even more than commonly striking by the precautions he had taken for silence, became suddenly converted into an animation that cheered, and almost amused, every witness of his ardour. It seemed kindled in an instant. He drew his sword,—gave a loud hurra,—spurred his horse,—and led the charge on the astonished ranks of the French, then forming, without a thought that he was so near at hand. The first brigade, headed thus vigorously by himself, moved at once on the village of Arroyos; and the Highlanders, catching up the humour

of the hour, were heard playing on their bag-pipes, 'Hey, Johnny Cope, are ye wakin' yet?' The second brigade, under General Howard, moved quietly round to the other side of the place, to intercept the troops which the first should drive out. In the centre came the cavalry, ready to act in whatever way might be deemed expedient. Presently the 71st and 92d regiments dashed into Arroyo, and came upon the French just as they were filing out, with the exception of one brigade, which had marched for Medellin before daylight. This charge first announced to them the snare into which they had fallen. And, with only a feeble effort on the part of their cavalry, they were driven before the bayonets of the British. The French infantry, nevertheless, having emerged from the town, tried to form into two squares, with cavalry on their left; but the 71st, lining the garden-walls of the town, poured into them an awful fire, which was soon succeeded by that of artillery. They fled in utter confusion, and the capture of the prisoners, cannon, and baggage, rapidly followed. Then came the memorable pursuit of that extraordinary day. Just behind the routed forces of Girard, rose the rocky and steep Sierra de Montanches, up which they clambered, in a state of utter confusion, throwing away their arms, ammunition, and knapsacks, and yielding their persons as prisoners to their pursuers at every step. In the excitement of such a chase, the British, the Portuguese, and the Spaniards, seemed all to forget that they had been without rest, and soaked with rain and mist all the night before. They laughed, shouted, jumped in their heavy accoutrements, or caught the scrambling horses of the fugitives, who could not ride them over the mountain, and came down mounted in triumph, till fatigue caused some to desist, and the rest, being too much scattered, were judiciously stopped on the summit of the Sierra, by General Howard. Nearly fifteen hundred prisoners were taken, and some of them of high rank. Lieutenant Blakeney, of the 28th, leaped over a wall, and seized the Prince d'Arenberg, in the midst of a group of officers. General Brun was also taken, with a colonel of cavalry, an aide-de-camp of Girard, two lieutenant-colonels, a commissaire de guerre, and no less than thirty captains and inferior officers. Girard himself, with a handful of men, escaped by the bridge of Medellin, declaring he would rather die than surrender. It was altogether a most brilliant achievement; and is thus eloquently adverted to by Major Sherer, in his recollections of the day:—"One thing in our success at Arroyo de Molinos gratified our division highly; it was a triumph for our General—a triumph *all his own*. He gained great credit for his well-conducted enterprise; and he gained what, to one of his mild, kind, and humane character, was still more valuable—a solid and bloodless victory; for it is certainly the truest maxim in war, 'That conquest is twice achieved, where the achiever brings home full numbers.' Indeed, the loss in his division was most trifling, while a deep blow was inflicted on the enemy. Girard was wounded before he escaped, and Soult afterwards arrested him, and reported him to Buonaparte, who, knowing that he was, notwithstanding this misadventure, a thoroughly brave soldier, pardoned him, in the expectation of future services."

It is strikingly illustrative of the retiring modesty of Hill's character, that it was some time before he could become reconciled to the new title he had won. "When he was knighted," says an officer on his personal staff, "there was not one of us dared, for nearly six months, to call him Sir Rowland." He was quite distressed at being called anything but General; and it was only very gradually that he could be driven to bear his honour.

The next important achievement of General, now Sir Rowland Hill, was the surprise of Almaraz, undertaken in May 1812, to destroy the means possessed by the French of effecting the passage of the Tagus, which was effected with equal skill, and obtained from his military superiors, and the country, equal commendation. But we

must not pause upon military operations, the details of which, however important as illustrating the character of the individual, are rather out of place in a notice of this kind. To the end of the campaign, Hill maintained the same high character which he had won for himself from the outset. When it was brought to a close by the abdication of Buonaparte, he was raised to the peerage, by the title of Lord Hill, of Almaraz and Hawkstone.

On Lord Hill's return to England, he came in for a large share of the marks of public gratitude which were showered upon the heroes of the war. The city of London voted him a sword. "His visit to Shrewsbury," remarks his biographer, "was a triumph. The streets were filled with thousands, who came pouring in from every quarter. The trees on the road by which he entered, were adorned with flowers, and the very road itself actually strewed with them. A splendid dinner was given at the Guildhall, where the venerable father of Lord Hill was an object of universal interest. He appeared fresh, vigorous, and animated, as the youngest of the guests at that festive board, until he rose amid the plaudits of the company, to return thanks for the honours of that day. Then the tears rolled down his aged cheeks; but, at length, his manly spirit conquered all emotions, and he expressed, in a few brief words, his sense of the reception of his name by the Salopians."

In September of this year, Lord Hill was offered the command in Scotland, but declined it.

After the return of Buonaparte from Elba, he was again called into active service. The following circumstance, narrated by himself, is not generally known:—"When Buonaparte came back from Elba, I was in London. One day I was sent for, suddenly, to the Cabinet. They told me there was a fear of an action being risked on the frontier of the Netherlands, that might prove disastrous. 'We think,' they said, 'your influence would operate to prevent it;—will you go?' I answered, 'Yes.' 'When?—To-night?' 'No, not to-night; to-morrow morning.' I went home, got ready, and set off, and was able to keep all right till the arrival of the Duke of Wellington." He was actively engaged in the battle of Waterloo, and accompanied the army to Paris.

On Lord Anglesey's appointment to the lord-lieutenancy of Ireland in 1827, Lord Hill was offered the master-generalship of the Ordnance by Lord Godorich; but declined the appointment as unsuited to his habits and health. Subsequently, on the Duke of Wellington's acceptance of the premiership, he offered to Lord Hill the appointment of general commanding-in-chief, which he did not think it right to refuse. "This office he held till the state of his health obliged him to resign it, in 1842. For a considerable part of that time it was a matter of considerable delicacy for him to hold office, as his political sentiments were opposed to those of the government of the day. In these circumstances he equally consulted his duty and his comfort by refusing to take any active part in politics. The following anecdote, while it strongly shows the kindness and urbanity of Lord Hill's disposition, furnishes a useful hint for persons similarly circumstanced."

"Lord Hill took possession of the Horse Guards without any ostentation; and the transaction of his delicate and important duties was marked by equal courtesy and justice. Officers' widows received from him the kindest attention; but not unfrequently the length and urgency of their claims were quite embarrassing. On being asked how he managed to prevent their taking up more time than he could spare, he replied, smiling, 'Why, in the room where I receive them there is only one chair. I ask them to sit down; then they are sorry to see me standing; so they do not stay very long.'"

The state of his health compelled Lord Hill to resign the command of his army on the 9th August, 1842, on which occasion he was honoured by an autograph letter from Her Majesty, expressive of much esteem and regret

for the loss of his services. He immediately retired to Shropshire, where he soon after received accounts of his elevation to the rank of viscount. He did not long survive this fresh honour; but died on the 10th December in the same year, at the age of seventy, leaving behind him a name, which, if not the most brilliant in the annals of the country, is as little tarnished by the blemishes and inconsistencies too often attaching to great names, as that of any one who has ever filled situations of equal importance.

III. BOSSALDAB'S VISION.

BOSSALDAB, the Sultan of Egypt, had an only son, named Aboram. He loved this son as an old man loves the life in which he still hopes to enjoy the fruit of his youthful labours. He collected great treasures, conquered many neighbouring countries, and toiled day and night to provide a rich inheritance, and a glorious throne, for this his much-loved son. He had almost attained the highest pinnacle of power and grandeur, when the youth who was to have inherited them, was killed in the chase by a random arrow.

Bossaldab was inconsolable. He tore his beard, he beat his face, and covered the dead body with his tears. His loud cries of sorrow re-echoed from the distant rocks, but they could not recall the youth to life. His servants approached, and spoke words of comfort, but he heard them not. He cursed his palace, his kingdom, and himself, and hid himself in a dark cave of the forest. Here he lay in the dust, loudly lamenting the injustice of fortune. "Why am I become the possessor of so many kingdoms, so great riches," he exclaimed, "if my only son was to be thus taken from me in the bloom of life?" Thus he passed two days in senseless despair. His strength failed him, and he lay exhausted on the ground, looking forward with anxiety to death, which he thought would end his misery, when suddenly a bright light surrounded him. He lifted up his eyes, and saw before him a youth, in a sky-blue garment, with a wreath of lilies on his temples. He touched the Sultan's forehead with a green bough he held in his hand. New life ran through his veins; his heart was strengthened; he arose, and looked in silence upon the heavenly visitant. "Bossaldab," said he, "I am Kaloe, the Angel of Peace, sent to instruct thee: come, follow me."

He took the Sultan by the hand, and led him to a high mountain; then he placed him upon the summit, and said: "Look down into the valley." Bossaldab did so, and beheld a barren, waste island. The waves of the sea rolled around it, and at that moment cast a shipwrecked man upon its shore. The unfortunate held in one hand a casket, full of diamonds, and with the other he strove to mount the rocky cliffs. He had nearly reached the summit; his joyful demeanour bespoke the hope he felt of reaching an inhabited country; but when he at length reached the top, and saw only a desert, sandy waste before him, he seemed overcome with dismay. He threw his jewels on the earth, wrung his hands, uttering loud cries, and then traversed the plain in search of food; but there grew neither tree nor bush upon it; and he saw the sun rise and

set four times without finding a berry or a leaf with which to appease his hunger. Pale and exhausted, he at last threw himself down on a rock by the sea-shore, pulled some dry grass from its crevices, and awaited his death.

"Oh!" exclaimed Bossaldab, turning towards the Angel, "be gracious, and suffer not yonder poor wretch to perish so miserably." "Be silent," rejoined he, "and attend to that which thine eyes behold." Bossaldab looked again, and discovered a ship drawing near to the shore. The sufferer perceived it, and the sight gave him fresh strength; he sprang on his feet, stretched out his arms, and beckoned to the sailors. When they saw him upon the rock, they heaved to; he fell down before the captain of the ship, told him of his sufferings, and offered the half of his treasure if he would rescue him. When the captain saw the precious stones, he made a sign to his crew, who approached, bound the wretched man hand and foot, seized his jewels, and departed, rejoicing in their plunder, and leaving him upon the shore, half dead.

"O merciful God!" mournfully exclaimed Bossaldab, "canst thou behold this wickedness, and suffer it? Behold, the wretches sail away, leaving him they have robbed, to perish with hunger." "Look yet once again," returned the Angel, "the ship of these sinners is wrecked on yonder rocks: hearest thou not their cries? None may escape; the weight of their sins will sink them all. And wouldst thou have placed the forsaken one on board this ship, which was sailing towards destruction? Remember, henceforth, that thou blame not the ways of Providence. The man whom thou dost commiserate shall be saved, though not in the way thou didst anticipate. God, in his providence, hath more than one way of deliverance. This man was covetous and hard-hearted towards the needy; he possessed more than he required, and his love of gain led him to seek riches on the sea. Therefore he was led into this wilderness, that his hard heart may be softened, and moved to open his closed hand. Blessed is the man who learns wisdom from adversity! But now, turn and behold another vision."

Bossaldab did so, and looked down from the rock. The sea had disappeared, and the deep was changed into a blooming plain. The Sultan's eyes rested upon fertile fields, when a tall palace of marble rose before his eyes; the ivory doors opened, and showed a royal throne, decked with gold and precious stones. Unnumbered riches lay in great heaps on either side of the throne, which was surrounded by servile groups of the princes of the country, and ambassadors from foreign nations, who all took the oath of allegiance to the young king who sat upon the throne. And this young king was Aboram, the son of Bossaldab.

"Gracious Allah! it is my son!" said the Sultan. "Oh, suffer me to embrace him!" "Remain where thou art," said the Angel, "it is an empty form, by which I show thee the vanity of thy life and the sinfulness of thy despair. Observe and mark it well."

The oath of fealty taken, a banquet followed, after which the young king divided his treasures amongst the guests. In a short time, the riches which a most niggardly economy had been years in amassing, were thus distributed. The princes had no sooner decked themselves with the king's diamonds, than they proudly and arrogantly exalted

themselves against him. Four new thrones arose upon the ruins of the former one, and upon them were seated new kings; they bound Bossaldab's son, who had become intoxicated at the banquet, and cast him into a dungeon, where, after much suffering, he was murdered by the hand of a slave.

The Sultan turned his eyes away. "Ah, it is enough!" said he, "it is enough!" "Humility and patience," said the Angel, "would have spared thee this sight." "I have sinned," answered Bossaldab, "in murmuring so bitterly at the stroke which removed my son in his innocence, and thus preserved him from so much evil to come." "Yes," replied the Angel, "he is happy whom an early death saves from destruction. Depart, Bossaldab, and bear thy affliction in patience. The earthly works of man are transient; his proud edifices sink beneath the burden of a few years. The name of the niggard and of the oppressor is mentioned with contempt; while the memory of the beneficent man is blessed by succeeding generations."

Thus spoke the Angel of Peace. He stretched his wings, and rose into the air; the rustling of his pinions resembled the sound of a waterfall, and then gradually subsided into a soft and gentle murmur.

The Sultan awoke. He was lying in the cave of the forest, with his face to the earth. He arose, returned to his palace, and sought, throughout a long reign of justice and kindly wisdom, to heal the wounds he had inflicted on his people by his former avarice and oppression.

THE SOLDIER'S BRIDE.

(From the French.)

DURING one severe season,—a winter remarkable for its long and inclement frost, experienced with equal rigour throughout Italy, France, and Germany, where the largest rivers were rapidly congealed, and people were seen to fall dead with cold,—in the French town of Metz, a poor sentinel was sent upon guard on one of the bitterest nights, when a fierce north wind added to the usual cold. His watch was in the most exposed situation of the place, and he had scarcely recovered from a severe indisposition; but he was a soldier, and declared his readiness to take his round. It chanced that he was betrothed to a young woman of the same city, who no sooner heard of his being on duty, than she began to lament bitterly, declaring it to be impossible for him to survive the insufferable severity of such a night, after the illness under which he still lingered. Tormented with anxiety, she was unable to close her eyes, or even to retire to rest; and as the night advanced, the cold becoming more intense, her fancy depicted him struggling against the fearful elements, and his own weakness; and, at length, no longer able to support himself, overpowered with slumber, and sinking to eternal rest upon the ground. Maddened at the idea, and heedless of consequences, she hastily clothed herself as warmly as she could, ran out of the house, situated not far from the place of watch, and with the utmost courage arrived alone at the spot. And there she indeed found her poor soldier, nearly as exhausted as she had imagined, being with difficulty able to keep his feet, owing to the intenseness of the frost. She earnestly con-

jured him to hasten, though only for a little while, to revive himself at her house; when, having taken some refreshment, he might return; but aware of the consequences of such a step, this he kindly, though resolutely, refused to do.

"But only for a few minutes," she continued, "while you melt the horrid frost, which has almost congealed you alive."

"Not an instant," returned the soldier; "it were certain death even to stir from the spot."

"Surely not!" cried the affectionate girl! "it will never be known; and if you stay, your death will be still more certain. You have at least a chance; and it is your duty, if possible, to preserve your life. Besides, should your absence happen to be discovered, Heaven will take pity upon us, and provide in some way for our preservation."

"Yes," said the soldier, "but that is not the question; for suppose I can do it with impunity, is it noble or honourable thus vilely to abandon my post, without any one upon guard?"

"But there will be some one; if you consent to go, I will remain here until you return. I am not in the least afraid; so be quick, and give me your arms."

This request she enforced with so much eloquence and tenderness, and so many tears, that the poor soldier, against his better judgment, was fain to yield, more especially as he felt himself becoming fainter and fainter, and unable much longer to resist the cold. Intending to return within a few minutes, he left the kindhearted girl in his place, wrapping her in his cloak, and giving her his arms and cap, together with the watchword; and such was her delight at the idea of having saved the life of her beloved, that she was for a time insensible to the intense severity of the weather. But just as she was flattering herself with the hope of his return, an officer made his appearance, who, as she forgot, in her confusion, to give the sign, suspected that the soldier had either fallen asleep, or fled. What was his surprise, on rushing to the spot, to find a young girl, overpowered with alarm, and unable to give any account of herself, from her extreme agitation and tears!

Being instantly conducted to the guard-house, and restored to some degree of confidence, the poor girl confessed the whole truth; soliciting, with the anguish of doubt and distraction, a pardon for her betrothed husband. He was instantly summoned from her house, but was found in such a state of weakness, from the sufferings he had undergone, as to leave little prospect of his surviving them. It was with much difficulty, with the assistance of medical advice, that he was restored sufficiently to give an intelligible account of himself, after which he was placed in close custody, to await the period of his trial.

"Far happier had it been for me," he exclaimed, on being restored to consciousness, "far happier to have died at my post, than to be thus reserved for a cruel and ignominious death." And the day of his trial coming on, such was the politic severity of martial law, as he had well foreseen, that he was condemned to be executed within a few days after his sentence. Great as was his affliction on hearing these tidings, it was little in comparison with the remorse and terror that distracted the breast of his beloved girl, who, in addition to the grief of losing him in so public and ignominious a manner, accused herself as the cause of the whole calamity.

He, to whom she had been so long and tenderly attached, was now to fall, as it were, by the hand of his betrothed bride! Such was the strangeness and suddenness of the event, that her feelings being wrought up to the highest pitch of excitement and terror, her very despair seemed to give her strength; and casting all fear of consequences aside, she made a vow to save him, or to perish in the attempt. Bitterly weeping, and with dishevelled hair, she ran wildly through the city, beseeching pity and compassion from all her friends and acquaintance, and soliciting everybody of rank and influence to unite in petitioning for a pardon for her lover, or that her life, she being the sole author of the fault, might be accepted in the place of his.

The circumstances being made known, such was

the tenderness and compassion excited in her behalf, and such the admiration of her conduct, at once so affectionate and spirited, that persons of the highest rank became interested for her, and used the most laudable efforts to obtain a free pardon for the poor soldier. The ladies of the place also exerting their influence, the governor, no longer proof against this torrent of public feeling, granted him forgiveness, on the condition of his being immediately united to the heroic and noble-hearted girl, and accepting with her a small donation,—an example which was speedily followed by people of every rank; so that the young bride had the additional pleasure of presenting her beloved with a handsome dower, which satisfied their moderate wishes, and crowned their humble happiness.

Reading for the Young.

KING ROBERT BRUCE.

"Ye trumpets, sound your loudest notes,
A warlike chase announcing;
For Scotland's golden crown is mine,
All servile claims renouncing."

Thus spake the Bruce, his gleaming sword
Above him proudly waving;
And quickly summon'd to his side
True hearts, all danger braving.

When Edward heard from Windsor's towers
The Bruce so proudly vaunting,
He vow'd the Scots' best blood should flow
For such vain-glorious ranting.

With many a horseman, Edward now,
Like wintry blast, proceeded;
O'er hill and dale, on vengeance bent,
His wrathful minions speeded.

And when they saw King Robert's band,
With scornful laugh they shouted,—
How changed their note when all their host
By Robert's arm was routed!

For see! the might of England's king,
With rank on rank so swarming—
No force can stand, the Scottish band
With utter rout alarming.

"Oh, stop, King Robert, stop, I pray!
Oh, stop, and yield protection!
Save, save my child from murderous hands,
And Heaven be your direction!"

Thus, wildly shrieking, to the king
A feeble woman pleaded
Before him with her infant child;
Nor was her plea unheeded.

His steed up-reining, "Halt!" he cried,
"Your onward course delaying;
'Twill ne'er be said a Scottish heart
Was dead to woman's praying."

Then crowding thickly rank-on rank,
Their spears towards the foeman,
The Scots succeed with pious care
To save the child and woman.

And see, a wonder! Edward's host
To meet in fight refraining;
They deem'd the crowded Scottish ranks
Fresh patriot bands were gaining.

Then sound your trumpets, loudly sound,
And Scotland's cause speed brightly;
For child and woman both were saved
By Bruce, the brave and knightly.

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne*.

PAVING OF TOWNS.

BEFORE the eleventh century none of the great cities of the present day were paved, except Rome and Cordova. Paris did not enjoy this advantage, according to Rigord, physician and historian to Philippe-Auguste, who relates that the king, being at the window of his palace which commanded a view of the Seine, perceived that the carriages passing in the mire diffused a most offensive odour, which induced him to issue an order for the paving of the streets, notwithstanding the expense of it; the dread of incurring which, he was aware, had hitherto deterred his predecessors. Since that period the city took the name of Paris, instead of Lutetia, which originated in the number of its sloughs. Even London was not paved at that time; many of its principal streets were not thus improved till the fifteenth century. Holborn was done in 1417.

Dijon commenced the paving of the streets in 1391. In 1285 an order from Philippe-le-Hardi commanded the citizens of Paris to pave and sweep the street before their houses at their own expense; but this mandate was so badly executed, that, in 1309, the city was swept at the public cost, under the inspection of the police. Till the fourteenth century the inhabitants of Paris were suffered to throw every nuisance from their windows, provided they cried out three times, "*Take care!*" This license was interdicted in 1372; and still more strictly in 1395. An order was also issued to prevent pigs running through the streets, in consequence of the accident which happened to the young king Philippe. That prince, returning from Rheims, where he went to be crowned, while passing Saint-Gervais, a pig dashed between his horse's legs, and threw him down. The king fell backwards; and, in a few days, died of the injuries he had sustained in the fall.

It is rather remarkable, that the monks of the Abbaye de Saint-Antoine, having pretended that they could not—without failing in the respect due to their patron saint—keep their pigs from running about the streets, it was decided that these animals should continue to wallow in the mire, provided they had each a little bell round their necks!

It appears that cleansing the streets was regarded as the most degrading occupation. It was generally poor Jews, or attendants on the public executioner, who had the care of them.

INFLUENCE OF PECUNIARY CIRCUMSTANCES UPON CHARACTER.

IN the higher and middle classes of society, it is a melancholy and distressing sight to observe, not unfrequently, a man of a noble and ingenuous disposition, once feelingly alive to a sense of honour and integrity, gradually sinking under the pressure of his circumstances, making his excuses, at first, with a blush of conscious shame; afraid to see the faces of his friends from whom he may have borrowed money; reduced to the meanest tricks and subterfuges to delay, or avoid, the payment of his just debts; till, ultimately grown familiar with falsehood, and at enmity with the world, he loses all the grace and dignity of man.—*Malthus*.

There was a time when he would not have stooped to such a course; but then he was rich—rich in the world's wealth, and the honour such affluence suggests; for, alas! humbling as the avowal may seem, the noble traits so often admired in prosperity, are but the promptings of a spirit revelling in its own enjoyment; open-handed and generous, because these qualities are luxuries; free to give, because the giving involves gratitude;

and gratitude is the incense of weakness to power—of poverty to wealth. How often are the warm affections, nurtured by happy circumstances, mistaken for the evidence of right principles! How frequently are the pleasurable impulses of the heart confounded with the well-directed judgments of the mind! This man was less changed than he knew of; the world of his circumstances was, indeed, different, but he was little altered; the same selfishness that once made him munificent, now made him mean; but, whether conferring or accepting favours, the spirit was one.—*Lever*.

THE IMPERFECTION OF HISTORY.

NOTHING is more delusive, or at least more woefully imperfect, than the suggestions of authentic history, as it is generally, or rather universally, written. And nothing more exaggerated than the impressions it conveys of the actual state and condition of those who live in its most agitated periods. The great public events of which alone it takes cognizance, have but little direct influence upon the body of the people; and do not, in general, form the principal business or happiness or misery even of those who are in some measure concerned in them. Even in the worst and most disastrous times—in periods of civil war and revolution, and public discord and oppression, a great part of the time of a great part of the people is spent in making love and money—in social amusement or professional industry—in schemes for worldly advancement or personal distinction, just as in periods of general peace and prosperity. Men court and marry very nearly as much in the one season as in the other; and are as merry at weddings and christenings—as gallant at balls and races—as busy in their studies and counting-houses—as heartily, in short, and sleep as sound—prattle with their children as pleasantly—and thin their plantations and scold their servants as zealously, as if their contemporaries were not furnishing materials thus abundantly for the tragic muse of history. The quiet under current of life, in short, keeps its deep and steady course in its eternal channels, unaffected, or but slightly disturbed, by the storms that agitate its surface; and while long tracts of time, in the history of every country, seem to the distant student of its annals, to be darkened over with one thick and oppressive cloud of unbroken misery, the greater part of those who have lived through the whole acts of the tragedy, will be found to have enjoyed a fair average share of felicity, and to have been much less affected by the shocking events of their day, than those who know nothing else of it than that such events took place in its course.—*Jeffrey*.

Few men have done more harm than those who have been thought to be able to do least; and there cannot be a greater error than to believe a man whom we see qualified with too mean parts to do good, to be therefore incapable of doing hurt: there is a supply of malice, of pride, of industry, and even of folly, in the meekest, when he sets his heart upon it, that makes a strange progress in wickedness.—*Clarendon*.

THE honest and just bounds of observation by one person upon another, extend no further but to understand him sufficiently, whereby not to give him offence, or whereby to be able to give him faithful counsel, or whereby to stand upon reasonable guard and caution in respect of a man's self; but to be speculative into another man, to the end to know how to work him, or wind him, or govern him, proceedeth from a heart that is double and cloven, and not entire and ingenuous.—*Bacon*.

EVERY man is not a proper champion for the truth, nor fit to take up the gauntlet in the cause of verity. Many, from an inconsiderate zeal unto the truth, have too rashly charged the troops of error, and remain as trophies to the enemies of truth.—*Sir Thomas Brown*.

A Christmas Carol.

A song, a song, keep singing,
Of heaven-attemper'd strain !
Of Him who balm is bringing
To cleanse our deadly stain !
Of princes, gold, and gifts, O sing,
And shepherds waiting on their King !

A star in east hath risen,
Behold by sages' eyes ;
Long groped they, as in prison,
Until they saw it rise :
When first they mark'd its radiant light,
They wept for joy, and blest the sight.

With thanks to God low bending,
They saw night's horrors fade,
And watch'd the sign ascending,
For which so long they pray'd,—
That light of lights, whose rising ray,
Gave promise of eternal day.

Wake up ! wake up ! they shouted,
And call'd a royal train ;
They never fear'd, or doubted,

That hope was but in vain :—
The star before them beaming went,
Until before their Lord they bent.

O'er many a hill and valley,
And stream renown'd, they pass'd ;
Until their train they rally,
By Bethlehem's gates at last :
With hymn and song they cheer'd the way,
Still guided by the orient ray.

O'er many a palace towering,
In pomp it journey'd on ;
O'er castles, darkly lowering,
And cities vast, it shone :
Where pride and prosperous sin abound,
The humble babe can ne'er be found.

O Bethlehem, thou lowly
Yet highly-favour'd place !
As told by prophets holy,
The star now stays its pace,
And rests o'er thee, for to the cry
Of poverty the Lord is nigh.

'Twas o'er a manger's dwelling,
Arose a heavenly strain ;
From earth and heaven swelling,
All join'd the blest refrain,
To sing the glories of the Child,
Now sleeping with His mother mild.

The sages, lowly bowing
Before their mighty King,
All reverence are showing
For Him, who deign'd to fling
His royal robes aside, to save
Our race from Satan and the grave.

Their precious gifts outpouring,
They spread them at His feet,
The infant King adoring,
With gold and incense meet,—
Homage of hearts that were His own,
Homage with lowly worship shown.

All other gifts transcending,
They brought their best—the heart ;
In that one offering blending
Gems rarer far than art :—
Their blest example let us feel,
And with like holy homage kneel.

From the German Fest-Kalender.

CLAY, Broad Street Hill.

SHARPE'S London Magazine:

A JOURNAL OF ENTERTAINMENT AND INSTRUCTION
FOR GENERAL READING.

No. 10.]

JANUARY 3, 1846.

[PRICE 1½d.]

He pass'd unquestion'd through the camp,
Their heads the soldiers bent
In silent reverence, or begg'd
A blessing as he went;
And so the hermit pass'd along,
And reach'd the royal tent.

King Henry sat in his tent alone,
The map before him lay;
Fresh conquests he was planning there
To grace the future day.

King Henry lifted up his eyes
The intruder to behold;
With reverence he the hermit saw,
For the holy man was old;
His look was gentle as a saint's,
And yet his eye was bold.

"Repent thee, Henry, of the wrongs
Which thou hast done this land!
O king, repent in time; for know
The judgment is at hand.

"I have past forty years of peace
Beside the river Blaise;
But what a weight of woe hast thou
Laid on my latter days!

"I used to see along the stream
The white sail sailing down,
That wafted food in better times
To yonder peaceful town.

"Henry! I never now behold
The white sail sailing down;
Famine, Disease, and Death, and Thou,
Destroy that wretched town.

"I used to hear the traveller's voice
As here he pass'd along,
Or maiden as she loiter'd home,
Singing her even-song.

"No traveller's voice may now be heard,
In fear he hastens by;
But I have heard the village maid
In vain for succour cry.

"I used to see the youths row down,
And watch the dripping oar,
As pleasantly their viol's tones
Came soften'd to the shore.

"King Henry, many a blacken'd corpse
I now see floating down!
Thou bloody man! repent in time,
And leave this leaguer'd town."

"I shall go on," King Henry cried,
"And conquer this good land;
Seest thou not, hermit, that the Lord
Hath given it to my hand?"

The hermit heard King Henry speak,
And angrily look'd down;
His face was gentle, and for that
More solemn was his frown.

"What if no miracle from Heav'n
The murderer's arm control,
Think you for that the weight of blood
Lies lighter on his soul?"

"Thou conqueror king, repent in time,
Or dread the coming woe!
For, Henry, thou hast heard the threat,
And soon shalt feel the blow!"

King Henry forc'd a careless smile,
As the hermit went his way;
But Henry soon remember'd him
Upon his dying day.¹—*Southey*.

(1) While Henry V. lay at the siege of Dreux, an honest hermit, unknown to him, came and told him the great evils he brought on Christendom by his unjust ambition, who usurped the kingdom of France. In all manner of right, and contrary to the will of God; therefore, in His holy name, he threatened him with a severe and sudden punishment if he desisted not from his enterprise. Henry took this exhortation either as an idle whimsey, or a suggestion of the dauphin's, and was but the more confirmed in his design. But the blow soon followed the threatening; for, within some few months after, he was smitten with a strange and incurable disease.—*MZZERAT*.

BROUGHAM CASTLE.

THE remains of Brougham Castle stand upon the banks of the river Eamont, about two miles south of Penrith, and upon the site of the Roman station Brovacum. Many altars, coins, and other antiquities, have been discovered here at various times; and traces of the camp, which enclosed an area of 120 paces square, may yet be seen. The name of the builder of this edifice has not come down to us; its earliest recorded owners were Veteriponts. Its architecture was of the strongest description; indeed, its local position in the troubled Border country, required that this should be the case. From the Veteriponts, it passed, by a female heir, into the hands of the Cliffords, one of whom, having made large additions to it, placed the words, "This made Roger," over the principal gateway, leaving it an enigma for posterity, whether the castle had been the making of Roger, or that baron had made the gateway.

"Wherever the mountains receded," says Sir Walter Scott, speaking of the English Borders, "arose chains of castles, of magnificent structure, great extent, and fortified with all the art of the age belonging to those powerful barons, whose names hold so high a rank in English history. The great house of Clifford alone possessed, exclusive of inferior strongholds, the great and extensive Castles of Appleby, Brough, Pendragon, and Skipton, each of which formed a lordly residence, as may yet be seen, from their majestic ruins. All these, and many others that might be mentioned, are so superior to edifices of the same kind in Scotland, as to verify the boast, that there was many a dog-kennel in England to which the tower of a Scottish borderer was not to be compared."

About the end of the fourteenth century, it was attacked by the Scots, and terribly devastated, inso-much that an inquisition, made in 1403, returned the value of the demesne and buildings, as nothing; "because it lieth altogether waste, by reason of the destruction of the country by the Scots." It was soon, however, re-built on a greater scale than before. The people of the neighbourhood have a superstition that the castle is sinking into the ground gradually.

On the side next the river, it was defended by three square towers. The main entrance was from the east; and the great central tower, which exceeded in height all other parts of the structure, had to be passed through before the interior chambers could be reached. The principal buildings were disposed in three masses, around an extensive court-yard, but the whole are now entirely in ruins. The grand tower is laid open from top to bottom, and three staircases, with many ornamented windows and fire-places, are exposed to view. The highest turret, however, may yet be reached by a steady head, and he who makes the ascent will not only be astonished at the number of passages winding from loophole to loophole in the thickness of the wall, but be rewarded with a very extensive view from the summit. That view embraces, in one direction, a large extent of champaign country; and in the other, the principal mountains of the lake district, including Helvellyn, Skiddaw, and Saddleback. Between these hills and the spectator, Lowther Castle is concealed amongst its fine woods; whilst, yet nearer, and within a short distance, Brougham Hall, the seat of Lord Brougham and Vaux, is conspicuous. Penrith Castle, once the residence of the "subtle, false, and treacherous" Richard III., is to the north. Clifton Moor, the scene of an engagement, in 1745, between the retreating forces of the Pretender, and the troops of the Duke of Cumber-

land, is not far distant. This skirmish is one of the incidents in Waverley. Descending from this giddy height, the stranger may decypher this inscription over the great gateway—"This Brougham Castle was repaired by the Lady Anne Clifford, Countess Dowager of Pembroke, Dorset, and Montgomery. Baroness Clifford, Westmerland, and Vescie, Lady of the Honour of Skipton in Craven, and High Sheriffsess, by inheritance of the Countie of Westmerland, in the yeares 1651 and 1652, after it had layen ruinous ever since about August, 1617, when King James lay in it for a time, in his journey out of Scotland, towards London, until this time. Isa. c. lviii. v. 12. God's name be praised." The noble lady, whose titles are thus minutely set forth, was one of "the most celebrated women of her time. She had the poet Daniel for her tutor, whom, living, she revered, and being dead, she erected a monument to him in Westminster Abbey. It is stated, that she performed the like honourable office to the memory of Edmund Spencer, and Michael Drayton. Horace Walpole has placed her in his list of noble authors, principally for the sake of transcribing the letter which, it is reported, she returned to a ministerial application respecting the borough of Appleby. "I have been bullied by an usurper; I have been neglected by a Court; but I will not be dictated to by a subject; your man shan't stand." She never forgave Cromwell for having placed a garrison of foot soldiers in Brougham Castle, in 1659. Having survived two bad husbands, who, according to her own account, too frequently made the marble pillars of Knowle, in Kent, and Wilton, in Wiltshire, but the gay arbours of anguish, she employed herself in rebuilding her dilapidated castles; and in this reparation of the old waste places, she expended large sums. Another favourite occupation of the good Countess, was to compile a history of her family, (for she indulged a pardonable pride in tracing her descent through a long line of illustrious nobles,) and she has left, in more than one of her mansions, several folio volumes, in manuscript, containing the details both of her pedigree, and her biography. There are portraits of her ladyship in several of the mansions of our nobility, but the best is at Knoll, Lord Amherst's seat. Amongst her ancestry, she could reckon a Lord High Admiral, in the reign of Edward II., who, having command also in that monarch's army, fell on the field of Bannockburn. Other Cliffords were engaged in the battles of Cressy, Poitiers, Wakefield, St. Albans, and Towton,

"The bloodiest field between the White Rose and the Red."

When the chief of the Cliffords became earl of Cumberland, she could mention one, born in this castle, who engaged in several naval expeditions, chiefly at his own cost, and contributed, in no slight degree, to earn for our island its proud title of the "Ocean Queen." Sir Walter Raleigh was one of his Captains; and, in the memorable year of the Armada, the earl highly distinguished himself in the Elizabeth Bonaventure off Calais. He was a favourite of the queen, who loved and patronized his gallantry; and amongst other tokens of her favour he was invested with the garter. At an audience, after his return from a foreign expedition, the queen dropped her glove, and on Clifford presenting her with it, on his knees, she bade him keep it for her sake. He had it richly set with diamonds, and wore it ever after, on ceremonial occasions, in the front of his hat. Finally he was appointed her majesty's peculiar champion at all tournaments. This nobleman feasted James I. at Brougham, when he returned from paying a visit, in 1617, to his Scottish dominions.

"High in the breathless hall the minstrel sate,
And Eamont's murmur mingled with the song."

There is a volume, containing the "Ayres that were sung and played" upon that festive occasion, sleeping

peacefully enough on the shelves of some of our book collectors.

A few years after the Countess's death, her grandson, the Earl of Thanet, had actually the barbarism to strip several of the castles, in the repairing of which she had spent so much money, of all available materials. Brougham was one of them; but we will hope, that when his order to devastate it was issued, he had not consulted the text of Scripture referred to by the Countess in her inscription: "And they that shall be of thee, shall build the old waste places: thou shalt raise up the foundations of many generations; and thou shalt be called the repairer of the breach, the restorer of paths to dwell in." Mrs. Radcliffe says, that Brougham Castle was the occasional residence of Sir Philip Sidney, the "glory of the field, and glory of the muses," and that the greatest part of his "Arcadia," was composed here. This seems to have been written with the careless pen of a tourist. We believe that Sir Philip never even saw the fortress; and the "Arcadia" was composed long before there was any connexion between the families of Sidney and Herbert. The Countess of Pembroke, to whom that prose poem is dedicated, was the author's sister, and Lady Anne Clifford married her son.

We have stated that Lord Brougham's seat is in the immediate neighbourhood of the castle. His lordship is the representative of a very ancient line, who held the manor and village of Brougham as a fief, under the Veteriponts. There was a Walter de Burgham here as early as Edward the Confessor's reign. The manor became alienated from the Broughams for some time, but it was subsequently restored, and belongs, we believe, at present, to the family. The castle, however, was never their property, having passed, in succession, from the Veteriponts to the Cliffords and Tuftons; the Earl of Thanet, its present owner, being a member of the last-named family.

LUCY COOPER.

An Australian Tale.

CHAP. III.

THAT sun rose with cloudless majesty upon the Christian sabbath! The scene which the house and grounds of Feversham displayed on that morning, baffles all description. Within the house, the painful remains of last night's dissipation lay scattered up and down, disgraceful in the eye of day, and proffering the severest rebuke which pride and folly can receive. Out of doors, disorder and confusion were paramount. The gates stood open, the ground was cut up by wheels; property of all sorts lay upon the lawn, broken and confused. The lane and the paddocks were littered with shreds and fragments; and, in a deep water-hole, lay a cart, overthrown, that had been laden with the dishes, glasses, and other adjuncts of the feast. The horse was still in the shafts, but suffocated with mud and water; whilst the drunken man, by whose intemperance the accident had happened, had disappeared, and, as it afterwards turned out, had taken to the outlawry of the bush.

To extricate the cart, and drag the dead horse from the water-hole, to clear up the multitudinous wreck, and obliterate the scandalous marks of waste and extravagance, was a long trespass on the Sabbath; more especially as almost every member of the household had contrived to render himself unfit for any employment. Pug Mischief, whose head was racked with the consequences of inebriety, and whose bones ached with the beating bestowed upon him by his master, so far from being able to render any assistance, had not as yet even quitted his bed.

Towards noon, the master of the house, sick almost to death, pale and unsteady, and habited in his morning gown, paced up and down the verandah; in vain he

tried to take his coffee, and attempted to stimulate his appetite with a slice of German sausage. He sat down to table, and rose again immediately; but he sought in vain to compose his uneasy stomach. It was perfectly clear that the trespass he had committed would visit him with its usual penalties; and he almost resolved that the price was greater than the pleasure, and such a bargain as, irrespective of higher considerations, no sensible man would make.

But these thoughts, which were urged upon him only by immediate suffering, were of that nature, that, with the cause, they would immediately pass away, and leave the sufferer an easy prey to the next temptation. Indeed, he was in the very act of tossing down a glass of raw brandy—"a hair," he said, "of the dog that bit him"—when a man rode rapidly down the lane, from the direction of the huts, and, seeing the Doctor, reined in his horse abruptly, and declared he had just fallen in with a party of bush-rangers.

"Bush-rangers!" said the Doctor, "where?"

"Close by Dawson's hut," said the man, "by the three ponds."

"Nonsense," said the Doctor; "they will be in my bedroom next."

"Well, sir," rejoined the fellow, "there they are, at any rate. I am going to Sydney, and should have reported them at the nearest watchhouse on the road, if I had not seen your worship. Good morning, sir." So saying, he set spurs to his horse, and promptly disappeared.

"Tom Collins—Tom!" exclaimed the Doctor. "Does no one hear? Saddle my horse immediately! Run up to the huts, Lucy," he continued, "and bid the first man you see saddle Baron instantly, and bring him to me." Whilst Lucy hastened on this commission, and the Doctor was engaged in drawing on his boots, Mrs. Caveat came into the room.

"Reach me my whip, Mrs. C.," said the Doctor, "and be quick. There are bush-rangers within a mile of us! Their daring is quite outrageous!"

"What do you mean to do?" exclaimed Mrs. Caveat; "surely, you will not expose yourself to such a horrid set."

"I surely will," replied the Doctor; "I am not in the commission for nothing; and I will let them see whose fault it is, when scoundrels set them at defiance. There is neither spirit nor honour in the colony, or those desperadoes would not be allowed to set everybody at defiance."

Whilst Mrs. Caveat sank upon her chair, and was preparing to throw herself into hysterics, and the Doctor, without paying her any attention, filled his glass with another measure of brandy, one of the men passed the window, leading Baron ready saddled and bridled, and stopped at the door. The Doctor snatched up his hat and whip, and, without saying another word, galloped up the lane, and, reaching the scene of last night's entertainment, descended with all speed across the sloping pasture, and plunged into the surrounding thicket. In a few minutes he passed Dawson's hut, and was making for the ponds, when he perceived three men gathered round a fire which they had kindled, and preparing to cook their dinner in a cauldron, which was suspended over the flames from a rude triangle. To rein in his horse, and draw up in front of the party, was the work of an instant.

"Halloo," said the Doctor, "who are you?"

"Go your way," said one of the men, "whilst you are well. If you do not know me, I know you, Dr. Caveat."

"Villains!" continued the Doctor, "surrender yourselves. I am a magistrate."

"You are a dead man," replied the outlaw, "if you do not withdraw this moment!" So saying, he took his gun, which was leaning against a tree, and bringing it across his breast, the sound of cocking it was heard with deadly emphasis.

"You know," interposed the Doctor, "you dare not fire. It will cost you all your lives! Surrender—surrender, I say."

"Once more," said the man, "I warn you. Let us alone, if you value your life."

"Is that you, Joe?" said the Doctor, addressing a man who had hitherto concealed his face. "Tell these fellows who I am, and surrender yourselves."

"Dr. Caveat," interposed the first speaker, bringing his gun to his shoulder, "I know you well. Turn your horse's head, and begone whilst you may."

The Doctor was regardless of warning; he made a movement, as though he would have advanced upon the men; the bush-ranger fired his piece, and the Doctor instantly fell.

The three men lost no time in retreating; they made for the thickest of the forest, and waited the approach of darkness to break from their concealment, and remove to some distant quarter of the colony. Baron slowly trotted homeward with his empty saddle, bearing the stains of his master's blood upon his flanks; and, when he reached the stable door, a general alarm was raised, and the most gloomy anticipations of the horrid tragedy quickly spread through the household. A search was commenced in all directions; but, as no one had heard the few words which had passed at the verandah between the horseman and the Doctor, the scrutiny was for a long time unsuccessful.

By this time, many of the neighbouring gentry had come together, the mounted policemen arrived, and the search was renewed in a wider circuit. At length, a shouting was heard in the direction of Dawson's hut, the party gradually contracted, and there they found the remains of the bush-ranger's encampment, and the body of their victim yet alive, but evidently in the agony of death, past speaking, and, I hope, past suffering. Whilst the assembled party were preparing a kind of litter from the saplings, for the easier removal of the body, Mrs. Caveat rushed in, and, with a piercing cry, threw herself upon the dying man, who even at that instant breathed his last. The miserable pair were slowly removed, and Pug Mischief, who had come among the last to the fatal spot, followed his master, bearing in his hand a bough of flowering Acacia, steeped in his blood!

When affliction visited the house at Feversham, it fell, as usual, upon people wholly unprepared. The moment the Coroner's inquest had pronounced a verdict of murder against some person or persons unknown, several of the gentlemen, who had continued in the house, instituted an investigation of the papers, in search of a will. This scrutiny ended in the full conviction that the Doctor had died intestate. Another discovery, which, indeed, gave no surprise, was the unlawful cohabitation of the deceased with the woman who bore his name; and, finally, it was ascertained that some distant relations in England, who were living in great poverty, were the immediate heirs to all the Doctor's property. What justice was done them, I have been unable to ascertain; but it is perfectly well remembered, that, however the atrocious deed might have excited horror, there was but one person who made the least shew of regretting the deceased, and that person, for many months, suspended the Acacia bough that received his blood from the tester of his bed.

Among the very first duties to the deceased, was the dispatching of a trusty messenger to Sydney, to procure the immediate attendance of the undertaker; a functionary whose ministrations admit of no delay in a climate like that of New South Wales. Few hours, therefore, elapsed before the mortal remains of Dr. Caveat were cased in lead, and again inclosed in a magnificent coffin of cedar; and the interment, which was appointed for Tuesday morning, was advertised in the Sydney newspapers, and notified also to the neighbouring gentry, and other friends of the deceased, in circulars, with copper-plate emblems of pompous sepulture, which the taste of the undertaker has inflicted upon the long-

suffering patience of our age, for his own peculiar gratification and emolument. In that apartment, therefore, which had been heretofore his library, lay the confined dust. The windows were closed; all sounds and noises were suppressed; gloom and silence prevailed where there was not even the semblance of grief, except in one sequestered spot where the terror-stricken and astonished mistress sat absorbed in silent, tearless, motionless agony. Short and bitter transition! To-day, intervening between the health and life of yesterday, and the grave of to-morrow! Very early in the morning of Tuesday, the great drawing-room, with its numerous columns, hardly dismantled of the withered flowers suspended to adorn the picnic party of Saturday, was again set out for the reception of company. Many wine-glasses, carefully dusted,—many tumblers for bottled ale and porter, with decanters filled with port and sherry,—a basket of pound cake, cut into formal wedges,—and an assortment of biscuits, round, oval, and oblong,—made up the “funeral baked meats” on this occasion. One by one, nearly the same string of equipages arrived. The gentlemen were received at the door by the chief of the undertakers, relieved of their hats, and announced, with heraldic precision, to their old acquaintances within. The conversation was carried on in whispers, chiefly touching the age, the property, and the talents of the deceased. A few remarks were ventured upon the connexion already referred to; a few inquiries were made into the expectations and prospects of the surviving partner; the topics grew more general; the company was cast in groups; the confusion of tongues was gaining ground, checked only by a fresh arrival and a fresh announcement; and subdued into silence once more by the marshal of the dead, who, in conformity to old customs, himself proffered the solemn refreshments to the assembly. This done, a confused and stifled movement followed, which required no explanation, and called for no remark. Everybody felt that the late owner of the house was being removed for the last time from his threshold, to be taken whence “no traveller returns.” A loud report announced that the hearse was shut upon the dead; and the drawing-room door being opened, the gentlemen were called out in order; their hats, adorned with crape, or silk bands, and containing each a pair of kid gloves, were restored to them without error or mistake; and the carriages were drawn up in the same succession. Slowly the dismal train wound down the avenue, preceded by the splendid hearse, hung with nodding plumes of ostrich feathers. The velvet housings covered the four black horses that moved with funeral pride; but, long ere they arrived in Sydney, the clouds of sand, which were raised by this lengthened concourse, smothered all the grandeur of the show with kindred dust.

On arriving at the ground, which is on the sloping side of a field once remote from Sydney, but now in its immediate vicinity, and now, too, cumbered with its thronged inhabitants, the funeral procession was received at the gates by an aged clergyman, whose venerable figure and grey hairs announced the senior chaplain of the colony. As they slowly threaded the difficult ascent, the sandy hillocks crumbled beneath their feet—the rose-bush and the geranium, flourishing on the mansions of the dead, were rudely thrust aside, until at length, at the summit of the field, they found the tomb prepared for Doctor Caveat. Those who had placed themselves at the edge of the grave gradually retreated, whilst the solemn service of the Church, dismembered of its most impressive psalms and awful lessons, was rehearsed; for the rank and crowded earth gave forth a stench, which the humbling scene of death could hardly tolerate. One burial ground in Sydney has been long disused; it is now in the very heart of the city, where the cathedral is slowly rising, the episcopal throne of the southern hemisphere. A new cemetery is required to receive the present generation, when their little day is over, and they shall rest among the dead.

This was the end of Dr. Caveat. Feversham House now sank into neglect and ruin; and, in the course of a very few years, was but the wreck and phantom of its former consequence. The establishment was immediately scattered; the men and women servants were returned to government, and Feversham was left to the care of an old woman, until a tenant could be found to rent it. Mrs. Webster requested that Lucy Cooper might be allowed to remain with her, which was permitted, during her good behaviour; and, in the course of a few days, profound tranquillity reigned throughout the dismantled chambers of Feversham, but recently the scene of riot and mismanagement.

It was among the direct interpositions of an overruling Providence, in behalf of the unhappy girl, that an interval of repose occurred at this very moment. The ceaseless labours of the last few weeks, following the privations and miseries of a prison-ship, and the period of agony preceding her embarkation, had reduced the young woman to that critical point, at which every change of health would have been for the worse, until confirmed disease must inevitably have put an end to her probation. Her state of mind, too, was equally distressing. The susceptibility of youth was deadened, and a gradual indifference, amounting almost to callousness, was assuming its place; the only shelter, possibly, against the unceasing vexations with which she was beset. A sort of stupidity, or deadness to spiritual interests, manifested how entirely her external annoyances occupied her thoughts. For Lucy had been carefully brought up. True, she had fallen into the commission of a great crime; she had brought shame upon a respectable family, and a reproach upon her religious education. Yet there were circumstances of extenuation, which, if duly insisted upon, might have altered her sentence, had it not been deemed more expedient, upon the whole, to remove her at once from the land of her birth. These circumstances were a subject of consolation and support to her own mind, and gave consistency to the resolutions she had formed, that she would not willingly continue her downward course; but resist, with all her might, the inroads and injuries of future evil. In the absence of higher motives, she found here a rallying place; and, until the renewal of her faith, which taught her how little she could do for herself, it was from this source, under Providence, that she seemed to derive the feeble spark and principle of good, in which she found her safety.

It was still more providential that Mrs. Webster's character was formed upon correct views of religion, gathered and fostered by a mind of extraordinary powers. When the distresses of the working community in England, upon the termination of the war, had produced those shocking scenes of insubordination and demolition in the midland counties, which are still remembered and deplored at home; amongst those whom it was necessary to visit with the terrors of the law, was Mrs. Webster. She had, however, long been free from the sentence passed upon her; and now, in a state of widowhood, was living upon the humble savings of former years. To a woman so situated, the appointment at Feversham was as desirable, as it was advantageous to those who required her services: whilst for Lucy, it was at once a healing to her wearied body, and a health-giving medicine to her wounded spirit. The first act of kindness she experienced at her hands, was her obtaining from the administrator of Doctor Caveat's estate, a decent mourning dress; and Lucy accordingly felt an early sense of grateful kindness to one who had shewn so much interest in her welfare.

The little addition which Mrs. Webster's private resources enabled her to make to the usual ration provided for them, materially contributed to the comfort of their humble housekeeping. The quiet duties of the place were exactly suited to their combined powers, and these were so judiciously directed, that an immediate improvement became manifest in Lucy's appearance,

which was of a very interesting and modest character. A degree of contentment, a sort of melancholy acquiescence in her condition, stamped a character upon her brow of peculiar comeliness; her morning and evening devotions were renewed, encouraged by Mrs. Webster's example.

Here very long the murderers of Doctor Caveat were apprehended, and lodged in Sydney gaol. One of them was admitted to be king's evidence. From him was obtained a narrative of what had occurred in the fatal meeting by Dawson's hut. It did not appear that the man who fired the fatal shot, entertained any animosity against, or even had any previous personal knowledge of his victim; although the general character of the deceased seems to have had its influence on the mind of the murderer. The man Joe, who was thus involved in a crime which he had not premeditated, nor, indeed, participated in, except by his presence, was sentenced to death with the actual perpetrator; and both of the criminals underwent the punishment awarded by the law.

Little occurred to break the peaceful tenor of this tranquil period; and little to interrupt the smooth current of the time. Every Sunday morning Mrs. Webster and Lucy joined the church, at that time, and for a long period afterwards, assembled in the house of a respectable family, at a distance of two miles from Feversham. The church service was there solemnized by a faithful and zealous clergyman. And this weekly return of our holy rites greatly strengthened and confirmed the impressions of piety, and resolutions of devotion, which the study of the holy scriptures, and earnest prayer, had given birth to.

To reach this temporary church, a short cut through the bush was greatly preferable to the road; it was not only much nearer, but it was cooler, and more free from dust. The narrow path, which wound through the forest, was bordered by the native shrubs. Young trees grew thickly in every direction; whilst the aged monarchs of the wood, with tall straight stems, white and smooth as if they had been plastered, rose to the height of sixty or eighty feet before the branches started from their parent stems, with a uniformity of size, character, and colour, by no means admirable. Occasionally, a huge trunk, charred and burnt, and fractured by the fall, crossed the winding path: sometimes the least imaginative eye would be struck by the resemblance which these vegetable monsters bore to serpents, dragons, and other uncouth shapes, crouching amidst the tangled foliage; and, not unfrequently, images grotesque of men and women—

"Strange and uncouth; dire faces, figures dire,
Sharp-kneed, sharp-elbowed, and lean-ankled too,
With long and ghostly shanks;—forms which once seen
Could never be forgotten!"—Wordsworth.

The wood-cutter's bark huts, unseen until closely approached, shewed that the bush was not quite a desert; but, humble as were these abodes of men, one human habitation lay in their path, to which their attention was drawn by the circumstances of its wretched inmates. This abode was a hollow tree, of immense proportions, and apparently yet vigorous of growth; the lower part was regularly hollow, and the entry arched with a graceful curve that would have adorned a gothic doorway. A few sloping saplings, dry bushes, and sheets of bark extended this natural alcove. Within, and upon a kind of shelf, was placed a miserable mattress, and the other furniture of a bed, not less scanty than impure. A woman, not greatly advanced beyond her fiftieth year, yet burdened with many infirmities, the just results of her own evil habits, lay upon this uneasy couch, awaiting the slow but evident hour of her dissolution. Her complicated disorders, although not painful, filled her with fretful uneasiness; and it was evident that her faculties were obscured and weakened by a long and uninterrupted course of vice. Her husband picked up a precarious living by making and selling a sort of broom,

not much unlike the birch brooms of England. His chief want was ardent spirits; and his chief attention to his wretched wife, for such, in truth, she was, was sharing with her so much of the poisonous drink as he could bring home, the pitiful remains of what he had procured in Sydney, left over and above the frequent draughts he made upon it in his way. Beyond an uncertain supply of tea of the worst description, and a little of the coarsest sugar, Bet Kerby's wants were wholly neglected. He was away for many hours at a time, leaving this helpless being in perfect solitude, deep in the recesses of the bush, and far away from all sympathy or succour. Thus time rolled heavily away in a kind of delirious stupor, which was neither sleep nor wakefulness; at intervals she groaned continuously; then she lay in perfect silence; but the longer periods were filled with blasphemies which would make your flesh creep to hear them.

At such a time as this, Mrs. Webster and Lucy passed by Kerby's hut. The sounds of impiety were too distinct to escape attention, and the voice was clearly the voice of a female. Lucy's first impulse would have hurried them away; but Mrs. Webster, whose strength of mind has been already noticed, suffered no fears to influence her, which she did not distinctly understand, and she therefore approached the tree without hesitation. Bet Kerby ceased her wicked ejaculations at the sight of her visitor, and lay perfectly still, whilst Mrs. Webster threw a hasty glance about her strange abode. She soon learned, from the incoherent replies of the wretched woman, in how perilous a state she lay; and when, in the course of the interview, she raised her hand from beneath the blanket, and extended her fore finger in wild vehemence, the swollen state of her extremities betrayed the nature of her disease, and the nearness of her dissolution. Struck by the fearful condition of the dying wretch, she inquired what were her more urgent wants; and, having promised to return in the afternoon, with such relief as she could procure for her, she asked her whether she was aware that her death was impending. Bet Kerby told her she could not expect to live many days, and she added, "the fewer the better: I can have no peace till I am dead."

"But," interrupted Mrs. Webster, "have you no uneasiness, no apprehension of punishment for your evil deeds?"

This inquiry, although made in the kindest tone, threw the guilty creature into a second paroxysm of satanic imprecation, which no attempts of Mrs. Webster's could interrupt. She therefore retired from the place, hoping that she might find a more favourable opportunity, when she returned with the necessary relief, to make some impression upon her mind. Wondering at the apparently revolting character of her temptation, the two women pursued their way, and returned to Feversham, filled with anxious forebodings of the issue of their adventure.

Towards evening, Mrs. Webster returned to Kerby's hut, accompanied by Lucy, and bearing a little tea and sugar, some flour, and some meat, for their patient, if such a word is applicable to a woman, who, waking up from a dose, and becoming sensible of their presence, reproached them for their delay in visiting her. She showed little thankfulness for what they had brought for her use and comfort; and when, after rendering her some of those acts of charity which women alone can perform for the sick, Mrs. Webster anxiously renewed her inquiries about her religious state, she found that she was acquainted with the leading doctrines of the faith, but that she neither believed nor disbelieved them, and was wholly careless about futurity. It was equally vain to endeavour to arouse her hopes, or awaken her fears. Bet Kerby was entirely engrossed by her immediate condition, and there was no mind to work upon, no remains of intellect to address, upon the most momentous topic which can excite our interest. At the end of a week, when Mrs. Webster had procured the

attendance of one of the officers of the Benevolent Asylum, by whom the unhappy woman was immediately removed into that institution, the progress of her disease was steady and observable, but no awakening of her faculties could be perceived. Kerby himself baffled every attempt on the part of Mrs. Webster to speak to him, and still continues to occupy the hollow tree in Feversham Bush. Such as I have described this wretched couple, such, unhappily, are very many more in this colony, where the original depravity of its inhabitants, and the long neglect of all religious instruction, have left our English outcasts in a condition more deplorable than any other people upon the earth.

POPULAR YEAR BOOK.

January.

THIS month derives its name from JANUS, one of the divinities of the Romans, and held by them in the deepest veneration. He was said to preside over the gates of heaven, and selected by Numa Pompilius (when he added January and February to the months of his immediate predecessor, Romulus) as a deity possessed of qualifications peculiarly adapted for presiding over the year, not only on account of the knowledge he was thought to possess of the past, but more especially from his presumed power of foresight. Janus was often represented with two faces, turned from each other; the one *old*, representing his experience in reference to bygone events; the other *young*, and typical of his looking forward into futurity. Sometimes he was portrayed with four faces, as emblems of the four seasons, over which he was adjudged to have control: frequently with a key in his right hand and a rod in his left, to symbolize his opening and ruling the year. He was also, in some instances, depicted seated in the centre of twelve altars, in token of Numa's division of the months, with figures on his hands to the amount of the number of days to which the year was augmented by that wise sovereign.

January was called by the Saxons *Wolf-monat*, or *Wolf-month*, because the wolves, at this season, failing (in consequence of the cold and snow) to meet with the inferior animals, their usual food, were accustomed to attack man himself. Later, when the Saxons had been converted to the true Faith, they termed this month, *Aester-yula*, i.e. after Christmas. In the fine illuminated Kalendars of the Middle Ages, January was frequently represented as an old man clothed in white, with a billet of wood under his left arm, shivering and blowing his fingers. The sign *Aquarius*, or the Water-bearer, into which emblem of the zodiac the sun enters on the 19th of this month, was sometimes painted in the background.

There is usually more frost and snow in this month than any other. The snow prevents the roots of plants and vegetables from being injured by the cold. The weasel, polecat, and fox, impelled by hunger, often assail the hen-roost and the farm-yard. Hares and rabbits do much harm in gardens and wheat-fields. They feed on the tender shoots,

and the latter sometimes nibble off the bark from the young trees . . . Dormice and marmots are torpid in their holes, while squirrels and field-mice feast on their hoarded stores. Birds are often compelled by the severity of the weather to quit their retreats in quest of food. The thrush is seen under sunny hedges and southern walls in pursuit of snails, which he destroys in abundance. The robin-redbreast ventures into the house, and rewards its entertainer with a song, which not even the storms or cold of the season can silence. Chaffinches, yellow-hammers, and sparrows, flock about barn-doors and farm-houses, to pick up grains and crumbs. The nut-hatch is heard, and larks, linnets, and other small birds congregate and fly to the warm stubble for shelter. Skylarks, redwings, fieldfares, and titlarks, find gnats and other food in wet meadows. The titmouse seeks nourishment in the thatched coverings of houses; and gray and pied wagtails fly round cows in search of insects. Rooks seek their nest-trees, and jackdaws repair to the church towers. The ring-dove subsists on ivy-berries. Herons, snipes, and other water-fowl are driven from the frozen marshes, to the neighbourhood of rapid streams. Sea-birds leave the shore, and frequent the larger rivers. Blackbirds, wrens, skylarks, thrushes, titlarks, and chaffinches begin to sing. Few insects, beside snails and slugs, are visible. About the close of January the leaves of the honeysuckle appear, the crocus peeps above ground, and groundsel, rosemary, snowdrop, daisy, &c., are in flower.

January 1.—Feast of the Circumcision.

This Festival is observed throughout the Western Church; and became solemn in the sixth century, when, and as early as 487, it was called the *Octave of Christmas*. The Council of Tours, in 566, ordains that the chant of litanies should on the 1st of January be opposed to the superstitions of the Pagans, and that the Mass or Eucharist of the Circumcision should be celebrated.

OLD AND POPULAR CUSTOMS.

The first of January is known as *NEW-YEAR'S DAY*. It was devoted by the Romans to making presents, feasting, dancing, and rejoicing; and therefore the Primitive Christians, to express their detestation of the orgies of Paganism, solemnized it as a fast. The necessity for this marked distinction having gradually ceased, and the more gross abuses of the calends been abolished, the Church, in the eighth century, abrogated the fast, and allowed, under certain restrictions, the resumption of the elder and jovial custom; which was joyfully observed by our ancestors. The author of the "*Popish Kingdom*" (a Latin Poem, written in 1553, and translated by one Barnabe Googe) writes—

"The next to this is New-year's day, whereto to every friend
They costly presents in do bring, and new-year's gifts do send,
These gifts the husband gives his wife, and father eke the child,
And master on his men bestows the like, with favour mild;
And good beginning of the year they wish and wish again,
According to the ancient guise of heathen people vain.
These eight days no man doth require his debts of any man,
Their tables do they furnish out with all the meat they can: [eyes,
With marchpanes, tarts and custards great, they drink with staring
They rout and reel, feed and feast, as merry all as pyes."

Such was the practice in England, among all ranks, before the "*Reformation*," nor was it discontinued afterwards. The ushering in of the

(1) It is proposed that the parts of the popular "Year Book," inserted in each number, shall be applicable to the week in which the Number is published. Should it, therefore, appear to occupy too much space of any one Number, this will be compensated by its occupying a very small space, or sometimes none at all, in others.

New-year with rejoicings, presents, and good wishes, was celebrated during the sixteenth century, as cordially in the court of the prince as in the cottage of the peasant. Our kings, and the nobility especially, interchanged new-year's gifts or *tokens*. Latimer sent to Henry VIII. a New Testament richly illuminated, with a leaf conspicuously doubled down at Hebrews xiii. 4, of the intended application of which text the royal sensualist was but too conscious. It is supposed that the wardrobe and jewellery of Elizabeth were principally supported by these annual contributions. Lists of these presents from the original rolls are published in her "Progresses," by Mr. Nichols; and "from these it appears," says Mr. Hone, in his "Every Day Book," "that the greatest part, if not all, the peers and peeresses of the realm, all the bishops, the chief officers of state, and several of the queen's household servants, even down to her apothecaries, master cook, and sergeant of the pastry, &c., gave new-year's gifts to her majesty; consisting, in general, either of a sum of money, or jewels, trinkets, wearing apparel, &c. The largest sum given by any of the temporal lords was twenty pounds; but the Archbishop of Canterbury gave forty pounds; the Archbishop of York thirty pounds; and the other spiritual lords twenty pounds, and ten pounds; many of the temporal lords and great officers, and most of the peeresses, gave rich gowns, petticoats, shifts, silk stockings, garters, sweet-bags, doublets, mantles embroidered with precious stones, looking-glasses, fans, bracelets, caskets studded with jewels, and other costly trinkets." Elizabeth's gifts in return were, it seems, always of less value than those she received.

Elizabeth's successors till the reign of James II. gave and received new-year's presents. The only remnant of this custom at Court now is, that the two chaplains in waiting on New-year's day have each a crown piece laid under their plates at dinner. Before we quit the subject of new-year's gifts to royalty, we may observe that a journalist, about twenty years ago, stated that such presents are always given to each other by the members of the royal family of France.

In 1560, the Eton boys used on this day to play for little new-year's gifts, before and after supper; and also to make verses, which they presented to the provost, the masters, and to each other.

An orange stuck with cloves, metal pins (when introduced about the beginning of the sixteenth century, instead of the wooden skewers before in use), and gloves, were popular new-year's gifts. From the second of the above donations, *pin-money* became a favourite term for small presents in general. Money was sometimes tendered instead of the last, and called *glove-silver*. When Sir Thomas More was chancellor, he was presented by a Mrs. Croker (who had obtained a decree in Chancery against Lord Arundel) with a pair of gloves, containing 40*l.* in angels. "It would be against good manners," said the knight, "to refuse a gentlewoman's new-year's gift, and I accept the gloves; their lining you will be pleased to bestow elsewhere."

These presents were given, as the verses above cited intimate, with the mutual expression of kind wishes, and particularly that of a happy new year. The compliment was sometimes paid at each other's doors, in the form of a song; but more

generally, especially in the north of England and in Scotland, the house was entered, very early in the morning, by some young men and maidens selected for the purpose, who presented the spiced bowl, and offered the congratulations of the season. It was also formerly the custom in Scotland, to send gifts on New-year's eve, and on New-year's day to wish each other a happy new year, and ask for a present in return. Servant-maids, likewise, received presents from their masters.

The good old practice of making new-year's gifts is not nearly so common amongst us as it once was. A writer, in 1815, observes, that such presents are scarcely known, except in some trifling instances, when such marks of affection are offered to children emerging from the nursery. We have received authentic information that the practice is retained by a family of some consequence in the neighbourhood of Southampton, in relation to their connexions, friends, and dependents. It is a sad pity that the custom is not revived.—In every point of view, it is amiable and praiseworthy. "If I send a new-year's gift," says an old author, "to my friend, it shall be a token of my friendship; if to my benefactors, a token of my gratitude; if to the poor, which at this season must never be forgot, it shall be to make their hearts sing for joy, and to give praise and adoration to the Giver of all good gifts." "These customs," observes Mr. Brady, in his "Clavis Calendaria," "so nearly obsolete, must certainly have had their good effect; the interchange of civilities and kind offices among friends and acquaintances, naturally created the most pleasant sensations, and led to that hilarity and good humour so conspicuous in the character of our ancestors, and so necessary to keep up the spirits and resolution in this gloomy season of the year; and notwithstanding their now almost total abandonment, they will still be held in esteem by those, read in the usages of antiquity, who can trace their origin from the remotest periods." The same author justly laments that the ancient friendly and benevolent custom of wishing a *happy new year*, and even the *compliments of the season*, is so generally exploded.

In France, it appears, the practice of giving new-year's presents still prevails. As early in the morning as persons can possibly dress themselves in proper attire, they set out on a round of visits to relations and friends (beginning with those nearest in affinity, and ending with acquaintances) to wish them a happy new year, and present them with *bon-bons*. A communication in an English journal for January, 1824, relates, that in Paris, on New-year's day, which is called *le jour d'étrennes*, parents bestow portions on their children, brothers on their sisters, and husbands on their wives. Carriages may be seen rolling through the streets with cargoes of *bon-bons*, *souvenirs*, &c.; and pastrycooks are to be met with, carrying upon boards enormous temples, pagodas, churches, and playhouses, made of flour and sugar. It is by no means uncommon for a man of 8,000 or 10,000 francs a-year to make presents which cost him a fifteenth part of his income. No person able to give, must, on this day, pay a visit empty-handed. Everybody accepts, and every one (females only excepted) gives according to his means. The morning of the first of January is passed in visits, and in gossiping at the confectioners' shops, which are the great lounge on the occasion; a dinner is given by some member

of the family to all the rest; and the evening concludes, like Christmas-day, with cards, dancing, or any other amusements that may be preferred.

The only open demonstration of joy in London, on this day, consists in the welcoming the new year with merry peals from the belfries of the numerous churches; and this practice prevails throughout the country.

A few local observances, in various parts of the kingdom, remain to be described. In Westmoreland and Cumberland, early in the morning, people assemble with baskets and *stangs* (stout poles, on which the baskets are suspended); and whoever refuses to join them, is immediately mounted across the "stang," and carried, "shoulder height," to the next hostelry, where the payment of sixpence immediately liberates the prisoner. So says a writer in 1791, and we believe that the custom yet continues, not only in the counties above mentioned, but also in other parts of England. Women, if seized, are carried in baskets; and no one, however industriously inclined, is allowed to work on this day.

In a "Statistical Account of Scotland," Edinb. 1793, we read, "There is a large stone, about nine or ten feet high, and four broad, placed upright in a plain, in the isle of North Ronaldshay . . . The writer of this has seen fifty of the inhabitants assembled there, on the first day of the year, and dancing with moonlight, with no other music than their own singing."

"In the Highlands," says Mr. Chambers in his "Traditions of Edinburgh," the first night of the year is marked by a curious custom, of which no trace exists in the Lowlands. Young and old having collected, probably at some substantial farmer's house, one of the stoutest of the party gets a dried cow's-hide, which he drags behind him. The rest follow, beating the hide with sticks, and singing—

'Hug man a',	Carlin ben at the fire,
Yellow bag,	Spit in her two eyes,
Beat the skin,	Spit in her stomach,
Carlin in neuk,	Hug man a'.
Carlin in kirk,	

"After going round the house three times, they all halt at the door, and each person utters an extempore rhyme, extolling the hospitality of the landlord and landlady; after which they are plentifully regaled with bread, butter, cheese, and whisky. Before leaving the house, one of the party burns the breast part of the skin of a sheep, and puts it to the nose of every one, that all may smell it, as a charm against witchcraft and every infection."

The same amusing writer informs us that the doings of the *guizards*, or maskers, form a conspicuous feature in the new year's proceedings throughout Scotland. The evenings upon which these worthies appear, are those of Christmas-day, Hogmanay (the last day of the year), *New-year's day*, and the first Monday in January. Such of the boys as can sing, dress themselves in old shirts belonging to their fathers, and each wears a mitre-shaped helmet of brown paper, attached to which is a sheet of the same material, which, falling down in front, covers the whole face, except where holes are made to let through the tip of the nose, and to afford space for seeing and breathing. Each master is attended by a kind of humble squire, in the garb of a girl, with an old woman's cap and a

broomstick, and called Bessie, who shares in the proceeds of the enterprise. She goes before her principal; opens all the doors at which he chooses to sing; and, during the song, sweeps the floor with her broomstick, and makes other antics. The common reward of this entertainment is a half-penny.

The more important feats of the *guizards* are of a theatrical character. There is one *rude* and grotesque drama which they are accustomed to perform on the nights above mentioned, and which, in various fragments or versions, exists in every part of Lowland Scotland. The performers, who are never less than three, but sometimes as many as six, having dressed themselves, proceed from house to house, "generally contenting themselves with the kitchen for an arena, whither, in mansions presided over by the spirit of good humour, the whole family will resort to witness the spectacle." The play is called *GALATIAN*, and the *dramatis personæ* are two fighting men, or knights, one of whom (attired in a tartan and old cavalry cap) is called the *black knight*, the other (arrayed in a good shirt, wooden sword, and large cocked-hat), *Galatian*, and alternatively, *John*; a doctor, in faded black clothes; a fourth personage, who acts the same talking and demonstrating part with the chorus in the Greek dramas; a young man who is little more than a bystander; and *Judas*, the purse-bearer. Our space will not allow of our inserting the dialogue of these characters. It is given at length in "Popular Rhymes, Fireside Stories, and Amusements of Scotland." The actors fight, dance, and sing, and the *finale*, chanted by the whole party, is as follows:—

'Blessed be the master o' this house, and the mistress also,
And all the little babies that round the table grow;
Their pockets full of money, the bottles full of beer—
A merry Christmas, guizards, and a happy new year.'

Mr. Sandys, in his volume of "Christmas Carols," 1833, transcribes a play called "S. George," which is still acted in Cornwall at the beginning of the year, exactly after the manner of "Galatian," which it closely resembles. The principal characters, besides S. George and the dragon, who is twice slain, are a Turkish Knight and the King of Egypt. We learn elsewhere, that other personages, as *Father Christmas*, the *Doctor*, and the *Hobby-horse*, are sometimes introduced. S. George and the other tragic performers appear in their shirt sleeves, and white trousers, much decorated with ribands and handkerchiefs, and each carries a drawn sword or a cudgel in his hand. They wear high caps of pasteboard, ornamented with small pieces of looking-glass, coloured paper, beads, &c.; and several long strips of pith, having small fragments of coloured cloth strung on them, usually hang down from the top of these head-dresses. *Father Christmas* is disguised as an old man. He wears a large mask and wig, and brandishes a club, with which he preserves order among the spectators: the *Doctor*, who is generally the merry-andrew of the piece, has a wig, three-cornered hat, and painted face: the *Hobby-horse* wears a representation of a horse's hide; and the other comic characters are attired according to fancy. Some imagine that the play of S. George has reference to the time of the Crusades, and was invented by the warriors of the cross on their return from Palestine, in memory of

their conflicts. The following is one of the versions of this venerable drama :—

BATTLE OF S. GEORGE.

One of the party steps in, crying out—

Room, room, brave gallants, room :
Within this court
I do resort,
To show some sport
And pastime,
Gentlemen and ladies, in the Christmas time.

After this prologue, old CHRISTMAS frisks into the room, singing—

Here comes I, old Father Christmas ;
Welcome, or welcome not,
I hope old Father Christmas
Will never be forgot.

I was born in a rocky country, where there was no wood to make me a cradle ; I was rocked in a stouring bowl, which made me round-shouldered then, and I am round-shouldered still.

He then capers about for a short time, and then departs with this speech :—

Who went to the orchard, to steal apples to make gooseberry pies against Christmas ?

Enter TURKISH KNIGHT, saying—

Here comes I, a Turkish Knight,
Come from the Turkish land to fight ;
And if S. George do meet me here,
I'll try his courage without fear.

Enter S. GEORGE, saying—

Here comes I, S. George,
That worthy champion bold,
And, with my sword and spear,
I won three crowns of gold.
I fought the dragon bold,
And brought him to the slaughter ;
By that I gained fair Sabra,
The King of Egypt's daughter.

TURKISH KNIGHT.

Saint George, I pray be not too bold—
If thy blood is hot, I'll soon make it cold.

S. GEORGE.

Thou Turkish Knight, I pray forbear,
I'll make thee dread my sword and spear.
[*They fight until the TURKISH KNIGHT falls.*]

S. GEORGE.

I have a little bottle, which goes by the name of
Elicumpane.

If the man is alive, let him rise and fight again.

The KNIGHT here rises on one knee, and endeavours to continue the conflict, but is again stricken down, and says—

Oh ! pardon me, S. George ; oh ! pardon me, I crave :
Oh ! pardon me this once, and I will be thy slave.

S. GEORGE.

I never will pardon a Turkish Knight,
Therefore, arise and try thy might.

The KNIGHT rises, and they again fight, till the KNIGHT receives a heavy blow, and then drops on the ground as dead : upon which S. GEORGE inquires,

Is there a doctor to be found
To cure a deep and deadly wound ?

Enter DOCTOR, saying,

Oh ! yes, there is a doctor to be found
To cure a deep and deadly wound.

S. GEORGE.

What can you cure ?

DOCTOR.

I can cure the itch, the palsy, and gout ;
If the devil's in him, I'll pull him out.

The DOCTOR then performs the cure, with sundry grimaces, and S. GEORGE and the KNIGHT again encounter, when the latter is knocked down and left for dead. Then another performer enters, and on seeing the dead body, says,

Ashes to ashes, dust to dust ;
If uncle Tom Pearce won't have him, aunt Molly must.
[*The hobby-horse here prances in and carries off the body.*]

Enter OLD SQUIRE, saying,

Here comes I, old old Squire,
As black as any Friar,
As ragged as a colt,
To leave fine clothes for malt.

Enter HUBBUB, saying—

Here comes I, old Hub-bub-bub-bub,
Upon my shoulders I carries a club,
And in my hand a frying-pan ;
So, am I not a valiant man ?

Enter the BOX-HOLDER, who says,

Here comes I, great head and little wit,
Put your hand in your pocket and give what you think fit.

Gentlemen and ladies, sitting down at your ease,
Put your hands in your pockets and give what you please.

S. GEORGE.

Gentlemen and ladies, the sport is almost ended,
Come, pay to the box, it is highly commended ;
The box it would speak if it had but a tongue ;
Come, throw in your money, and think it no wrong.

The characters generally finish with a dance, or sometimes a song or two is introduced. In some of the performances two or three other tragic heroes take a part.

New-year's day is observed throughout Scotland with much festivity. "Till a recent period," says a writer above cited, "this festivity approached to license ; and, from the frantic merriment which reigned in most minds, the time was called the *Daft* (i.e. mad) *Days*. But now these follies are much corrected." The Scotch also festively celebrate the first Monday in the new year, and call it *Hundsel Monday*.

The first of January is kept in Germany as a complete holiday. There is service at the churches ; business is at a stand ; and, like Christmas-day, it is far more observed than Sunday.

SOME PASSAGES IN THE HISTORY OF A REMARKABLE ORGAN.

I was still but a child, a child of sixteen—[it is a German musician who speaks]—when I believed myself master of the art. I was young ; and, as my violin yielded a thousand pleasing sounds to the touch of my bow, I thought I had little more to learn. Happy presumption of youth ! My violin was dear to me as my life ; and I the more willingly gave myself up to this passion for music, that I, in my ignorance, believed that I was every day approaching perfection.

However, I was not the only one infatuated with the same musical ardour in our little German town. Many lads of my own age abandoned themselves to this mania ; and we soon formed a band among ourselves. All our neighbours came three or four times a week to

my father's house to listen to our concerts; for we gave them more music than they could attend to in one evening. They listened, praised, and admired us to our heart's content.

One evening in autumn the air was calm and serene, the sky was clear, time appeared to fly slower than usual, and even our violins seemed to share the balmy sweetness that reigned around; when suddenly a man of most singular appearance entered my father's hall, in which we were all assembled. He wore an old-fashioned pair of purple-velvet trousers, which were almost threadbare; his woollen stockings were cross-barred blue; his shoes, which could scarcely be seen, were ornamented with silver buckles. This fantastic costume was completed by a light green coat, with large glittering brass buttons; above which was an immense black cravat; and above the cravat a most melancholy face, round which hung a profusion of long curly hair. His countenance was particularly grave; but his eyes were sparkling and intelligent. He entered my father's house without being announced; and, observing a vacant place in the corner of the hall, beside my pretty cousin Nanrel, he seated himself; after which he assumed an attentive air, to listen to the concert. But the presence of this stranger struck us all with unutterable and indescribable fear. He was hardly seated beside my pretty Nanrel, when we all played out of tune. In vain my father, who was a clever musician, hastened to our assistance: he could do nothing. Then the stranger advanced towards me; and, with rather a stern air, said, 'Young man, your ardour leads you too far; you are attached to a bow which is too brilliant for you; it is an instrument which the inexperienced should not touch, lest they burn their fingers.' However, the stranger picked up the bow, which had fallen from me in my confusion, and taking the violin from my hands, began to play. Then, indeed, I felt myself more humbled than ever; but I also felt enraptured at the delightful music. Such exquisite, admirable harmony, which seemed to descend from Heaven! and oh, what plaintive, melodious notes the violin yielded to the stranger's touch! It was as if an invisible soul, concealed in that echoing wood, was suddenly awakened by a ray from on high. When the stranger had laid down the instrument, we all still appeared to listen to him. My father was the first who took his hand; and, in the most kind and respectful terms, bade him welcome. Nevertheless, he resumed his natural modesty, and blushed for the praises bestowed upon him. At length the crowd took leave; and my father, the stranger, and I, were alone.

We knew that there was to be, in our little town, in that very month of September, a meeting of all the great German masters, who wished to form in it a good and useful musical association; and, we naturally concluded that the stranger was a new master, who had just arrived to be present at the meeting; and, as my father was prejudiced in his favour, he offered him the hospitality of his house; which he gratefully accepted. Behold then our guest; behold him seated at our table, and at our fire-side, as if he were my father's brother. Simple, good, and wise he certainly was; and, whenever the conversation turned on that great and inexhaustible topic, the manufacture of musical instruments, their improvements, their intricacies, and all the ingenious contrivances necessary to attain the desired end, the stranger was almost unable to restrain himself.

Such was the life we led for about a fortnight; lavishing on our esteemed guest all the care and kindness he merited. We paid strict attention to his instructions, and blessed him from our hearts for all his counsels. Often would he say to us, "Young men, love music; it is the food of the soul: it can teach us the end of life: it is the immortality of this world." Thus he used to speak; but if, accidentally, he saw a stranger coming to the house, he would fly into the garden: he liked to be alone, or at least, alone with us.

One day, however, it happened that a friend of my

father's, named Kurtz, arrived. He was a rich timber-merchant, in the environs. To tell the truth, this good man, Kurtz, was no favourite of mine; he was rich, and generous; knew how to sell his goods at a high price, and to purchase at the very cheapest rate:—in short, he was a man of the world, and quite out of my line, as the son of an artist, and one who liked the society of artists only. At the sight of the timber-merchant, our guest hastened into the garden; but Kurtz had already seen and recognised him, and followed him with his eye.

"Who is this you have staying with you?" said he to my father:—"you have a singular guest, upon my word; and, indeed, I should rather know that he was at the bottom of the sea, than in your house."

"You know him, then," exclaimed my father, with ill-disguised curiosity.

"Yes, I do know him!" said Mr. Kurtz: "he resided a long time in my village; his name is Beze; he is a carpenter, an odd sort of man, who thinks but little of the things of this life. Some time ago, when the organ of our church lost its sound, the committee resolved to get a new one. Your guest, Beze, soon came and offered his services; he undertook to construct the organ alone, at his own expense; he demanded only the materials: his air was that of one who perfectly understood his business; and his offer being, on the whole, very reasonable, it was accepted. He then set to work; made and re-made many things; exerted all the powers of his mind and body, night and day: he neglected his meals, so ardently did he apply himself to his task. At length it was finished. The organ resounded throughout the church. No one had ever heard anything half so beautiful. People came from all parts to admire this master-piece of art; every person of rank in the neighbourhood hastened to see it; and the villagers were all in anxious expectation. Beze, in the mean time, explained to us the mechanism of his instrument; he entered into the most minute details, and clearly proved all his propositions. Soon, however, the old organist of the parish, who was quite beside himself with joy, rushed from the crowd, impatient to show us what he could do on the beautiful new instrument; but the instrument, alas! refused to sound! Then, a thousand bitter sarcasms were showered on the unfortunate artificer; and, with one voice, his organ was condemned. There was a great tumult in the church. Beze, however, was not intimidated by it. He went out, casting an ironical look around, as if he had produced a master-piece of art, whose merits we were too ignorant to appreciate. Such, my dear friend, is the illustrious guest whom you have received into your house."

Thus spoke Mr. Kurtz. I know not what more he might have said, for I could not stay any longer to hear my friend spoken of in that manner. I went to seek him in the garden, and found him sitting on the grass, in his usual place, under the shade of an old apple-tree.

When he saw me, he beckoned me towards him. "Look," said he, with a voice of deep emotion, "look at the sun, setting in all his splendour; the least cloud may obscure the brightness of his glory: so it is with the man of genius; the prejudices of an ignoramus may, for awhile, tarnish his fame, but the first breeze dispels the cloud."

I was much struck with these melancholy words, and strove to cheer my friend. "Oh!" said he to me, "I fear nothing; my mind can no longer be distracted by the vulgar. I know very well that it is no easy matter to succeed all at once; and that anticipation is everything in this world: all attempts at perfection are sure to be repulsed by men at first; but I am convinced that, under God, time sets all to rights. That beautiful organ which I built, that great work of my hands, possesses a soul; but a man must be found who can awake that sleeping spirit: it is but the story of Alexander's horse, which no one could mount but Alexander."—And when it grew dark, "Come," said he, "come, my son, let us to our violin."

By degrees, however, our town was enlivened by many strangers. The time for the meeting of the musical association being arrived, masters hastened thither in crowds from all parts of the world; and the inhabitants of the country vied with each other in hospitalities worthy of such great names. Music constitutes the pride and happiness of our beloved Germany! Every celebrated musician who arrived was received as if he were a king; the entrance of each was a triumphal procession, formed by ardent admirers, who eagerly crowded to behold and to applaud them. We hastened to the spot by which these great masters were to pass, that we might see them, and add our voices to the general shout of welcome. We saw all the celebrated professors arrive, one after the other: Grawn, that inexhaustible genius, whose productions were original, because from the heart; Fursch and Hass, his two faithful companions; the young Gassman, whose future glory Germany already anticipated; and then a courier from Gluck, whose involuntary absence from this reunion of the arts, was deplored by him in a letter to his pupils, breathing the most ardent wishes for the success of German art.

These great professors had all the simplicity which ever marks true genius; their meetings were held in public, and were open to all. I, timid as I was, could not absent myself; I glided between the tables, and seated myself in an obscure corner, and there, for whole hours, I listened, as, alternately, they spoke of the art to which their lives were devoted, with my eyes fixed on their nobly intellectual countenances. Occasionally, these great men interrupted their conversation, to pass around some old German wine, which made glad their hearts.

One evening, when they were all assembled, and I was at my usual post, listening to them, their conversation happened to turn on the stranger. Each told what he knew of this musician, who so mysteriously endeavoured to escape notice.

"It shall never be said," exclaimed Grawn, "that we did not recognise a man of genius, who shrinks from notice. My friends, we will insist on his coming to make one amongst us; he shall take his glass with us, and partake of all our social pleasures."

Then I quietly advanced into the middle of the group. "My masters," said I, meekly, "the man of whom you speak, is indeed a true genius; but vain will be your invitation, he will not come."

All repeated in astonishment, "he will not come!" then overwhelmed me with questions, and listened attentively to my answers. I related to them the history of the organ in the neighbouring village; how no person was able to play it; and how unutterably this failure affected my poor friend.

When the masters heard this account, they were seized with intense interest. "My friends," said Grawn, "as to-morrow will be Sunday, let us go early in the morning to examine this organ, which refuses to sound; that will be a strange instrument that will resist the united efforts of so many professors!"

At these words, Hass and Fursch rapturously applauded them. Léléman added, that he would consider on the means of inducing the mysterious workman to meet them in the organ-loft; but the young Gassman exclaimed, with a deep sigh, "My friends, there is one man in the world who could produce sounds from stones. Oh! where art thou, *Emmanuel Bach*, our divine master?"

On retiring, the party renewed their promises of meeting in the organ-loft the next day.

The following morning dawned in full beauty; the sun was rising over the little church that contained the organ, when two pedestrians entered the building by the door of the cemetery. One of these men was in the prime of life; his high forehead denoted deep thoughtfulness, and his large blue eyes shone forth with radiance; his companion was a gay, good-humoured looking man, with a very jovial face.

"Master," said he, "why do you thus stop on your route? the meeting of the great professors will be over before you arrive."

"Let us go in, my child," replied he; "do you not remember that a traveller told us yesterday of a mysterious organ in this little church, that cannot be played? that traveller called the organ the work of a madman; perhaps Heaven has sent me to prove it to be the production of a genius. You offer up your morning prayer; it may be I shall accompany it on this organ; implore a blessing on it, and on all here below."

The master seated himself before the organ; soon the little church was crowded by the pious worshippers, who came to early service. The great masters, faithful to the appointment they had made the previous evening, entered the building, and, as the priest ascended the altar, they knelt in prayer. Suddenly, a sound, as if from heaven, made the little church re-echo; the most divine, the most harmonious melody was produced from the hitherto silent organ. Had the worshippers heard an angel, they could not have been more amazed. Each of the masters raised his head, anxious to discover which one among them had gone to play the organ, and were confounded at seeing all kneeling in their places. The priest himself was seized with secret fear. Meanwhile the organ, touched by an inspired genius, was alternately grave, sublime, melancholy, impassioned, and plaintive; now flute-like; now thunder itself; now praises to God; now terror to man. All listened, admired, and remained prostrate.

In that crowd, one man alone stood erect; it was the stranger. He was near the altar, leaning against a pillar; he looked up at the organ, his now living work; or, rather, he looked up to heaven. At last, then, his great thought was given to the world; at last there was full revelation. He wept not, he prayed not; he believed himself the sport of a dream; he was the happiest of all that happy excited throng. When he saw that all eyes were fixed on him with admiration; he went out of the church with hasty steps, and the service continued.

When service was over, the masters pressed towards the organ, to ascertain who the angel was that had called it into life. The door opened, and with one voice they exclaimed, "*Emmanuel Bach!*—*Emmanuel Bach!*"

It was indeed *Emmanuel Bach*. "Good morning, my friends," said he; "you see your brother arrived; but where is the man of genius who has made this organ? Where is he, that I may embrace him, or, rather, that I may throw myself at his feet?"

The professors answered, "that he was some invisible being. But come, dear master," said they, "come and breakfast with us at the sign of *St. Cecilia*."

In the evening, *Emmanuel Bach*, and Grawn, walked in my father's garden. Eagerly did they seek the stranger. At length they found him under his favourite tree; but, oh heavens! in what a state! My poor friend's head was reclining against the tree; his eyes were still open, vaguely seeking the last rays of the setting sun; his hands were extended on his knees, and his fingers moved, as if about to play the organ; and the palpitation of his heart alone announced that he yet lived.

I flung myself on my knees before my friend; *Emmanuel Bach* did the same, while Grawn supported his head. We called him; he opened his eyes, and perceiving the strangers, exclaimed, "Ah! you are here, my masters! . . . Ah! you are here, *Emmanuel Bach!* . . . You! . . . this morning . . . Oh! pardon me, if I do not treat you with all due respect; . . . it is all over . . . this sudden happiness has killed me . . . the sound of my beautiful organ was my death-knell—I am dying!"

The two masters placed themselves at each side of the poor mechanic. "Yes," said he, "I can die now, with Grawn at my left, *Emmanuel Bach* at my right." Then

turning towards me, he extended his hand—"Adieu, my son," said he; "you, my masters, bless me!"
With the last ray of the setting sun, the soul of my friend departed. The sweet twilight cast a silvery shade

over that noble countenance! It seemed as if all around were hushed into silence, to listen to the few strains of a simple melody, in which was exhaled the last breath of the stranger.

PALM LEAVES.

IV.—ABDALLAH AND BALSORAH.

THE name of Helim is still famous through all the eastern parts of the world. He is called among the Persians, even to this day, Helim the great physician. He was acquainted with all the powers of simples, understood all the influences of the stars, and knew the secrets that were engraved on the seal of Solomon the son of David. Helim was also governor of the Black Palace, and chief of the physicians to Alnareschin the great king of Persia.

Alnareschin was one of the greatest tyrants that ever reigned. He was of a suspicious and cruel nature, having put to death, upon very slight jealousies and surmises, many of his queens and his sons, whom he suspected to have conspired against his life. Being at length wearied with the exercise of so many cruelties in his own family, and fearing lest the whole race of caliphs should be entirely lost, he one day sent for Helim, and spoke to him after this manner: "Helim," said he, "I have long admired thy great wisdom, and retired way of living. I will now shew thee the entire confidence which I place in thee. I have only two sons remaining, who are as yet but infants. It is my design that thou take them home with thee, and educate them as thy own. By this means shall the line of caliphs be preserved, and my children succeed after me, without aspiring to my throne whilst I am yet alive."

"The words of my lord the king shall be obeyed," said Helim. After which he bowed, and went out of the king's presence. He then received the children into his own house, and bred them up with him in the studies of knowledge and virtue. The young princes loved and respected Helim as their father, and made such improvement under him, that by the age of one-and-twenty they were instructed in all the learning of the East. The name of the eldest was Ibrahim, and of the youngest Abdallah. They lived together in such perfect friendship, that to this day it is said of intimate friends, that they live together like Ibrahim and Abdallah.

Helim had an only child, who was a girl of an excellent disposition and a most beautiful person. Her father omitted nothing in her education that might make her the most accomplished woman of her age. As the young princes were in a manner excluded from the rest of the world, they frequently conversed with this lovely virgin, who had been brought up by her father in the same course of knowledge and of virtue. Abdallah especially grew, by degrees, so enamoured of her conversation, that he did not think he lived when he was not in company with his beloved Balsora, for that was the name of the maid. The fame of her beauty was so great, that at length it came to the ears of the king, who, going to visit the young princes his sons, demanded of Helim the sight of Balsora his fair daughter. The king was so struck with her beauty and behaviour, that he sent for Helim the next morning, and told him it was now his design to recompense him for all his faithful services; and that, in order to it, he intended to make his daughter queen of Persia. Helim knew too well the fate of those who had been thus advanced before, and could not but be aware of the secret love which Abdallah bore his daughter.

"Far be it," says he, "from the king of Persia to contaminate the blood of the caliphs, and join himself in marriage with the daughter of his physician."

The king, however, would hear of no excuses; and immediately ordered Balsora to be sent for into his presence, keeping the father with him, in order to make her sensible of the honour which he designed her. Balsora, who was too modest and humble to think that she had made such an impression on the king, was a few moments after brought into his presence as he had commanded.

Upon hearing the honour which he intended her, she fainted away, and fell down as dead at his feet. Helim wept; and, after having recovered her out of the trance into which she had fallen, represented to the king, that so unexpected an honour was too

great to have been communicated to her all at once; but that, if he pleased, he would himself prepare her for it. The king bid him take his own way, and dismissed him. Balsora was conveyed again to her father's house, where the thoughts of Abdallah renewed her affliction every moment; insomuch that at length she fell into a raging fever. The king was informed of her condition by those that saw her. Helim, finding no other means of extricating her from the difficulties she was in, gave her a certain potion, which laid her fast asleep, so that she was to all appearance dead. The king, when he was told that Balsora was dead, told the father that, since it was known through the empire that Balsora died at a time when he designed her for his bride, it was his intention that she should be honoured as such after her death, that her body should be laid in the Black Palace, among those of his deceased queens.

In the meantime Abdallah, who had heard of the king's design, was not less afflicted than his beloved Balsora. But Helim, some days after the supposed death of his daughter, gave the prince a potion of the same nature with that which had laid asleep Balsora.

It is the custom among the Persians to convey in a private manner the bodies of all the royal family, a little after their death, into the Black Palace; which is the repository of all who are descended from the caliphs, or any way allied to them. The chief physician is always governor of the Black Palace, it being his office to embalm and preserve the bodies. The Black Palace is so called from the colour of the building, which is all of the finest polished black marble. There are perpetually burning in it five thousand everlasting lamps. It has also a hundred folding doors of ebony, which are each of them watched day and night, by a hundred slaves, who are to take care that nobody enters besides the governor.

Helim, after having conveyed the body of his daughter into this repository, and at the appointed time received her out of the sleep into which she was fallen, took care, some time after, to bring that of Abdallah into the same place. Balsora watched over him, till such time as the dose he had taken lost its effect. Abdallah was not acquainted with Helim's design when he gave him this sleepy potion. It is impossible to describe the surprise, the joy, the transport he was in at his first awaking. He fancied himself in the retirement of the blest, and that the spirit of Balsora, who he thought was just gone before him, was the first who came to congratulate his arrival.

Helim, who was supposed to be taken up in the embalming of the bodies, visited the place very frequently. His greatest perplexity was, how to get the lovers out of it, the gates being watched in such a manner as I have before related. This consideration did not a little disturb them. At length Helim bethought himself, that the first day of the full-moon, of the month Tizpa, was near at hand. Now it is a received tradition among the Persians, that the souls of those of the royal family who are in a state of bliss do, on the first full-moon after their decease, pass through the eastern gate of the Black Palace, which is therefore called the Gate of Paradise, in order to take their flight for that happy place. Helim, therefore, having made due preparation for this night, dressed each of the lovers in a robe of azure silk, wrought in the finest looms

of Persia, with a long train of linen whiter than snow, that floated on the ground behind them. Upon Abdallah's head he fixed a wreath of the greenest myrtle; and on Balsora's a garland of the freshest roses. Their garments were scented with the richest perfumes of Arabia. Having thus prepared every thing, the full moon was no sooner up, and shining in all its brightness, but he privately opened the Gate of Paradise, and shut it after the same manner, as soon as they had passed through it. The band of slaves, who were posted at a little distance from the gate, seeing two such beautiful apparitions, that showed themselves to advantage by the light of the full moon, and being ravished with the odour that flowed from their garments, immediately concluded them to be the spirits of the two persons lately deceased. They fell upon their faces as they passed through the midst of them, and continued prostrate on the earth till such time as they were out of sight. They reported the next day what they had seen; but this was looked upon by the king himself, and most others, as the compliment that was usually paid to any of the deceased of his family. Helim had placed two of his own mules at about a mile's distance from the Black Temple, on the spot which they had agreed upon for their rendezvous. Here he met them, and conducted them to one of his own houses, which was situated on Mount Khacan. The air on this mountain was so very healthful, that Helim had formerly transported the king thither, in order to recover him out of a long fit of sickness; which succeeded so well, that the king made him a present of the whole mountain, with a beautiful house and gardens that were on the top of it. In this retirement lived Abdallah and Balsora. They were both so fraught with all kinds of knowledge, and possessed with so constant and mutual an affection for each other, that their solitude never lay heavy on them. Abdallah applied himself to those arts which were agreeable to his manner of living and the situation of the place; insomuch, that in a few years he converted the whole mountain into a kind of garden, and covered every part of it with plantations, or spots of flowers. Helim was too good a father to let him want any thing that might conduce to make his retirement pleasant.

In about ten years after their abode in this place, the old king died, and was succeeded by his son, Ibrahim, who, upon the supposed death of his brother, had been called to court, and entertained there as heir to the Persian empire. Though he was some years inconsolable for the death of his brother, Helim durst not trust him with the secret, which he knew would have fatal consequences, should it by any means come to the knowledge of the old king. Ibrahim had no sooner mounted the throne, but Helim sought after a proper opportunity of making a discovery to him which he knew would be very agreeable to so generous a prince. It so happened, that before Helim found such an opportunity as he desired, the new king, Ibrahim, having been separated from his company in a chase, and almost fainting with heat and thirst, saw himself at the foot of Mount Khacan; he immediately ascended the hill, and coming to Helim's house, asked for some refreshment. Helim was at home; and, after having set before the king the choicest of wines and fruits, finding him wonderfully pleased with so seasonable a treat, told him that the best part of his entertainment was to come; upon which

he opened to him the whole history of what had past. The king was at once astonished and transported at so strange a relation; and seeing his brother enter the room with Balsora in his hand, he leaped off from the sofa on which he sat, and cried out, "It is he! it is my Abdallah!" Having said this, he fell upon his neck and wept.

The whole company for some time remained silent, shedding tears of joy. At length the king, after kindly reproaching Helim for depriving him so long of such a brother, embraced Balsora with the greatest tenderness, and told her, she should now be a queen indeed; for that he would immediately make his brother king of all the conquered nations on the other side the Tigris. He easily discovered in the eyes of the two lovers, that instead of being transported with the offer, they preferred their present retirement to empire. At their request, therefore, he changed his intentions, and made them a present of all the open country as far as they could see from the top of Mount Khacan. Abdallah continuing to extend his former improvements, beautified this whole prospect with groves and fountains, gardens and seats of pleasure, till it became the most delicious spot of ground within the empire, and is therefore called the Garden of Persia. This caliph, Ibrahim, after a long and happy reign, died without children, and was succeeded by Abdallah, a son of Abdallah and Balsora. This was that King Abdallah who afterwards fixed the imperial residence upon Mount Khacan, which long continued the favourite palace of the Persian empire.

TABLE ETIQUETTE OF THE SEVENTEENTH CENTURY.

THE following *Bill of Fare* for the new year, quoted from a scarce book entitled "The Second Part of Youth's Behaviour, or Decency in Conversation amongst Women," 12mo, 1664, shows the kind of viands under which the tables of our ancestors groaned at this festive season.

"1. Brawn. 2. A boiled capon with oysters and sausages. 3. A sirloin, or ribs of roasted beef. 4. A roasted goose. 5. Minced pies. 6. A roasted turkey. 7. A marrow pie. 8. A made dish of bread pudding. 9. A roasted capon. 10. Larks, partridges, or woodcocks, which may be best provided. 11. Lamb. 12. A tart of wardens or quinces. 13. Tame pigeons. 14. A dried neat's tongue. 15. Anchovies."

In connexion with the above subject, and as illustrative of the progress of civilization and etiquette since the seventeenth century, we extract from the first part of the "Youth's Behaviour," &c., certain amusing rules concerning

"CARRIAGE AT THE TABLE.

"1. Being set at the table, scratch not thyself, and take thou heed as much as thou canst [not] to spit, cough, and to blow thy nose; but if it be needful, do it dexterously without much noise, turning thy face sidelong.

"2. Take not thy repast like a glutton.

"3. Break not bread with thy hands, but cut it with a knife, if it be not very little, and very new, and that all the others did the same, or the major part.

"4. Cast not thyself upon the table with thine arms stretched even to thy elbows. And lean not thy shoulders, or thine arms, on their chair undecently.

"5. Eat not with cheeks full, and with full mouth.

"6. Sop not in wine, if thou be'st not the master of the house, or hast some indisposition or other....

"8. Taking salt, beware that thy knife be not greasy when it ought to be wiped, or the fork; one may do it neatly with a little piece of bread, or, as in certain places, with a napkin, but never with a whole loaf....

"10. Blow not upon thy meat, but if it be hot, stay until it be cold....

"11. Smell not to thy meat, and if thou holdest thy nose to it, set it not afterwards before another.

"12. Besmear not any bread round about with thy fingers, but when thou wilt cut some bread, wipe them first if they be greasy; therefore take heed, as nigh as thou canst, of fouling thy hands, or of greasing thy fingers, and, having a spoon or fork, make use of it, it becometh thee, according to the custom of the best bred....

"14. One ought not to cast under the table, or on the ground, bones, parings, wine or such like things; notwithstanding, if one be constrained to spit something which was hard to chew, or which causeth irksomeness, then may one throw it dexterously forth upon the ground, taking it decently with two fingers, or with the left hand half shut, so that it be not a liquid thing; in such case one may more freely spit it on the ground, turning oneself, if it be possible, somewhat aside, as hath been said here above....

"12. It is undecent to soil the table cloth, and that which is worse, to clean one's face, or wipe away one's sweat with the napkin, or with the same clean one's nose, one's trencher, or the dish....

"26. Suck no bones, at least in such wise that one may hear it; take them not with two hands, but with one solely and properly. Gnaw them not, nor tear the flesh with thy teeth, as dogs do; but make use of thy knife, holding them with one hand, or rather with two fingers, as nigh as thou canst. Knock no bones upon thy bread, thy trencher, to get out the marrow of them, but get out the marrow with a knife....

"34. Cleanse not thy teeth with a table cloth or napkin, or with thy finger, fork, or knife; much worse would it be to do so with thy nails, but use thy toothpick...."

Poetry.

[In Original Poetry, the Name, real or assumed, of the Author, is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

MY RUSSET GOWN.

BY JANE.

My russet gown is dear to me,
Though years have passed away
Since my young heart beat joyously
Beneath its folds of grey;
No jewels hung around my neck,
Or glitter'd in my hair,
With lightsome step I tripp'd along,
My spirit knew no care;

The roses near my window crept,
And shed their sweets around;
Hard was the bed on which I slept,
But yet my sleep was sound.

My russet gown I laid aside,
For one of rich brocade;
I thought, in my simplicity,
Its charm could never fade;
I left the cot where I had pass'd
My happy childhood years,
I left my aged father sad,
My mother was in tears;
I left them for a wealthy home,
To be a rich man's bride,
And thought that splendour would atone
For loss of all beside.

My russet gown, when next I gazed
Upon its sombre hue,
It brought a lesson to my heart
As sad as it was true;
Its simple meekness seemed to mock
My silks and jewels gay,
And bore my wandering thoughts to those
Dear friends so far away.

I felt how fleeting were the joys
That wealth alone can buy,
And for my humble cottage home
My bosom heav'd a sigh.

My russet gown I still have kept
To check my growing pride,
A true, though silent monitor,
My folly to deride.

And when I met with faithless friends
Among the giddy throng,
Whom vice and pleasure in their train
Drag heedlessly along.

I feel how gladly I would give
My coach and bed of down,
Once more in sweet content to live,
And wear my russet gown.

EMIGRANT'S SONG.

ONCE more let it sparkle and gladden the heart!
Adieu, loves and friendships! and now we must part;
Farewell, then, ye mountains, ye scenes of my home;
A power resistless impels me to roam.

The sun in the heavenly fields knows no stay;
O'er land and o'er ocean he rides far away;
The waves linger not as they roll on the sand,
And the storms in their fury sweep over the land.

The bird on the light fleecy cloud sails along,
And sings in the distance his dear native song;
Through woodland and pasture the youth must go forth,
And roam, like his mother, the wandering earth.

The birds he once knew in the fields of his home
Come flying to greet him o'er ocean's white foam;
And the flowers of his childhood salute him once more,
In the breezes that breathe from his far native shore.

The songsters of home still around him to charm,
The flowers love planted still breathing their balm,
Early loves and old friendships still pressing his hand,
His home is around him, though far be the land.

From the German of Körner.

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—Montaigne.

AN AFFECTING ANECDOTE.

A CORPORAL of the rifle brigade, for robbing a Spaniard of some bread, was tried by a drum-head court-martial, and brought out immediately afterwards for punishment. When the brigade was formed, and the unhappy corporal, who, till then, bore an excellent character, was

placed in the centre of the square, close to the triangle,—the general said, in a stern voice, "Strip, sir." The corporal never uttered a word till actually tied up, when, turning his head round, as far as his humiliating position enabled him, he said in a firm and respectful voice, "General Crawford, spare me." The general replied, "It cannot be; your crime is too great." The unhappy man, who was sentenced to be reduced to the pay and rank of a private soldier, and to receive two hundred lashes, then added, "Oh, general! do you recollect when we were both taken prisoners in Buenos Ayres? We were confined with others in a sort of pound. You sat on my knapsack, fatigued and hungry. I shared my last biscuit with you—on that occasion you shook me by the hand, swearing never to forget my kindness—it is now in your power. You know that when I committed the act for which I am now made so humiliating a spectacle to my comrades, we had been short of rations for some time." Not only the general, but the whole square was affected by this address. The bugler, who stood behind the corporal, then, on a nod from the bugle-major, inflicted the first lash, which drew blood from as brave a fellow as ever carried a musket. The general started, and turning hastily round, said, "Who ordered that bugler to flog? Send him to drill! send him to drill! take him down! take him down! I remember it well!" all the time pacing up and down the square, wiping his face with his handkerchief, trying to hide emotions that were visible to the whole square. After recovering his noble feeling, the gallant general uttered, with a broken accent, "Why does a brave soldier like you commit these crimes?" Then beckoning to his orderly for his horse, he mounted and galloped off. In a few days the corporal was restored to his rank, and I saw him a year afterwards a respected sergeant. Had the poor fellow's sentence been carried out, a valuable soldier would have been lost to the service, and a good man converted into a worthless one.

A SMALL PRESENT.

"I WILL give you my head," exclaimed a person to Montesquieu, "if every word of the story I have related is not true." "I accept your offer," said the president; "presents of small value strengthen the bonds of friendship, and should never be refused."

EVERY mile of railway takes eight acres of good land. The 1,800 miles already existing, and 20,000 miles impending, will require the snug quantity of 114,000 acres, without reclaiming any from other roads or canals.

LET not any one say he cannot govern his passions, nor hinder them from breaking out and carrying him into action; for what he can do before a prince or a great man, he can do alone, or in the presence of God, if he will.—Locke.

NATURE has perfections, in order to show that she is the image of God; and defects, in order to show that she is only his image.—Pascal.

To be happy at home is the ultimate result of all ambition, the end to which every enterprise and labour tends, and of which every desire prompts the prosecution.—Johnson.

RAILWAYS.

"God made the country, and man made the town;" and man, in pursuance of his vocation, is now making Railways, whereby, if we go on as we have been doing, we shall very soon be all town together, and the country, God's work, be fairly driven off the field—abolished—blotted out from our sight and knowledge, as an object of affection and enjoyment. Physically, no doubt, it will still remain in its coarser utilitarian elements, as a necessary appendage to towns—a place in which to rear fat cattle for the shambles, and grow wheat for the bakers' shops; there will still be grass and turnips and timber, fields and farm-steadings, hedgerows and haystacks; and men must live there to look after those things, so that the breed of bumpkins and clod-hoppers will not altogether die out. But *the country*!—that glorious temple of God—so profusely strewed with the loveliest of His works—from which the eye drinks in such abundant draughts of beauty, steeping the senses in delight, and filling the soul with love, gratitude, and peace—will be as much lost to the greater number of us, as if a thick cloud had settled down upon it, shrouding it in darkness for ever.

It used to be our delight to feel that the country—not that which produces crops, and pays rent—but that which

is beautiful to look upon, and whose air fills the lungs with health, and the heart with the sense of enjoyment, was still an unappropriated possession, from which no grudging owner could shut out the very poorest of us. He might forbid our feet to tread upon his soil, but he could not forbid our eyes to look upon the beautiful objects with which it was covered; he could not shut our ears to the song of the birds, or to the murmur of the brook, nor imprison the sweet scent which the breeze bore upon its wings. These were ours as much as his; for the king's high-way, at least, was open to us, where we could loiter as long as we pleased, or as our convenience served, and where, from many a commanding point of view, we might copy, not on canvass or paper, but on our memory and heart, all the loveliness of the scene, and carry it away with us as an imperishable possession. Such was the enjoyment of Milton, in that delightful morning ramble of his:—

"Straight mine eye hath caught new pleasures,
While the landscape round it measures;
Russet lawns, and fallows grey,
Where the nibbling flocks do stray;
Mountains on whose barren breast
The labouring clouds do often rest;
Meadows trim with daisies pied,
Shallow brooks and rivers wide;

Towers and battlements it sees
Bosom'd high in tufted trees,
Where, perhaps, some beauty lies,
The cynosure of neighbouring eyes."

Who shall say that the various features of this landscape, the lawns and fallows, the flocks, the mountains with the clouds resting on their breasts, the meadows, the brooks, the rivers, the embattled towers, were not, at that moment, in so far as they ministered to the sense of beauty, (one of our richest sources of enjoyment,) as much a property to him whose eye they filled, as to the nominal owner, then, perhaps, prisoned to a sick chamber, or, if looking on them at all, viewing them with the cold unloving eye of familiar indifference? They who are commonly called owners, have sometimes the least share of what is really worth having in their possessions. We have heard of a Highland minister, whose *manse* was situated in one of the loveliest glens of which Scotland can boast, and who used to be utterly bewildered by the admiration with which his little paradise filled its frequent visitors. "What is it," he would say, in reply to their exclamations of delight; "Och! what is it, but wood and water?" True, it was wood and water to him, and nothing more, like Peter Bell's primrose; wood which would not fetch much in the market, and water which lay between him and his walk to the parish church; that was all he had of it, though he lived there all the year, resembling in this not a few owners, we rather suspect, of many a lovely patch of God's earth, whose ownership is confined to its mere husk, its carcase, its dirty acres,—leaving its ethereal part—its soul—that with which the spirit of a man can hold communion, to the chance occupation of each passer by, to whom nature has given the faculty to seize upon and enjoy it.

This is the property—the only property, alas! we can boast of—of which we complain, that the present rage for connecting all towns with each other by railroads, is fast depriving us. For what is a railroad, with all its furniture of engines and trains? If it were merely a contrivance for enabling us to pass more swiftly than before from any one spot to any other,—for empowering us, if we pleased, and when we pleased, to do in one hour that which formerly consumed three or four, then it would be all right; it would be an important saving of time, and no loss of anything else. For, in that case, if we might travel fast, we might also, if we pleased, travel slow; and, at all events, fast or slow, we might stop when we pleased, and be set down at what point we thought proper. We should still preserve our liberty; nor be compelled, because some dozen or two of men, whom we have nothing to do with, are impatient to reach Liverpool or Edinburgh next morning, to suffer ourselves to be whisked from station to station, like Lapland witches driving through the scud, that we may be landed in a few hours, dead or alive, as the case may be—it is an equal chance—at a place which we should have been quite well content not to have reached for a week. In a railroad, the stations are everything; all that is intermediate is nothing. Its object is to realize the extravagant prayer of the two lovers,—

"Ye gods! annihilate but time and space!"

Time it is, if not annihilating, at least attenuating to a mere shadow of its former dimension; and space it is doing all it can to reduce to a series of stations, so as to make it resemble the dotted lines of which we read, as drawn in the plans deposited with the clerks of parliament. Between each dot, for all we can henceforth hope to know of the matter, there is a mere vacuity; as much so to us as if we were transported from point to point in a moment of time by an Eastern genie. What can a man know or enjoy of a country, part of which he passes under ground, part through cuttings which limit his view to a few feet on each side of him; and, on which, where he might see something, the attempt to look throws him back upon his seat with a sensation, as

if myriads of burning thread had been drawn across his eyeballs? And, as for the world on either side of the line, that will be a mere *terra incognita*—an unexplored central Australia, of which some traditional memory may survive for a few years, and then will be lost for ever. For what can we know of it? How can we ever see it? We dare never diverge, for the hundredth part of an inch, from the one immovable line through which we are propelled like a bullet through a gun-barrel.

When all the communications throughout the country are railroads, which is what we are now driving at, all modes of travelling, except one, will be utterly exploded. Walking will be a forgotten pastime; riding an impossible achievement; and driving, whether in gig, chariot, or coach, an unattainable luxury; for none of these are possible on a railroad. There will be no such thing known as taking it easy, or stopping to look about one. How can he do so, who travels as if he carried in his pocket an express, indorsed—"Haste, haste, post haste—for thy life—for thy life—for thy life!" For his life, indeed; for should he make one half-minute's pause, crash comes the up or down train thundering into him, and he is dashed off, to use Carlyle's pet phrase, into infinite space.

We shall still be able to walk, ride, and drive on the old roads, however, and to loiter along them as much as we please. Shall we? Where will the old roads be when every petty town is connected with its next neighbour by a rail? or whence will come the money which is to keep them up? The great traffic, to which we are indebted for our noble roads—once the pride and boast of the land—will all be absorbed by those leviathan wheel tracks, intersecting the country in every direction, like so many unsightly gashes in a beautiful countenance; and all that will remain for other means of conveyance, will be utterly insufficient to preserve our old friends from decay and ruin. The advantage of our good old roads was, that they served every purpose; that they were good for all paces, from ten miles an hour to a mile a day—for all modes of travelling, from the mail-coach to the donkey's back. They were not the less fitted to answer the great purposes of commerce, and to carry our busy merchants and dealers, and the products of our mines and looms, with speed and safety, to their several destinations, that they furnished accommodation to less important wayfarers, and suffered them to trudge along slowly, but in comfort, to their journey's end. The same expense which was necessary for the purposes of the former enabled them to answer all the purposes of the latter. Good roads were required for business and commerce; and these were able to maintain them; other travellers followed in their wake, reposed under their shadow, and shared, at a comparatively trifling cost, in that luxurious accommodation, of which one of the greatest charms was, that no limit could be assigned to the extent to which it might be used, and that those for whose use chiefly it was prepared and maintained suffered no diminution of their enjoyment of it, by its being used to the fullest extent by others. Thus, the business of money-making went hand in hand with, and lent its powerful aid to, the supply of wants of a less exigent character, as well as to the pursuits of a refined and cultivated taste. But in railroads this alliance is broken up. Business and commerce travel sulkily by themselves, on roads which are fit for no use but theirs. In the language of the Scotch proverb, they "keep their own fishguts for their own sea-maws." They must "go a-head;" and whose, in travelling, has other objects in view than going a-head, or cannot afford to travel at the "go a-head" price, must go elsewhere, and find or make roads which will answer his purpose. The old roads were like the old times, when the liberal expenditure of the manor-house furnished, without any sensible increase of cost, food and shelter to scores of hangers on and dependents; and when the relations between the wealthier and poorer classes of the community, regulated according to a less exact standard of

value given and received than now, admitted of more feeling and sentiment—more kindness on the one hand, more gratitude on the other, and more attachment on both. It is not mere fancy to ascribe an analogous influence to roads. The superabundance of one class of travellers overflowed for the benefit of others; and the poorer, or merely occasional users of the roads, got more than their money's worth, while its great supporters had none of theirs taken away. The new roads—the rails—resemble the modern times, in which servants are kept on board wages, the beggar is excluded from the kitchen as scrupulously as a housebreaker, and all charity is administered in the workhouse. Each man gets exactly what he can pay for, neither more nor less; and as speed is an inseparable attribute of the system, he who cannot pay for speed, or with whose plans speedy travelling is inconsistent, is excluded altogether, not from them only, but, which is the kindest cut of all, from all use of roads; for neither his means, nor the extent to which he is to use them, will enable him to keep up roads for himself. Railroads are a selfish, utilitarian, unpoetical, unsentimental device, which exclude from travelling every idea but that of mere locomotion.

We may be permitted to grumble at that, the progress of which we are utterly powerless to impede, even supposing we seriously desired to do so. The advance of railroad communication, now that the means of effecting it have been developed, is a necessity, which no human power can overrule:—

"Its course will on
The way it takes, cracking ten thousand curbs
Of more strong link asunder, than can ever
Appear in our impediment,"

or in that of any man whatever. All interests must necessarily seek for the best way of accomplishing their own ends; and we cannot expect that any one should forego an important improvement for the sake of another; far less that the world should renounce a material possession, bringing in a tangible revenue, for the sake of an ideal one, existing only in the world of sentiment, and whose returns are not "palpable to feeling." There never yet was an improvement in any of the great commanding interests of society, which did not disturb and destroy numberless dependent and parasitical interests—the swallows' nests in the caves—which, however regarded with affection for the sake of their associations, we cannot consider of sufficient importance to warrant us in rejecting or retarding the improvement. Our object must be to preserve unhurt, as far as possible, amid all changes, the sympathies which the old modes of living and acting tended to cherish and keep alive. These possibly must seek for new objects, adopt new forms of expression, clothe themselves in a new garb; but in their essential being they may still remain unchanged. The power of investing external objects with the robe of beauty, which is woven and preserved in the inmost recesses of the soul, cannot be taken away from us by any change in the material forms of our existence. It may be depressed and cramped in its action, for a time, but it cannot be destroyed, by external circumstances. It depends for its preservation upon the mind itself. Against the assault of outward enemies it,

"All incorruptible, will on its throne
Sit unpolluted, and the ethereal mould,
Incapable of stain, will soon expel
Her mischief, and purge off the baser fire
Victorious."

It can only be permanently injured by the decay of the feeling and love of beauty itself in the soul. Let that be preserved, (and to do so is, under every change of circumstances, in our own power,) and place it where we please, it will find out objects for its exercise.

AMERICA AND HER SLAVE STATES.

No. III.

MR. FEATHERSTONHAUGH not only visited the pigmy locality, but opened an untouched grave himself.

"The skeleton was there, with an extremely thin cranium, without teeth; the bones were surprisingly small, and it was evident the body had been laid on its right side, and packed in earth. A small pot was under the neck, which crumbled in pieces on being touched; and I found a rib of a deer, with a snail shell, that had also been put in the grave." Vol. i. p. 180.

Whether pigmies or not, it is impossible for us to determine; and if Mr. F. did not favour the defender of the pigmy theory with more facts and arguments than he has the readers of his volumes, we do not wonder that he told our traveller, "that he had just got the wrong notion, and that when he got to Nashville, he'd better talk about something else." Any antecedent improbability in a pigmy race we cannot see, and it is by no means such a wonder of creation as the troglodyte race now admitted to exist in Africa, that last link between men and brutes; a race scouted at when described by the father of history, and now allowed to have the knowledge and the power of erecting huts such as the negro lives in, and to possess a mutilated speech, as a means of communicating with each other.

Professor Troost, of Nashville, the geologist and ophiologist, the great gun of the State of Tennessee, who has led the way in the patronage of physical science, is too good a sketch to be omitted. He reminds us much of an old school and college friend, in whose rooms you never felt perfectly sure that a green snake would not crawl up your leg, after wine, or a pet toad nestle itself in your cap. Our friend's pockets were generally the nests of three or four glow-worms, and his hat, not unfrequently, the cage of a bird. But to Professor Troost.

"His private room, at his house, is full of snakes, fossils, turtles, birds, fishes, Indian relics, &c. &c., all thrown together in the greatest confusion. It makes no matter what it is, the doctor is such a confirmed virtuoso, that everything is fish that comes to his net. Everything of the serpent kind he has a particular fancy for, and has always a number of them, that he has tamed, in his pockets or under his waistcoat. To loll back in his rocking chair, to talk about geology, and pat the head of a large snake when twining itself about his neck, is, to him, supreme felicity." Vol. i. pp. 194, 195.

As may be conjectured, the professor considers every one as little afraid of his crawling pets as himself. One day he mounted the top of a coach, with a hamper not over well secured, which he placed near a Baptist preacher. The latter was just about falling asleep, when a slight rustling woke him: he turned, and lo! beside him, two rattlesnakes raised their crests from the basket. Over went the preacher on to the driver, who jumped from the box immediately as he caught sight of the cause of the reverend gentleman's alarm. Out too turned the insides, as soon as the origin of the *émeute* was known; whilst the professor, all alone in his glory on the roof, quietly stripped off his great coat, and tied it down over the basket; with this consolatory advice to the startled passengers, "Gentlemen, only don't let dese poor things pite you, and dey wont hoort you."

The life and adventures of old Mr. Ridley, the

Tennessee patriarch, is a most interesting account of the dangers and difficulties the early settlers had to encounter, at the time when the red man was in his vigour, and small-pox and rum had not broken down the old lords of the new world. The homestead was then a fort, every settler was a tried warrior; and the females of a family were the armourers of the fort, like Mrs. Ridley, casting the bullets at the kitchen fire, while her husband and his co-defenders were pouring on the Indians from every available part of the block-house. Such a life as Mr. Ridley's proves that the apparently highly coloured narratives of the novelist, Cooper, are but too true tales. In those days, the hunting grounds of the Indian were reclaimed to cultivation by tillers of the ground who worked with their rifle at their back, and their bright axe by their side.

The late presidential election renders the following account of Kentucky and its great man peculiarly interesting, when we consider how far even so democratic a country as the states, follows the heels of its leader.

"The Kentuckians are an enterprising, industrious, and united people; they inhabit a beautiful country, and cultivate a generous soil. With a magnificent river on their frontier, that can convey their tobacco, pork, corn, and other various productions, to every part of the earth; they seem to have all the elements within themselves of permanent prosperity. The people, too, do not appear to have been demoralized by low demagogues to the extent that they have in some of the other states; and hence are not so much under their influence, but rather listen to the precepts and emulate the examples of their superiors. Of these, the acknowledged leader is Henry Clay; his name, which is so very well known in the United States, operates as a talisman in Kentucky. There is not a man in the state but is proud of Mr. Clay as a Kentuckian. Indeed, identified as all his interests are with the state, being the most extensive farmer, the most spirited improver of all the breeds of cattle, horses, and mules, the most affable of men to all classes, and having an established reputation for undaunted personal courage, and never having been known to do a mean action, either in his public or private capacity, whilst, during his long political career, he has been conspicuous, above almost all his fellow citizens, for active and shining talents; it is not surprising that his character should have made an impression on the people, and that they should, by their conduct, acknowledge the advantages they derive from their relation to so eminent a person. What a blessing would it be to this republic, if its people, turning a deaf ear to selfish demagogues, would but consent to receive, even if it were but for one presidential term, so much permanent benefit as they would derive from his great experience, his manly virtues, his honourable consistency!" Vol. i. pp. 233, 235.

Few expressions are more common in the speeches of anti-Americans than Lynch-law. How many among the speakers could give an account of the origin of the expression? Lynch was a rude, but, at the same time, shrewd judge in Arkansas, originally a Virginian, inheriting from his ancestors the judicial talent for which he became so celebrated. The practice of his court was summary: if the evidence was sufficient to warrant the sending the culprit up to the legislature, off he went, with a good prospect of punishment; if otherwise, Judge Lynch took him in hand himself. With him the cowskin whip was as effective in eliciting a confession as the iron boot, or the scavenger's daughter, of olden time. Stripped, and tied to a tree, the culprit heard the order given

for twenty lashes; down they came, twenty on the shoulders, and the same number lower down, to make all parts alike. "How many more would you like to have before you've made up your mind?" asked the judge; "for there's a heap more a coming, I tell you." If no confession was elicited, Lynch ordered ten more lashes; in practice, twenty. Sooner or later this kind of cross-examination had its effect—the culprit gave in; and with three "*more leetel wales to help it out of the hopper*," a confession was elicited, and the culprit packed off for further punishment. Lynch-law, or the cross-examination of the cowskin, was seldom without its beneficial results.

Arkansas presents nearly the worst specimen of society within the vast boundaries of the United States. As the sanctuary of the States—the refuge for the thief, the swindler, and the murderer—it boasts of a fearful race of people; and the six hundred souls that fill the town of Little Rock, and devour the three cheap newspapers that are printed there, are as pretty a set of rogues and vagabonds as can be found out of the Newgate of any civilized country. This is, in an especial manner, the country of the bowie-knife, and the atrocious duels with which every account of America teems. The Legislative Assembly is here interrupted not only by quarrels and personal sparring between *honourable* members, but the floor of the house has, ere now, been the scene of murder;—the sufferer, an unoffending member; the murderer, the speaker of the Assembly. This speaker of this honourable house called upon a member to explain an allusion, apparently personal to himself. The explanation was hardly commenced, when he thundered forth his command to sit down. The member refused, on the score of continuing his explanation. The speaker drew his knife, and descended to the floor of the house. Anthony, the member, did the same. Then the combat began before the whole, who looked on whilst the speaker and his opponent cut each other, and who seemed in no way disconcerted when Anthony fell dead from a direct thrust; and the speaker, coolly wiping his knife, returned to his presidential chair. The house adjourned; and for three days no notice was taken of the deed. At length a relative of the murdered man took out a warrant against the speaker. He was, therefore, arrested, and *bailed*, in the teeth of the direct words of the law. The trial came on in another county, whither it had been moved; because, as the affidavit said, "from the repeated occurrence of similar acts, within the last four or five years, in this county, the people would be inclined to act rigidly; and, therefore, it would not be safe for Wilson to be tried there." Day after day the culprit dined with his judge, and feasted the people of the place where he was to be tried. A mob prevented the reply of the prosecuting counsel from being heard. The jury retired; and returned a verdict of *not guilty*. "Sheriff," exclaimed Wilson, on the return of the verdict, "take the jury to a dram shop: I will pay for all that is drunk by them, and everybody else." Numbers shook hands with the acquitted culprit; and amid a riot and a noise too disgraceful to describe, he left the court, where the judge had never dared to repress, during the entire trial, any one act of insubordination. Such are honour and justice in Arkansas; *such*, remember, not according to the highly-wrought narrative of any book-making tra-

veller, but *such*, according to the cotemporary account of their own local journal. It is all very well for the better class of citizens to refer to the nature of the settlement of this frontier state, and to claim a less rigid censure for the manners of the half-reclaimed hunter and the desperate outlaw, than for the more civilized inhabitants of older states of the Union; but this will not account either for the slowness of the onward progress of society in Arkansas, or for the utter absence of feeling with which crimes of the greatest enormity are daily regarded by the inhabitants of the state. The fault lies deeper; it is in their political institutions. Almost every office in the territory is elective. "Candidates, if they will not wink at the vicious habits of the people, have little chance of success. At present, therefore, a great deal must be tolerated by the magistrates; for the truth is, they are only tolerated themselves upon that condition." Take another instance of the effect of the political institutions of America—REPUDIATION. Thus says Sam Slick:—

"Squire, that is a painful subject either to contemplate or talk upon. What they ought to do as honest men, there can be no doubt, what they will do, is less certain. I have read the correspondence between one of our citizens and Sydney Smith. Those letters of Mr. Smith—or rather, Smith, I should say, for he is too celebrated a man for the appellation of 'Mr.'—will do more good in America than a fleet, or an ambassador, or reprisals. We cannot stand ridicule: we are sensitively alive to European opinion; and these letters admit of but one answer—that is, *payment*. Repudiation cannot be justified; no, not even palliated. It is not insolvency, or misfortune, or temporary embarrassment, that is pleaded; it is a refusal to pay: and a refusal to pay a just debt, in public or private life, is—mince it as you will—*dishonest*. Every honest and right-minded person in our country deplores and condemns this act, as much as every person of the same description does in Europe. When we speak of American, or English, honour, we speak of the same thing; but when we speak of the honour of the English people, and of the American people, we speak of two different things, because the word *people* is not used in the same sense: in one case it is understood in a restricted form, and in the other, in its most extensive signification. When we speak of the honour of an European, we do not mean the honour of a chimney-sweeper, or a street scraper, or cabman, or coalheaver, or hodman, or such persons; but of those that are responsible for the acts of the people, as a government. When we speak of the honour of an American citizen, we speak of every individual, high or low, rich or poor; because, as all have the franchise, all are responsible for public acts. Take the same class with us that the word is applied to in England; and if the honour of that class is not equal to its corresponding one in great Britain, I think I may say it will at least bear a very favourable comparison with it. *The question of payment or non-payment, in the repudiating states, has been put to every male in those states over the age of twenty-one years; and repudiation has been the result.*"—*The Attaché*, second series, vol. ii. p. 83-5.

But let us turn to our traveller's records, and cull one or two more amusing extracts from his pages. And first, of the names and nature of forks at a tavern in Saline county, Arkansas, somewhat less than thirty miles from the capital of the territory, where the she Caliban of the wretched roadside hut endeavoured to get her negro deputy to back her lies about what she had not got at that time.

"Upon the broken table around which we were to sit, Nesby had placed certain plates and coffee cups and

sauces, most of which had gone through a great many hardships; and having used her talent for display to the best advantage, went into the kitchen, where her missus was occupied in baking some heavy dough cakes, and frying a quantity of little bits of fat pork. By and by, in came missus, to take a survey before the fresh *entrée* came in; and affecting a most distressing surprise, commenced the following dialogue with her *aide-de-cuisine*, at the top of their voices:—"Why, how this gal has laid the table! Nisby!" "What's a wanting, missus?" "You hant laid the table no how, you kroetur, you!" "I reckon I couldn't do it no better." "Why, where on earth is all the forks?" "Why, the forks is on the table there." "If you don't beat all!—I mean the new forks." "I never seen no new forks, you know that, missus." "Where has the kroetur put the forks, I say?" No answer. "Wahl, if you don't find the forks, I allow I'll give it you!" *Enter Nisby, agitated. (Sotto voce è staccato.)* "I h'aunt put no forks no whar. I never seen no forks, but them as whats on the table. Thars five on 'em, and thars not no more; thar's *stump-handle*, *crooky-prong*, *horny*, *big pewter*, and *little pickey*—that's just what thar is; and I expect they arq all thar to speak for 'emselves."

Right well did the five forks deserve their sobriquets; *stump-handle* appeared as a single prong stuck in a stumpy piece of wood; *crooky-prongs* was turned up like a fish-hook; *horny* imitated in cow's horn, a fork; *big pewter* was the handle of a spoon, without the bowl; and *little pickey*, a cobbler's awl, in a wooden handle. Cleanliness was not this good hostess's qualification; dirt and slovenliness were natural to her, and Judge Dooley's quick application of the old story of "Waiter!—'Yezzir!—Next time bring the meat in one plate, and the dirt in another, and then I can mix them as I like"—was a home thrust at this Arkansas road-side inn. The next story gives not a bad hint to Old Bailey practitioners. Three murderers, and a horse-stealer, were to be tried. The court was a solitary house in the wilderness, the then representative of the future county-town; and it was with great trouble that twelve jurymen were gathered together. When the case came on, one of the twelve was not forthcoming; why, or wherefore, the prisoners' counsel best knew. What was to be done? the prisoners were as anxious to be tried, as the prosecutor to try them. Take a jurymen from the "circumstances," was the suggestion of the prisoners' counsel. Now, the only circumstances, other than witnesses, were the prisoners. So they put one of the murderers on the jury to try the horse-stealer, and acquitted him; and then transferred the horse-stealer from the dock to the jury-box, to try and acquit the murderers.

THE PRIORY OF LANERCOST.

THE county of Cumberland is remarkable for the small number of its monasteries. Speed, writing on Cumberland, says:—"This county, as it stood in the front of assaults [from the Scots], so was it strengthened with twenty-five castles, and preserved by the prayers (as was then thought) of the votaries in religious houses at Carlisle, Lanercost, Wetheral, Holme [Cultrane], Dacre, and St. Bees."¹

(1) There were others, of less importance, omitted by Speed. Of the above, the Priory of St. Mary, Carlisle, is now the cathedral church; the ruined priory of Wetheral was pulled down during the last century, the gate-house tower, however, yet remains; the abbey of Holme-Cultrane, in like manner, is all destroyed, excepting

The Priory of St. Mary Magdalene, Lanercost,¹ is beautifully situated near the banks of the river Irthing, in the picturesque vale of St. Mary Holme, about eleven miles north-east of Carlisle, and within one mile of the blackened ruins of Naworth Castle, on the one hand, and of the Roman wall of Severus, on the other. This Priory is remarkable, not only for the picturesque appearance of its ivy-mantled ruins, but also as having frequently been the temporary residence of Edward I.; and here, with his queen Margaret, that martial and politic monarch spent the last winter of his life.

Lanercost Priory was founded A.D. 1116, by Robert de Vallibus or Vanx, who, having no children to portion,² wisely resolved on spending a part of his wealth in honour of Him by whose providence he enjoyed it. It was erected for canons regular of the order of St. Augustine, and was dedicated A.D. 1169, in honour of St. Mary Magdalene. The troubled state of the Borders, and of the whole kingdom, at that period, may account for the long period which elapsed between the foundation and the dedication. The choir appears to have been first erected, and the other buildings to have gradually proceeded from the east to the west.

Seated amid the western marches of the Borders of Scotland, the Priory of Lanercost was much exposed to bands of straggling marauders, whose violence kept its peaceful inmates in fear. And when Edward I., ambitious of conquering the Scots, declared war against their country, the poor canons were necessarily exposed to greater evils. In 1296, John Comyn, Earl of Buchan, with six other earls, at the head of a large army, after making a fruitless attack on Carlisle, came to Lanercost, secured some of the church treasures, and fired a part of the buildings. Strange, indeed, that neither the poverty nor the piety of the secluded canons of Lanercost should preserve them from the hostile attacks of their northern neighbours!

In 1280, however, the Priory of Lanercost was honoured by more distinguished and welcome visitors. On the 10th of September, Edward I., and his good and noble-minded queen, Eleanor of Castile, came to this Priory, and offered at the high altar a cloth of silk. To her pious memory were reared the glorious crosses of Northampton, Waltham, and Charing, and of other places, where her remains rested on their way to Westminster Abbey. No other king has given such importance to the local annals of Cumberland as Edward I. In this county did he occasionally reside, both at Carlisle and Lanercost, and he visited Rose Castle, Linstock Castle, and the Abbey of Holme-Cultram:³ hither he came to hunt in the adjoining forest of Ingelwood;⁴ and hither he again came on his way to subdue Scotland—*malles Scotorum*, as he is entitled in his monumental epitaph; but he sickened and died within sight of that northern kingdom, into which he was not to enter. But we are anticipating.

In the year 1300, Edward, having appointed an army to rendezvous on the western Border, again honoured

the canons of Lanercost with a royal visit. In 1306, that monarch marched another army to the frontiers of Scotland; but, falling sick, he came again to the Priory (October 1st), attended by his queen, Margaret. The stout-hearted warrior king—borne upon a litter—now entered Lanercost on his last visit; committing himself to the attention, the medical skill,⁵ and the intercessory prayers of the kind canons, whose hospitality he had so often enjoyed. Here he remained until February,—unable, from the weak state of his health, to meet his parliament, which had been summoned to assemble at Carlisle in January. Edward left Lanercost in February 1307, yet weak and sickly, and visited John Halton, Bishop of Carlisle, at Linstock Castle. He afterwards remained some time in Carlisle, and then set out towards Scotland; but, being seized by a dysentery, he proceeded no further than Brough-upon-Sands, where he died, July 7th.

Although it was the dying request of Edward that his son and successor should prosecute the war against Scotland, and that his body should remain unburied, and be borne with the army until that kingdom was subdued,—yet that weak and effeminate prince, although he crossed the Border, had his father's remains interred in Westminster Abbey, and returned to Carlisle on his progress southwards. This was an evil time for Lanercost. Robert Bruce came hither, and remained three days; quartering part of his army on the canons and the tenants of the priory, and imprisoning some of the former, but setting them at liberty on his departure. Again, in 1340, David Bruce, son of the above, plundered the church of its treasures, and committed other depredations in the neighbourhood.

The monks of Lanercost yielded something to the literature of the country, and which has been of service in illustrating the local annals of Cumberland: thus, in the Chronicle of Lanercost,⁶ which, with some other historical MSS. said to have been written by them, is preserved in the British Museum.

But the time approached when this Priory was to share the fate of the other monasteries. Vain were the irrefragable proofs adduced of the regularities and innocence of some, and of the exemplary piety, worthy of all praise, in others. Of no avail were the literary and scientific pursuits, and the historical researches of their inmates.⁷

The poverty of the Priory of Lanercost might have pleaded for its salvation, as Dugdale estimates its income at only 77*l.* 7*s.* 11*d.* at the time of the suppression. There were then in this house a prior and seven canons. The Priory, buildings, and estate having been promised by Henry VIII., were granted by Edward VI. to Sir Thomas Dacre, Knt. (and his heirs male), known in history as the Bastard Dacre, and supposed to have been a son of Thomas Lord Dacre, K.G. In this grant, however, "there was a reservation of the parish church of Lanercost,"⁸ the church-yard, and a dwelling-place for the poor parish priest, who, in many cases, was left to starve on a pittance less than the wages of a common labourer, by the tender mercies of Henry and his rapacious courtiers. Sir Thomas's name, however, became extinct (so far as his own descendants were concerned) in a few generations. Upon the death of James Dacre, Esq., the seventh lineal possessor, in 1716, without issue male, the

a portion of the nave, which now serves as the parish church, the parishioners having petitioned to have their abbey-church spared (see Ellis's Orig. Lett. ii. p. 89); the monastery of Dacre—so ancient as to have been mentioned by the Venerable Bede—exists only in history; the nave of the priory-church of St. Bees is now the parish church, and the choir—formerly a roofless ruin—was fitted up as a lecture-room, by the late Earl of Lonsdale, for the college of St. Bees, which institution has furnished Wordsworth with the subject of a noble poem.

(1) The Charters of Lanercost, in the handwriting of Lord William Howard of Naworth Castle, is preserved in the library of the Dean and Chapter of Carlisle.

(2) It has been stated, however, to have been built "as an expiation" of the crime of murder—Robert de Vallibus having slain Gilles-al-Bueth, the son of him who had been deprived of the barony by the Norman Conqueror. But at this period we can know nothing whatever of his motives.

(3) See *Liber Garderobe*, 1299, 1300; Rymer's *Fœdera*, &c.

(4) In the Chronicle of Lanercost, it is stated, that he there killed two hundred bucks and does. This, we may suppose, was the royal *baggage* which has furnished the idea of similar slaughter to modern sportsmen.

(5) In like manner, King John went, in his last sickness, to Leicester Abbey.

(6) *Chronicon de Lanercost*, 1201—1346, 4to. Edinb. 1839; a codice Cottoniano nunc typis mandatum, with Appendix of valuable original letters and papers, published for the Maitland Club, and edited by Joseph Stevenson, Esq. "One of the most important volumes printed by this club. The reputation of the History itself is praised by Tyrrell, Wanley, Nicolson, and Haller. The first-named writer, in his History, regrets that part of it had not been published with the '*Decem Scriptores*.'"

(7) Fuller says, in his Church History, that monks were "the sole historians."

(8) This probably meant a part, if not the whole, of the conventual church.

Priory estate reverted to the crown, and is now held on lease by the earl of Carlisle,—the patron of the church-living. The arms of the Priory, as given by Tanner, were,—Gules, a fiasque, or.¹ The living is a perpetual curacy, and was certified to the governors of Queen Ann's Bounty at 141. 6s.

The priory of Lanercost was small,² yet its ruins are interesting from their architectural details, and from the remains of its various conventual buildings. From the number of inscribed stones and altars built up in the walls, it appears to have been erected in part with materials from the Roman wall we have before mentioned as crossing this neighbourhood. The gate-house, of which, however, only the archway remains, bearing a profusion of ivy and hanging shrubs, was nearly opposite to the western front. About half way between this and the western entrance is part of the old cross, such as were formerly erected in all church-yards. The ground plan of the church is cruciform. It consists of a choir, without aisles; north and south transepts, a nave with a north aisle; and a low embattled square tower at the intersection of the cross. There are chapels on the eastern side of the transepts, and on the north and south sides of the choir.

The choir (including the transept) is seventy-six feet in length. Its eastern end is lighted by six lancet windows, placed in two rows. Beneath them is an ambrie, or locker, formerly used to contain the sacred vessels of the high altar; and in the wall on the south side of the altar is a tomb—most probably that of the founder, under an arch in whose mouldings occurs the tooth ornament. On each side of the choir towards the east, where the chapels do not extend, are two long lancet windows, having above them an arcade, where a gallery runs round the choir and transepts. In the two compartments nearer the tower, are the chapels, separated from the choir by two lofty pointed arches, springing from circular piers. Of the altar tombs, in and near the choir, there are two, which, for the richness of their sculpture, and the illustrious persons whose memory they commemorate, are deserving of particular notice. That on the north side, filling up the space between the piers of one of the chapels, where the roof remains, was erected to Humphrey, Lord Dacre, Lord Warden of the west marches, *temp.* Richard II., who died in 1485. That on the south, is yet more elaborately sculptured, and commemorates Thomas, Lord Dacre, K. G. who had a principal command at Flodden Field, and died in 1525.³ Both these have their sides enriched by the armorial bearings of the Dacres and their alliances, with niches, and angels bearing shields. They are in tolerable preservation, and one of them is protected from the weather by a stone canopy, erected by the late earl of Carlisle.

The roofs of the choir, the tower, the transept, and the southern chapels, are gone. That of the northern chapels remains, consisting of a plainly groined vaulting; it supports sufficient soil to afford nourishment to several trees, which, with the shrubs springing in other parts, from crevices in the walls, where vegetation could scarcely be supposed to exist, add much to the picturesque effect of the grey ruins. The tower is supported by four piers, of which three are octagonal, and the remaining one is clustered.

The nave is 98 feet in length; and, including the north aisle, 39½ feet in breadth. It has no south aisle, as the cloister abutted on this side, from which, by a doorway at each end, were outlets to the cloister. In place of a triforium, are four lancet windows, placed at unequal distances from each other. Above these is an arcade, or range of small pointed arches, springing from

clustered shafts, which extends round nearly the whole of the nave. The tooth ornament occurs in the moulding of those arches. The nave is characterised by great simplicity and plainness.

The aisle on the north side is separated from the nave by four obtuse-angled arches, springing from octagonal piers. The mouldings of the arches are flat; one of them springs from a beautiful corbel or bracket, which may be particularly noticed, as it is the only attempt at sculpture in foliage exhibited in the whole building. This aisle alone was used, at the commencement of the last century, as the parish church, when the nave itself was roofless and ruinous. The parishioners, however, requiring more ample accommodation, the nave has since been repaired, and, with the aisle, has continued to be used for Divine service.

Near the altar-table, at the east end of the nave, is a mural tablet, bearing this inscription:—

Robertus de Vallibus filius Huberti, Dominus de Gilsland, fundator Priorat. de Lanercost, Anno Domini 1116. Adargan uxor ejus sine prole.

In the window over the altar, was the following inscription, said to have been removed from the window of the hall, which is now used as a barn:—

Mille et quingentos ad quinquaginta novemq.
Adjice, et hoc anno, condidit istud opus;
Thomas Daker, Eques, sedem qui prim. in istam,
venerat, extincta religione loci.
Hæc Edvardus ei dederat, devoverat ante
Henricus longæ plerumque militiæ.
Anno Domini 1550.

The western front is evidently the latest portion of the church, though from its style (early-English) it does not appear to have been built long after the more eastern parts. The elevation of this front consists of three divisions; in the lower one is the principal entrance to the church—a noble doorway, with a series of shafts and deep mouldings.⁴ Immediately above this is a range of niches, forming an arcade, which fills up the entire width between the lateral buttresses, and having trefoil heads, with detached shafts. Two or three of the central niches have been destroyed, to make way for the insertion of a small window, now walled up; for what purpose it was intended it is impossible to determine, as there is sufficient light in the church without it. Most probably there were originally thirteen of these niches, which may have been filled with images of our Lord and the twelve Apostles. There are now ten niches, and, judging from the space occupied by the inserted window, there were three others of the same breadth as those now remaining. Immediately above this arcade, are three lofty lancet windows, the central one higher and broader than the others. The exterior of these has been enriched by detached shafts, which are now destroyed. At each angle of this west front of the nave is a buttress, carried up to the height of the windows. In the gable, above the middle light, are figures of the Virgin and Child, with a diminutive monk in the attitude of devotion. This façade, which measures 64 feet from the ground to the apex of the gable, (which was formerly decorated by a cross,) is justly regarded as a very fine composition.

Having now described the Priory church, we may pass on to the other conventual buildings. Some of these have been destroyed; but several now remain, although much of their ancient character and appropriation have been lost by modern alterations. The chapter house no longer exists. The prior's residence and the guest house are supposed to have been contained in a long range of buildings extending westward from the nave, with which it unites at the southern angle. In the centre is a square tower, one of whose rooms still retains the name of *the king's chamber*. Most probably this was occupied by Edward I. on his frequent visits, and by other distinguished guests. The interior of these buildings has been

(1) Some heraldic writers say, fiasques were "given as a reward for virtue and learning." This is complimentary for the Priory of Lanercost.

(2) The church, including choir, transept, and nave, extended only 174 feet from east to west.

(3) He was supposed to be the father of Sir Thomas Dacre, Knt. the grantee of the Priory.

(4) The soil appears to have accumulated very much about this part of the church; the height to the springing of the arches is less than it is from the spring to the top of the arch.

entirely altered, to adapt them to modern notions of convenience.

The only remaining portion of the cloister is at a little distance from the south side of the nave. It measures 98 feet by 23, and is divided into two walks by a series of eight short massive piers, extending along the centre, for the spring of the groined arches. Above this was probably the dormitory, which is now deeply covered with soil, and used as a garden. Within the cloister are preserved a number of Roman altars, probably found in one of the Roman stations in the neighbourhood.

The refectory is situated between the cloister and the west end of the nave; it measures about 50 feet by 18, and is now used as a barn; its fire-place is 12 feet in width.

On the south of the refectory is a ruinous tower, said to have been built by Sir Thomas Dacre, subsequent to the dissolution, when he came to reside here.

In one of the out-buildings, a little west of the Priory, are the remains of a very ancient and curious cross, (said to have been dug up in the cemetery,) when it was more perfect than it is at present. The Lord William Howard, of Naworth, copied the inscription into the Chartulary of Lanercost: it is as follows:—

Anno ab incarnatione MCCXIII. et VII anno interdict.
optinente sedem Apocam Innocent III. Imperante in
Alemania Othon. Regnante in Franc. Philippo Johanne
in Anglia. Willmo. in Scotia facta h. crux.

During the last century, one of the sepulchral vaults fell in, by which "several bodies" are said to have been exposed to view: one of them had a grey beard "down to his waist:" but the air, in a few days, reduced them to dust. In 1775 the leaden coffin of William, Lord Dacre, K. G. was sacrilegiously stolen from its vault.

At the time of the Conquest, the vale of St. Mary's Holme was "a great forest and waste ground; in Henry II.'s time, this tract of land was given by Robert, son of Robert de Vaux, to the prior and convent."¹ The agricultural skill and industry of the canons of Lanercost soon effected a change in the appearance of the vale. It was they who

"Thin'd the rank woods; and for the cheerful grange
Made room where wolf and boar were wont to range."⁽²⁾

The rich crops of corn, and the fruitful meadows and pasture lands, in a short time made this once barren wilderness to rejoice. Nor was this all. The canons gave a moral beauty to this district, by reclaiming their neighbours from much of their rudeness and barbarity; by educating the children, and by taking care that they grew not up in ignorance, in idleness, and in irreverence. The sick poor blessed them for their medicine and their surgical skill; and to this day we are indebted to them for the industry as annalists and historians, in writing "The Chronicle of Lanercost."

Fables from the German.

THE DYING SWAN.

"MUST I alone be silent and songless?" spake, sighingly, the quiet Swan to himself, while he bathed in the radiance of the setting sun; "almost I alone in the whole realm of the feathered kind? Certainly, as for the cackling goose, the clacking hen, and the screeching peacock, I envy not their sounds; but thee, O soft Philomela, I envy thee, when I, as if enchained by thy song, move slowly along in my wavy undulations, and linger, as if intoxicated, in the resplendence of the heavens. How would I sing of thee, thou golden evening sun—sing of thy beautiful light and my own bliss; plunge myself in the bright mirror of thy rosy bosom, and die!"

Transported, the Swan dived down, and scarcely had he raised himself up again out of the waters, when a shining form, who stood on the shore, beckoned him to

(1) Denton's MS. Account of Cumberland. (2) Wordsworth.

come to him. It was the god of the evening and morning sun—the beautiful Phœbus.

"Sweet, lovely creature," said he, "the desire is fulfilled to thee, which thou hast so often cherished in thy silent breast, and which could not before be granted."

Scarcely had he spoken the words, when he touched the Swan with his lyre, and sounded upon it the note of the immortals. The sound thrilled ravishingly through the bird of Apollo, and he poured forth his song on the strings of the god of beauty. Gratefully and joyfully he sang of the beautiful sun, the resplendent sea, and his own innocent, peaceful life. Soft as his own soft form was the melodious song; he drew long waves of sound in sweet, languishing tones, until at last he found himself in Elysium at the feet of Apollo, in all his true celestial beauty. The song which was denied to him in his life-time had become his death-song, which was softly to unloose his limbs and dissolve him in death; for he had heard the tone of the immortals, and seen the countenance of a god. Gratefully he bowed himself before the feet of Apollo, and listened to his divine tones; and now, too, his faithful spouse arrived, who had mourned his departure in a sweet song, and after his death had followed him to paradise. The goddess of innocence chose both of them as her favourites;—as the beautiful team of her pearly chariot when she bathes in the sea of youth.

Have patience, oh quiet, hoping heart! What is denied to thee in life, because thou couldst not bear it, the happy moment of death bestows.—*Herder.*

THE NIGHTINGALE.

A COUNTRYMAN one day went to the mansion of a wealthy lord. Here he heard the singing of a bird in a gilt cage. On approaching it, he saw it was a Nightingale. With a feeling of melancholy, he stood and leant upon his staff, and listened to the song.

Then the servants of the rich man came to him, and said, "Wherefore art thou amazed, that thou standest thus musing there?"

"I am amazed," answered the countryman, "that your master can bear the sad notes of the imprisoned bird in your splendid mansion."

"Thou fool," replied one of the servants, "does the song of the Nightingale seem sad to thee in thy fields and woods?"

"No," rejoined the farmer; "there its song fills me with delight and admiration."

"Are its notes, then, different there?" asked the man, with a contemptuous smile.

"Certainly," said the countryman. "Our Nightingales, amidst sprays covered with leaves and blossom, chant the praises of renewed Nature; they sing under the open canopy of heaven the song of liberty, and over their brooding mates the notes of love."

At this, the servants raised a loud laugh, and called the countryman a simple clown. But he held his peace, and returned quietly to his cottage and his fields.—*Krummacher.*

THE PRESENT OF THE FAIRIES.

By the cradle of a young prince, who afterwards became one of the greatest kings of his country, stood two benevolent Fairies.

"I present to this, my favourite," said the first, "the penetrating glance of the eagle, who does not fail to see the slightest fault that is committed throughout his wide kingdom."

"The present is a beautiful one," interrupted the second Fairy. "The prince will be a sensible monarch; but the eagle not only possesses the penetration to remark the least faults, but he possesses, also, a noble contempt for the habit of seeking them out;—and this will I give to the prince, for my present."

"I thank you, sister, for this wise provision," returned the first Fairy; "many kings would have been far greater, if they had not lowered themselves by too great a prying into small matters."—*Lessing.*

Hassan, or the Camel-Driver.*Scene—The Desert. Time—Mid-day.*

In silent horror, o'er the boundless waste,
The driver Hassan with his camels past ;
One cruise of water on his back he bore,
And his light scrip contain'd a scanty store ;
A fan of painted feathers in his hand,
To guard his shaded face from scorching sand.
The sultry sun had gain'd the middle sky,
And not a tree and not a herb was nigh ;
The beasts with pain their dusty way pursue,
Shrill roar'd the winds, and dreary was the view !
With desperate sorrow wild, the affrighted man
Thrice sigh'd, thrice struck his breast, and thus began :
"Sad was the hour, and luckless was the day,
When first from Schiraz' walls I bent my way !

Ah ! little thought I of the blasting wind,
The thirst or pinching hunger that I find !
Bethink thee, Hassan ! where shall thirst assuage,
When fails this cruise, his unrelenting rage !
Soon shall this scrip its precious load resign,
Then what but tears and hunger shall be thine ?

Ye mute companions of my toils, that bear
In all my griefs a more than equal share !
Here, where no springs in murmurs break away,
Or moss-crown'd fountains mitigate the day,
In vain ye hope the green delight to know,
Which plains more bless'd or verdant vales bestow ;
Here rocks alone and tasteless sands are found,

And faint and sickly winds for ever howl around.
Sad was the hour, and luckless was the day,
When first from Schiraz' walls I bent my way !

Cursed be the gold and silver which persuade
Weak men to follow far fatiguing trade !

The lily peace outshines the silver store,
And life is dearer than the golden ore ;
Yet money tempts us o'er the desert brown,
To every distant mart and wealthy town.
Full oft we tempt the land, and oft the sea ;
And are we only yet repaid by thee ?

Ah ! why was ruin so attractive made,
Or why fond man so easily betray'd !
Why heed we not, while mad we haste along,
The gentle voice of Peace, or Pleasure's song ?
Or wherefore think the flowery mountain's side,
The fountain's murmurs, and the valley's pride ;
Why think we these less pleasing to behold
Than dreary deserts, if they lead to gold ?
Sad was the hour, and luckless was the day,
When first from Schiraz' walls I bent my way !

O cease, my fears ! All frantic as I go,
When thought creates unnumber'd scenes of woe,
What if the lion in his rage I meet !
Oft in the dust I view his printed feet ;
And fearful oft, when Day's declining light
Yields her pale empire to the mourner Night,
By hunger roused he scours the groaning plain,
Gaunt wolves and sullen tigers in his train ;
Before them Death with shrieks directs their way,
Fills the wild yell, and leads them to their prey.
Sad was the hour, and luckless was the day,
When first from Schiraz' walls I bent my way !

At that dead hour the silent asp shall creep,
If aught of rest I find, upon my sleep ;
Or some swollen serpent twist his scales around,
And wake to anguish with a burning wound.
Thrice happy they, the wise contented poor,
From lust of wealth and dread of death secure !
They tempt no deserts, and no griefs they find ;

Peace rules the day where reason rules the mind.
Sad was the hour, and luckless was the day,
When first from Schiraz' walls I bent my way !
O hapless youth ! for she thy love hath won,
The tender Zara ! will be most undone.
Big swell'd my heart, and own'd the powerful maid,
When fast she dropp'd her tears, as thus she said :
' Farewell the youth whom sighs could not detain,
Whom Zara's breaking heart implored in vain !
Yet as thou go'st, may every blast arise
Weak and unfelt as those rejected sighs ;
Safe o'er the wild no perils mayst thou see,
No griefs endure, nor weep, false youth ! like me.'
Oh ! let me safely to the fair return,
Say with a kiss, she must not, shall not mourn ;
Oh ! let me teach my heart to lose its fears,
Recall'd by wisdom's voice and Zara's tears."
He said, and call'd on Heaven to bless the day
When back to Schiraz' walls he bent his way.

Collins.

POPULAR YEAR-BOOK.

January 5, is the *Eve or Vigil of the Epiphany*, and is not without its peculiar festive observances. It was formerly the custom on this day for wandering minstrels to carry a "wassail-bowl" of spiced wine to the houses of the gentry from whom they expected an hospitable reception, and drink wassail to their entertainers.¹ We are told by a writer in the "Gentleman's Magazine," 1791, that, in the South-hams of Devonshire, the farmer, attended by his workmen with a large pitcher of cyder, goes to the orchard, and there, encircling one of the best bearing trees, they drink the following toast three times :—

"Here's to thee, old apple-tree,
Whence thou mayst bud, and whence thou may'st blow,
And whence thou mayst bear apples enow !
Hats full ! caps full !
Bushel—bushel—sacks full !
And my pockets full too ! huzza !"

This done, they return to the house, the doors of which they are sure to find bolted by the females, who, be the weather what it may, are inexorable to all entreaties to open them till some one has guessed at what is on the spit, which is generally some nice little thing, difficult to be hit on, and is the reward of him who first names it. The doors are then thrown open, and the lucky clodpole

¹ *Was-hails* and *drinc-hail* were the usual ancient phrases of quaffing among the English. The first (of Anglo-Saxon origin) signifies, *be in health*. The *wassail-bowl* was a large goblet, like a punch-bowl, with handles, out of which each reveller drank in turn. Its contents were usually ale, sugar, yeast, and roasted crab or apples. *Wassail-bowls*, or cups, of many silver, very frequently appear at Cambridge entertainments, both in the college halls and the private apartments of the Cantabrigians. The most perfect fragments of "wassail," says Mr. Hone, "exists in the songs of certain corporation festivals. The person presiding stands up, at the close of the dinner, and drinks from a flagon, usually of silver, having a handle on each side, by which he holds it with each hand, and the toast-master announces him as drinking 'the health of his brethren out of the loving cup.' The *loving cup* is then passed to the guest on his left hand, and by him to his left hand neighbour; and, as it finds its way round the room to each guest in his turn, so each stands up and drinks to the president out of the 'loving cup.' The last time the writer of this note saw the *wassail-bowl* in use was on Ascension Day, 1845, at the fellows' table, in the noble hall of Trinity College, Cambridge. Immediately afterwards, a long napkin was laid, with some ceremony, down the middle of the table, and a huge silver salver of rose-water placed upon it, and passed to each of the company.

receives the tit-bit as his recompense. Some are so superstitious as to believe that, if they neglect this custom, the trees will bear no apples that year.

Brand, the antiquary, relates, on the authority of a statement made to him in 1790, "that it is the custom for the Devonshire people, in some places, to go, after supper, into the orchard with a large milk-pan full of cyder, having roasted apples pressed into it. Out of this each person in company takes what is called a clayen cup, (*i. e.*) an earthenware cup full of liquor, and, standing under each of the more fruitful apple-trees, passing by those which are not good bearers, he addresses it in the following words :—

'Health to thee, good apple-tree,
Well to bear pocket-fulls, hat-fulls,
Pack-fulls, bushel-bag-fulls.'

And then, quaffing part of the contents, he throws the rest, with the fragments of the roasted apples, at the tree. At each cup the company set up a shout."

In Herefordshire, as the same writer informs us, at the approach of the evening, on the Vigil of Twelfth-day, the farmers, with their friends and servants, meet together, and, about six o'clock, walk out to a field where wheat is growing. In the highest part of the ground, twelve small fires and one large one are lighted up. The attendants, headed by the master of the family, pledge the company in old cyder, which circulates freely on these occasions. A circle is formed round the large fire, when a general shout and hallooing takes place, which you hear answered from all the adjacent villages and fields. Sometimes fifty or sixty of these fires may be all seen at once. This being finished, the company return home, where the housewife and her maids are preparing a good supper. A large cake is always provided, with a hole in the middle. After supper, the company all attend the bailiff (or head of the oxen) to the wain-house, where the following particulars are observed :—The master, at the head of his friends, fills the cup (generally of strong ale), and stands opposite the first, or finest, of the oxen. He then pledges him in a curious toast: the company follow his example with all the other oxen, addressing each by his name. This being finished, the large cake is produced, and, with much ceremony, put on the horn of the first ox, through the hole above mentioned. The ox is then tickled, to make him toss his head: if he throw the cake behind, then it is the mistress's perquisite; if before (in what is termed the boosy), the bailiff himself claims the prize. The company then return to the house, the doors of which they find locked; nor will they be opened till some joyous songs are sung. On their gaining admittance, a scene of mirth and jollity ensues, which lasts the greatest part of the night.

A custom, in some respects very like that just described, prevails at Pannikley, Gloucestershire. On the eve of Twelfth-day, all the servants of every farmer assemble in one of the fields that has been sown with wheat. At the end of twelve lands, they make twelve fires in a row, with straw; around one of which, made larger than the rest, they drink a cheerful glass of cyder to their master's health, and success to the future harvest; then, returning home, they feast on cakes made of caraways, &c. soaked in cyder, which they claim as a reward for their past labours in sowing the grain.

At Brough, in Westmoreland, a singular and

ancient usage (the origin of which is entirely lost) is still retained. On the Eve of Twelfth-day, the "holly tree" is carried in stately procession. Formerly the "holly tree" was really "holly," but ash being abundant, the latter is now substituted. There are two head inns in the town which provide for the ceremony alternately, though the townspeople mostly help in preparing the tree, to every branch of which is fastened a torch. About eight o'clock, P.M., it is taken to a convenient part of the town, where the torches are lighted, the town band accompanying and playing till all is completed, when, amid the shouts and salutes of the spectators, it is carried up and down. The band march behind it, playing their instruments, and pausing every time they reach the town bridge, and the cross, where the "holly" is again greeted with huzzas. Many of the inhabitants carry lighted branches and torches; and rockets and other fireworks illumine the sky. After a while, the tree is placed in the middle of the town, when it is again cheered by the numerous bystanders, and then thrown among them. They eagerly watch for this opportunity; and, seizing each end of the blazing "holly," endeavour to bear it off to the inn they are contending for, where they are allowed a copious supply of ale and spirits, and pass a "merry-night," which seldom breaks up before two in the morning.

There is some account of this usage in Hone's "Year Book" (pp 26, 27), where it is said to be observed on the night of Twelfth-day. A very courteous communication, which we have received from the vicar of Brough, the Rev. L. Jefferson, authorizes us in stating that this is a mistake; the procession, &c., taking place on the Eve of Twelfth-day, as above mentioned. Our reverend informant observes: "If the custom took its rise from, or was any way connected with a religious ceremony, I regret to say that it is now sadly degenerated. There is generally a tumultuous assemblage at the procession, and that is followed, too frequently, by scenes of intemperance and debauchery."

January 6.—The Epiphany.

This festival is celebrated by the whole Western Church. Pope Julius I., in the fourth century, is said to have directed the Nativity, and Epiphany, or Manifestation of Christ to the Magi, to be celebrated on distinct days. The Greeks still keep Epiphany with the Birth of CHRIST, on Christmas-day. From the circumstance of this festival being held twelve days after Christmas, it is called TWELFTH-DAY. It was formerly also styled *The Feast of Kings* (in reference to the supposed regal dignity of the Wise Men), a name which, in Spain, it still retains.

OLD AND POPULAR CUSTOMS.

The customs of this day, though various in different countries, yet agree in the same end, to do honour to the Eastern Magi. In France, one of the courtiers was formerly chosen king, and waited upon by the real sovereign, and his nobles, at a grand entertainment. In Germany they observed nearly the same custom in cities and academies. At our own universities, not many years ago, and in private entertainments, it was usual to give the name of king to one of the company, and to honour him with mock homage. "In every family," says an eloquent writer, alluding to the Twelfth-day of the olden time, "a king was

chosen, who ruled for the day." This choice was usually made by means of a bean found in a piece of divided cake. Mr. Horace Smith thinks this mode of perpetuating the remembrance of the Wise Men may have been partly borrowed from the Roman Saturnalia, when the masters made a banquet for their servants, and waited upon them; and partly from the Roman custom of drawing lots, or beans, for the title of king, when the fortunate party was declared a monarch of the festive circle, over which he exercised full authority until they separated. Allusion has been made to the Twelfth-night cake, in connexion with the ancient usual way of choosing the Twelfth-night sovereign. The ancient cake was composed of flower, honey, ginger, and pepper. Mr. Fosbroke says that it "was full of plums, with a bean in it for the king, and a pea for the queen, so as to determine them by the slices. Sometimes a penny was put in the cake, and the person who obtained it, becoming king, crossed all the beams and rafters of the house against devils." The custom of choosing a king and queen on Twelfth-night has never been wholly left off in England. A writer in 1774 says: "After tea yesterday, a noble cake was produced, and two bowls, containing the fortunate chances for the different sexes. Our host filled up the tickets, the whole company, except the king and queen, were to be ministers of state, maids of honour, or ladies of the bed-chamber. Our kind host and hostess, whether by design or accident, became king and queen. According to Twelfth-day law, each party is to support their character till midnight." "At present," writes Mr. Brady, at the beginning of the nineteenth century, "the honours of king and queen, and others of a festive nature, introduced to heighten the jollity, are determined by the drawing of folded slips of paper, on which are inscribed these ephemeral distinctions, though the practice of drawing beans is yet preserved in some few districts." Every one knows that the custom of eating Twelfth-cake, and drawing "characters," is still retained in London and some of the provinces.

In France the Twelfth-cake is plain, with a bean, and the drawer of the slice containing the bean is king or queen. There is no other drawing, and consequently the sovereign is the only distinguished personage. In Normandy they place a child under the table, which is covered in such a manner with the cloth that he cannot see what is doing; and when the cake is divided, one of the company, taking up the first piece, cries out, "Fabe Domini pour qui?" The child answers, "Pour le bon Dieu;" and in this manner the pieces are allotted to the company. If the bean be found in the piece for the "bon Dieu," the king is chosen by drawing long or short straws. Whoever gets the bean chooses the king or queen, according as it happens to be a man or woman. At the close of 1792, in the French Revolution, the Council General of the Commons at Paris ordained that "La Fête de Rois" (Twelfth-day) was thenceforth to be called "La Fête de Sans-Culottes." To this nominal change the French consented, but they would not resign the festival. "While the statue of Marat," says Chateaubriand, "usurped the place of the image of St. Vincent de Paul, while people celebrated all those festivals the anniversaries of which are marked in our calendars as days of eternal grief, many a pious family secretly kept a

Christian holiday, and religion still mingled a small proportion of joy with a sea of affliction. Simple hearts cannot recollect, without emotion, the happy hours when whole families assembled round their cakes, which recalled to mind the presents of the Magi. The infirm grandfather, confined all the rest of the year to his room, made his appearance on this festive occasion. His grandchildren, who had long anticipated the expected feast, surrounded his knees, and made him young again with their affectionate vivacity. Joy beamed from each face, and every heart swelled with transport; the festive apartment was unusually decorated, and each individual appeared in his best clothes. Amid loud bursts of merriment, the happy company drew lots for those royalties which cost neither sighs nor tears; and oftentimes an artifice, which heightened the mirth of the subject, and drew complaints from the queen alone, transferred the highest dignities to the daughter of the house and the son of some neighbour, lately arrived from the army. The young people blushed, embarrassed as they were with their crowns; the mothers smiled; the fathers made signs to one another, and the grandfather drank his glass to the prosperity of the new queen.

"The pastor, who was present at the festival, received the first portion, styled the portion of the poor, to be distributed among them, with other gifts. Diversions handed down from days of yore; a ball, at which some aged domestic performed the part of first musician, prolonged the pleasures of the festival till late at night; and the whole company, nurses and children, farmers, servants and masters, joined all together in the sprightly dance.

"These scenes were formerly repeated throughout all Christendom, from the palace to the cottage. And what a succession of happy days! Christmas, New-year's day, and Twelfth-day. At that time, the farmers renewed their leases, the tradesman was paid his bills; it was the time of marriages, of presents, and of charity; the companies, fraternities, courts of justice, universities, corporations assembled according to the ancient Gallic custom; the infirm and the indigent were relieved. The obligation you were under to receive your neighbour at this season, made you live on good terms with him all the rest of the year."

In the times of chivalry, and as late as the reign of James I., Twelfth-day was celebrated in the English Court by grand feasts and tournaments.

Barnabe Googe, in the "Popish Kingdom," gives the following account of a custom (now obsolete) which was prevalent in England before the Reformation:

"Twice six nights then from Christmas they do count with diligence,
Wherein each master in his house doth burn up frankincense;
And on the table sets a loaf when night approacheth near,
Before the coals, and frankincense to be perfumed there:
First bowing down his head, he stands, and nose, and ears, and eyes,
He smokes, and with his mouth receives the fume that doth arise;
Whom followeth straight his wife, and doth the same full solemnly;
And of their children every one, and all their family;
Which doth preserve, they say, their teeth, and nose, and eyes,
and ear,
From every kind of malady and sickness all the year
When every one received hath this odour great and small,
Then one takes up the pan with coals, and frankincense, and all,
And other takes the loaf, whom all the rest do follow here,
And round about the house they go, with torch or taper clear,

That neither bread nor meat do want, nor witch with dreadful charm

Have power to hurt their children, or to do their cattle harm.
There are that three nights only do perform this foolish gear,
To this intent, and think themselves in safety all the year."

The same author says, that on Twelfth-day, also,
"The youth in every place do flock, and all apparelled fine,
With pipers, through the streets they run and sing at every door.

* * * * *
There cities are, where boys and girls together still do run
About the street with like, as soon as night begins to come,
And bring abroad their wassail-bowls, who well rewarded be
With cakes and cheese, and great good cheer, and money
plenteously."

OBSERVANCES.

Upon the Epiphany was anciently performed the "Office of the Three Kings; or, Feast of the Star." Three priests, clothed as kings, with their servants carrying offerings, met from different directions before the altar. The middle one, who came from the East, pointed with his staff to a star. A dialogue then ensued; and, after kissing each other, they began to sing, "Let us go and enquire," after which the Precentor began a responsory, "Let the Magi come." A procession then commenced; and as soon as it began to enter the nave, a crown, like a star, hanging before the cross, was lighted up, and pointed out to the Magi, with, "Behold the Star in the East." This being concluded, two priests, standing at each side of the altar, answered meekly, "We are those whom you seek;" and drawing a curtain, showed them a child, whom, falling down, they worshipped. Then the servants made the offerings of gold, frankincense, and myrrh, which were divided among the priests. The Magi, in the mean while, continued praying till they dropped asleep; when a boy, clothed in an alb, like an angel, addressed them with—"All things which the prophets said are fulfilled." The festival concluded with chanting, services, &c. The above account is cited from Fosbrooke's "British Monachism," p. 47, royal 8vo, 1843. There can be little doubt that this and similar sacred dramas of the Middle Ages, as well as the ceremonies peculiar to the solemn festivals, acted upon the minds of men with the force of reality, and excited emotions corresponding, in some degree, to those which would have been caused by witnessing the events they commemorated; and thus was Religion, its facts, its doctrines, and duties fastened upon the minds, thoughts, and affections of the people.

To resume our relation of the pious observances allied to the Feast of the Epiphany.—The Knights of the Order of the Star, (founded by King John of France, in the year 1351,) used to assemble every year at S. Ouen, between Paris and S. Denis, in a castle, called the Noble House, on this festival, at the hour of prime; and they were required to remain there till after vespers the following day. Kings and great men made their offerings on the altar, in imitation of the star-led monarchs of the East. A MS. of the time of Henry VII. directs—"And he [the king] must offer that day gold, myrrh, and sense [frankincense]; then must the dean of the chapel send unto the Archb shop of Canterbury, by clerk or priest, the king's offering that day; and then must the archbishop give the next benefice that falleth in his gift to the same messenger." The custom of making offerings on the Epiphany is still observed by our English sovereigns. On Twelfth-day, 1620-1, James I. offered gold, frankincense, and myrrh, and touched

"eighty of the evil;" so lately as Twelfth-day, 1731, "The king and prince, at the Chapel Royal, S. James's, offered at the altar, gold, frankincense, and myrrh." These royal offerings continue to be annually made by proxy. In 1842, they were placed on the altar at S. James's, after the offertory, by the Lord Bishop of London.

January 7.—This was formerly called *S. Distaff's-day*, because the Christmas holidays having ended, good housewives resumed the distaff and other laborious occupations. It was sometimes termed *Rock-day*, in honour of the rock, which, says Hone, is a distaff held in the hand, from whence wool is spun by twirling a ball below. It appears that the burning of the flax and tow was the men's diversion on the evening of this, their first day of labour after the Christmas festivities, and that the females returned the compliment by soaking their mischievous assailants. Thus Herrick sings in his "*Hesperides*:"—

"Partly work and partly play,
You must on *S. Distaff's-day*:
From the plough soon free your team;
Then come home and fother them:
If the maids a spinning go,
Burn the flax, and fire the tow;
Scorch their plackets, but beware
That ye singe no maiden hair.
Bring in pails of water then,
Let the maids bewash the men.
Give *S. Distaff* all the right;
Then give Christmas-sport good night,
And next morrow, every one
To his own vocation."

THE LADY OF STAVOREN.

A GERMAN BALLAD.¹

THE incident of the ring, in the following poem, is evidently taken from the story of "*The Ring of Polycrates*," in Herodotus, of which we here give Beloe's translation:

"Whilst Cambyses was engaged in his Egyptian expedition, the Lacedæmonians were prosecuting a war against Polycrates, the son of *Æaces*, who had forcibly possessed himself of *Samos*. He had divided it into three parts, assigning one severally to his brothers, *Pantagnotus* and *Syloson*. He afterwards, having killed *Pantagnotus*, and banished *Syloson*, who was the youngest, seized the whole. Whilst he was thus circumstanced, he made a treaty of alliance with *Amasis*, King of Egypt, which was cemented by various presents on both sides. His fame had so increased that he was celebrated through *Ionia* and the rest of Greece. Success attended all his military undertakings; he had a hundred and fifty oared vessels, and a thousand archers. He made no discrimination in the objects of his attacks, thinking that he conferred a greater favour even on a friend, by restoring what he had violently taken, than by not molesting him at all. He took a great number of islands, and became master of several cities on the continent. The *Lesbians*, who, with all their forces, were proceeding to assist the *Milesians*, he attacked and conquered in a great sea-fight. Those whom he made prisoners he put in chains, and compelled to sink the trench which surrounds the walls of *Samos*.

The great prosperity of Polycrates excited both the

attention and anxiety of *Amasis*. As his success continually increased, he was induced to write and send this letter to *Samos*:—

'AMASIS TO POLYCRATES.

'The success of a friend and an ally fills me with particular satisfaction; but, as I know the invidiousness of fortune, your extraordinary prosperity excites my apprehensions. If I might determine for myself, and for those whom I regard, I would rather have my affairs sometimes flattering and sometimes perverse. I would wish to pass through life with the alternate experience of good and evil, rather than with uninterrupted good fortune. I do not remember to have heard of any man remarkable for a constant succession of prosperous events, whose end has not been finally calamitous. If, therefore, you value my counsel, you will provide this remedy against the excess of your prosperity—examine well what thing it is which you deem of the highest consequence to your happiness, and the loss of which would most afflict you. When you shall have ascertained this, banish it from you, so that there may be no possibility of its return. If, after this, your good fortune still continue without diminution or change, you will do well to repeat the remedy I propose.'

Polycrates received this letter, and seriously deliberated on its contents. The advice of *Amasis* appeared sagacious, and he resolved to follow it. He accordingly searched among his treasures for something, the loss of which would most afflict him. He conceived this to be a seal ring which he occasionally wore; it was an emerald, set in gold, and the workmanship of *Theodorus* the *Samian*, the son of *Telecles*. Of this determining to deprive himself, he embarked in a fifty oared vessel, with orders to be carried into the open sea. When he was at some distance from the island, in the presence of all his attendants, he took the ring from his finger, and cast it into the sea; this done, he sailed back again.

Returning home, he regretted his loss; but, in the course of five or six days this accident occurred:—a fisherman caught a fish of such size and beauty, that he deemed it a proper present for *Polycrates*. He went, therefore, to the palace, and demanded an audience. Being admitted, he presented his fish to *Polycrates*, with these words: "Although, sir, I live by the produce of my industry, I could not think of exposing this fish, which I have taken, to sale in the market-place, believing it worthy of you to accept, which I hope you will." The king was much gratified, and made him this reply: "My good friend, your present and your speech are equally acceptable to me; and I beg that I may see you at supper." The fisherman, delighted with his reception, returned to his house. The servants, proceeding to open the fish, found in its paunch the ring of *Polycrates*. With great eagerness and joy they hastened to carry it to the king, telling him where they had met with it. *Polycrates* concluded that this incident bore evident marks of divine interposition; he therefore wrote down every particular of what had happened, and transmitted it to Egypt.

Amasis, after perusing the letter of his friend, was convinced that it was impossible for one mortal to deliver another from the destiny which awaited him: he was satisfied that *Polycrates* could not terminate his days in tranquillity, whose good fortune had never suffered interruption, and who had even recovered what

(1) From Merivale's excellent translation of the *Minor Poems* of Schiller. London: Pickering. 1845.

he had taken pains to lose. He sent, therefore, a herald to Samos, to disclaim all future connexion; his motive for doing which, was the apprehension that, in any future calamity which might befall Polycrates, he, as a friend and ally, might be obliged to bear a part."

On the Zuyder Zee Stavoren—who hath the city found?—
With turrets and with gates full proudly girdled round;
And palaces of state thou still mayst there behold,
Albe the boundless ocean have long time o'er them roll'd.

When thy bark is softly cradled, and all the winds asleep,
The mariner will show thee where she lies beneath the deep;

Thou look'st o'er street and market, where voiceless echoes dwell,
And the pike darts forth, awaken'd by the sound of the muffled bell.

Of old time in Stavoren did Pride and Plenty reign—
Then feasted they in gladness, and dream'd of pleasures vain,

While proud o'er every sea their galleons stout did ride,
For the children of Stavoren rich treasures to provide.

Spoil'd children were they truly—their fortune all too kind—
Their entrance halls and gates with gold profusely lin'd;

Their banquet rooms and courts with ducats pav'd throughout,
And o'er passages and stairs bright dollars strew'd about.

As store was heap'd on store, so grew proud Surquedry,
As though by worldly riches high Heav'n might purchas'd be;

But when the cup ran over, came the city to the ground;
And whom the sea had prosper'd well, the sea now clos'd around.

The first in all Stavoren a wealthy maid did dwell,
No king might hope to mate her, so far she did excell;
And so she wax'd withall in arrogance and pride;
She worshipp'd gold, and own'd no other God beside.

And thus to her Ship's Captain bespoke that haughty fair—
"Go heave thine anchor straight—for a twelvemonths' cruise prepare!

Return not to Stavoren without thou laden be
With the noblest and the best thou canst on earth—ball see."

Then spake that ancient Captain—a prudent man was he—
"I bring whate'er thou biddest; but more plainly tell to me,
What is the best and noblest? In the world is much to choose,
And I full fain would know what wares to take and what refuse.

"Let but thy lips pronounce—and, be it corn or wine,
Or amber, silk, or spice, or gold, or jewel-shine,
Or emerald, or pearl—'tis but thy speech's worth
To freight my ship with all that's best and noblest on the earth."

"Nay," said she, "if thou guess not, why art thou held for wise?
Whoe'er would choose my service, him must a wink suffice.

Wherewith shalt thou be freighted? now, by my wrath, to sea!
And bring the noblest and the best—I'll say no more to thee."

Now he must fain obey; yet stands he on the brink,
Like one who ponders much, scarce knowing what to think.

That Lady's pride unbending 'twas his full well to know,
And how to do her pleasure best he ponders to and fro.

At length he thus resolv'd him to meet her haughty scorn—

"The best of things on earth—the noblest too is corn.
'Tis corn man honours most—the noblest and the best;
Therewith will I my vessel freight, and do her high behest."

With that he sails for Dantzic, his cargo to provide—
Ten thousand loads of wheat from Poland far and wide—
The choicest wheat of all that land did ever grow;
Such wheat, as whoso tasted, 'twould give him strength enow.

Then homeward to Stavoren with favouring gale he sped,
And reach'd the harbour safely ere six months were fled.

Straight stepp'd he to the Lady, at table where she sat,
And look'd as if she marvell'd much what could the fool be at?

"What ho, my noble Captain! full soon thou art come back—
No doubt, the whole world's treasure is hidden in your sack:

Your ship must be an eagle, and every sail a wing,
So swift its precious cargo home from Guinea's coast to bring."

Then spake the valliant sailor—he from the Lady's scowl Perceiv'd,
As well experienced, the weather something foul—

"I bring the best of wheat, dread Lady, unto thee—
The best and noblest ever grown on earth or shipp'd by sea."

Quoth she—"What's this I hear? I surely must mistake:
What! wretched vulgar wheat, whereof men simmels make?

Think'st thou to cheat me thus? Thou canst not serious be—
The noblest and the best of wares I bade thee bring to me."

"If it so wretched be, whence comes"—the old man said—
"Our daily prayer we make, God, give us daily bread?"

"Soon shalt thou prove," said she, "how I such prating scorn—
Say, from what point of Heav'n above didst ship this filthy corn?"

"Far hence unto the larboard the ship was laden."—"Good!
Then turn thee to the starboard, and fling it in the flood.

Aye—the whole cargo, mark me!—and be it instant done—
I come myself to see it well perform'd ere set of sun."

The Sailor went, but did not the thing the Lady bade—
Such sin against high Heaven to commit he was afraid;
So he gather'd all the poor and half-starv'd people round,
To try if aught of pity might in that hard heart be found.

She came as she had spoken—"My bidding hast thou done?"
Then fall they at her feet, those poor people, one by one—

"Give us the wheat," they begg'd her, "nor cast it in the sea!
That we our hunger may appease"—but nothing answer'd she.

A nod alone for mandate to the standers-by she gave,
And they whelm'd God's blessed gift, remorseless, in the wave.

The famish'd crowd stood wringing of their hands in speechless grief—
Till at last the brave old Captain for his anger found relief.

Full loud before the people in the Lady's face he cried—
"Nay, verily, unpunish'd such sin will ne'er abide;
As God the good rewardeth, and the wicked bringeth low,
So will he one day make thee this crime's just judgment know."

"So shall the hour arrive, when thou mayst yet be fain
From the streets this noble corn to pick up grain by
grain,

Thine hunger to appease, since none will give it thee."—
She, loudly laughing, answer'd, "Friend, that day will
never be.

"Stavoren's richest heiress will never want for food.
Look! this ring, this golden ring, I cast into the flood!
Not till it back returneth may this thing hap to me."
—That it will back return ere night—full little weeneth
she.

Lo! in a fish's belly, the cook that ring hath found;
And ere she laid her down to rest the fatal news came
round,

How all the Argosies she to the East had sent,
Had foundered been, and those no less that to the West-
ward went.

How that the Moors and Turks, to work her sore annoy,
Their forces join'd—and, more, her fortunes to destroy,
A princely house had fail'd—thus follow'd post on post,
Till she was doom'd to starve or ere a year had pass'd at
most.

From door to door she hied her, to beg her daily bread,
And thus it was fulfill'd as that valiant Captain said.
By none was she lamented—by many held in scorn—
So she moan'd her wretched life away, unpitied and
forlorn.

Yet Stavoren on it revell'd, in sinful idle pride,
While riches still her navies brought in with every tide.
The warning no man heeded—so grew the penance-seed,
For all the godless city from that maiden's cruel deed.

There where the noble wheat was sunk by her command,
Arose a fearful sandbank, they call *The Frauen-sand*;
And thereout through the waves a meagre plant did
shoot,
Like wheat it show'd in stalk and head, save that it bore
no fruit.

Yet higher rose the sandbank, and higher o'er the tide—
The Harbour barr'd, no ships therein might longer ride.
The springs of wealth throughout that gluttonous city
died;

Yet still they revell'd on in their wantonness and pride;

Until one day, a shoal of herrings came to light
From forth the deep draw-well; and on the self-same
night

The sea another channel chose, and with a fearful swell
The flood o'erwhelm'd the streets, and the market-place
as well.

On the Zuyder Zee Stavoren—who hath the city
found?—

With turrets and with gates, full proudly girdled round,
And palaces of state thou still mayst there behold,
Albe' the boundless ocean have for ages o'er it roll'd.

THE WILL.

A TALE OF THE LAST CENTURY.

THE old lady who related the outline of the
following singular story, heard it told, in her
youth, by no means as a fiction, but as a real oc-
currence. She even once knew the name of the
old northern family concerned in it, but that, with
the exact dates, she has now forgotten, if she ever
knew the latter; and having never written down
the story, she has no means of recovering them.
However, from her express mention of a tight wig,
worn by the benevolent old hero of the tale, we
have fixed the strange occurrence not earlier than
the last century.

Towards the end of a gusty October day, about

the year 1730, a barrister of the Temple was sitting
reading, when the opening of the door, and his
servant's announcement of "a gentleman," inter-
rupted him. He rose to receive his visitor, who
proved to be a perfect stranger, a person of very
gentlemanly, but extremely old fashioned, appear-
ance. He was dressed in a grave-coloured suit, of
antique cut; a neat, tight grey wig surrounded his
serious, and even solemn, physiognomy; silk stock-
ings, rolled at the knee; enormous shoe buckles
of gold; a cane, headed with the same metal, and
a broad-brimmed and uncocked hat, completed his
equipment; which was in the fashion of the last
years of William the Third, or the first of his suc-
cessor. Having stiffly bowed, in the exact way
prescribed by the etiquette of the era to which he
seemed to belong, he took possession of the chair
offered to him by his host; and, after a preparatory
hem, thus began, in a slow and serious manner:
"I think, sir, you are the lawyer employed by the
S—— family, whose property in Yorkshire, you
are, therefore, aware is about to be sold."

"I have, sir," answered the barrister, "full in-
structions and powers to complete the disposal of
it, which, though a painful duty to me, must be
performed."

"It is a duty you may dispense with," said the
visitor, waving his hand; "the property need not
be sold."

"May I presume to ask, sir, whether you are
any relation to the family? If so, you must be
acquainted with the absolute necessity of selling
it, in consequence of the claim of another branch
of the family, just returned from beyond sea, who,
as heir-at-law, is naturally possessor of the estate,
in default of a will to the contrary; and who
desires its value in money, instead of the land.
The present possessor is unable to buy it; and,
must, therefore, depart."

"You are mistaken," replied the old gentleman,
rather testily; "you seem not to know of the will
of Mr. S——'s great grandfather, by which he not
only left that, his estate, to his favourite grandson,
this gentleman's father, but even entailed it on his
great great grandson."

"Such a will, sir," said the barrister, "was, in-
deed, supposed, for many years, to exist; and, in
virtue of it, Mr. S—— has, until now, peaceably
enjoyed the property; but, on the claimant's appli-
cation, a renewed search having been made for it,
either the belief proves wholly unfounded, or it has
been lost or destroyed. Cabinets, chests, every
room, inhabited and uninhabited, have been ran-
sacked in vain. Mr. S—— has now given up all
hope of finding it; the sale is to be completed in
the course of the next week; and the fine old place
must pass into the hands of strangers."

"You are mistaken once again, young man,"
said the stranger, striking his cane on the floor,
"I say, sir, the will exists. Go, immediately,"
continued he, in an authoritative tone; "travel
night and day. You may save an old family from
disgrace and ruin. In the end room of the left
wing, now uninhabited, is a closet in the wall."

"We have looked there," interrupted the bar-
rister.

"Silence, sir; there is a closet, I say. In that
closet is a large chest; that chest has a false
bottom, and underneath that is the deed. I am
certain of what I say. I saw the paper deposited
there; no matter when, or by whom. Go; you

will find it worth your trouble. My name, sir, is Hugh S——. I am not now personally known to the proprietor of S—— Hall; but I am his relation, and have his welfare at heart. Neglect not to follow my advice." So saying, the old gentleman arose, again bowed, and at the door put on his hat, in a fashion which would have enchanted an *élégant* of Queen Anne's day; and sliding the silken string of his cane on the little finger of his right hand, on which the lawyer had remarked a very fine brilliant ring, he descended the stairs, and departed, leaving the barrister in the utmost astonishment. At first he felt half inclined to consider the whole as a hoax; then again, when he thought of the old gentleman's grave manner, and the intimate knowledge he must have possessed of the house, to be able to describe the room so exactly in which the chest was, he could not but believe him to be sincere.

At length, after much deliberation, he decided upon immediate departure; and arrived, on the evening of the fourth day, at S—— Hall. The sale had been the only theme of conversation at every place he had passed through, within twenty miles of his destination; and much and loudly was it lamented, that the squire should be leaving his house for ever, and that poor Mr. John would never enjoy his *rights*; as they persisted in calling the possession of the estate. On his entrance into the mansion, signs of approaching removal everywhere met his eye. Packages filled the hall; servants, with sorrowful countenances, were hurrying about; and the family were lingering sadly over the last dinner they were ever to partake of in their regretted home.

Mr. S—— greeted his friend with a surprise, which changed to incredulity when the barrister, requesting his private ear, declared the reason of his appearance. "It cannot be," said he. "Is it likely that no one should ever have heard of the hiding of the deed but the old gentleman you mention. Depend upon it, you have been deceived, my dear friend; I am only sorry you should have taken so much trouble, to so little purpose." The barrister mentioned the name of his visitor. "Hugh——!" exclaimed the gentleman, laughing. "I have not a relation in the world of that name."

"It is worth the trying, however," said the lawyer; "and since I have come so far, I will finish the adventure."

Mr. S——, seeing his friend so determined, at length consented to satisfy him, and accompanied him towards the apartment he specified. As they crossed one of the rooms in their way, he suddenly stopped before a large full-length picture. "For heaven's sake," cried he, "who is this?"

"My granduncle," returned Mr. S——. "A good old fellow as ever lived. I wish, with all my heart, he were alive now; but he has been dead these thirty years."

"What was his name?"

"Hugh——. The only one of our family of that name."

"That is the man who called upon me. His dress, his hat, his very ring, are there."

They proceeded to the closet, lifted the false bottom of the trunk, and—found the deed.

The kind old uncle was never seen again.

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne*.

REMARKABLE PRESENCE OF MIND.

A WORKMAN employed in one of the mining shafts of the Scottish Central Railway lately had a most miraculous escape. He had lighted the fuses connected with the charges of powder for the purpose of blasting, and gave the signal to be drawn up, but the rope slipping, the poor fellow was suspended a few feet above where the explosion was to take place, with no other prospect before him but instant death. With great fortitude and presence of mind he called out to lower him, which was immediately done, and, advancing cautiously to the burning fuses, he extinguished them. On examination they were found to have burned within half an inch of the powder.

UMBRELLAS.

It is curious to observe the slender thanks given to those who endeavour to increase the comforts and conveniences of the human race. When Jonas Hanway, though a very popular character, first appeared in the streets of London with an umbrella, he was looked upon with a feeling similar to that with which the ancient prophet of that name was regarded. The novel example of such effeminacy was ridiculed as quite insufferable; and preferring the rays of the sun to the shower of missiles with which he was assailed, he quietly put it down, and took shelter in a cutler's shop, from the back door of which he retreated into an adjoining street, and without further molestation got safe home. It was some time before he again ventured to defend himself publicly against the sun's rays; but being deemed an eccentric, his singularity was overlooked, and he was permitted quietly to walk under cover. At length so many began to avail themselves of the like accommodation, that the common eye grew familiar to it. A few rurals stopped now and then to gaze and wonder, but felt rather amused than offended. The imitation at length spread from the Bond-street men of fashion to the men of smock frocks and aprons; and in our day there is scarcely any one, however poor, that has not an umbrella. They are become as common as shoes and stockings.

WHAT we call good sense in the conduct of life, consists chiefly in that temper of mind which enables its possessor to view at all times, with perfect coolness and accuracy, all the various circumstances of his situation: so that each of them may produce its due impression on him, without any exaggeration arising from his own peculiar habits. But to a man of an ill-regulated imagination, external circumstances only serve as hints to excite his own thoughts, and the conduct he pursues has in general far less reference to his real situation, than to some imaginary one, in which he conceives himself to be placed: in consequence of which, while he appears to himself to be acting with the most perfect wisdom and consistency, he may frequently exhibit to others all the appearances of folly.—*Stewart*.

TRUE humility, the basis of the Christian system, is the low, but deep and firm foundation of all real virtue.—*Burke*.

THE DUCHESS OF ORLEANS.¹

On the road from Berlin to Hamburg, nearly at the entrance of the rich and fertile principality of Mecklenburg, lies a small town, the appearance of which surprises and charms the traveller; it is Ludwigslust, one of the prettiest and most attractive towns in Germany. In the middle of the last century, Ludwigslust was a mere *rendezvous de chasse*. In 1756 the Grand Duke Frederick established himself there with his court. He built a palace, a church, an enclosure of houses for his officers, and several wide and handsome streets. The Grand Duke Frederic Francis continued the work of his predecessor. He ornamented the palace and embellished the park; and, having a taste for natural sciences and the arts, he, by degrees, made such a collection of pictures, minerals, and shells, as well deserves the visit of the traveller. Thus patronized by two sovereigns, Ludwigslust soon became a place of note. What can be gayer than the aspect of its Dutch-built houses, of its paved streets, shaded by double rows of lime-trees? What more charming than the view of the palace, the limpid cascade playing beneath the windows, and the cheerful green surrounded with habitations, and terminated by the church? In this delightful residence of the princes and nobility of Mecklenburg, was born the Princess Helena, Duchess of Orleans. She is daughter of the hereditary Grand Duke Louis Frederick—a man of affectionate and generous disposition, and an exalted and upright character. Her mother, the young Duchess Caroline of Saxe Weimar, whose picture I lately saw in the hereditary palace of her ancestors, had a countenance of extreme beauty and intelligence.

Educated at Weimar during the period of its greatest literary fame, in the interior of that poetical court, which the names of Goethe and Schiller have immortalised,—surrounded by those men whom Germany and all other European countries delighted to honour, who gladly assembled under the kind protection of her parents,—Caroline was remarkable for the excellence of her heart, and the superiority of her talents. The inhabitants of Weimar called her their tutelary angel: and a German writer, who had watched her progress from infancy to womanhood, remarked, when speaking of her. "Her's was a heavenly character."

The Duchess of Orleans thus inherits, from either parent, those qualities which insure to the prince the hearts of his subjects, and endear his memory to men of talent; and, through them is connected with the oldest and most powerful families of Northern Europe. One prince of Mecklenburg reigned in Sweden; another, the valiant Ruric, conquered and subdued a part of that vast empire which is at present under the absolute dominion of the Russians. Genealogists carry back the

history of the princes of Mecklenburg to the most remote ages, and have spread the collateral branches of the family over the entire north. The learned Funo Magnussen has very lately proved, by an affiliation of several centuries, their relationship with Regnar Lodbrok, the wonderful hero of Scandinavian tradition. But misfortune, alas! hovered over the cradle which was surrounded with so much lustre and virtue. The Princess Helena was only two years old when she lost her mother. Her father re-married, on the 3d of April, 1818, the Princess Augusta of Hesse Homberg, eighteen months after which this excellent prince was taken from his country and his children. The Princess Helena had already lost one young brother; one other yet remained to her fond affection; but, at the very age when his family and his country were indulging in the fondest hopes of him, at that age when he was preparing to continue the fatherly government of his ancestors, she beheld him languish and fade, and in 1834 she received his last sigh.

In the middle of a grove of beeches, in the park of Ludwigslust, stands a chapel of a simple, yet striking, appearance. It is there that these interesting victims of premature death repose, under a dimly lighted dome. Hope mingles with our grief as we contemplate their tombs. The blue vault, bespangled with stars of gold, is like the cloudless night of summer; and the inscription over the entrance tells of the happiness of those, who, though separated in this life, will be re-united in that which is to come. This chapel is a sort of pilgrimage to the good people of Mecklenburg. On the day that I visited it, I was followed by a poor old peasant woman; her hands were joined, her head hung down, concealing her features. She was praying; and in her prayer she associated the past with the present, and the names of those who were not, with those of their surviving relations. But Providence, which had blighted the sweetest and holiest ties, gave to the princess Helena, in the person of her father's second wife, a sympathising supporter, and a mother capable of the fondest attachment and the most untiring devotion, whose noble and enlarged heart, elevated and fortified by the love of virtue and the sentiment of duty, had learnt, from her own early experience of sorrow, to feel for another's misfortunes. Admirable woman! Condemned, in the flower of her age, to the widow's melancholy garb, she was accustomed betimes to seek, in the practice of her religion, for support in the calamities of life; and, in the charms of literature, for more true and lasting joys than fortune and power can bestow. She it was who, assisted by a few chosen masters and an excellent governess, brought up the subject of our present memoir; she it was who, by her incessant care, her boundless affection, and her judicious advice, developed those precious gifts which heaven had been pleased to bestow on her; she it

(1) From "*Les Illustrations*."

was who, guiding her step by step on her entrance into life, in her studies and her observations, profited by every opportunity of giving a right direction to her talents, and a pious inclination to her soul; and she it was who, on the day of that royal and splendid marriage, alas, so quickly clouded in mourning! accompanied her to France, and who hastened from the other end of Germany to afford her the support of her piety and tenderness under her cruel bereavement.

The dowager grand duchess passed, with her adopted daughter at Ludwigslust, twenty years of retirement, of improvement in the performance of good works, and in the indulgence of generous reflections. She inhabited one of the houses that Prince Frederic had built, by the side of the green lawn which extended to within a short distance of the church. She was acquainted with most of the inhabitants of the ducal residence, the poor as well as the rich; and she identified herself with their interests and wishes. She became their protectress, adviser, and supporter; and she taught her daughter the sweet feelings of humanity and sympathy. A part of every day was spent in providing for the necessities of those who surrounded her, and the rest of her time was devoted to choice society, useful reading, the study of art, history, and general literature, and to improving walks in a botanical garden, instituted by the duchess herself, and in which she had collected the most beautiful and rarest plants and flowers. Sometimes, on the return of summer, the two princesses, quitting for a space their loved retirement, would visit some of the most beautiful scenery and remarkable towns in Germany. At Berlin, at Leipsic, and at Weimar, they viewed the modern and ancient monuments of art, and conversed with the most distinguished persons of each place that they visited. One may easily imagine the effect of such an education, and that the hopes of her who had so ardently undertaken, and so fondly continued it, have not been disappointed, nor her lessons of love failed of an ample reward. One must have been in Germany, have stayed in Mecklenburg, fully to understand the depth of respect and affection which the Duchess of Orleans has left in the heart of all those who knew her. From the moment of her quitting Ludwigslust, France has been the point of attraction to all her compatriots. The Paris journals are subscribed to, and all news from France impatiently waited for; and the first sheet unfolded, the first column sought for, is that in which they hope to find the name of the youthful duchess. The most tender solicitude attends her steps, and she is spoken of as a dear absent child whom they long to see again.

Such love as this, unweakened by time, unaltered by absence, extends itself to her adopted country. They desire its prosperity, power, and peace; for the good people of Ludwigslust associate the destiny of France with that of their young princess; and the arrival and departure of a courier from that country, is a matter of the greatest interest to them. Among the lower ranks, the same feeling prevails; their respect and devotion for her, who was brought up under their eyes, exceeds all idea. Ignorant as they are, they cannot trace her destiny like those who are versed in the histories of nations, and the reports of the daily papers; but they still see her in imagination, in light-hearted happiness, with a look or word of kindness for every one crossing the streets and park of Ludwigslust. I one day hired a carriage, to take me from Ludwigslust to Schwerin, and, during the drive, I conversed with the honest old driver, whose open countenance, and quaint recitals, interested me. After speaking of the popular traditions of his country, of the palace of Schwerin, and the dykes of Doberan, I asked him if he had ever known the duchess of Orleans. At this question, he held down his head, and was, for some moments, silent, like a person who, struck by the unusual sound of a word, tries to arrange his confused ideas; then suddenly recollecting himself, and look-

ing at me with an expression of joy, he exclaimed, "Oh, our Helena! (*Unser Helena*); did I know her! I should think I did. I, who have seen her pass our house so often, as a little child! My wife and children also know her well, and could tell you how she is beloved; but, you see, the new title that you gave her puzzled me. We know that she is a French duchess, but we never can give her another name than that she bore while with us; she is our Helena of Mecklenburg, happen what may."

Upon this the good old fellow began to relate all that he knew of the infant years of the princess, of the acts of kindness and commiseration which had so endeared her to her country; and his recital lasted until we drove under the gothic arches of the old castle of Sewherin.

At Weimar, where the duchess of Orleans had, at different periods, passed many months, every one, from the dweller in the ducal palace, to the inmate of the meanest abode, praise and bless her. The affection which the inhabitants of this town had borne to the mother, reflects on her noble child; and at the sound of her name, there arises on all sides a murmur of love and gratitude. "Our guardian angel has not left us," said one of Goethe's old friends to me; "our Princess Caroline lives again in our Helena, who belongs as much to us, as to Mecklenburg."

The duchess of Orleans justifies the constancy of this affection, by her remembrance of her old and valued friends. She gave herself, heart and soul, to France, but her native land lives in her memory. She is interested in its improvement and welfare, and she watches over the fate of those she loved. She shares their happiness, and compassionates their misfortunes, and conveys to them, with the promptitude of true generosity, from time to time, tokens of sympathy, and words of encouragement, or consolation. During my sojourn at Weimar, an artist of eminence died; and the first letter of condolence received by his weeping widow, was from the duchess of Orleans. Another female, being obliged to seek, under the milder sky of Italy, for that health which her native climate denied her, found that the orders of the Duchess of Orleans had preceded her on her route, and that, wherever she went, she was received with the most marked attention. Need I say what feelings the august princess has inspired throughout that country, which is become her second home? Ah! France knows it well; and those who have watched her progress through some of our provinces, or who daily, at Paris, discover those noble actions which her modesty would conceal, but which gratitude betrays, have not now to learn her worth.

From her childhood, the history and literature of France has been her study. She spoke its language, while she learned her own; and when she first placed her foot on the soil of France, amidst joyous and admiring crowds, she came not as a stranger; she had long known its joys and sorrows, its riches and embellishments; and she arrived in it like a long-expected daughter. She made its interests her own; and France, in return, has devoted itself to her. Who can have forgotten those splendid fêtes at Fontainebleau, where her charming dignity caused a minister of state to exclaim, on seeing her, "We were prepared for a princess, but this is a queen." Who can have forgotten those evenings at the Pavillon Marsan, where she, and her august husband, so graciously welcomed all who were distinguished for birth, character, or talent—the functionaries of the kingdom, the poets, the deputies, and the artists. Alas! a dreadful misfortune,—a misfortune which resounded like a clap of thunder throughout Europe,—put an end to those brilliant entertainments, those intellectual reunions! But God watches over those whom he has so severely wounded, and France contemplates, with the deepest pity, the young princess, whose high sense of duty supports her in her conjugal grief, by her powerful maternal hope and consolation; and her regret for the past, is brightened by the promise of the future.

LUCY COOPER.

An Australian Tale.

CHAP. IV.

BUT those days of profound tranquillity were soon terminated; and bitter were the regrets with which Lucy Cooper contemplated her approaching separation from Mrs. Webster, that she might be transferred into the family of a Sydney attorney, to take charge of three infant children. Mrs. Kately had seen Lucy on several occasions, and, with the instinctive readiness of her sex, had prized her at her due value; not that she set any further store on religion, temperance, and honesty, than as they might be made available to her own comfort and convenience. Mrs. Kately was exceedingly beautiful; her education had been completed in London and Paris, whither her doting parents had sent her from this land of her nativity; and a more accomplished person probably never set foot on the shores of Australia. Her father, who had flourished under the protection of a conditional pardon, accumulated immense wealth, which the growing prosperity of Sydney had increased in a tenfold degree; and it so happened, that, very shortly after Mrs. Kately's marriage, her only brother had been thrown from his horse, on his return from a prize-fight, in which his man had been victorious, and he had somewhat exceeded his usual measure of intemperance; thus in a few days Mrs. Kately became the sole representative of her father's honours and exceeding wealth. In addition to this, Mr. Kately was indefatigable in the practice of his profession of the law, which in Sydney is lucrative beyond belief: he was unbounded in his expenses, careful only that his lavish expenditure should be limited by his income; and he maintained a household constructed on a scale of princely magnificence, and in a style of etiquette and observance seldom seen, except in the mother country. In one of the loveliest spots of the transcendently beautiful bay of Port Jackson, Mr. Kately was rearing his mansion: it was designed with exquisite taste, and executed with costly and elaborate care. The colonial marbles, which yield to none in beauty of colour and polished surface, were plentifully employed: a lawn, gradually gained from the solid rock at a large expense of gunpowder, lay sloping to the beach, and bounded by a wide terrace and noble balustrade. The verdure was perpetual in all seasons; tropical and European plants and shrubs were intermingled with complete success; whilst a screen of native trees, diligently reduced to the picturesque, overhung the house and grounds. The whole bay was Mrs. Kately's property, and every point was made subservient to the beauty of the scene. A little island, where they had erected a bath-house, and formed a private garden, inaccessible to all eyes but their own, bore the classic name of Salamis, and the bay itself was called the gulf of *Ægina*. Although much of this undertaking remained to be accomplished, so much was already finished, that Mr. and Mrs. Kately had for some time past resided at *Ægina*; and hence, with professional punctuality, Mr. Kately daily drove in to Sydney alone, in his gig, meditating the most lucrative practice of his profession. On his return, his solitary ride afforded him leisure to direct his thoughts upon his sumptuous home, saying, "What shall I do, because I have no room where to bestow my fruits? This will I do: I will pull down my barns, and build greater; and there will I bestow all my fruits and my goods. And I will say to my soul, Soul, thou hast much goods laid up for many years; take thine ease,—eat, drink, and be merry."

If there was any drawback to all this splendour, it arose from the mortifying recollection that the neighbouring gentry refused all intimacy with Mr. Kately, because he was not only connected by marriage with emancipated people, but because he also was similarly descended. To be the possessor of so much magnificence, without the power of raising envy and admi-

ration in others, seemed to take away the principal enjoyment of wealth; but, as all overtures towards the interchange of civilities were rejected, Mrs. Kately had long since adopted the consolatory reflection that *she could buy them all up*, and that their condescensions were by no means essential to her happiness.

It was, however, in her power to drive to the Homebush races, more splendidly dressed, and in a more dashing equipage, than any other woman in the colony, and to excite more admiration of her person than all the rest could. No public occasion of display was ever lost, nor was she ever seen twice in the same dress; but her dress and equipage were inferior to her dazzling beauty, sustained by an elegance of manner truly fascinating. That Mr. Kately perfectly adored his lovely wife hardly needs the statement; and he doted upon his children with equal devotion. All that he could do to gratify her lightest wishes was promptly done; and she appeared to return his affection with equal love.

A very stylish carriage, containing Mrs. Kately, her three children, and a nursery-maid, drawn by a pair of Arabian ponies of a milky whiteness, arrived to fetch away the government woman, and convey her to her new place. The fine lady would not descend, and hardly deigned to notice Mrs. Webster, who very earnestly commended Lucy to the care and kindness of her new mistress, using with much modesty the privilege of her advanced age, to commence a conversation with a lady. A few moments sufficed to enable Lucy to gather together her small wardrobe; yet Mrs. Kately showed manifest signs of temper at the delay, and, with petulant impatience, bade her mount beside the coachman, who was immediately ordered to drive home.

In this well-regulated family, for so the master and the mistress designed it should be, the coachman was too well disciplined to address a single word to his fellow-servant by his side. Intent upon his Arabian steeds, and handling the white reins and silver-mounted whip with professional dexterity, he left Lucy at leisure to indulge in the melancholy regrets that she felt at parting with her excellent friend. But the very pretty drive from Faversham to Sydney soon secured her attention. When she had last traversed that road in Dr. Cavendish's dray, the whole country was deluged with rain, and the roads deep in mud. A cloudless sky now canopied them; the sun darted his meridian beams upon the fainting landscape, and, but for the breeze, the heat would have been intolerable. But altogether the drive was exceedingly agreeable. A few huts by the roadside, which have since become villages, and several gentlemen's residences on either hand, diversified the scene. A high hill, which has since been cut in a bold and scientific manner, commands a distant view of the rising metropolis of New South Wales, whose suburbs now extend to its very foot. They passed up George street, thronged with bustling people and equipages, numerous indeed, and varied by every character of vehicle, from each degree of propriety and elegance down to the various orders of vulgar, dirty, and incongruous. Many well-dressed persons passed up and down; crowds of humbler people, faithfully preserving the language, dress, and manners of the mother country, pursued their avocations. If there was any observable difference, it might be seen in the cabbage-tree hats uniformly worn by the men and boys of low degree; and the brown, beaverless felt, with ample brims, worn by the middle ranks. The careful observance of neatness and refinement, manifested by the higher classes of the town, was conspicuous chiefly in the general similitude to the dress and manners of the same class at home; whilst settlers, and young men from the country, in bush-clothing, straw-hats, and lengthened beards, were easily distinguishable from the townsmen. Ere they had reached the middle of the city, they turned from the principal street, and crossed a large and open area, dignified with the name of Hyde Park, a treeless space, but bounded by the Supreme Court, St. James's Church and Parson-

age, the Barracks, for the reception of an ironed gang, St. Mary's Cathedral, and the Sydney College, founded upon the model of the London University, and, like it, remaining unfinished: hence to Darlinghurst, or Woolloomooloo, a lovely spot, overlooking Elizabeth's Bay, and the residence of several distinguished families, at the head of whom is the Lord Bishop of the diocese; and, pursuing a private road of considerable length, undulating over gentle hills, and improving in appearance as they approached its termination, a sudden turn brought them upon the lovely grounds and aspiring turrets of *Egina*. No combination of circumstances can produce a finer effect than here presented itself. The broad expanse of rippling sea, the delicious breeze, a white sail or two of boat or larger vessel always moving, the grandeur of the lawn and terrace, where marble vase and marble statue were mingled with exquisite adjustment amidst the superb vegetation of the Southern hemisphere, made *Egina* hardly less than a paradise. The carriage was drawn up to an unfinished portico; a few solid planks afforded access to a hall and staircase of admirable composition, lighted from its oval dome, and giving a natural and convenient communication to the principal rooms. Mrs. Kately proceeded into the drawing-room, and seating herself upon a sofa, near a marble fireplace richly sculptured with the chariot of the sun and the attendant hours in purest alabaster, Lucy, who had been motioned to follow her, waited her orders just within the door.

"Come nearer to me, young woman," she commenced; "take off your bonnet; let me look at you. I must have scrupulous cleanness; exact compliance with the minutest orders; silence, and a noiseless foot. You will confine yourself to the nursery, except you have my orders to quit it. You must never lose sight of the children; and, if I find you willing, careful, and obliging, I have the means of rewarding you, as I have of inflicting a severe punishment if you disoblige me. Saunders will give you what you need; and let me see you always drest with care. Abdallah, take her to Saunders' room." Abdallah was a young African, wearing a gorgeous suit of green and gold, every button of which was elaborately carved into the form of a pine apple, and pine apples were embroidered on his shoulders and his belt. He made a profound obeisance, and led Lucy to the presence of the major-domo, Mr. Thomas Saunders. This great dignitary, whose honour it was to be cockney-born, and who "had left his country for his country's good," was a genuine specimen of an uneducated low Londoner. He was entirely possessed of his master's confidence, having the disposition of all stores, and the control of all property about the estate, any unnecessary diminution of which he looked upon as a wrong done to himself, to whom alone belonged, according to his doctrine, all that could be safely abstracted and diverted from its lawful use. Such was the circumspection of this peculator, that the most lynx-eyed of his fellow-servants were baffled in every attempt to trace his dealings; indeed, they gave it up at last as hopeless, notwithstanding their anxiety to get a hold upon him, concluding that a private arrangement with the tradesmen rendered any further theft unnecessary. Thomas Saunders was a little man, with a great white face deeply scarred with small-pox, and a great black muzzle, which by clean-shaving wore a blueish complexion, extending over half his expansive countenance. He looked at Lucy with peculiar complacency, and gave her a new page in his account-book, duly headed with her name, under which he proceeded to charge against her such supplies as were necessary to put her into the costume of Mrs. Kately's domestic servants; and, having imparted to her his opinion, that she was a "werry nice young ooman," he enjoined upon her the duty of retiring to the "nussery, and lookin' arter the children;" adding, with unusual condescension, that he should be "werry happy for her to come and cook him a dish of tea in his room sometimes, when the children was safe in bed."

The few dependants, parasites, and toad-eaters who were admitted at *Egina*, paid largely for their participation in the luxurious ostentation of the place, in a flattery at once the most gross and ingenious. Common phrases of assent and current admiration, such as elsewhere are quite acceptable, only exposed the utterer to scornful contempt; whilst any new mode of praise was acknowledged with gracious approbation, and rewarded with offensive condescension. In this traffic, Mr. and Mrs. Kately were equally engaged: taste was an attribute belonging to both; their peculiar empire was, learning and decision in the master, beauty and accomplishments in the mistress. The children were paragons of beauty; capable of learning, decision, and accomplishments. Such were the grounds of an inflation and exuberance of pride, which, as they were not without foundation, so was the boundless vanity they inspired more intoxicating and pernicious. Lucy, who soon learnt her true position in this temple of human presumption, and resolved at once what was her duty, and how she should best discharge it, enjoyed the lovely spot with more true enjoyment than the right owners, in whose unchastised bosoms enjoyment only bred a sense of wearying satiety; and who, whilst they were oppressed with languor, and hurt at the seclusion from society which they affected to despise, found no source of comfort in themselves, or one another; but were loaded with the incurable poverty of those who lay up treasure for themselves, and are not rich towards God.

In this way rolled on the tedious months, diversified by Mrs. Kately's fourth confinement and happy convalescence; the great rejoicing of her husband and household, and some approach towards familiarity on the part of Tommy Saunders towards Lucy Cooper. This grave personage and Lucy were seated in his carpeted apartment, discussing the merits of the coffee on which they were regaling, and Mr. Saunders, tired of single life and self-enjoyment, was meditating the proper phrase and auspicious moment to lay himself and his acquisitions at his visitor's feet; touched by the unobtrusive merits of her conduct, and by no means insensible to her personal attractions. Such had been the unbroken tenour of his success since he had entered upon the procurement of Mr. Kately's affairs, and such the unquestionable authority he held over all subordinate persons and things within that jurisdiction, that he had gradually adopted the intoxicating idea, that he was second, and only second, to the great Jove himself of Australian *Egina*: consequently, that the proposal he was about to make would be looked upon in the light of a great condescension, a most advantageous match, and one in no wise to be rejected. Tommy was hardly less than fifty, and although perfectly conscious of his gains from "Plutus's mine," his oddities and natural deformities had totally escaped his attention. "You may be sure, Lucy," he continued, "I must have had a werry great respect for you before I would a harsked you to tea with me. No, dearest Lucy, I always looked upon you from the werry fust as a werry nice young ooman. You know, dear Lucy,"—and he balanced the tea spoon across the edge of his saucer, in which it floated on the steaming beverage,—balancing probably at the same time in his own mind the absolute wisdom of the disclosure he was about to make; but, perceiving no violent symptoms of trepidation or uneasiness on Lucy's face, he deemed the disclosure essential to the success of his declaration—"You know, Lucy, that mine is a werry nice appointment here, and that, if I was obligated to cut to-morrow, I should not be so bad off; but there is no fear of that; master and me was made for each other—he thrives and I thrive together; and I do think, Lucy, with my money, if you was to have me, you could not do better, and I would set up my own shay, and take you out on Sundays."

Much, doubtless, there was that prudent folks call eligible in this proposal, particularly as a marriage with a freeman would at once have put a period to her sen-

tence, and there could be no difficulty in obtaining the Governor's official consent; yet there were certain conditions essential to the arrangement so repulsive—among the rest, Tommy Saunders's own person, character, and conversation,—that Lucy felt no other perplexity in conducting the treaty than to adopt that line of conduct which is occasionally called temporizing, and occasionally dignified with the name of Fabian. And considering their mutual relation to each other, and the power Mr. Saunders might exert to her prejudice and annoyance, if his *penchant* were rudely resisted, Lucy thought it no derogation to her principles, if she gave him to understand that she thought him “a werry nice young man,” and that at some future period she might not be disinclined to become Mrs. Saunders.

But about this time it happened, that in the course of business it was Mr. Kitley's chance to be concerned with a young gentleman belonging to a distinguished family in England, an officer of the — regiment, then in Sydney, whose criminal indulgence in a profligate and debauched mode of life had involved him in the retribution of the law; that indiscriminate power which treats alike the unfortunate and the unprincipled; involving all in unrelenting extortion. It was in this way, therefore, that Mr. Kitley and the Honourable Claude Mac Catchit became personally known to each other; and upon this occasion Mr. Kitley yielded to a genius superior to his own; for such was the fascination of this young man's manners, such the elegance of his person and address, and, above all, so perfect his acquaintance with Mr. Kitley's character and circumstances, that from an interview, in which Mr. Mac Catchit appeared before the lawyer as a helpless debtor, whose last resources were exhausted, arose an intimacy, which terminated in a promise to stay all further proceedings, and an invitation to dinner at *Ægina*. Although Mr. Kitley always asserted, that his exclusion from society was rather to be desired than not, the eagerness with which he made the Honourable Claude Mac Catchit's acquaintance may satisfy the least suspecting, that an opening towards the acquaintance of the officers of his regiment was a thing greatly desired by one who could purchase anything but good company. Be this, however, as it may, it is certain that, by previous arrangement, Mr. Kitley drew up at Mac Catchit's quarters exactly at four o'clock, and, taking that gentleman up, drove off, no longer the solitary occupant of the vehicle, but having by his side, in full uniform, and most elaborately dressed, the Honourable Claude Mac Catchit. Claude was profoundly skilled in the ways of the world; he knew all the worst parts of the human character, and was no less skilful in turning to his own advantage all the peculiarities, the weaknesses, and the vices of his fellow-creatures. He addressed himself, therefore, with an assiduity proportioned to the greatness of the prize which he was aiming to secure, to improve the success he had already obtained; and whilst, by general attentions, he gained an opportunity of ascertaining the exact nature of his task, such was the cleverness of his proceedings, that, ere they reached their destination, the lawyer and the soldier were upon terms of most agreeable and confidential intercourse.

The experienced eye of the visitor caught up with eagerness all the objects of taste and improvement which gradually presented themselves as they approached the house; they served him as so many vehicles of adulation to his new friend, and so many fresh incentives to the exertion of his arts of pleasing. His expectation was much more than realized in this scrutiny; for, although he had heard a tolerably correct estimate of Mr. Kitley's fortune, he was not prepared to see the display of an elegant taste either in the manner or the degree in which it improved upon him. The effect of the sudden opening of the scene when he stood upon the edge of the lawn, and turned first towards the stately bay, spreading beneath the glories of the setting sun, and then to the magnificent house now advancing to-

wards completion, startled even the well-practised and experienced Claude. The silent state with which they were received by footmen in purple and gold liveries, with silk stockings; the coolness and calm obscurity of the hall, exchanged for the brightness and fervour of the evening sun; and the luxurious elegance of the drawing-room, not less beautiful for its architectural proportions, than for the delightful sea-view visible from its windows, and the costly furniture with which it was decorated, made the young man anxious to see the lady whose fortune it was to preside over this combination of delights, and who, he rightly concluded, must have had no small share in their accumulation. But when Mrs. Kitley herself appeared, and welcomed her guest with a satisfaction she had no wish to conceal, equally gratified with his company, and struck with the elegance of his appearance and manners, the designs of the Honourable Claude Mac Catchit assumed new amplitude, and stimulated him to the employment of all the fascinations within his power. That evening was spent delightfully: all three persons had their own motives for self-congratulation, and all were engaged in the pleasing occupation of giving pleasure.

“This lovely bay,” said Claude, “is beautifully named; indeed the spot is at once charming for its natural beauties, and for the gorgeous embellishments of art. One palazzo at Genoa, and one garden there, (I spent two months in unspeakable enjoyment on that coast,) are only worthy to be compared with it.”

“I was disappointed in not visiting Italy,” replied Mrs. Kitley,—for the remark was made in a manner which seemed to ask for her concurrence; “but I have seen the Mediterranean at Marseilles, and lingered a whole winter in the isle of Sainte Marguerite. I prefer *Ægina* to anything I ever saw there.”

“Not without reason,” said Claude. “I profess I would not barter this region of delight for an Italian principality, and the title to boot.”

“I have been casting about,” said Mr. Kitley, “for a name for yonder headland to the north-west, which shall be in keeping with the leading idea of *Ægina*; perhaps you can help me.”

“The other promontory, to the westward, wants a name, I presume,” said Claude.

“It does,” said Mr. Kitley. “And the two points should be associated with one another, and with us.”

“What think you of *Sestos* and *Abydos*?” suggested Claude.

“We have rejected them,” said Mrs. Kitley, “more than once. They are pretty, but remote from the proper scene.”

“Then,” said Claude, “if I do not greatly mistake, yonder point, beneath the setting moon, ought, in topographical propriety, to bear the name of *Colonna*.”

“Cape *Colonna*, Cape *Colonna*,” repeated Mrs. Kitley; “nothing can be better. Falconer, I remember, has celebrated it. I declare it shall be Cape *Colonna*.”

“Here, in the dead of night, by *Lonna's* steep,
The seaman's cry was heard along the deep.”

“I forget,” said Claude, “the corresponding name; but we can easily refer to the map.”

“I'll build a ruined temple on the cliff,” observed Mr. Kitley.

“I think a few shattered columns placed upon the head would greatly improve the scene,” interposed Claude.

“It must be done,” replied Mr. Kitley. “I never saw the place to such advantage: the very heavens burn with glory.”

“The skies of this southern hemisphere are as gorgeous as the scene before us. Look at that path of light that blazes over our heads,” exclaimed the lady, with much fervour. “The Magellan clouds, too, torn, as one might believe, from the milky way, where you may see the space from which they have been rent—”

“And that cross, too,” added Claude.

“That marvellous cross,” said Mrs. Kitley, “of which the Florentine mariner exclaimed, ‘*una croce mara-*

vigiliosa, e di tanta bellezza, che non mi pare ad alcuno segno doverla comparare. Thus rendered into English by Samuel Rogers," she continued, delighted with the aptness of the passage, and proud of her own reading and memory—

"The orbs that roll,
Singly or clustering, round the Southern pole!
Not yet the four that glorify the night—
Ah, how forget when to my ravished sight
The Cross shone forth in everlasting light!"

At length it became necessary to separate. An early day was named to renew the visit, and the examination of Mrs. Kitely's portfolio was proposed. Mr. Kitely's carriage took Claude into Sydney, revolving all the way how far he could lay *Ægina* under contribution, to administer to his pleasures as well as his necessities, and pondering the best means to secure the footing he had already gained. The host and hostess were determined to improve the acquaintance, as well for the satisfaction it afforded them, as in the vague expectation that, somehow or other, it would be instrumental in giving them an introduction to society.

For some weeks the progress of this adventure was slow. The refinements of life—poetry, painting, and music—engaged the attention of the host and hostess and their new friend. Gradually Mrs. Kitely's visits to her nursery became less regular, and her interest in her children less engrossing. But we need not detail the progress of the catastrophe. Before many weeks had passed, she had fallen before the seductive arts of the Honourable Claude Mac Catchit, and the suggestions of her own vanity, unchecked by any restraints of religion and virtue.

POPULAR YEAR-BOOK.

January 12.—Plough Monday (1846).

THE first Monday after the Epiphany is thus designated, because it was the first day after the Christmas holidays that husbandmen resumed the plough. The morning was devoted to the examination of their instruments of agriculture; after which they were indulged with a farewell holiday, and a free recurrence to the sports and pastimes of Christmas. Time and the progressive refinement of manners have now nearly worn out this ancient usage. In the north, however, the young peasants yet enjoy dancing on Plough Monday, each clad in the dress of the opposite sex; morris-dancers, with a boy in girl's clothes, still exert their agility in other villages. In several districts, *Mab and his wife* continue to lead the festive throng. In some parts of the country, a plough is drawn in procession to the doors of the townspeople and villagers; ropes are affixed to it, and thirty or forty men, in shirts and trousers, and having their arms, shoulders, and hats ornamented with large bows of gay-coloured ribands, drag it along. An old woman, or a boy disguised to represent one, and gaudily apparelled, usually accompanies the party, and is called *The Bessy*; sometimes she is attended by a rustic in skins, with a lengthy tail, and carrying a box for contributions, who is styled *The Fool*. Music and morris-dancers (when they can be procured) increase the gaiety of the scene. In all cases there is a merry dance, with riband-decorated maidens. The money collected is spent at night in conviviality. This rustic procession appears to have had a pious origin. Before the change of religion, a light, called the *plough-light*, was frequently maintained by old and young husbandmen, before certain images, and on Plough Monday they feasted, and went about with a plough and dancers, to obtain money to support the *plough-light*.

Washington Irving, in his account of Newstead Abbey, makes the following delightful allusion to Plough Monday. "Sherwood Forest," he says, "still retains much of the quaint customs and holiday games of the olden time. A day or two after my arrival at the Abbey, as I was walking in the cloisters, I heard the sound of rustic music, and now and then a burst of merriment, proceeding from the interior of the mansion. Presently the chamberlain came to me, and informed me that a party of country lads were in the servants' hall, performing Plough Monday antics, and invited me to witness their mummery. I gladly assented, for I am somewhat curious about these reliques of popular usages. The servants' hall was a fit place for the exhibition of an old Gothic game. It was a chamber of great extent, which, in monkish times, had been the refectory of the Abbey. A row of massive columns extended lengthwise through the centre, from whence sprang Gothic arches, supporting the low vaulted ceiling. Here was a set of rustics dressed up in something of the style represented in the books concerning popular antiquities. One was in a rough garb of frieze, with his head muffled in bear skin, and a bell dangling behind him, that jingled at every movement. He was the clown or fool of the party, probably a traditional representative of the ancient satyr. The rest were decorated with ribands, and armed with wooden swords. The leader of the troop recited the old ballad of S. George and the Dragon, which has been current among the country people for ages; his companions accompanied the recitation with some rude attempt at acting, while the clown cut all kinds of antics.

"To these succeeded a set of morris dancers, gaily dressed up with ribands and hawks'-bells. In this troop we had Robin Hood and Maid Marian; the latter represented by a smoothfaced boy: also Beelzebub, equipped with a broom, and accompanied by his wife, Bessy, a termagant old beldame.

"These rude pageants are the lingering remains of the old customs of Plough Monday, when bands of rustics, fantastically dressed, and furnished with pipe and tabor, dragged what was called the 'fool plough' from house to house, singing ballads and performing antics, for which they were rewarded with money and good cheer."

Brady says, that the more common mode of passing the holiday, was to drag a plough from door to door, soliciting *plough money*, wherewith to defray the expenses of a feast, and a dance in the evening. We witnessed this practice in Cambridge, as recently as 1836. The writer just mentioned, supposes that it was introduced by degrees after the abolition of the feudal system. Before that event took place, the nobles who held the land employed their dependents, then in a state of villinage, in its cultivation, and fed them in common with their other retainers: at first the vassals commuted with their lords by the payment of a tribute called *plough silver*; and at length, when labour was remunerated by pecuniary wages, it became usual for the poor and recently emancipated labourers, to appeal to the kindness of the wealthy, by showing them the plough, which could not then be used, especially in the north, on account of the inclemency of the season.

Strutt, in his "Sports and Pastimes," states, that on this day in the Scilly Islands, a sort of galantry is exercised called "goose-dancing." The

girls are dressed as young men, and the youths as maidens, and, thus attired, they visit their neighbours in companies, where they dance and joke upon what has taken place in the island; and everyone is humorously "told their own" without any offence being taken. By this kind of amusement, according to yearly custom, is a spirit of wit and drollery kept up among the people. The music and dancing over, they are treated with liquor, and then they go to the next house of entertainment.

January 14.—At All Souls' College, Oxford, the evening of this day was formerly called MALLARD NIGHT, and celebrated with much festivity. The custom owed its origin to the tradition, that, when preparing to lay the foundation of the original buildings, the workmen found, in a sewer or drain, a mallard of enormous size. "This observance," says Mr. Wade, in his "Walks in Oxford," "exists no longer; but on one of the College gaudies there is still sung, in memory of the occurrence, 'a merry old song, set to ancient music.'" It is as follows:—

I.

GRIFFIN, bustard, turkey, capon,
Let other hungry mortals gape on,
And on the bones their stomach fall hard,
But let All Souls' men have their MALLARD.
Oh! by the blood of King Edward—
Oh! by the blood of King Edward—
It was a swapping, swapping MALLARD.

II.

The Romans once admired a *gander*
More than they did their chief commander,
Because he sav'd, if some don't fool us,
The place that's called th' head of *Tolus*.
Oh! by the blood, &c.

III.

The poets feign Jove turned a swan,
But let them prove it if they can;
As for our proof 'tis not at all hard,
For it was a swapping, swapping MALLARD.
Oh! by the blood, &c.

IV.

Therefore, let us sing and dance a galliard
To the remembrance of the MALLARD;
And as the MALLARD dives in pool,
Let us dabble, dive, and duck in bowl.
Oh! by the blood, &c.

Fosbrooke states, that on this day the flight into Egypt was anciently represented. A beautiful maiden, seated on an ass elegantly trapped, was led in procession to church, and placed on the gospel side of the altar. Probably, it is partly in allusion to this custom that a modern writer observes: "The Church did not grow angry at the popular dramas attached to some of the high festivals. She allowed even the beast as well as the man to be re-established. The humble witness of our SAVIOUR's birth, the faithful animal whose breath warmed Him, an infant, in the manger, who bore Him, with His mother, into Egypt, who led Him triumphant into Jerusalem, had also part in the joy."

THE OLD BROWN COAT.¹

BY CAPTAIN MARRYAT, R.N.

"I RECKON you see nothing very particular in this, do you?" said an American acquaintance of mine, bringing out the cuff of an old coat, and holding it up before me, dangling it between his finger and thumb. "I can't say that I do," replied I, "but I presume it has some

secret merit which remains to be explained." "Exactly," replied my acquaintance, pronouncing each syllable of the word apart; "yet the coat, of which this is the remaining cuff, was the occasion of my being just now pretty considerable well to do in the world; I guess I'm right, an't I?" continued he, appealing to his wife, a very pretty young woman, who stood by him. "So you seem to think," replied she, smiling, "but I am not convinced, as far as I am concerned in the business, that the coat had anything to do with it." "Well, then, I shall just tell my story, and leave you to decide," said he, turning to me. "You must know that there was a time when I was rather hard up, and how to go a-head was the business. I had tried at mercantile speculation, and sunk an immensity of dollars. I had turned lawyer, but that would not answer in any way. I took to farming, no luck there. Went out supercargo; ship went on a reef, and lost cargo. Returned to New York, speculated a long while upon nothing; didn't lose much, that's certain; but didn't realize. At last, I gave up business, and resolved to amuse myself a little; so I went south, and joined Bolivar. I fought with him for three years, and a good officer he was, but he had one fault as a general, which was, that his army never got paid. I wanted my three years', and finding that there was neither pay nor plunder, I got tired of it, and made my way home to the States, and at last arrived at the capital with only one extra shirt, and not a cent in my pocket. I happened to meet with a tailor, whose customer I had once been, when I had money and paid my bills; and he observed that my coat was rather shabby, and that I could not appear in it. I knew that very well, and all that he wanted was an order for another; but as I had no chance of paying him, I thought it advisable not to take the hint. "I think," said I, "that, with a new velvet collar and brass buttons, it might do very well for an evening party." "I see," says he, "that's an old country custom, wearing an old coat at a ball; I guess you're going to Mr. T.'s to-morrow night. A regular flare up, I am told. President there, and everybody else. It's hardly worth it," continued he, touching the thread-bare cuff. "Yes, it is," replied I; "there'll be a regular jam, and a new coat would be spoiled. I'll send it to you to-night, and you must let me have it in the morning, so good bye." Well, the coat came home the next day, not early in the morning, as I expected, but past meridian; and I walked up and down in my bed-room, in my trowsers, thinking what I should do. At three o'clock, I called upon Mrs. T., and left my card; went back again, and waited two hours for the invitation—no invitation. Called again at five, and left another card, telling the nigger that I had not received an invitation, and that there must be some mistake; whereupon an invitation came about an hour after my return, just as I was putting my hat on to call again and leave another card, in a very fierce manner, I reckon. Well, I went early to the ball, and my coat looked remarkably gay. You could see that the velvet collar was new, and the buttons glittered famously; but you could not see that the cloth was not a little the worse for wear. In short, my brown coat looked very smart, and I was a considerable smart fellow myself just at that time. Well, I stood near the door, looking at the company coming in, hoping to know somebody; but, I presume, that I had grown out of all recollection, for nobody knew me. But as the company were announced, I heard their names; and if they did not know who I was, at all events I found out who they were. "This won't do," says I, as the rooms became quite full; "I may stick against this wall till day-light, but I shall never go a-head." So, at last, perceiving a young lady speaking to the daughter of the secretary of the navy, after they parted, I went up and bowed to her. Having heard her name, I pretended to be an old acquaintance, and accused her of having forgotten me. As I was very positive, and very bold, she presumed it was the case; and when I gave her my name, which I refused to do

(1) From the "Book of Beauty," 1846.

till we had been talking for some minutes, as it happened to be a very good one, she considered that it was all right, and, in another quarter of an hour, we became very intimate. I then asked her if she knew Miss E——, the daughter of the secretary of the navy. She replied, that she did; and I requested her to introduce me; and, offering her my arm, we walked up to the young lady together, and I was introduced. Now, thought I, I am going a-head a little. After the introduction, I commenced a conversation with Miss E——, and a gentleman fortunately relieved me of my first acquaintance, whose arm I had dropped. I continued my attentions to Miss E——; exerted myself to the utmost; and, on the strength of my introduction, and my agreeableness, I was soon intimate with her, and she accepted my arm. As I paced her up and down the room, I asked her if she knew the daughter of General S——, who was near us. She replied in the affirmative; and I requested an introduction, which was immediately complied with; and I offered Miss S—— my other arm, and paraded them both up and down the room, making them laugh not a little. Now I'm going a-head, thinks I, and my old brown coat looks remarkably well. "Here is the President coming up," said Miss E——; "do you know him?" "I did once, a little, but he must have forgotten me, since I have been in South America so long." The President came right up to us, and addressed the young ladies. I made a sort of half bow. "You don't recollect Mr. —?" said Miss S——. "I recollect the name well," replied the President. "You are well supported, Mr. —; you have the navy and the army on each side of you." "And the highest officer of the state before me," replied I, with a low bow; "I ought, indeed, to feel proud. It makes amends for all the privation that I underwent in my last campaign with General Bolivar, for the general and his aide-de-camps fared no better than the meanest soldier." That last was a hit. I did not say that I was aide-de-camp to Bolivar, but they thought proper to fancy so. The President made me a bow, and, as it appeared, he wanted to have some information from that quarter; and he asked me many questions, all of which I was able to answer with precision. After a quarter of an hour's conversation, during which the whole room were wondering who it was that was so intimate with the President, and many were trying to catch what was said, the President presuming, as Bolivar's aide-de-camp, that I could give him information upon a certain point, and not wishing to have the answer public, said to the young ladies, "I am going to do a very rude thing; I wish to ask a question, which Mr. — would not like to reply to, except in strict confidence; I must take him away from you for a minute or two. I beg your pardon, Mr. —, but I feel, and shall be truly grateful for the great sacrifice you will make in giving up for one moment such charming society." "I fear the loss will only be on my part," said I to the young ladies, as I dropped their arms, and followed the President to a vacant spot near to the orchestra. The question which the President put to me was one which I could not well answer; but he helped me out of the difficulty by answering it himself according to his own views, and then appealing to me if he was not correct. I replied, "that I certainly was not at liberty, although I had left the service of General Bolivar, to repeat all that I knew; fortunately," continued I, bowing, "where such clear-sightedness is apparent, there is no occasion for the question being answered." "You are right, Mr. —; I wish all those about me had your discretion and high sense of honour," replied the President, who had one of my new brass buttons between his thumb and finger; "and I perceive by your reply, that I was also right in my conjecture. I am much obliged to you, and trust I shall see you at Government House." I bowed, and retired. I am going a-head now, at all events, thought I, as every one was looking at me as I retreated. I had been walking arm-in-arm with the daughters of the two first

officers of the state; I had been in confidential communication with the President, and that before all the *elite* of Washington. I can now venture to order another suit of clothes; but never will I forget you, my old brown coat. The next day, the tailor came to me; he had heard what had taken place at the ball, and I amended my wardrobe. Everybody came to me for orders, and I ordered everything. Cards were left in showers; I was received everywhere, the President was my friend, and from that moment I went a-head faster and faster every day, till I am, as you now see, well off, well married, and well up in the world. Now I do pertinaciously declare, that it was all owing to the old brown coat; and I have kept this cuff, which I show now and then to my wife, to prove I am grateful; for, had it not been for the old brown coat, I should never have been blessed with her for a companion. "But," said his wife, round whose waist he had gently encircled his arm, "the old brown coat would have done nothing without the velvet collar, and new brass buttons." "Certainly not, my dear." "And they would not have effected much without they had been backed by—" "What?" "*Impudence*," replied the lady, giving him a slight slap on the cheek.

Fables from the German.

THE OSTRICH.

"I AM going to fly," cried the gigantic Ostrich; and the whole assembly of birds gathered round in earnest expectation. "I am going to fly," he cried again; and stretching out his immense pinions, he shot, like a ship with outspread sails, away over the ground, without, however, rising an inch above it.

Thus it happens, when a notion of being poetical takes possession of unpoetical brains; in the opening of their monstrous odes they boast of their intention to soar over clouds and stars, but nevertheless remain constant to the dust.—*Lessing*.

THE IMAGE OF ISIS.

An old priest at Memphis had the image of the veiled Isis standing in the hall of his dwelling, ingeniously formed of grey marble. His son, a lively, active boy, stood often before the image, and longed very much to behold the concealed countenance of the goddess. One day he could no longer restrain his curiosity; he took a hammer and chisel, and with a few blows struck off the veil. But, to his great surprise, he now beheld nothing more than a piece of the raw, shapeless stone!

"What dost thou there?" asked the priest, who just came up.

"I wanted to see the face of the goddess."

"Ah!" sighed the priest, "it has happened to thee as it did to me when I was a youth, and fancied to find wisdom in the schools of the sages."—*Schreiber*.

THE CUCKOO.

THE Cuckoo thus addressed a Starling who had flown from town.

"What say they in town of our melodies? What say they of the Nightingale?"

"The whole town praises her song."

"And of the Lark?" cried he again.

"Half the town praises her tuneful throat."

"And of the Blackbird?" continued he.

"Her, too, they praise now and then."

"I must ask yet one more question: what say they of me?"

"That," said the Starling, "I know not; for I have not heard a single person speak of thee."

"Then will I," proceeded he, "revenge myself on the ingratitude of men, and will everlastingly speak of myself."—*Gellert*.

Lady Mary.

Thou wert fair, Lady Mary,
As the lily in the sun :
And fairer yet thou mightest be,
Thy youth was but begun :
Thine eye was soft and glancing,
Of the deep bright blue ;
And on the heart thy gentle words
Fell lighter than the dew.

They found thee, Lady Mary,
With thy palms upon thy breast,
Even as thou hadst been praying,
At thine hour of rest :
The cold pale moon was shining
On thy cold pale cheek,
And the morn of the Nativity
Had just begun to break.

They carved thee, Lady Mary,
All of pure white stone,
With thy palms upon thy breast,
In the chancel all alone :
And I saw thee when the winter moon
Shone on thy marble cheek,
When the morn of the Nativity
Had just begun to break.

But thou kneelest, Lady Mary,
With thy palms upon thy breast,
Among the perfect spirits,
In the land of rest :
Thou art even as they took thee
At thine hour of prayer,
Save the glory that is on thee
From the Sun that shineth there.

We shall see thee, Lady Mary,
On that shore unknown,
A pure and happy angel,
In the presence of the throne ;
We shall see thee when the light divine
Plays freshly on thy cheek,
And the resurrection morning
Hath just begun to break.

Rev. H. Alford.

REMARKS ON THE CHURCH ARCHITECTURE OF ENGLAND.

We purpose in the following remarks to give, first, some account of the different styles of Church Building which have prevailed in this country, with their respective dates; and, secondly, to point out certain definite and appropriate practical rules which those who built our churches used in their construction. We all know how very much difference is to be seen between churches of a different date, and so it seems desirable that, as the difference exists, we should have proper words to express it, in, and thus be able to say in one word what the particular date or style of this or that building may be. We know from an ancient writer (Tacitus), that the Romans, who conquered England in the first century, retained possession of parts of this country for nearly 400 years, and that they instructed the barbarous natives in building as well as in other arts. We also are certain, that Christianity had been established among us before the end of the 1st century, and, though its progress was slow, yet we find in one of our earliest historians (Gildas), that there were buildings dedicated to Christian worship long before the conversion of the Emperor Constantine, which took place at the beginning of the fourth century. This event produced the same result in Britain as it did throughout the Roman empire; the worship of God was generally openly established, and temples, once devoted to the service of demons, now resounded with the prayers and psalms of the Church, while new ones rose on every side. Hence the first Christian Churches in this country were all built after the Roman manner—that is, after the manner used at Rome, but, of course, more plainly and poorly, as the state of a country but newly recovered from the effects of previous barbarism, and the more recent severity of foreign rulers, would render necessary. Of the buildings thus erected, we have, of course, scarcely any remains: we know, however, that the materials of these buildings were small flat bricks, so imbedded in a very hard kind of mortar that they form one compact mass, hardly to be divided, except as one would divide stone; that the arches were universally round, and the piers not shaped as we see them in Gothic churches, but merely, as it were, pieces of the walls in which the arches were made.

In the 5th century the Romans, whose empire was now hastening to its fall, withdrew from England, and the unprotected English became a prey to the frequent invasions of the barbarous nations of northern Europe, so that the country became almost pagan again, and, of course, the churches and ministers of our religion were destroyed and murdered, as Venerable Bede relates. After long endurance of these miseries, the British called over to their assistance the Anglo-Saxons, a warlike nation, who proved at first a greater scourge to our land than those whom they were invited to protect it from; they gradually became complete masters of the land, but continued in heathen darkness, till circumstances, which we will not call chance, threw some captives of our nation under the notice of S. Gregory the Great, then Bishop of Rome. Finding that they were heathen, that holy man was not contented till he had sent S. Augustine and some other monks to England, in hopes that they might revive the drooping Church in

England, for the word of God still had some to preach, and some (though but a few) to hear it, through all these troubled times. S. Augustine and his companions arrived in England, after many fears and some delay upon the way, in the year 597; and from this date till the year 1050, that is, for more than 400 years, the next style of architecture, called the Anglo-Saxon, from those who built in this style, prevailed. As will readily be believed, this style was not very different from the Roman; for the Anglo-Saxons had no buildings of their own to copy from, and moreover Rome, though it had ceased to be the centre and seat of temporal power, was now become that of spiritual supremacy; and so it came to pass that, as the Liturgy and forms of worship, which S. Augustine and his colleagues introduced, came from Rome, so also the style of church building was, at least for the most part, borrowed from Roman models. We have but few remains of Anglo-Saxon buildings, but those that we have exhibit the same appearance as the Roman buildings; the same plain round arches and rectangular piers, and the same brickwork. But now we can speak with certainty of the shape of the churches built in this style, for we have enough left to trace it very distinctly; and, in mentioning this shape, I shall be mentioning the shape of all ancient churches in this country, of whatever style. The general ground plan of a cathedral or conventual church, was in the shape of a cross—the centre being a tower, with transepts running north and south to form the arms of the cross. Westward of the tower is the nave, or main body of the building; on each side of it are the aisles. The west front contained the principal entrance, and generally had towers at each side of it. Eastward of the central tower is the choir, (where the principal service was performed,) forming the head of the cross; and this also had its aisles. The plan also often comprehended additional chapels. Parochial churches usually have a tower, forming the west end, a nave and aisles, and a chancel to the east of them; transepts sometimes are added, but the smaller churches have not even a tower, but consist merely of a nave and chancel, having a turret or an open gable for the bell at the west end.

We have, as I said, but few Anglo-Saxon remains left, which we may ascribe to the fact (as many think) of wood being much employed in those

centuries, or again, to the effects of the Danish invasions, which, as they altered every other insti-

tution of the country, would hardly leave the Church untouched. The examples we know of are the ruined church at Dover Castle, the church of Brixworth, Northamptonshire, and the towers of Earls Barton and Barnack churches, both in the same county; also the church of S. Nicholas, Leicester. One great mark of the masonry of this style is the narrow rib, or square-edged strip of stone, which is often seen running up and standing out from the surface of walls. In the towers of Earls Barton and Barnack churches, these occur so frequently that the surface of the walls appears divided, as it were, into panels. The tower of S. Michael's church, Oxford, is of Anglo-Saxon work: it does not exhibit this feature, but it has the angles formed of ashlar or hewn-stone in alternate long and short courses, a feature also distinctive of the later Anglo-Saxon buildings. Where brick is not used, flat stones are employed in the earlier buildings of this style; and, later, we find hewn stone used for the door-ways and door-posts. The windows were usually semicircular headed, and the doors also, for the most part, though sometimes triangular heads may be found. The bellfry windows were usually of two lights, with round heads and a pillar between them, as at S. Michael's in Oxford. The later buildings of this style exhibit an improvement in the greater use of hewn stone, and the attempt at mouldings, as in the chancel arch of Wittering church, Northamptonshire.

NORMAN.

With the Norman invasion, about the middle of the 11th century, came in the next style of architecture, called the Norman, from those who introduced it. Of this style we are in no want of examples: for nearly 150 years, that is, till nearly the end of the 12th century, this style was used exclusively, and many of our finest cathedral and abbey churches, as well as parish churches, are built in it. It is distinguished from the ruder work of the Anglo-Saxon period, by a display of greater knowledge of construction. The masonry is massive, and, as the style advanced, we find it decorated with a profusion of rich and appropriate mouldings, and with highly wrought details.

The Norman churches much surpassed the Saxon in size; the cathedral and conventual churches being often carried to the height of three tiers or rows of arches, one above the other. The arches, windows, and door-ways, in this style, are usually

round-headed. The cathedral in Oxford, and the parish church of Iffley, near Oxford, were both built rather late in the style, and, therefore, are richly decorated. They are good examples of this style. The door-ways of Iffley afford admirable specimens of the Norman style of door-way. They are composed of a succession of receding semicircular arches, each springing from its own side shafts, and having each a moulding of its own, different from the others. The mouldings of this style are of great variety. The commonest are chevron or zigzag, the indented or toothed, the alternate billet, and the beak head: the doorways and arches of Iffley church afford specimens of many of the Norman mouldings.

DOORWAY IN LLANDAFF CATHEDRAL.

The windows of this style are generally not very large, round-headed, and surrounded by zigzag or other mouldings. They never have tracery, that is, stone divisions, as we see in later styles; but, when we do see such divisions in Norman windows, we know them to have been put in at a later period, as in the windows at Iffley. Circular or rose-windows, as they are called, are also found in this style; there is one (now filled up) to be seen at the west end of Iffley church.

Early in this style the piers from which the arches spring are very massive and plain, and generally square or cylindrical; they also have rectangular nooks or recesses at the angles. We sometimes, also, see the piers octagonal, and round; or one side round and the other having angles, as in Oxford cathedral. In smaller churches the piers are often more slender, so as to resemble the pillars of the Italian styles, as in St. Peter's church, Northampton. Later in the style we find the piers formed of clustered pillars, but these are generally characteristic of the last period of Norman. The bases of the piers and columns

in this style are usually plain, consisting of a square stone with a round one, having a roll moulding on it, from which springs the shaft or pier. But the capitals, especially late in the style, are much decorated. The shape of the capital is usually square, and, on the faces of it, will be found more or less of elaborate work, representing flowers, figures, and the like. At the top of the capital is a square flat stone, (called the abacus,) from which springs the arch. There are also to be found round capitals of this style, but they are of the later period of it. The chancel arches of churches, (that is, the large arch which separates the nave from the chancel,) in this style, are most richly decorated; one of the best instances we know is that at Iffley, or, again, that of Stoncleigh church, Warwickshire.

BRISTOL CATHEDRAL.

The Norman vaulting was confined, in large churches, to the aisles, and to the crypt, if there was one. The vaulting being very plain and heavy, it is evident that they had not yet arrived at the skill to vault the nave or the choir, which are roofed with flat timber ceilings divided into compartments. In the small churches (as at S. Peter's in the East, in Oxford) the chancel was vaulted, and a chamber left between the vaulting and the outer roof. In large churches, the same space was left between the vaulting of the aisles and their roofs; and this space often has windows of its own, both from without, to let in light, and also from within, to give a view into the nave; it is called the *triforium*, and forms a sort of gallery, running, sometimes, round the whole church. Over this triforium comes a row of windows, which frequently have another passage from each to each. This story of upper windows is called the *clerestory*. The chief use to which these galleries were put, seems to

have been the accommodation of the people who flocked to witness the great festivals (and, particularly, the processions,) of the Church, at the great feasts of Easter, Christmas, Whitsuntide, and the like. They are also very useful in repairing or adding to the buildings of the church. On the outside of Norman churches, the thing which denotes their date most readily, is the shape of the buttresses they used. These were usually flat and broad, and not divided into stages advancing outwards nearer the ground, but of the same thickness all the way up. The towers of Norman churches are usually short and massive; in the later times of this style they have arcades of intersecting arches as an ornament near the top; lower down are small round-headed windows. The battlements often seen on towers of this date, are always a later addition; pinnacles were also but little known at this period. I may observe generally, as distinctive marks of this style, that the aisles are narrow; the naves of large churches very long, especially in abbey churches, as at S. Alban's; the chancels often terminated with a round end, (called an *apsis*,) instead of a square one, as usual; and the east end pierced with three narrow, round-headed windows, which, when the east end is round, stand apart, but when it is square, are widely displayed, internally, so as to appear apart outside, but to form one range inside. Often, however, this arrangement has been destroyed, and a large single window of a later date put in instead. We will not go through an account of the gradual increase of decoration which this style assumed, as it became more used. Of course, in a hundred and fifty years, we should expect a great deal of improvement. But we have now to notice, briefly, the semi-Norman, or transition style, which gradually crept in about the middle of the 12th century, and, as it were, paved the way for a very remarkable change in architecture.

In this style are used almost the very same mouldings and other details as in the pure Norman style, but in conjunction with a totally new feature, to which all sorts of origins have been by different people ascribed—we mean, the pointed arch. This kind of arch seems to have had (so to speak) a hard battle to make its way. Thus in Buildwas Abbey-church, Salop, (which was founded about 1140,) we find regular Norman piers, with *pointed* arches on them, and over these *round-headed* windows in the clerestory. So also, in Oxford Cathedral, we see the two arches, east and west, under the tower, are *round*, but the transept arches are *pointed*. Again, on the west front of Croylund Abbey, Lincoln—now in ruins—the date of which is since 1163, we see successive tiers of arcades, some of the arches being round, and others pointed. The details in this period are sometimes found of the early Norman character, as well as of the later sort; so that it seems probable that the fashion (so to speak) of the new pointed arch *came in* in some places sooner than it did in others. The doorway of Rothwell church, Northants, is a beautiful specimen of the semi-Norman style.

We have thus seen how a style of church architecture, borrowed more or less from the classical models of Rome, advanced, from the humble and simple Saxon, through the more rich and gorgeous Norman, till its dominion began to totter and give way (in the 12th century) on the appearance of this new element—the pointed arch.

Reading for the Young.

THE FAITHFUL JOHAN.¹

THERE was once an old king, who was so sick, that he thought he was lying on his death-bed; and he therefore desired his servants to send the faithful Johan to him. Now this Johan was the dearest of all his subjects; and he was called faithful, because he had served him faithfully all his life. As soon as he came to the bed-side, the king said to him, "Faithful Johan, I feel that my end is drawing near, and I have no other care but my only son. He is so young, that he knows not yet how to govern himself; and, unless you promise me to direct him in everything, and to be to him a foster-father, I cannot close my eyes in peace." Then the faithful Johan answered, "I promise you I will never leave him, but will serve him truly, even if it should cost me my life." Then the old king thanked him, and said, "Now I can die in peace and confidence: when I am no more, take him, and show him all the castle, the chambers, the halls, the vaults, and all the treasure which lies in them; but one room you must not show him, the room wherein is concealed the statue of the daughter of the king of the golden roof; for, if he sees it, so deep a love for her will seize him, that he will fall down speechless, and, for her sake, will run very great dangers; and from this must you carefully guard him." And hardly had the faithful Johan given his hand, as a pledge that he would perform his command, than the old king laid his head on his pillow, and died. After he had been carried to his grave, the faithful Johan told his son what he had promised to his father on his death bed; adding, "and this will I certainly perform, and serve you truly, as I served him, even if it should cost me my life." When the mourning was over, he said to the young king, "Now it is time that you should see your inheritance: come, and I will shew you your father's castle." So he led him over it, up and down, and let him behold all the pomp and splendour of the halls and chambers; only, that one forbidden chamber, in which was the statue of the princess, he passed over. Now this statue was so placed, that if the door of the room was opened, it must necessarily be seen, for it stood just opposite to it; and it was so curiously made, that any one would have deemed it was a living figure; indeed, nothing in the world could be more lovely or beautiful. As soon as the young king observed that this door was passed over, he asked why it was not opened, as all the rest had been. "There is something there," said Johan, "that would frighten you." But the king answered, "I have seen the whole castle, and I will also see what is in this chamber." And he went up to the door, and would have forced it open, but the good Johan held him back, and cried, "I have promised your father, on his death bed, you should never see what is in that chamber, for it would bring to both of us very great misfortune."

"No," answered the king, "the misfortune will be, if I do not see what is in there, for I shall have no rest day or night; and, indeed, I will not leave this place, till you have opened that door."

Then the faithful Johan saw there was no help for it, and, with a heavy heart, and many sighs,

sought for the key amongst the great bunches he held in his hand. At last he found it, and slowly unlocked the door, and went in first himself; thinking that the young king, who was behind him, would not, thus, first see the statue: but the youth was so impatient, that he stood on tiptoe, and peeped over his shoulder. As soon as he saw the image, which shone as bright as gold, he fell powerless on the floor, and the faithful Johan, full of sorrow, raised him in his arms, and carried him to his bed.

Then he went and fetched some wine, and gave it him; but, when he came to himself, the first words he spoke were, "Ah, whose is that beautiful statue?" And Johan answered, "It is the daughter of the king of the golden roof." "Alas," said the youth, "my love for her is so great that, if all the leaves of all the trees had tongues, they could not speak it! My life depends on winning her: you are my most faithful Johan, and you must help me."

This good servant thought a long time of the best means of doing this, for he knew it was a very difficult thing, even to see the king's daughter. At last he said one day to the king, "Every thing that the princess has, is of pure gold: tables, chairs, dishes, goblets, cups, and all household furniture. In your treasury lie five tons of gold; now, therefore, call all the goldsmiths in your kingdom together, and order them to make all kinds of golden vessels and toys, all kinds of birds, and all kinds of wild and wonderful beasts; and with these will we go hence, and seek our fortune."

So the king called the goldsmiths together, and they worked day and night, till all these glorious things were finished. As soon as they were ready, Johan ordered a ship to be laden with them, and he bought some merchant's clothes, in which the king dressed himself, that no one might know him; and then they both went on board, and set sail.

They sailed over the sea, a long way, till they came to the town in which the king's daughter dwelt. After they had anchored, Johan begged the king to remain in the ship, and wait for him, whilst he went ashore. "Perhaps," said he, "I shall bring the princess with me; so let everything be in readiness; set out all the gold vessels, and dress the decks with them to the best advantage." Then he took with him a little bag filled with gold toys, and, as soon as he was landed, went straight to the royal palace.

In the yard he saw a beautiful maiden, who was standing by a well, with two golden buckets in her hand; and, when she had filled them with the bright and glancing water, she turned round and saw him, and asked him who he was; and he said that he was a merchant, opened his little bag, and showed her its contents. "Ah!" she cried, "these are, indeed, beautiful!" And she set down her buckets, and looked first at one and then at the other; and, after she had looked at them, she said, "I must shew these to the princess my mistress, for she has such a delight in pure gold vessels, that she buys all she can find." And she took him by the hand, and led him to the king's daughter, who, when she saw the gold toys, was very much delighted; said they were beautifully made, and that she would buy them all. Then the faithful Johan answered, "I am only the servant of a very rich merchant, and what I have here is nothing at all to what my master has in the ship, where, indeed, are the most costly and wonderful things that have

(1) From the German of Grimm.

been ever made of gold." But when she begged that they might be brought for her to look at, he added, "that would lose too many days; and, besides, they are so numerous, that no room in your house would hold them." When she heard this, her desire and curiosity to see them became so strong, that she ordered him to conduct her to his vessel, saying, "I will myself go, and see your master's treasures." Very gladly Johan led her on board; but when the king saw her, and found her yet more beautiful than the statue, he thought his heart would have been torn to pieces by his rapture; and he showed her all the golden furniture in the ship, while Johan remained behind, and helped the sailors to raise the anchor, and spread the sails to the breeze; so that the vessel flew through the waters, like a bird through the air. Many hours went by, whilst she was looking at the birds and the beasts, the cups and the dishes; and, in her joy, she did not perceive the rapid course of the ship: but when, at last, she would have thanked the merchant, and gone home, she looked over the side of the vessel, and saw her own town and castle whitening in the distance. Then her soul fainted within her, and she called out, "Ah me, I am betrayed, I am ruined, and am in the power of this artful merchant. Better had I died." But the king took her by the hand, and said, "I am no merchant, but a king, and of birth as royal as your own. It is my love for you that has urged me to carry you away thus artfully: the first time I saw your statue, I fell, without power, to the ground." When the princess heard that, she was comforted, and her heart melted towards him, so that she quite willingly became his wife.

One day, whilst they were still on the wide sea, and the faithful Johan was sitting in the fore part of the ship, playing on a lute, he saw three ravens, which kept hovering near him; so he stopped, and listened to what they were saying to each other; which he perfectly understood. He heard the first say, "He is leading home the daughter of the king of the golden roof." "Yes," said the second, "but he has not got her safe yet." "But," answered the third, "there she is, sitting beside him, in the ship." Then the first spoke again, and said, "How does that help him? For, when they land, a horse as red as a fox will spring to meet him, and he will jump on him; but, if he does, he will be carried away through the air, and never see his beautiful lady again." "But," asked the second, "is there no way of saving him?" "Oh yes," answered the first, "if another quickly takes the fire arms, which are stuck in his halter, and shoots him dead, then is the young king saved. But he who knows, and does, and tells that, will be turned to stone, from the foot to the knee." Then the second said, "I know yet more than that. If the horse were dead, the young king would not be sure of his bride, for, when they come into the castle, they will see, in a box, a wedding garment, which shines like silver and gold, although it is nothing but sulphur and pitch; and, if he puts it on, it will burn him to the marrow of his bones." "But," said the third, "is there no way of saving him?" "Oh yes," answered the second, "if some one, with gloves on, takes hold of the garment, and throws it into the fire, then is the young king saved: but how does that help him? for he who knows, and does, and tells that, will be turned to stone, from the knee to the heart." "Then," said the third, "I know more than that.

For, even if the wedding garment were burnt, the young king would not be sure of his bride; for if, after the wedding, they begin dancing, and the bride dances, she will suddenly turn pale, and fall to the ground; and, if they do not raise her up immediately, and draw from her neck three drops of blood, she will never again recover: but how does that help him? for he who knows, and does, and tells that, will be turned to stone, from his heart to his head."

After this, they all three flew away, and the faithful Johan remained silent and sorrowful; for he thought to himself, "If I tell not my lord what I have heard, the misfortunes will fall upon him, and, if I do, my own life will be the sacrifice." But, at last, he resolved to keep his promise to the old king, and save his son, without telling him anything, even if it should cost him his life. Everything happened just as the ravens had said; for as soon as they were landed, a horse, as red as a fox, sprang to meet them. "Ah!" cried the king, "this shall carry me to the castle;" and, as he spoke, he laid his hand on his neck; but, before he could jump on his back, Johan rushed forward, drew the weapons from his halter, and shot him dead. When the other servants saw what was done, they murmured loudly, saying, "It was shameful to kill such a beautiful beast, and which would have carried the king so well to the castle." But the king ordered them to be silent, "For he is my faithful Johan, and who knows whether what he has done is not right?"

When they came into the castle, there stood in the hall an open box, in which lay a wedding garment, that shone like gold. The young king went up to it, and would have taken hold of it, but the faithful Johan pushed him away, seized it in his gloved hand, threw it quickly into the fire, and there let it burn. Then the other servants began to murmur again, and said, "See, now, he has burned the king's wedding garment." But the king answered, "Who knows whether it is not right? let him alone, he is my faithful Johan." After they were married, they went back into the hall, the musicians played their merriest tune, and the dancing began. At last, the bride and bridegroom arose, and joined it, and the faithful Johan sat near them, to watch the queen's countenance. All at once, she turned deadly pale, and fell to the ground; then he sprang hastily up, carried her in his arms into the next room, laid her down on a couch, and kneeling beside her, drew three blood drops from her neck. Immediately she began to breathe again, and at last sat upright: but the king, who had seen all that Johan had done, was very angry, and called out, in his rage, that he should be thrown into prison directly; and the other servants hastened to draw him away to the dungeons. The next day, Johan was judged, and condemned to die; but as he stood in the court, before he was taken away to execution, he said, "Every criminal is allowed to speak before he dies: may not I, also, make my defence?" And the king said,—"certainly, he might do so." "Then," Johan continued, "my sentence is an unjust sentence; for I have served you most faithfully:" and he related all that he had heard the ravens say, and showed how all that he had done was necessary, to serve his lord and master. Then the king cried out, "Oh! my most faithful Johan, pardon! pardon!" and threw himself on his neck: but, hardly had this good ser-

vant uttered the last words, than he fell on the floor, a senseless statue of stone.

Very great was the grief of the king and queen; the king, especially, continually lamented him, saying, "Alas, how have I rewarded his faithful services!" And he ordered the statue to be taken up into his chamber, and placed by his bed, and, whenever he looked at it, he wept, and said, "Oh! could I but make you alive again, my beloved Johan." After a time, the queen had two little sons, who, as they grew, day by day became more and more the delight and joy of their parents. Once, when their mother was gone to the church, the children sat and played by the king, who stopped in the midst of his caressings, and looked up at the statue, full of grief, and sighed, "Ah! my beloved Johan, could I but make you alive again, I might, indeed, be happy." Then speech was given to the statue, and the stone spoke, and said, "If you are willing to sacrifice that which is dearest to your heart, you may restore me to life again." And the king answered, "All that I have in the world will I gladly give to free you." "Then," continued the statue, "you must, with your own hand, cut off the heads of your two little sons, and sprinkle me with their blood."

The poor king sat a long time grieving, when he heard that it was only by the death of his two children, that he could restore Johan to life. At last, as he thought of his great truth, and that he had died for him, he drew his sword, cut off their heads, and sprinkled the stone with their blood; and, immediately, life returned into it, and the faithful Johan stood again beside him, fresh and sound, and said to him, "Now will I, also, reward your truth and fidelity." So he took the heads of the two children, put them again upon their shoulders, washed their wounds with their own blood, and, instantly, they jumped and played about again, as if nothing had happened. Then the king was full of joy, and, when he heard the queen coming, he hid Johan and the two children in a great closet, and, as she entered, he asked her if she had been to pray in the church, and she answered, "Yes, but I could not help thinking of the faithful Johan, and how, for our sakes, he had perished miserably; and I prayed, that our great sin of ingratitude might be forgiven us." Then he said, "Dear lady, it will, indeed, be forgiven us, and we can restore him also to life again; but it will cost us both our children, for they must both die." When she heard his words, she turned very pale, and fear crept into her heart; but she said, firmly, "Let us, then, sacrifice them, since only so can we pay the great debt we owe him for his constant truth." Then the king rejoiced, that she thought as he had thought, and he went and opened the closet, and brought out his little sons, and the faithful Johan; and said, "God be praised, he is freed, and our dear ones are restored to us!" and he related to her how it had all happened. Then was the cup of their happiness filled to overflowing, and they all three lived out their days together, in peace and prosperity, and in a perfect trust, that no doubt ever again disturbed.

Poetry.

[In Original Poetry, the Name, real or assumed, of the Author, is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

AGATHA.

[BY ANNABEL C.]

AGATHA, the daughter of William the Conqueror, was betrothed to Earl Edwin, the Saxon chief, who, with his brother Morcar, made so brave an attempt to preserve the liberties of his countrymen, and whose life was the sacrifice of his devoted gallantry. The remainder of Agatha's history is told in the following ballad:—

"Nay, urge me not, dear father!
Urge me not, I pray;
The sunlight shed o'er my youthful head.
Like a dream hath passed away:
Like a dream whose hues were lovely
In the shady night;
Whose robe of gold grew dim and cold
When dawned the early light:
Like a dew-drop in the morning,
Ere the sun hath shone;
Which, ere that sun its race hath run,
Its flowery-bed hath flown:
Like a bird that carols blythely,
Ere the bow is bent;
Then swiftly falls from the azure halls
Of the shining firmament.
So brightly dawned my morning,
My dream so early past;
And I awoke with a thunder stroke
To find it could not last.
For my lot seemed the fairest,
The highest destiny,
That ever might on maid alight,
Whatever her degree.
The present was all sunshine,
A blessed summer day;
The future spread like sunshine shed,
In the distance far away
On a mist that hid so softly,
With a silvery veil,
Both flower and tree, all things that be
By forest, hill, or dale.
Which, though it veiled their beauty,
Still itself was bright;
And round things beneath would ever wreath
A radiant robe of light.
For my young troth was plighted
To a warrior true;
And my maiden heart in its inmost part
Him as its own lord knew.
For he was good and valliant;
Alas, that he is dead!
Ah me! ah me! oh woe is met!
Alas, for he is dead!
And o'er his grave the wild winds rave
And the cold, cold earth is spread.
Oh, I did love him dearly!
All worldly things above;
And a soul so bright and a heart so right,
Who could not choose but love!
Our souls were knit together,
They were no longer twain;
No single thought but the other caught,
And responded to again.
He was my first love, father!
My first and only one;
And my heart is sore and my soul is drear—
My happiness is done.

Then urge me not, dear father!
Urge me not, I pray;
The sunlight shed o'er my youthful head
Like a dream hath past away.

And force me not, I pray thee,
To wed the Spanish king;
And in foreign land from unknown hand
To take the bridal ring."

"Nay, daughter," stern he answered;
"Nay, it must be so;
I have said the word, and thou hast heard.
Thou must even go."

Then Agatha, all weeping,
To the king replied—
That Conqueror proud, who spake aloud
To the maiden at his side!—

"Then God in heaven have mercy!
And rather let me die.
Let my spirit be free ere I cross the sea;
Oh, let me rather die!
That my soul may sail on a heavenly gale
To my own lord in the sky!"

These words said the maiden;
These, and only these.
They deck her with pride as a royal bride,
And she must cross the seas.

A ship with pennons flying
Waiteth in the bay;
They lead her there with a train so fair:
Lady Agatha must away.

The merry wind is singing
Through the sails so white;
Then bounding away like a child at play;
That ship was a goodly sight.

Thus on the waters bounding,
In truth she was most fair;
But though in pride she swept the tide,
A breaking heart was there.

The vessel rode on gally,
Gaily on she sped;
The sun shone high in the clear blue sky,
And the calm sea round her spread.

But the words of humble prayer
Agatha had said,
Were heard above by the God of love!
Lady Agatha, she was dead!

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne*.

THE EDITOR'S BOX.

THE box at the extreme right of the gallery, is that occupied by the editors-in-chief of the Paris journals; and that box is the true political barometer of the Chamber, though visible only to an initiated few. If the discussion in progress be important—if M. Guizot, M. Thiers, or M. Berryer, be at the tribune, all is earnest attention; the silence is broken only by some exclamation of enthusiasm, or some muttered expression of anger or indignation, mingling with the signs of blame or assent of the legislators below, during the interruptions so frequent in the French Chamber. But if, on the contrary, some honourable member attacks the tribune manuscript in hand, or begins a deliberate paraphrase of the articles of the journals (as happens at times)—or if there be a suspension of the sitting, enabling the speech-making deputies to rush to the tavern—

then do the occupants of this box, seated on the front benches, wheel round, and, turning their backs to the Chamber, get up amongst themselves a counterpart of the debates below. No pen could do justice to this discussion—so original, varied, piquant, and at all times instructive. Cutting words, gibing fancies, witty sallies, sarcastic hits, extravagant eulogies, and outrageous invectives, pass from mouth to mouth, and mingle every tone. Often the friends or protégés of the editors smuggle themselves into this box, with a passionate fondness for the debates of this Chamber on a small scale. It is a sight to see, too, with what a polite and insinuating air some belated deputy, or unfortunate reporter to the Chamber, or orator *incompris* (there is no translating the word), hands in a note to these distributors of praise and blame, defending his representative zeal, giving explanations, or complaining of a mis-report. And then this box has its intimate and private conversations. It is before the opening of the discussion, or during the division, that a small part of its frequenters, disdaining the *Salle des Pas Perdus*, remain here; and, half-reclined on the benches, gaily amuse themselves with the small whims, petty crosses, and private intrigues, of the legislators then crowding around the tribune. They know a hundred adventures and anecdotes—like the malicious chroniclers of the *Ciel de Bauf*—and, for my own part, I have retained more than one of these; but their repetition here would be a bad return for my welcome into that box. I leave them to the ingenious indiscretion of the authors of all sorts of "Mysteries." The box in question is a democratic republic; it has a president, elected at the commencement of each session, to keep its peace, and maintain order, with the title of Syndic. * * But it is about as impossible to introduce order into this box, as to make the thirty journals of Paris harmonize. The editors' box is and ever will be a Babel—but an alluring Babel, and a very instructive one—where I have spent many a happy hour, and whose diversity of opinions and sentiments I greatly prefer to the uniformity of praise uttered by my compatriots in the mines of Siberia, in honour of his Majesty the Emperor of all the Russias.—*From a Journey round the Chamber of Deputies.*

JOURNALISM IN AUSTRIA.

THE number of journals at present published in the Austrian States is 159; which, compared with the population, amounting to 31,500,000, gives one journal for every 198,110 inhabitants. Of these journals, 40 are political, 12 commercial, and 107 literary and scientific. In Austria, properly so called, there are 29; in the Lombardo-Venetian kingdom, 43; in Hungary, 21; in Bohemia, 17; and in the rest of the Austrian States, 49. Of these journals, 76 are written in German, 53 in Italian, 15 in Slavonian, 1 in French, and 14 in various other dialects.—*Galvani's Messenger.*

JEREMY TAYLOR, in his beautiful sermon on the duties of the tongue, observes: "God is pleased with no music from below so much as in the thanksgiving songs of relieved widows, of supported orphans, of rejoicing, and comforted, and thankful persons. This part of our communication does the work of God and of our neighbours, and bears us to heaven in streams made by the overflowing of our brother's comfort."

THE BLACK PRINCE.

I'll tell you a tale of a knight, my boy,
The bravest that ever was known;
A lion he was in the fight, my boy,
A lamb when the battle was done.
Oh, he need not be named; for who has not
heard
Of the glorious son of King Edward the Third!

Armour he wore as black as jet;
His sword was keen and good;
He conquer'd every foe he met,
And he spared them when subdued.
Valiant and generous, and gentle and bold,
Was the Black Prince of England in days
of old.

Often he charged with spear and lance
At the head of his valorous knights;

F. P. DICKERSON DEL.

W. LINTON SC.

But the battle of Poitiers, won in France,
Was the noblest of all his fights;
And every British heart should be
Proud when it thinks of that victory.

The French were many—the English few;
But the Black Prince little heeded:
His knights, he knew, were brave and true;
Their arms were all he needed.

He ask'd not *how many* might be the foe;
Where are they? was all that he sought to know.

So he spurr'd his steed, and he couch'd his lance,
And the battle was won and lost;
Captive he took King John of France,
The chief of that mighty host:
Faint grew the heart of each gallant foe;
Their leader was taken; their hopes were low.

Brave were the French; but at last they yield,
All wearied and worn out:
The prince is conqueror of the field;
And the English soldiers shout,
"God save our prince, our mighty lord!
Victory waiteth on his sword!"

Of all the knights who fought that day,
James Audley was the best;
His wounds were three, won valiantly,
On cheek, and brow, and breast:
And the Black Prince said, when the fight was o'er,
He never had seen such a knight before.

And did they chain King John of France?
Was he in dungeon laid?
Oh, little ye know what a generous foe
Our English Edward made!

A gentle heart, and an arm of might—
These are the things that make a knight.

He set King John on a lofty steed,
White as the driven snow,
And without all pride he rode beside,
On a palfrey slight and low:
He spoke to the king with a reverent mien,
As though the king had *his* captor been.

He treated King John like an honour'd guest:
When at the feast he sate,
With courteous air, and with forehead bare,
The prince did on him wait;
And even when they to England came,
Our generous hero was the same.

But the prisoner's heart it grew not light,
For all the prince could say:
A captive king and a conquer'd knight,
Oh, how could he be gay?
E'en while his courteous words were speaking,
For his own dear France his heart was breaking.

Another lay shall the story tell
Of this valiant king and true:
He loved the Black Prince passing well,
And his worth full well he knew.
Then let us all unite to praise
That hero of the olden days.

The Romans when they won the day
And bore their captives home,
Caused them to march in ~~and~~ array,
Fetter'd and chain'd, through Rome;
And every foe, though good and brave,
They held as victim or as slave.

But ours was a Christian conqueror,
Generous, and true, and kind:—
Though the grave has now closed o'er his brow,
He hath left this rule behind,—
That valour should ever wedded be
To mercy, and not to cruelty.

From Lays and Ballads of English History.

AMERICA AND HER SLAVE STATES.

No. IV.—(*Concluded.*)

THE hot-springs of Washita may fairly rank, for natural curiosities, with those in the volcanic valley of New Zealand. A narrow vale, edged in on either side by lofty ridges of sandstone, where wretched log-cabins afford the sole accommodation for the traveller and visitor, comprises the far-famed watering-place. At the base of the eastern ridge, on a bed of clay slate, runs a shallow little stream, into which the hot-springs flow from the lofty face of the ridge, varying in their sources, from 150 to 300 feet above the bed of the brook. With a mean temperature of 145° Fahrenheit, these copious springs form, in times when the brook is swollen, a continuous upper surface of hot water, over the trickling cold stream below. At times, in the deep pools, fish float merrily in the lower cold stream, and, when tempted by crumbs of bread, trust their noses into the upper run of hot water, and retreat with a celerity proportioned to the warmth of the spring. With thirty-five springs, all flowing into one small stream, the great difficulty is to find cold water. From this curiosity of inanimate nature, let us pass to an example of the more than instinct of animate nature, an act of undoubted reasoning in the savage buffalo. The old hunter had struck, but far from mortally wounded, a huge male buffalo: enraged with the wound, the beast pressed him hard, and unable to reload, the hunter turned and fled:—

"In running down a short hill, some briars threw him down, and he dropped his gun. There was a tree not far from him, of about eighteen inches in diameter, and everything seemed to depend upon his reaching it; but as he rose to make a push for it, the buffalo struck him on the fleshy part of his thigh, with his horn, and slightly wounded him. Before the beast, however, could wheel round upon him again, he gained the tree, upon which all the chance he had of preserving his life rested. A very few feet from this tree grew a sapling, about four or five inches in diameter; a most fortunate circumstance for the hunter, as it contributed materially to save his life. The buffalo now doggedly followed up his purpose of destroying his adversary, and a system of attack and defence commenced that, perhaps, is without a parallel. The buffalo went round and round the tree, pursuing the man, jumping at him in the peculiar manner of that animal, every time he thought there was a chance of killing him; whilst Percival, grasping the tree with his arms, swung himself round it with greater rapidity than the animal could follow him. In this manner the buffalo harassed him more than four hours, until his hands became so sore with rubbing against the rough bark of the oak tree, and his limbs so fatigued, that he began to be disheartened. In going round the tree, the buffalo would sometimes pass between it and the sapling; but the distance between them was so narrow, that it inconvenienced him, especially when he wanted to make his jumps; he, therefore, went round the sapling instead of inside of it. The time thus con-

sumed was precious to Percival; it enabled him to breathe, and to consider how he should defend himself. After so many hours fruitless labour, the bull seemed to have lost his pristine vigour, and became slower in his motions. He would now make his short start preparatory to his jump, only at intervals; and even then, he jumped doubtingly, as if he saw that Percival would avoid his blow by swinging to the other side. It was evident he was baffled, and considering what he should do. Still continuing his course round the tree, but in this slow manner, he at length made an extraordinary feint, that does credit to the reasoning powers of the buffalo family. He made his little start as usual, and when Percival swung himself round, the bull, instead of aiming his blow in the direction he had been accustomed to do, suddenly turned to that side of the tree where Percival would be brought, when he had swung himself round, and struck with all his might. The feint had almost succeeded; Percival only just saved his head, and received a severe contusion on the arm, which was paralyzed for an instant."—Vol. ii. pp. 126—128.

It is hardly to be wondered that the hunter now began to despair of his life, and even thought of leaving his slight defence, and seeking instant death, from his pertinacious enemy. He held on a little longer, and gradually the bull became slower in his attacks, and evidently fainter in his pursuit. Thus encouraged, Percival endured two more hours, and eventually stabbed his enemy till he fell, exhausted and dying, at the foot of the tree. When the hunter returned to his companions, after a separation of forty days, so pale and emaciated was he, that they asked him "if he had been down with a fever." From that eventful day he had never got quiet rest, and the image of his powerful and resolute enemy haunted him for more than three months, whenever he sought to sleep. Seven and twenty years had passed, when our traveller met the bold hunter, and, even then, so great had been the nervous shock, that the least sudden noise troubled him. And yet, these hunters and settlers of the Arkansas are as little troubled with nerves, as their female kind with delicacy. Their happiness is to sleep by a good fire in a cane break, and drive the "bars" about, on whose fat they subsist and grow, and with whose skins, tanned and prepared by their own hands, they are clothed. The old man Davis and his family are specimens of, and not exceptions to, the general hunter-settlers of the wild parts of the states. They never leave their neighbourhood, except to hunt; dislike towns, because there is some pretence at government in them; have an undisguised horror of lawyers, because they sell lands and break up the cane breaks; and, as young Davis said, regard Texas as a paradise, because "there was no such thing as a government there, and not one varmint of a lawyer in the hell place." Miss Davis, or, as she was called in her maiden days, *Old Davis's She-Bar*, before she was elevated to the rank of a neighbouring great pedlar's wife, deserved her sobriquet, and did justice to the family qualifications.

"I have never seen any one," says Mr. F. "as far as manners and exterior went, with less pretensions to be classed with the feminine gender. All her accomplishments seemed to me to have a decided leaning the other way. She chewed tobacco, she smoked a pipe, she drank whisky, and cursed and swore as heartily as any backwoodsman, all at the same time; doing quite as much vulgarity as four male blackguards could do, and with as much ease as if she had been an automaton set to do it with clock-work machinery. She must have been a person of surprising powers in her youth, for I was in-

formed that she was now comparatively refined to what she had been before her marriage."—Vol. ii. pp. 137, 138.

Let it not be thought that there are not bright spots even in such a locality as Arkansas. Our traveller has perpetuated the successful exertions of one settler, to introduce comfort, sobriety, and religion. But the experiment is difficult, the situation of such a settler hazardous, amongst men to whom order, cleanliness, and propriety are unknown; to whom Sunday is merely a memorial of a weekly shave, or weekly visit; who live twenty years and more in one wretched cabin, without discovering that they have a single want. What can a man of higher views expect, but that, instead of endeavouring to raise themselves up to his standard, they will strive their hardest to drag him down to their level?

One look our traveller gave into Texas: a look that gave rise to mixed feelings of pleasure and pain. The wondrous fertility of the soil could not but delight the spectator, whilst the prospect of the flowing of the tide of slavery from the states, over a country until then free from its curse, must harrow the feelings of any thinking man. Every year sees a marked depreciation in the cotton lands in the old states of America, and tends to render the slave more a burden than a benefit to his master. Give the Southern States but the fertile lands of Texas, as yet almost untouched by man, and you destroy the greatest prospect of gradual abolition, and convert the old slave-holding states into slave nurseries, for the supply of the *black crop* to the cotton lords of Texas. The daily decreasing value of slaves was a daily argument for abolition; their sudden increase in value, on the annexation of Texas, would be a stronger argument, not only for the increased production of slaves, but against any attempt at humane legislation for the black people.

The demoralizing effect of slavery, in perpetuating the notion of an actual difference of nature between the white and the black race, is painfully exemplified in the state of the quadroon female population of New Orleans. The utter absence of everything approaching to science and literature from this swampy capital,—the congregation of its inhabitants in a locality so fetid in summer, so miserable in winter, in order to fight with death for gold,—the wide-spread curse of gambling,—the painful absence of religion,—all fail to strike the attention, and to grieve the heart, so much as the miserable condition of the quadroon female.

"The position of this unfortunate race," says our traveller, "is a very anomalous one; for quadroons, who are the daughters of white men by half-blooded mothers, whatever be their private worth or personal charms, are forbidden, by the laws, to contract marriage with white men. A woman may be as fair as any European, and have no symptom of negro blood about her; she may have received a virtuous education, have been brought up with the greatest tenderness, may possess various accomplishments, and may be eminently calculated to act the part of a faithful wife and a tender mother, but, if it can be proved that she has one drop of negro blood in her veins, the laws do not permit her to contract a marriage with a white man: and, as her children would be illegitimate, the men do not contract marriages with them. Such a woman, being over-educated for the males of her own class, is therefore destined from her birth to be a mistress; and great pains are lavished on her education, not to enable her to aspire to be a wife, but to give her those attractions which a keeper requires."—Vol. ii. pp. 267, 268.

The cold-bloodedness of the system is, if possible, more disgusting than the iniquity itself. The quadroon balls are the slave markets of this class. There, shown off to her greatest advantage, the poor girl is bargained for by her admirer; the dollars are placed out as her provision when the man grows tired of his purchase; and she retires to her keeper's house, there to mix in the society of her female friends, to visit their "*bals de société*," "and brings up sons to be rejected by the society where their father finds his equals, and daughters to be educated for quadroon balls, and destined to pursue the same career which their mother has done." There is no excuse of sudden passion, of ungovernable affections, of incautious moments. All is business—cold, calculating trade;—the parent deals in the prostitution of his child; the same ball room sees the *legitimate* son bargaining for his mistress, his *illegitimate* sisters being sold to the highest bidder.

To argue from the worst facts with which every book on the slave states of America teems, that everywhere in the slave-holding states such barbarities are committed on the blacks, is one of the worst forms of generalizing from particular instances. The slave, in his slavery, has, doubtless, a person to whom to look for aid and for sustenance, when age or sickness renders him incapable of work. But is this any set-off against the unlimited power of the master—for his want of freedom of action, aye, and of thought—for his being forbidden knowledge—excluded from religious comforts? To say that the injudicious acts of the abolitionists have given rise to the much-reported barbarities, by their imprudent advice, their unsound lectures to the slaves, is to charge them with producing the state of slavery by which they themselves were called into action. The well-fed, well-cared-for slave, would have found but few to plead for his liberty: the cruel treatment that many of his fellow slaves endured, called into existence the feeling in favour of abolition. A South-Carolinian proprietor furnished our traveller with a rather novel view of the advantages of slavery.

"He observed, that the working of the institution of slavery was not understood out of the slave states; that it elevated the character of the master, by comparison, made him jealous of his own, and the natural friend to public liberty; that the dignity of character that belonged to Southern gentlemen, from Washington down to the present times, was unknown to the men of the northern states, and must always be; as one effect of their laws and customs was, to cause a division of the estate of every head of a family, on his decease, equally among his children, and so compel every one of them to re-construct a fortune as well as he could: that everybody knew this generated a rapacious spirit, and made the accumulation of wealth the sole object of every man's life. This was not the case in South Carolina, where the planter, whatever might be his transactions, was careful not to encroach upon the character of the gentleman: and he adduced Mr. Calhoun, the leader of the nullifying party, as an instance of the justice of what he said. This gentleman, he remarked, was a planter and a slaveholder, who in private life had never been known to be guilty of a mean action, and in public life had never omitted an opportunity of vindicating the constitution from the attempts of sordid persons to pervert its intentions. For these reasons, he said, Mr. Calhoun, independent of his great intellectual powers, was universally honoured in his native state, and was justly looked up to by all, as the vigilant guardian of its rights. All these great principles, he added, were developed and strength-

ened by the institution of slavery; that the slaves were not an unhappy race of men; they were well fed, well clothed; and, if there had been a necessity for it, in the late dispute with the United States government, the slaves would have shown, to a man, their well-known fidelity to their masters."—Vol. ii. pp. 343, 344.

The black, chained full length on the top of the stage that drove up to the door of the tavern, was no bad practical criticism on the just-concluded reasoning of the Carolinian philosopher.

We have written much, and talked more, about negro slavery; have legislated much, and paid more, for abolition; have risked the friendship of powerful nations, and sacrificed the health and lives of our sailors, to abrogate the trade in black slaves; and yet, for years, shut our eyes to our own domestic slavery. The free black, and the slave black, of America, is not inaptly compared to our own colonists, and our own manufacturing population.

"We have two kinds of niggers in the states," says Sam Slick, "free niggers and slaves. In the north they are all free; in the south all in bondage. Now, the free nigger may be a member of Congress, but he can't get there; he may be president, but he guesses he can't; and he reckons right. He may marry Tyler's darter, but she won't have him; he may be an ambassador to the court of St. James, if he could only be appointed; or he may command the army and the navy, if they would only let him;—that's his condition. The slave is a slave—that's his condition. Now the English have two sorts of niggers—American colonists, who are free white niggers; and manufacturers' labourers at home, and they are white slave niggers. A white colonist, like our free black nigger, may be a member of Parliament, but he can't get there; he may be a governor, but he guesses he can't—and he guesses right; he may marry an English nobleman's darter, if she'd only have him; he may be an ambassador to our court at Washington, if he could be only appointed; he may command the army or the fleet, if he had the commission;—and that's his condition. A colonist and a free nigger don't differ in anything but in colour: *both have naked rights, but they have no power given them to clothe those rights;—and that's the naked truth.*"—Vol. ii. pp. 213-14.

The Canadian judge hits hard and straight. There is more practical effect in a short, pithy sentence of caricature than in petitions a mile long, or memorials and remonstrances by the folio. The one comes home by the shortest road; the others lose themselves in getting their unwieldy length through the narrow streets.—But to pass on.

"As to the manufacturing slave, he is different from all the servants in England! all other servants are well off, most too well off, if anything, for they are pampered. But these poor critters! oh, their lot is a hard one! Not from the corn laws, as their radical employers tell them; not because they have not universal suffrage, as demagogues tell 'em; nor because there are bishops that wear lawn sleeves instead of cotton ones, as the dissenters tell 'em; *but because there is a law of nature violated in their case.* The hawk, the shark, and the tiger, the bird, the fish, and the beast, even the reasoning brute, man, each, and all, feed, nurture, and protect those they spawn, hatch, or breed; it is a law written in the works of God. They have it in instinct, and find it in reason; and necessity and affection are its roots and foundation. The manufacturer alone obeys no instinct, won't listen to no reason, don't see no necessity, and hant got no affections. He calls together the poor, and gives them artificial powers, unfits them for all other pursuit,

works them to their utmost, robs all the people of their labour; and when he is too rich and too proud to progress, or when bad speculations ruin him, he deserts these unfortunate wretches whom he has created, used up, and ruined, and leaves them to God and their country to provide for."—Vol. ii. pp. 217-18.

The condition of our manufacturing slaves is indeed heart-rending; but to them alone, unfortunately, this description does not apply. It extends itself to all our labouring population. Can we wonder at discontent, when the workman cannot live by incessant labour, when the poor sewer of the garret feels thankful for ceaseless work, which he knows cannot afford him enough to live on, doled out to him by the contractor, who rolls in wealth? "Ah, sir," said a poor tailor in London, "I do feel thankful that Mr. — has given me this contract of making soldiers' trousers at sixpence a pair, though I know I can't make a living out of it; but when I see him riding about in his carriage, all along of such contracts, it be difficult to be right-minded!"

LUCY COOPER.

An Australian Tale.

CHAP. V.

ABOUT five months after this period, Mr. Kitley, who had given orders to admit no one to his presence, and who had been walking up and down his own room in evident and increasing perturbation, at length rung his bell; and when young Meredith stood before him, awaiting his orders, he suddenly collected himself, and said, "I must go to-night to Bathurst; you will be so good as to accompany me. I start at four o'clock, and travel in my own carriage. If you have any arrangements to make for yourself, you had better see about them at once." Meredith left the room: again Mr. Kitley's bell was rung. "Meredith," said Mr. Kitley, "get me a brace of carriage pistols. Go to Soames or Wilcox; tell them I want a pair that may be relied on. You will oblige me by seeing to the detail yourself."

In the course of an hour, the young man returned with his small portmanteau made up for the expedition, and a case of pistols, of very superior workmanship and formidable appearance. Mr. Kitley and Mr. Meredith examined them with much minuteness; and, having carefully loaded them with ball of which twenty made a pound, they were deposited in the case, and locked up. Mr. Kitley now talked cheerfully to his clerk; and the young man himself was elated with the thoughts of the expedition before him, glad to escape the routine of the dusty office, and honoured by the selection of himself to be his master's companion in travel. At four o'clock the travelling carriage drew up to the door. Mr. Kitley's own man was seated in the dicky behind, with great coats and upper benjamins, to enable him to pass the night in dignified comfort. Meredith had lodged his portmanteau under the seat, and placed his pistols in the carriage, awaiting, with some impatience, Mr. Kitley's return, to start from the tiresome metropolis into the country. In about half-an-hour, Mr. Kitley was seen to turn the corner: he passed through the office, and entered his own room; whence, about five o'clock, he issued forth, and, followed by Meredith, took his seat

in his carriage, and drove down George Street, in the direction of Parramatta. After about an hour's drive, they reached an inn by the road-side, and here Meredith was surprised to hear Mr. Kitley give orders to take the horses out, and to bring tea: a proceeding so wholly out of likelihood for a man hastening on important business to the interior, that Meredith became uneasy and watchful. In spite of every effort to throw off the habitual restraint of business, and to treat his young companion with easy kindness and condescension, Mr. Kitley every now and then became immersed in gloomy abstraction, and, leaving his chair, he paced the room in manifest perturbation. To relieve the embarrassment he felt, young Meredith occasionally quitted the room; he strayed into the garden, and then looked into the stable, and, whilst so employed, he recognised a horse belonging to the Honourable Claude Mac Catchit, which, with three others belonging to the officers of the regiment, was standing there. At this moment Claude entered the stable, and seeing Meredith, whom he knew, he gathered from him the particulars I have related. It required little penetration to find that something more was going on than was given out. And it occurred to Claude, that the journey to Bathurst, which had been announced at *Ægina*, somewhat elaborately, a whole week before, was a mere fiction of Mr. Kitley's, which, for reasons of his own, he had invented, to put him and Mrs. Kitley off their guard. A sensation of uneasiness had been increasing among the three, which, without any apparent diminution of confidence, had been distinctly felt on all sides. Claude's guilty mind, therefore, took immediate alarm, and he called Meredith on one side, and obtained from him a solemn promise that he would not inform Mr. Kitley that he had seen or communicated with him.

His next step was to take leave of his brother officers, who were well acquainted with his intimacy at Kitley's and had long entertained their own opinions of the nature of his proceedings there. When they became acquainted with the fact, therefore, that Kitley was in the house, they were not surprised at Claude's desire to leave them; nor at his wish, to keep from Mr. Kitley's knowledge that he was or had been in the house. Claude and his servant withdrew from the inn, taking a bush-road, and avoiding the public way, and, after riding a hundred yards into the thicket, he left his horse in the charge of his servant, enjoining upon him the necessity of lying close, and remaining where he was, ready to mount at a moment's notice. He now crept stealthily back, and took up such a position behind a tree as enabled him to observe all the movements of the place; resolved to ascertain what were Mr. Kitley's intentions. Here he turned over in his own mind a number of circumstances which had occurred at *Ægina*, and endeavoured to connect them together, with the present suspicious state of things, alarmed at the consequences of a discovery, which he well knew might already have been made, or was possible at any moment. It was now approaching to ten o'clock; all was still and silent about the inn, but candles were burning in Mr. Kitley's room. The shadow of that restless personage was distinctly visible against the wall and ceiling, as he paced backward and forward; and Claude finally resolved that he would continue where he was until he had watched Mr. Kitley to bed, or into his carriage, even though he should remain all night in the bush, and cause the greatest anxiety to Mrs. Kitley by his absence.

After a while, however, he was aware that some change was impending in the proceedings within the inn. The horses were harnessed, brought out, and attached to the carriage, and, in the course of a few minutes, Mr. Kitley stepped into it alone, and drove off with great speed towards Sydney, leaving Meredith and the valet behind him. Claude immediately returned to his

horse, mounted without loss of time, and followed at such a distance as to be quite sure of his object, without exposing himself to the observation of the chase. In this way they returned to town; and great was Claude's astonishment to find that Mr. Kitley, instead of taking the road to Aëgina, continued his way down George Street, until, at Hunter Street, the carriage suddenly stopped, Mr. Kitley alighted, and, wrapped in his cloak, glided silently down the street towards the landing-place in the (intended) Circular Quay. Here he stepped into a boat, and bade the waterman pull away from the shore, and, when they were almost out of hearing, he ordered him to make for Aëgina.

There was something in all this that spoke so directly to the guilty conscience of Claude, who had followed him very cautiously on foot, that, without further consideration, he stepped into another boat that was lying there, and, at such a distance as he considered safe, pursued Mr. Kitley in his clandestine track. The wind and tide were both adverse; the passage was long and fatiguing; so that it was nearly one o'clock before the first boat gained the little island of Salamis. To follow to this spot was too hazardous; besides, Claude well knew that there, at least, no *denouement* could occur either to his own or Mrs. Kitley's prejudice. He hastily determined, therefore, to land upon the rocky shore of Aëgina, and, dismissing his boatman, to conceal himself among the rocks and shrubs that rose precipitously from the sea, and there watch Mr. Kitley's further proceedings. Within a few yards of his concealment was the landing-place, constructed to facilitate the intercourse with this island, plainly within observation. Some time elapsed before Mr. Kitley's boat was again visible. It was clear, that whatever object had excited his jealousy, he had expected to find it in the luxurious bathing-lodge in that place; but it so fell out that his search was wholly ineffectual; nothing was to be found there of which he was in pursuit, nor did any living creature disturb the silence of the night. When he landed, it was manifest that he was prepared for some deed of violence, for in each hand he carried a pistol, and so with stealthy steps, and an air of cool determination, he advanced through the winding plantation, and avoiding the open lawn, upon which the sloping beams of the moon were beginning to pour their feeble rays, he reached a French door, which, from his own study, led to the lawn, and producing a key from his pocket, gained admittance without making the least noise. He now proceeded up the marble stairs with noiseless step, and reaching his own room door, paused a while to listen. The whole house was buried in repose. The lamp was burning feebly in the chimney, and shed a faint and doubtful light upon the bed, closely enveloped in white mosquito curtains. So much he could discern from the key-hole. His agitation was now at the height, and bitterest determinations armed his purpose. He struck a violent blow with the butt-end of his pistol upon the panel of the door, which was heard throughout the house. Mrs. Kitley, evidently awakened from sleep, rang her bell violently, and Mr. Kitley with a loud voice demanded instant admission. No sooner was this order complied with, than the furious husband rushed into the room, prepared, it would appear, for some horrid deed of vengeance, while Mrs. Kitley sank into an arm-chair, and bursting into an hysterical flood of tears, demanded to know the reason of this most outrageous proceeding.

Equally agitated, Mr. Kitley retired from his own room, and returning to his study, threw himself in a state of uncontrollable passion upon a sofa. He had evidently been baffled; yet his information was so precise and circumstantial, that he never hesitated for a moment in his persuasion of his wife's infidelity, and the treachery of the honourable Claude M'Catchit. Rage and indignation drove him almost to frenzy. It had been his full purpose to detect and destroy the guilty couple; and with this intention had he laid the

snare for their detection, which we have recorded. He was now, therefore, by the disclosure of his suspicions, prevented from the fulfilment of this horrible purpose. But he saw with accurate precision that the final ruin of his repose was effected; he had lost his wife, and thrown a fresh and more indelible disgrace upon his poor children. A deed of separation was immediately executed; and Mrs. Kitley left the house of Aëgina, never again to cross its threshold. After a few weeks, she embarked for Hobart Town, whither she was followed by Mr. Claude M'Catchit, who had thought it prudent to keep himself out of Mr. Kitley's way, equally unwilling to incur the lawless violence he was evidently capable of inflicting, or the more usual, though not less formidable, vengeance of the law. Here, on Mr. Kitley's allowance, the unhappy criminals lived for a while, regretting only their detection, and the costly splendour of Aëgina; but they gradually acquired habits of inebriety, and were fast sinking into extreme misery in mutual reproaches, when, one night, in a state of insensibility, they set fire to their curtains, and were burnt to death. Mr. Kitley continued to exercise his profession as heretofore; he came and went daily; he made arrangements for the education of his deserted children; but the canker-worm was at the root of all contentment, and from that unhappy hour never did he know a moment's satisfaction.

In almost any other country, and in any other state of society, Thomas Saunders would not only have been the last person selected to be steward and major-domo in a family so wealthy as Mr. Kitley's, but so far from gradually usurping the offices of housekeeper and governess, he would have been driven far away from all intercourse with the female part of the establishment, and the young ladies. Thomas Saunders, however, was good-natured enough to assume the direction of everything; and as Mr. Kitley had his head and hands full of other things, wholly foreign to our narrative, and little worthy of being recorded, he cared not how things went on, so that he was not troubled on the subject. The consequences were full of mischief to all the persons whose chance it was to be within reach of his influence, and Lucy Cooper was doomed to find that his love was as pernicious as his hatred. She had long felt that her only wisdom was to keep out of his sight, and to discontinue those snug little tea-parties, which we have already recorded. But Tommy was bursting with self-importance, and his successful career had made him believe nothing too difficult, nothing impossible for him. As he still continued to think Lucy Cooper a fit and proper partner for his own merits, and their splendid rewards, he persevered in paying her his elegant and assiduous attentions; occasionally offering to her acceptance valuable and costly trinkets; at other times, articles of female attire, or the captivating gifts of the butler's pantry. At distant intervals, Lucy had had the pleasure and advantage of a visit from Mrs. Webster, to whom she had duly related all these circumstances, together with a number of other points of management in the household, all tending to Mr. Saunders's personal emolument and advantage. Mrs. Webster lamented that she could not interfere to protect her young friend from this distressing condition; for all appeal to Mr. Kitley was rendered impossible, from his inaccessible mode of life; and she was by no means confident that she had sufficient proof to satisfy him of the true character and proceedings of his steward. She could therefore only recommend Lucy to be very guarded and watchful in all her movements; and to look upon Tommy Saunders as a man who would make no scruple about the means, so long as they served him to reach his proposed end. And with these friendly cautions, and their mutual earnest prayers, the young woman was again committed to the unwholesome influence of Mr. Kitley's household.

It was at this period, however, that a new state of things supervened at Aëgina. Among the women con-

stantly assigned and dismissed from Ægina, at length came Betsy Shindles, who was destined to make a material alteration in the fortunes of Mr. Saunders. This person has been mentioned as having shared the smiles of Dr. Caveat, at Feversham. She was a large and powerful woman, with a fresh complexion, and fierce black eyes; and though her features were coarse and vulgar, she could assume a very winning air whenever it suited her immediate interests. She was a native of London, where her father still kept a respectable shop, and brought up a large family with credit and comfort. This girl, however, had been perverse and wicked from the beginning; and after having for some time distressed her parents by her vicious propensities, she had entirely disappeared from her early neighbourhood, and had been transported from a distant town, under a fictitious name, so that her unhappy mother was still ignorant of the fate of this miserable and unfeeling woman. What she had gone through during the three years already spent in captivity, it is not our present purpose to record; everything had tended to confirm her evil propensities, and indulge all her irregular and pernicious habits. After a very few days, therefore, the household slaves of Ægina perceived the usual indications of Mr. Saunders' favour bestowed upon his new acquaintance, who profited by her entire exemption from hard work, and shared in the luxurious privileges of the butler's pantry. Mr. Saunders' morning face, heavier, whiter, and duller than usual, and his blood-shot eyes, betrayed the dissipation of his hours of darkness; and the flushings of intemperance spread over Shindle's brows with distinct colours. Persecution now awaited poor Lucy, of whom it was clear that the new favourite could not but be jealous; and who, notwithstanding her entire detestation of their course of life, was yet an object of concern to both these wicked people. The woman hated her, because she knew, with a full assurance of knowledge, instinctive to the female heart, that Mr. Saunders would have preferred her, if he had received the least encouragement; so she spared no insults, nor disdainful glances, whenever it chanced that they should meet. And this was the more common, as Shindle's indulgences were unlimited; and Mr. Kitley's absence from home left the beautiful grounds and alleys of Ægina entirely at the mercy of his servants, who sometimes manifested the greatness of their interest with the *factotum*, by taking the air among the costly flower-beds and plantations of this lovely spot. Here, therefore, whilst Lucy was waiting upon the children, she was occasionally encountered by Betsy Shindles, whose new bonnet and shawl, and red ribbons, were conspicuous at every corner. But Lucy had learnt to bear all this without murmuring, as a portion of the punishment awarded her—an evil inseparable from her condition; too happy if she could quietly escape, from day to day, from the entanglement of those evils which surrounded her. Indeed, it was part of her occupation to seek the most retired walks, and to shun all intercourse with every one; still the unavoidable commerce with her fellow-servants, the most depraved and unfeeling of mankind, terrified and distressed her; and it was upon these occasions that she felt most acutely the degradation into which she was plunged.

It was nearly a month after Betsy Shindle's arrival in Mr. Kitley's household, that Mr. Saunders, who, probably, had become a little fastidious, and was tiring of "his Elizabeth," as he was wont to call her, met Lucy at the end of a shady walk, terminated by a rustic alcove, which, in the possession of innocence and goodness, would have been a most lovely and delightful retirement from the turmoil of the world, and the fervours of the sun. Mr. Saunders, who had evidently sought this interview, and was attired in his most fascinating suit of brown jacket, with small pearl buttons, in closest proximity to each other; a full white shirt, projecting from his waistband, and fastened by four studs of opal; an ample shirt collar, covering his ears,

and expanded stiffly across each cheek; a loose handkerchief of bright blue silk, contrasting with the leaden blue of his close-shaven muzzle; and the long lock from either temple, greased and trained into symmetry with extreme care; these, with a pair of ducks, bursting at every seam with the grandeur of the wearer, completed the outward person of Mr. Thomas Saunders.

"How d'ye do, dear Lucy?" said this elegant personage. "I came out a' purpose to speak to you. Won't you except my harm?"

"Thank you," said Lucy, very quietly, as she walked by his side, but without taking his arm. "What would you say to me, Mr. Saunders?"

"Lucy, dear Lucy," sighed Mr. Saunders, and his great white jaws rivalled the complexion of his opal-studs; "I have some at werry serious to say to you!"

"O my!" rejoined Lucy, "I hope not!"

"Werry serious, indeed, upon my honour! I have long entertained the most serious thoughts about you. My peace of mind in futer is in your hands; and if you won't have me, I do not know whatever is to become of me."

By this time they had approached the alcove that was at the end of the walk, and as they entered it, Lucy replied to the last pensive thought of poor Tommy Saunders, as to what was to become of him, by saying—

"Betsy Shindles will secure your peace of mind, and take great care of you, never fear."

Lucy had hardly uttered this reference to her rival in Mr. Saunders' affections ere she reproached herself for having condescended to mention her; and at the same time she felt that Saunders would have reason to suppose he was not indifferent to her from the circumstance of her having made the allusion. But there was a still greater cause of regret, of which she was not aware; the said Betsy having, at that very instant, planted herself within earshot of the parties, whom she had followed down the walk, concealed by the thick and umbrageous hedge of monthly roses. Betsy Shindles had heard every syllable of the conversation, and was working up her passions to all their ungovernable violence.

"Lucy, my dear," continued Saunders, "do not mention her. I know my weakness there. But it is only a weakness. Can I approve of Betsy Shindles? Can I think of her vicious sperret, and rampaging tricks, with any satisfaction? O Lucy, Lucy, I want a wife; and it must be you, and not Betsy Shindles. Lucy, dear Lucy, dearest Lucy!"

"And are you sure you are serious, Mr. Saunders!" asked Lucy.

"Sure I am serious," rejoined he; "indeed I am. I never was more serious in all my life."

"Well," said Lucy, "and I am serious too. It is my fixed determination not to marry any man, so long as I am under the sentence of the law."

"Vell," said Saunders, "that need be no obstacle. Vell soon get your ticket, master and me."

"No, Mr. Saunders, until I am perfectly free I will never make any arrangement of the sort."

"Vell," said Saunders, "then I'll wait: that's a settled thing. You are so good, so werry nice a young 'ooman, that I'll wait at any rate."

"Yes, Mr. Saunders; you will wait, and console yourself with Betsy Shindles, or any one else that comes in your way. I am determined, Mr. Saunders; quite determined."

"Oh," said Saunders, "don't say so—dear Lucy—Betsy Shindles; I hate Betsy Shindles; I'll never speak to her again."

At this turn of the interview, when Tommy Saunders was preparing to throw himself on his knees at the feet of Lucy Cooper, after the most approved formulary, as he had seen it in action from the shilling gallery on the stage of Sadler's Wells, he was suddenly interrupted by the appearance of "his Elizabeth," who, with much ado, had maintained her equilibrium until now; but overcome at length, she rushed upon the scene, and

made at once for Lucy, whom she beat and tore with ungovernable violence, until, with Mr. Saunders' assistance, she contrived to extricate herself, and, with the children, make the best of her way to the house, terrified and bruised by the fists of Betty Shindles.

What passed between Mr. Saunders and "his Elizabeth," when Lucy had effected her escape; what altercation and reconciliation took place, and what projects for the future were arranged, need not be told at present. The amiable pair shortly afterwards left the summer-house in earnest conversation, and the last evening which Lucy spent at *Ægina* gradually melted into night.

In the failing light, whilst she was arranging her nursery, after having put the children to bed, Lucy heard some footsteps at her door; and on looking round she perceived that Mr. Saunders, accompanied by a sturdy man in a blue jacket, a yellow waistcoat, and white trousers, and belted with a black leathern girdle, from which hung a pair of handcuffs, advanced steadily towards her.

"That's the young 'ooman," said Saunders; "take her away."

The constable moved forward, and seized her by the arm; and, brandishing his heavy staff, blazoned with the armorial bearings of the Majesty of England, and the emphatic words "*Dieu et mon Droit*," he bade the terrified and fainting girl make no resistance, but come along with him without "hoppersition."

"Search her fust," said Saunders.

A rude and unmanly search was instituted; but they found nothing to their purpose about her person.

"Where are her clothes?" said the constable.

"Yes, where is her close!" said Mr. Saunders.

By this time, some of the women of the household had gathered together; and great was their triumph to see the poor girl committed to the custody of the ruffian constable. They all hated Lucy, of course. She was good-looking, decent, and well-behaved; and they felt the contrast to be exceedingly reproachful to themselves; and when the tears at length burst from her eyes, and her cheeks and lips recovered some of their natural colour, her beauty and distress drew fresh invectives from these horrid creatures.

"Here," exclaimed one of them, bringing Lucy's canvas bag forward, in which her slender wardrobe was deposited; "here is her kit: untie the strings yourself, and see what is in it." The constable proceeded to the window, and, emptying the bag of its various contents, at last produced from the very bottom a purple morocco case, containing a lady's gold watch, chain, and seals.

At the sight of these glittering objects, which the constable held up on high, full in the gaze of all the assembled household, various were the remarks, and various the effects of the display.

Poor Lucy clasped her hands together in desperate earnestness. "Good God!" she exclaimed, "I am undone."

"Come," said the constable, "it is no use making any fuss about it. You must come along with me." Lucy sobbed.

"It's no manner of use," said the constable.

One of the women brought her bonnet and shawl; and having placed them on the half-conscious Lucy, the officer of justice led her by the arm with his left hand, and with his right brandished the staff of his authority in a manner which the pale and trembling girl had no intention to gainsay; but which had a due effect upon the minds of all beholders. In this manner they set out upon their journey, the shades of evening gathering fast around them, and gradually wrapping their path in deeper obscurity, until a night of darkness, known only in tropical climates, took away from them all power of discerning anything before or around them. Three miles of open country lay before them, unenlivened by a gleam of light. Still, however, they slowly pursued their way, occupied with their own

thoughts, and rarely interrupting each other, except when a stone in the path or a hole threatened to throw them down. Lucy's consternation under the charge of robbery had hardly settled down into any definite terror; and the difficulty of her path, and her want of confidence in her companion, raised so many fresh alarms, that they acted advantageously upon her principal misfortune, by diverting her thoughts to what seemed more imminent and inevitable. But the constable's thoughts,—could she but have inspected the curious mechanism of his cranium, how greatly would she have been relieved from one class of terrors! the constable was full of the dignity of a constable's office, amazed at being no longer the prisoner; for all the New South Wales constables have been convicts. This man revolved the changes and chances of human things, and reflected upon the solemn trust now confided to his honour; this constable permitted his thoughts only to wander from the principal point to the stones and holes aforesaid, occasionally broken by the reminiscence of Mrs. Constable at home, and a certain 12s. 7d. due to the landlord of the Three Cupids for rum and tobacco. Could Lucy have known all this, great would have been her relief: but then she might have concentrated all her thoughts upon what must have given her unmitigated and almost intolerable agony.

At length, on reaching the acclivity of a steep hill, the lights of Sydney suddenly burst upon them, distant about half a mile. They reached the unfinished structure of St. Mary's, the Roman Catholic Cathedral of New South Wales; then they passed the Hyde Park Barracks, for the reception of the men employed upon the government works; St. James's Church; the Court House, whence issues all the law of New South Wales; and, after traversing a few streets of inferior description, they came at length to the Female Watch-house, at the back of the military barracks, and here, in a stone cell of six feet by three, was locked up, on a charge of robbery, Lucy Cooper, the heroine of our narrative, to await the determination of their worships on the following morning. Fatigue, hunger, and a sense of desolation weighed heavily upon this unhappy victim; she sobbed bitterly, and, ere very long, even whilst commending herself to Him who is the friend of the friendless, and a protector to all those who trust in Him, fell into a state of forgetfulness of all her troubles, from which she did not awake until the sun beamed into her cell through the narrow grating. It was nearly eleven o'clock before she was brought into the court for a hearing; and when rudely thrust into the place allotted for prisoners, there was something in her appearance which immediately secured the especial notice of the presiding magistrate, who was then somewhat disadvantageously known for his loose conversation among all ranks of women. His attention, however, was of material value in the investigation which ensued, the witnesses being duly mustered, and the charge announced for which she was now to be questioned. The finding of the watch having been set forth, the prisoner was asked what she had to say upon the subject, and Lucy, entirely bewildered by the danger of her situation, and hopeless of extricating herself from it, answered with considerable composure that she knew nothing whatever about it, had never seen the watch until it was produced from her bag, and that she was wholly innocent. The military magistrate had several young friends about him, for whose amusement he let fall sundry remarks upon Lucy's person, and the few words she had uttered, not forgetting the usual joke, on such occasions, that he saw very distinctly she was a "pretty innocent."

MARCO VISCONTI.¹

THE scene of this interesting tale, from which we are about to present our readers with one or two short extracts, is laid in the Milanese, during the disturbed period when the schism in the Church of Rome, in consequence of the existence of rival claimants for the papal chair, added to those other elements of confusion which were never absent from the turbulent republics of Italy, had reduced the bulk of the people to a most deplorable condition. Our space will not permit us to attempt even a sketch of the narrative, so as to do anything like justice to the author. He professes to be a disciple—and he is a worthy one—of the school of Manzoni: a high recommendation, but one which will at once suggest to those who are acquainted with it, the difficulty of an effective condensation of his narrative.

Marco Visconti is an historical character, possessing a large share of the excellences, and some of the vices, of the nobles of that period. He is brave, generous, and honourable, but ambitious, domineering, and self-willed; and, like most men of energetic passions, sufficiently ready to disregard the feelings and happiness of others, when chancing to stand in the way of any of his ambitious projects. In early life he had suffered a bitter disappointment in love. He had been betrothed to a lady whom he fondly loved, and who loved him with equal fondness in return; but her father desired to marry her to another. Treachery was employed to induce her to break her plight: a letter was forged in his name, renouncing his claim to her hand; and the love-tokens she had given him were stolen from his bedside while he slept, and returned to her in his name. The deceit was effectual; his inconstancy was believed; and she married her father's choice. The daughter of this lady is the heroine of the story. The whole course of Visconti's life was changed by this disappointment. After slaying the lady's treacherous father in a hostile rencounter, he enters wildly into the intrigues of politics and pleasure, for which the states of Italy afforded so much scope; and he appears before us, at the beginning of the tale, a stern, care-worn politician, with all the ingenuous freshness of youth entirely worn away.

His nephew, Ottorino Visconti, is a more amiable character. He also is brave and generous; more truly generous than his ambitious uncle, to whose interests he is ardently devoted, and whom he regards, on all occasions, with unqualified admiration. A marriage is contemplated by Marco between Ottorino and the daughter of a neighbouring noble, whose adherence he wishes to secure; but Ottorino having accidentally met with Bice, the daughter of the lady to whom Marco had been betrothed in youth, falls passionately in love with her, and seeks and obtains the consent of her parents to their union. The news of this attempted

interference with his plans is received with much displeasure by Marco, who treats his nephew very coldly in consequence. He soon becomes more actively hostile, and on more personal grounds, to the marriage. Bice, who is the very image of what her mother had been when young, accompanies her father to a great feast given by Marco. There he sees and converses with her; and the love which he had before felt for the mother returns, with increased power, in the person of the daughter. He now treats his nephew with unmitigated harshness; and employs all the means in his power, some of them not very worthy ones, to defeat his marriage.

The love of Marco for Bice becomes a madness, partaking of the terrible energy of his character. She who is the object of it remains utterly unsuspecting of the fatal secret, until, in the simplicity of her heart, she implores his interference, to save from death his nephew's faithful servant. Then the terrible truth bursts forth: he behaves with the wildest and most capricious violence, and throws her into a state of the utmost perplexity and distress. The terror excited in her mind by this scene prepares the way, naturally, for the catastrophe of the story. Marco's former love for his nephew is now changed into hatred; and he makes a singular attempt upon his life at a tournament; but an accident discovering to him there the continued attachment with which Ottorino still regards him, notwithstanding his

(1) Marco Visconti; from the Italian of Tomaso Grossi. We are indebted for the extracts here given, as well as for the engraving which accompanies them, to the new translation of the above work, lately published by Mr. Burns.

harsh coldness to him, he changes his design, and becomes much softened to him. In the meantime so many troubles thicken around them, that it is deemed best by Ottorino, and the friends of his bride, that their marriage should take place at once, and that they should leave Italy for a time. But a plot had been forming against them, of which they little dreamed, and which we cannot here undertake to unravel. The marriage ceremony takes place, and they set out on their journey, when Ottorino receives a letter, apparently from Marco, acknowledging his injustice towards him, and entreating his immediate aid in an important undertaking. This is a summons which, even on so interesting an occasion, Ottorino cannot refuse. He leaves his bride, promising, and confidently expecting, to return in a few hours. Hours pass, but he does not return; and she begins to be overwhelmed with anxiety, when a messenger arrives with a token from him, requesting her to put herself under his charge, and accompany him to a place where she will meet her husband. The whole, we need scarcely say, has been a trick. She is brought, with her female attendant, to a castle belonging to Marco, but under the charge of a villain, one of the parties to the plot we have referred to. She has been three weeks in this place daily expecting her husband, when our first extract opens.

The bride of Ottorino was at that moment reclining in a rich arm-chair; her attitude was that of languor and fatigue, and on her white hand she was resting her pale face, which gently bent over it. She wore a plain loose and flowing robe, as white as snow, and of a very fine texture, and beneath this mass of ample folds, were lost to sight those beautifully-formed limbs, which used once to fill them out so well, moving with such grace and freedom. Her long fair hair, parted on her forehead, surrounded and almost covered her face, which, from between those golden locks, shone with a cold and uniform whiteness, and was not relieved by the slightest tinge of vermillion, excepting round her lips, which still glowed with a faded hue of rose-colour.

But her eyes were the most remarkable feature in her face: those large blue eyes, which with a depth of softness and angelic innocence used to sparkle with the fire of vivacity: those eyes, which united to the modest dignity of a maiden an indescribable winning expression of kindness, of which they were themselves unconscious; those serene and tender eyes, which yet possessed a sprightly glance of tenderness, were now cast down, and sunken in her forehead, indicating a feebleness of frame, the result both of sorrow and fear.

Lauretta, seated at a small table, which stood between her and her mistress, was working at a piece of embroidery, which Bice had just laid down.

Bice, with her cheek resting on her palm, kept her face turned towards Lauretta, as if she were interested in the work; but her eye saw not, for her mind was at that moment obscured with the suspicions of secret terror.

At length she rose on her feet, and moved towards an open balcony. Her step was slow and languid. She leaned her elbows on the parapet, and stood some time gazing in silence on the scene which was before her. The setting sun, partly hidden by the top of a distant wood, shed over the broad and uniform plain between a faint and sickly light, only broken by the scattered and mournful shadows of some willows which rose here and there, from that humid soil. The dull heavy atmosphere resounded with the loud monotonous croaking of the frogs, from the fens, pools, marshes, and swamps, which covered that part of the country in its full extent; a thick grey mist began to rise by degrees, spreading a veil over the neighbouring objects, rendering those which were fading, more and more obscure,

and entirely concealing those which were more distant. At first, some of the sun's rays penetrated, with difficulty, this cold thick cloud, but by degrees these were waning and dying away, like the light in the eyes of one who is expiring, till at length the vapours having gained the ascendant, and the sun having set, all light was extinguished, and it seemed as when one closes his eyes in death.

This sunset, so different from those brilliant and gorgeous sunsets, which the unfortunate Bice was wont to contemplate among her native mountains, recalled them so painfully to her mind, that she quitted the balcony, and returned to the table on which the lamp, which Lauretta had just lighted, was burning with a faint, reddish light. She threw herself into the chair, and exclaimed, "O Lord! my torment is too great."

When the place of Bice's confinement is discovered, Marco himself, having received a most affecting letter from her mother entreating for aid, proceeds to her rescue.

Our two horsemen arrived before the walls of the Castle of Rosate when day was just beginning to dawn. Marco gave the usual signal, the drawbridge lowered, the gate was thrown open, and he rode, in company with Lupo, under the gateway; but neither there, nor in the adjoining court, was one living soul to be seen.

The porter, recognising the Lord of the Castle, was going to ring a bell, in order to announce his arrival, but Marco, making a sign to him not to do so, immediately enquired for Pelagrua.

"He went out last night," replied the gate-keeper, "and he has not returned since. A courier from Milan," added he, "has even now arrived with a letter for him, very pressing it would appear."

"Where is this courier?"

"Here, in my apartment, blaspheming like an Arian at the delay."

"Send him instantly to me, in the red hall. If Pelagrua return in the meanwhile, let him enter, but let no one go forth without orders from me. Do you understand?"

"Not even the Castellan on his return?"

"No one."

"I will not deviate the least from your commands."

Marco, having crossed a large court, went into the hall he had indicated, to await the courier. A few minutes after, the man appeared; and Marco, going towards him, seized him by one arm, saying, "Give me that letter."

The fellow, who by the faint light which penetrated the room at that hour, had not, at first, recognised who it was that spoke to him, and treated him thus, tried to free his arm and to defend himself, struggling, and replied, "My orders are to deliver it into no one's hands but those of the Castellan."

Marco shook him with still greater violence, dragged him to a window, and replied, in a terrible voice, "Give me the letter."

By the light which came in through the casement, the poor wretch saw the face of the famous Captain, and replied, turning pale, and trembling, "Pardon me, for I did not know you. . . In truth, my master. . . but you . . . you are the master, here, here is the letter;" and drawing it from his vest, he delivered it to him.

Marco opened the letter, ran his eyes over it rapidly; but the name of the writer was not signed; he read the contents, and they were as follows:—

"MISERABLE VILLAIN,

"By this time you should have despatched the business, as we agreed the other day. The devil take you, for having delayed so long! What plan can you follow, now that Marco is in Milan? Yes, he has arrived this very night, and to-morrow he may fall upon you. Be quick, cursed knave! Be quick! Let this letter set you on fire! Destroy every trace of the deed, efface

every indication, foresee, repair. . . . Remember, scoundrel, that your life is in jeopardy."

The Visconte shuddered with horror; a cold thrill passed over him; his hair bristled: and, striking the courier on the face with his fist, he exclaimed, "Who gave you this letter?"

This question was asked in a tone which left no room for evasion. The man, thus interrogated, laying aside all excuse, replied at once, "Lodrisio gave it to me."

"If you wish to leave this place alive," said Marco, "tell me what kind of transactions this man has with my Castellan."

But the other, half stupified with terror, looked in the face of the questioner, with his eyes staring, but making no reply.

"Do you know," continued Marco, raising his voice to a louder pitch, "do you know to what affairs the writing you have brought relates?"

The messenger comprehended nothing, and still remained silent.

"Do you know it? miscreant, poltroon!" cried the Lord of the Castle, furiously, shaking him roughly by the shoulders.

"Mercy!" replied the man, as if aroused, and terrified. "I know nothing; I have only obeyed my master, who said to me 'Take that letter to Pelagrua,' and I have brought it. . . . On the faith of a Christian man, I swear to you, that I know nothing else; you may kill me on the spot, but I have nothing more to say."

"We will see about it afterwards; meanwhile, beware if you set foot outside this Castle."

Saying this, Marco hurried away to the quarters of the Castellan. He knocked; and a maid-servant having opened the door to him, he told her he wished to speak instantly to Pelagrua's wife.

The maid without knowing him, ushered him into a room, where the Castellan's wife came to him in a few minutes, just as she was, with a child in her arms.

"Where is your husband?" enquired Visconti of her, in a stern voice, the moment she appeared.

The poor woman, horrified at finding herself suddenly in the presence of her Lord, and at being questioned in such a manner, started back a few paces, pressing her little child to her bosom, and she answered, hesitating, "He went out last night, and I know not whither he has gone."

"Read this letter," said Marco, presenting Lodrisio's writing to her, "and explain to me instantly the mystery which lies underneath it."

The poor woman looked timidly over the fatal document; then falling on her knees before him who had given it to her, she said with a torrent of tears, "Oh! have mercy on my unfortunate husband."

"Speak; what do these words signify?" interrupted Marco.

"Yes; I will tell all, all I know."

"Rise then, and speak."

The poor frightened woman rose to her feet, and began, trembling and sobbing: "I told him so many times, I entreated, I supplicated; the Lord is my witness."

"I ask about Bice!" interrupted Marco again, almost roaring the words. "Tell me what has become of her: is she living?"

"She is living, and has been here more than a month," replied the woman.

"Is she alive? Is she here?" repeated the Visconte, breathing freely.

"Yes," continued the Castellan's wife. "Yesterday, before it grew dark, I saw her attendant at a window, whence she usually makes me understand by signs, all that happens, and all her mistress requires. She signified to me that she was tranquil; the poor girl has been ill for some time past."

"Be quick! take me to her, for I would see her instantly; on the spot, I tell you!"

The woman placed her child in the arms of the maid-

servant, and said to Marco, "Come then with me." They went down a small staircase, turned to the left under a portico, whence they emerged into a court, which they crossed; this led into a long, dark passage; and, after many windings and turnings, they came out, at length, into another solitary little court. When they reached this, the Castellan's wife said, raising her hand towards some windows above, which were in a wall opposite to them, "She is in there, together with a faithful young waiting-woman, who was brought here with her."

"Let us go to her immediately," said Marco; and he already placed his foot on the first stair of a staircase which led up to it; but then he paused, stopped a moment, thinking, and added, "No, do you go up alone; I will remain here; for the sight of a man . . . for the sight of me . . . Encourage her, tell her to be of good cheer, for she will soon see her mother . . . for she shall return to her house . . . Tell her that I . . . No, no, do not speak to her of me, do not mention my name; tell her all that can be done for her good, promise her all that she asks for."

"But have you really come to liberate her?" enquired the Castellan's wife, timidly, "for I have not the heart to betray the poor creature . . ."

"May I die excommunicated, may my body never repose in consecrated ground, if I do not tell you the truth!"

"The Lord bless you!" exclaimed the woman, clasping her hands.

"Then," said Visconti, "to save time, while you go up to bring her the first consolation, I will go and send off a messenger to her parents, that they may come directly."

So saying, he turned back; went over the ground he had just passed, reached the principal court, found Lupo, ordered him to get to horse immediately, and hasten to Milan with the greatest speed to which he could put the best courser in the stables, in order to inform the Count and Countess de Balzo, that their daughter was found, and pray them to come quickly to Rosate, and see her, and conduct her back to her home themselves.

While Marco was occupied in this, the wife of Pelagrua went up the stairs, came out into a gallery, and approaching the door which led into Bice's apartments, she knocked gently, allowing her voice to be heard at the same time. No one replied. She put her ear to the key-hole, and heard not the slightest word or breath; she knocked louder, enquired for Lauretta, enquired for Bice; no answer. She went to a large window, secured by a grating, which looked into the second chamber, she tapped against the glass with her finger, she called within, first to the maid, then to her mistress; no one stirred; she went back to the door, knocked, shook, and beat against it, but all in vain.

The poor woman felt a death-like chill come over her. What could have happened to the captives? She thought on Lodrisio's letter, and shuddered; she thought on Marco, and would gladly have fallen dead at the moment, or have been buried a thousand fathoms under ground, that she might not have to appear before him with such tidings. What was she to do, then? Hide herself? Fly? But whither? how? And Visconti, if he did not see her immediately, would suspect her also; and if her husband came back in the meanwhile? . . . She turned her eyes towards heaven, and said, "Lord, I am in Thy hands;" then with the resignation of a pious heart, she returned towards the apartments which she knew Marco inhabited, when he was at the castle.

She was just entering the first hall, when she saw him appear under the wing of a portico, at the moment when he was coming back, after he had sent Lupo to Milan. He perceived her instantly, quickened his pace to rejoin her, and as soon as he was near enough to be heard by her without shouting, he anxiously enquired, "Well, have you comforted her? Have you told her that her mother will be here in a few hours? How is she? What is she doing?"

Instead of answering, the woman covered her face with her two hands, and burst into tears.

"Oh God!" exclaimed Marco, suddenly changing his expression of calm enquiry into one of horror and desperation; "what has happened to her? . . . speak, tell me instantly; . . . tell me as you value your life;" and while he said this, he grasped her by the hand.

"She is not to be found," replied the Castellan's wife, in a voice broken and suffocated by sobs; "she is no longer in her apartments."

"Vile crew! Ye are all infamous traitors," Marco began to shout, like one possessed. "But I thank Heaven, ye are in my custody; murderers, yes, ye are in my power, and blood shall be atoned by blood." Meanwhile he struck his forehead violently with one hand, and squeezed that of the poor woman with the other; she believing her last moments had arrived, raised her eyes towards Heaven, with a look of such touching supplication, that the hardest heart must have been moved to pity.

Visconti was touched; he dropped the hand of Pelagrus's wife, and fixed his eyes on her face; while she said, still weeping, and lifting up to Heaven that hand which had become quite bruised from the strong compression of his grasp: "God is my witness—I am innocent!"

"And I believe you," said Marco. "Reassure yourself, good woman; have no more fear of me." But seeing that she ceased not from weeping, he again resumed his more peremptory and impatient manner: "Rise then, I tell you; rise, and tell me all you know."

The search proceeds; and the following is the account of its success.

Suddenly, many voices at once called out, from the side opposite that where Marco was standing, "She is here! She is here! She is found, she is found!" All the others throwing down their tools, answered with another shout of joy, and ran precipitately to the place. The burning of so many flaring torches cast a flickering light over the long dark vaults of the intricate labyrinth.

"Is she alive?" demanded Marco, in the midst of the crowd which pressed forward.

"She is dead!" replied a voice from the spot to which all were directed.

A group of people now emerged; and in the centre of it two squires were seen, tenderly bearing the Count's daughter in their arms. Her face was pale, her eyes were closed, and her head was hanging back, over one shoulder. Lauretta followed, with hair dishevelled, and supporting with her hands the forehead of Bice, which she ceased not to kiss and water with her tears.¹

Marco, whose heart resounded with the first accents of hope and of death, could not persuade himself that the spectacle was real, when he saw this mournful procession slowly advancing, and by the light of the numerous torches, gradually distinguished the beautiful form, the pallid countenance of the young girl as she was carried. He still hoped that he was labouring under the fanciful delusion of a dream. To convince himself, he stretched out his hand as if stupified; now feeling the walls, now pressing the arms and shoulders of those who passed by him; at length, making his way through the crowd, which immediately opened to let him pass, he approached Bice, and laid his hand on her brow. The cold feel of what he touched recovered him from the stupor and benumbed sensation that had come upon him. An increasing tremour crept over all his limbs; the blood rushed violently to his face, swelling the veins of his forehead, on which the large drops of perspiration stood.

She was not dead, however, although beyond hope of recovery. We conclude with the account of her death.

Towards evening, the invalid, who felt herself growing

worse and worse, asked for a confessor. She remained for some time with an old Benedictine, who was summoned to her assistance, after which she desired to see her parents.

"Hark! my daughter," said her father, "Ottorino is not yet come, but we expect him before day-break."

She became agitated, and replied, "Ottorino, my husband! my dear husband! . . . If the Lord would have vouchsafed me this boon, . . . if I could but have seen him before I die!"

"Sacrifice your desire to Him," said the pious monk.

"Offer your husband to Him who gave him to you, and adore that eternal counsel of justice and mercy which accepts this sacrifice of your heart in expiation of your sins, and as a remedy to save your soul."

Poor Bice joined her hands, and raised her eyes to Heaven, in token of a heartfelt assent, but a sad resignation. Ermelinda exclaimed, laying one hand on her head, "Oh, my child!—my beloved child! am I then to lose you! What will remain for me in this world without you, for you were my comfort, my only consolation!"

Her daughter hung down her head and wept; after a minute she replied, sobbing:—

"Consolation, did you say! And what consolation have you ever derived from this miserable being, whose waywardness has scattered so many thorns over your path? Oh! dearest mother, I do not ask for your pardon, because I know that you have already forgiven all; and you, too, my father, you have also forgiven me, have you not?"

Ermelinda and the Count were so choked with tears, that they could not utter a word. They were all silent for some time.

During this interval Lauretta, after bringing some kind of restorative beverage to the patient, had thrown herself into a chair beside the bed, and, overcome by exertion and fatigue, she gradually bent down her head over the bed-clothes, and fell asleep. Bice, who perceived this, without removing the hand which was resting on her shoulder, motioned with the other to those standing round her, that they should be silent, and not make any noise. She, herself, as she now and then exchanged a few words with the Confessor, lowered her voice, which was of itself almost gone; and the pious monk, touched by this tender solicitude, followed her example. At first, Bice had perpetually required the sheets or the pillows to be smoothed; one minute wishing to be lifted up, another to be turned on her side—as sick persons are wont to do when they can find no repose on any side,—now, however, she constrained herself to lie still in the position she was in, hardly daring to draw her breath, for fear of disturbing her beloved attendant, on whose face she fixed her eyes with an expression of tender compassion.

When Lauretta awoke the day was beginning to dawn, and the slender flame of the lamp which was placed by the bedside, was growing dim, before the first gleams which came in through the opposite casement.

On awaking, she stared round her with astonishment, not knowing at the first moment where she was, till she encountered the eyes of Bice, who smiled kindly at her, saying,—“You are here with me—you are with your dear Bice.” Lauretta looked down, grieved and ashamed because the frailty of the body should have been able to make her forget her cherished mistress for one instant, in such an extremity. But Bice, who divined the thought of her affectionate companion, knew how to comfort her quickly, by imposing on her every little service she needed, and by graciously receiving all the tender offices which Lauretta performed with redoubled zeal.

An hour after sunrise Bice said she felt weary, and that she wished to repose; she lay down, closed her eyes, and slept awhile; but her slumbers were broken and uneasy. All at once she shook herself as if startled—raised her head from the pillows, and fell back instantly:

(1) See engraving, page 201.

a cold perspiration came upon her face—her breathing ceased—her pulse fluttered. There was a general fear, and all thought she was gone. This was, however, a mere transient oppression on the heart—a fainting fit from which she soon recovered: and on seeing those she loved standing round her in despair, she said:—

“Why are you weeping? I am still with you.”

They all gathered round her, and after she had regained her breath, she turned to her mother, and continued:—“Still I feel that life is passing from me, and that my hour is near. Now then be calm, and receive my last words—the last wishes of my heart.”

She took a ring from her finger, and gave it to Ermelinda, saying:—“It was given me by Ottorino, in your presence—the symbol of a knot which was decreed to be of short duration in this world, but which will be renewed in Paradise If it is granted to you to see him again, give it into his hands, that he may one day show it to me and also tell him, that in this solemn hour, while I tremble at the thought that I shall so soon be alone in the hands of the Lord, I entreated him to do me one favor, for the love he has borne me,—for his own, for my eternal salvation,—I entreat him not to call any one to account for what I have suffered in this world.”

She leaned back for a few minutes, then indicating her attendant, who sat at the foot of the bed, with a slight nod, she added:—“I need not recommend her to you; you have ever had her under your own eye, and in your heart; but after all that she has endured for my sake, she would have been to me as a sister, so let her be as a daughter to you She will be more obedient to you than this one, whom you have loved too well.” And turning to Lauretta, she said:—“Will you promise me?”

“Oh! yes,” replied the girl, “I will never forsake her while I live: I will always remain with her. I will be entirely hers.”

Bice was silent after this, as she felt her strength failing her. She remained a long time as if in a stupor; at last, slowly opening her eyes, she turned them towards the window, through which the sun's rays were shining in, murmuring to herself, “Oh, my dear mountains!”

Her mother drew closer to her, and Bice, with difficulty, raising her voice, which was becoming every instant more feeble and tremulous, uttered these words, in broken sentences:—“There, in the holy Church-yard of Limonta, in that little Chapel . . . where my poor brother lies . . . where we have prayed together . . . and wept together so often . . . Let me rest by his side . . . You will go there alone to pray and weep for us both . . . I shall have the best wishes of those good people . . . Salute them all for me . . . and poor Marta, who has a son also in that holy place”

Her mother, more by signs than by words, for her utterance was impeded by tears, assured her that every wish should be fulfilled. Then the Monk, perceiving that the suffering girl had but a few moments to live, put on his stole, gave her his blessing, and began to recite the prayers for the dying, over her. All knelt round the bed and responded, sobbing. Bice, also, sometimes with her voice, sometimes with a slow and fervent inclination of her head, showed that she was taking part in the aspirations expressed in those holy words. Her calm and placid countenance gave testimony to the peace of that devout spirit, which, in the midst of the pangs of death, tasted beforehand the bliss of another life.

But suddenly, the silent stillness which prevailed in that room was broken by the noise of hurried footsteps ascending the staircase. All eyes were turned to the door. The Castellan's wife, getting up, went to meet the two individuals who were approaching, and spoke a few words to them. One of the two paused on the threshold, but the other, rushing into the room, threw himself on his knees, at the foot of the bed, pressed and

kissed the bedclothes, and inundated them with a flood of tears.

Ermelinda, the Count, and Lauretta, immediately recognised Ottorino; the others guessed who it was.

The young man had just arrived from the castle of Binasco, in company with him in whose name he had been detained prisoner, and who had gone in person to set him at liberty.

The dying girl, disturbed by this sudden noise, languidly opened her eyes, without being able to distinguish the new comer, who was concealed from her view by those standing about, and enquired what it was.

“Praised be God!” exclaimed the Confessor, with emotion. “You accepted the bitter trial from Him; you accepted it with resignation and gratitude; receive, with the same mind, the blessing He now grants you.”

“What? Ottorino!” said Bice, in the agonies of death, making a last effort to pronounce his name.

“Yes, your husband,” repeated the Priest; and, going to the young Knight, he made him rise from his knees, and brought him to her. Bice fixed on him her two eyes, which sparkled with a ray on the point of being extinguished, stretching out her hand, over which he bent his face, agitated, but no longer tearful. After a moment, the expiring girl drew her hand gently back, and showing it to her husband, she at the same time pointed to her mother, and tried to say something, without being able to articulate the words distinctly. The Monk guessed her desire, and turned to Ottorino—

“She wishes to tell you of the wedding ring she has entrusted to her mother, and which you will receive from her.” A smile brightened the countenance of Bice, signifying that he was right. Then Ermelinda quickly drew the ring from her finger, and gave it to Ottorino, who kissed it, and said, “It shall descend with me into the grave.”

“Your wife has also bequeathed a petition to you,” continued the priest; “she prays you to lay aside all thoughts of revenge, if ever you entertained any in your heart. ‘Vengeance belongeth to the Lord.’”

Bice kept her eyes anxiously fixed on the countenance of Ottorino, who stood with his head hung down, and made no answer; but the confessor took the irresolute young man by the arm. “Well,” he asked, in a grave and severe tone, “do you promise? Do you promise this to your wife, who, at the last step from life into death, from time into eternity, asks it of you as a favour, imposes it upon you as a duty, in the name of that God, before Whom she is about to appear?”

“Yes, I promise it,” replied Ottorino, giving way to a burst of tears. Bice thanked him, with a look full of angelic mildness, which plainly showed that she had nothing more to wish for in this world.

After this, the Priest signed to the bystanders, who knelt down again, and he went on with the prayers that had been interrupted. In this moment of suspense and universal silence, she who lay at the point of death seemed the only one who was aware of the suppressed sound of sobs, coming from the next room; and she slowly raised her eyes to her mother's face, as if enquiring who it was; but Ermelinda hid her face in her hands, for she could not bring herself to pronounce that name; the Priest, however, bending over Bice, said to her, in a low voice, “Pray for him, pray especially for him; he is Marco Visconti.”

She gently inclined her head in token that she did so; and they never saw her raise it. She had breathed her last.

One of the most pleasing points in this work, is the graphic vigour of the delineation of the character of the Italian peasantry; a character compounded of naïve simplicity and acuteness—easily persuaded, and unquestioning on all points relating to religious belief, but keen and penetrating in the perception of character.

There are also scenes in the book of much pathos. The passages we have quoted will recall to the reader's recollection the catastrophe of Kenilworth; and there is another, the death of the fisherman's son, which is not unworthy of being placed by the side of the similar scene in the *Antiquary*.

POPULAR YEAR BOOK.

January 19.—On this day, 1247, ROBIN HOOD is supposed to have died. Albeit a robber and an outlaw, his popularity was unbounded among our English ancestors. The old ballads, still extant, which celebrate his feats of prowess and generosity, are very numerous; and his remembrance was kept alive for centuries, not only by those traditional lays, but also by those dramatic representations which formerly enhanced the joys of May in every town and village of "merrie England." The true history of this worthy, for such, on the whole, he seems to have been, notwithstanding the questionable character of his occupations, is involved in deep obscurity. One of the versions of his biography is as follows:—His real name was Fitz-Ooth. His grandfather, Ralph Fitz-Ooth, Earl of Kyme, whose name appears in the roll of Battle Abbey, came over to England with William Rufus, and was married to a daughter of Gilbert de Gient, Earl of Lincoln. His father, William Fitz-Ooth, was a ward of Robert, Earl of Oxford, who, by the king's order, gave him his niece in marriage, the third daughter of Lady Roisia de Vere, Countess of Essex. Having dissipated his fortune, Robin Ooth, or Hood, joined a band of depredators, and, as their chief, levied heavy contributions for his support on all such as he deemed rich enough to bear the loss. He was celebrated for his courage, skill in archery, and kindness to the poor, who often shared with him in the plunder he had taken.

"It is said," writes Baker, in his "*Chronicles*," "that he was of noble blood; at least made noble, no less than an earl, for deserving services; but having wasted his estate in riotous courses, very penury forced him to this course."

Some historians have affirmed Robin Hood was only a name assumed by the Earl of Huntingdon, who was disgraced and banished the Court by Richard I. at his accession. The old ballads, however, say nothing of this, and the only authority for it appears to be the outlaw's epitaph (cited below), the authenticity of which has been greatly doubted, although Ritson, the most fastidious of antiquaries, seems inclined to admit its genuineness.

Robin is reported to have lived till 1247; but Baker, in his "*Chronology*," supposes that he died in the reign of Richard I. "The king," he says, "set forth a proclamation to have him apprehended. It happened he fell sick at a certain nunnery in Yorkshire, called Kirklees, and desiring to be let blood, was betrayed, and made to bleed to death." According to some traditions, the robber was reconciled to his sovereign, feasted him in the "gay green wood," and subsequently gained all his lands and honours. Among such conflicting statements, it is impossible to arrive at any certain conclusion in reference to the rank, &c., of this popular personage. Two points, however, respecting him are clearly ascertained, *i. e.* the *period* and the *scene* of his exploits. "In this time," says

Stow, in allusion to the year 1190, "were many robbers and outlaws; among the which Robin Hood and Little John, renowned thieves, continued in woods despoiling and plundering the goods of the rich; they killed none but such as would invade them, or by resistance for their own defence. The said Robert entertained an hundred tall men and good archers with such spoils and thefts as he got, upon whom four hundred (were they ever so strong) durst not give the onset. He suffered no woman to be oppressed, violated, or otherwise molested; poor men's goods he spared, abundantly relieving them with that which by theft he got from abbeyes, and the houses of rich earls: whom Major (the historian) blameth for his rapine and theft; but of all thieves he affirmeth him to be the prince, and the most gentle thief."

The principal scene of Robin's exploits was "merry Sherwood." "The reliques of the old forest," says Washington Irving, "are few and scattered; but as to the bold outlaw who once held a kind of freebooting sway over it, there is scarce a hill or dale, a cliff or cavern, a well or fountain, in this part of the country, which is not connected with his memory." A few miles distant from Newstead Abbey, and at no great distance from the oak of Ravenshead, one of the last survivors of old Sherwood, is a small cave which goes by the name of Robin Hood's stable. It is in the breast of a hill scooped out of brown freestone, with rude attempts at columns and arches. Within are two niches, which served, it is said, as stalls for the outlaw's horses. To this retreat he retired when hotly pursued by the law; for the place was a secret even from his band. The cave is overshadowed by an oak and elder, and is hardly discoverable even at the present day; but when the country was overrun with forest, it must have been completely concealed. A niche in one of a chain of rocky cliffs called Kirkby crags, is named Robin Hood's chair. It commands a wide prospect over the valley of Newstead, and here the outlaw is said to have taken his seat, and kept a look out on the roads below, watching for merchants or nobles, and other wealthy travellers, upon whom to pounce down, like an eagle from his eyrie. An account of the many valorous and courtly deeds of Robin Hood would occupy far more space than we can spare even for so gentle a robber. Of Friar Tuck, Maid Marian, and Little John, the outlaw's favourite companions, we shall probably make mention hereafter. The story of Allan-a-dale, another of Robin's celebrated followers, has been told in a modern ballad, which we here transcribe:

The dew-drops lay like diamonds sheen,
And the lark piped shrill with joy,
When Robbin met in the forest green
A tall and handsome boy:
His face it was with weeping wan,
And a tearful tale he said—
How the girl he loved with a vile old man
That morn would be forced to wed.

For her father was a griping knave,
And the baron, her suitor old,
A costly price for the lady gave—
A store of rich gems and gold:
And in Newstead Abbey, the youth averred,
Would the cruel deed be done,
By the wily Bishop of Hereford,
Or the Abbot, his sister's son.

Then Robin took a tuneful lyre,
And a brave disguise put on,
(For fiercely glowed the outlaw's ire.)
And called to his crony John.
"Follow," he cried, "with my merry men all
Who revel in green wood gay,
For a pleasant feat must be done and shall,
By you and your chief to-day."

Then hastened he to the holy place,
Where the bridal train had gone,
And sweetly smiled in the lady's face,
And wakened his harp's sweet tone:
Full sternly the baron, that vile old man,
Did scowl on the stranger bold—
The Prelate he muttered the Church's ban,
The friars, their beads they told.

But Robin laughed out loud and long,
Aye loud and loud laughed he,
Then his silver call the archer rung,
And his troop hurried in with glee;
And he took from the bishop, with scoff and jest,
His mitre and staff of gold,
And stout little John in a vestment drest,
And bade him the mass-book hold.

Thus Alice was wedded to Allan-a-dale,
And many long years lived they
With Robin the outlaw,—so runs the tale—
And revelled in green-wood gay:
And her father he stormed, the miserly knave,
For the baron, her suitor old,
His wealth to the Abbey of Newstead gave,
A store of rich gems and gold.

J. F. RUSSELL.

At Kirklees, in Yorkshire, formerly a Benedictine nunnery, is a grave-stone, near the park, under which, according to tradition, Robin Hood lies buried. There are the remains of an inscription upon it, which, however, is quite illegible. Mr. Ralph Thoresby has preserved a copy of the epitaph, which, in modern phraseology, runs thus:—

"Here, underneath this little stone,
Lies Robin, Earl of Huntingdon;
No archer was as he so good,
And people called him Robin Hood;
Such outlaws as he and his men
Will England never see again."

January 20.—S. Agnes' Eve.

"They told her how, upon S. Agnes' Eve,
Young virgins might have visions of delight,
And soft adoring from their loves receive,
Upon the honeyed middle of the night,
If ceremonies due they did aright;
As supperless to bed they must retire,
And couch supine, their beauties lily white;
Nor look behind, nor sideways, but require
Of Heaven, with upward eyes, for all that they desire."

KEATES.

The above verse of a very beautiful poem alludes to the many kinds of divination practised on this day by virgins to discover their future husbands. Burton, in his "Anatomie of Melancholy," speaks of maids fasting, on S. Agnes' Eve, with this object; and the reward of their abstinence is thus alluded to by Ben Jonson:—

"And on sweet S. Agnes' night,
Please you with the promised sight,
Some of husbands, some of lovers,
Which an empty dream discovers."

Old Aubrey directs that, "Upon S. Agnes' night, you take a row of pins, and pull out every one,

one after another, saying a Paternoster, sticking a pin in your sleeve, and you will dream of him or her you shall marry."

January 21.—S. Agnes' Day.

S. Agnes was a Roman virgin and martyr, who suffered in the tenth persecution, under the Emperor Diocletian, 306. About eight days after her martyrdom, her parents, going to lament and pray at her tomb, beheld a vision of angels, among whom was their daughter, and a lamb standing by her as white as snow; on which account it is that she is usually figured with a lamb by her side. She has always been esteemed a special patroness of purity.

The "Popish Kingdom" contains the following account of the observance of this festival at Rome:—

"In Saint Agnes' Church, upon this day, while Mass they sing,
Two lambs as white as snow the nuns do yearly use to bring;
And, when the Agnus chanted is, upon the altar high,
(For in this thing there hidden is a solemn mystery)
They offer them. The servants of the Pope, when this is done,
Do put them into pasture good till shearing time do come;
Then other wool they mingle with these holy fleeces twain,
Whereof, being spun and dressed, are made the palls of passing gain."

These palls, so made, consist of white cloth of the finest texture. They are duly consecrated, and sent by the Pope to newly-appointed archbishops. "The Bishops of Rome," says Mr. Palmer, "gradually acquired authority over the Metropolitans of the West by conferring on them the *pall* (or *pallium*), which was an ornament originally given to the patriarchs of the Roman Emperors, and which, from the sixth century, the patriarchs of Rome bestowed on those bishops whom they constituted their vicars. "This honour became an object of extreme desire to the Western Metropolitans and Bishops; and, from the middle of the eighth century, the Metropolitans generally began to receive it. But they were obliged to solicit it earnestly, and at length to go to Rome for the purpose; and, in fine, about the end of the eleventh century, it was represented by the Popes as essential to the discharge of the duties of Metropolitans; and, this point being gained, the Metropolitans were at last compelled to take oaths of obedience to the Pope before they could obtain their palls." So expensive were these ensigns of dignity (or subjection) that an Archbishop of Canterbury has paid 5,000 florins for the privilege of wearing one. The pall was originally only a stole wound round the neck, with the ends hanging down behind and before. Mr. Hart, in his "Ecclesiastical Records," calls it "a narrow vestment, passing over the shoulders, and hanging down before, with crosses worked upon it."

Stopford, in his "Pagano Papismus," 1678, describes the ancient ceremony of the *Blessing of Sheep*, on S. Agnes'-day. The sheep, he relates, were brought into the church, and the priest, having blessed some salt and water, read, in one corner, this gospel, "To us a child is born," &c., with the whole office, a farthing being laid upon the book and taken up again; in the second corner he read this gospel, "Ye men of Galilee," &c., with the whole office, a farthing being laid upon the book, as before; in the third corner he read this gospel, "I am the good Shepherd," &c., with the whole office, as before; and in the fourth corner he read this gospel, "In these days," &c.,

with the whole office, as before. After that, he sprinkled all the sheep with holy water, saying, "Let the blessing of GOD, the FATHER ALMIGHTY, descend, and remain upon you, in the Name of the FATHER, and of the SON, and of the HOLY GHOST. Amen." Then he signed all the sheep with the sign of the cross, repeated thrice some Latin verses, with the Paternoster and Ave Marias, sung the Mass of the HOLY GHOST, and, at the conclusion, an offering of fourpence was for himself, and another of three-pence was for the poor.

Poetry.

[In Original Poetry, the Name, real or assumed, of the Author, is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

LAY OF THE MAIDEN.

[S. M.]

My heart is light, my fancy free,
My morn of womanhood,
Fresh as the wind that sweeps the sea
Is chainless and unwooded;
The thoughts my bosom's realm that fill
Are vassals only of my will.

My soul flings wide her hundred gates,
Wide as their span can reach,
For universal beauty waits
To enter in, through each;
The mighty tome of earth and skies,
I ponder with unwavering eyes.

The hush of woods, the hum of brooks,
The myriad shapes of art,
The boundless treasury of books,
The voice of friends, impart
A glory and a bliss to me,
Perfect in pure tranquillity.

And all serene and holy loves
Are tenants of my breast,
Separate yet close, like brooding doves,
Each on her own dear nest;
Most sweet and precious are the things
That grow beneath their folded wings.

If Sorrow's blasting wind profanes
The garden of my bliss,
My desolated spirit gains
Instruction even from this;
As from Bethesda's troubled wave
The Angel rose to heal and save.

Or if some bright deluding dream
My peace of mind betray,
As glaciers in the sunlight gleam,
Only to melt away;
If rainbow hopes that shine and die,
Give place to pale Reality;

If longings wild and vain oppress
My scarce resisting will,
Till earth seems one wide wilderness,
And love itself grows chill
— These are a sickness of the heart,
Health will return, and these depart.

The circle of my home's calm shade
Embraces all I crave;
Life seems a sheltered green arcade,
And, at its end, a grave,
Where beckoning Faith with upward eyes,
Stands, just descended from the skies!

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have thought nothing of my own, but the string that ties them."—*Montaigne*.

FENELON, Archbishop of Cambray, was asked one day by an intimate friend, if he could communicate to him the secret of being always easy. "Yes," replied the good man, "I can teach you my secret with great facility. It consists in nothing more than making a right use of your eyes." His friend begged him to explain himself. "Most willingly," replied the bishop. "In whatever state I am, I first of all look up to heaven, and I remember my principal business here is how to get there. I then look down upon the earth, and call to mind how small a portion I shall occupy in it when I come to be interred; I then look abroad into the world, and observe what multitudes there are, who, in many respects, are more unhappy than myself. Thus I learn where true happiness is placed; where all our cares must end; and I then see how very little reason I have to complain."

FRIENDSHIP hath the skill and observation of the best physician, the diligence and vigilance of the best nurse, and the tenderness and patience of the best mother.—*Lord Clarendon*.

WHEN you are disposed to be vain of your mental acquirements, look up to those who are more accomplished than yourself, that you may be fired with emulation; but when you feel dissatisfied with your circumstances, look down on those beneath you, that you may learn contentment.—*Dr. Moore*.

A RESOLUTION which costs us much, should be realized the moment it is formed. The heart may not have strength for a second effort.—*Anonymous*.

THERE is no such thing as forgetting possible to the mind; a thousand accidents may, and will, interpose a veil between our present consciousness, and the secret inscription on the mind; but, alike, whether veiled or unveiled, the inscription remains for ever.—*Coleridge*.

It is a mean device to seek the affection of another by vilifying his friends, and seeking to alienate him from them. It is generally as unsuccessful as it is mean. If we disbelieve the accuser, and detect the artifice, it can only, as it ought, inspire disgust. If we believe him, we find small prepossession towards one who has dissipated a cherished illusion.—*Anon*.

OUR friendships hurry to short and poor conclusions, because we have made them a texture of wine and dreams, instead of the tough fibre of the human heart. The laws of friendship are great, austere, and eternal, of one web with the laws of morals and of nature.—*Goethe*.

CHIVALRY is to modern, what the heroic was to ancient times; all the noble recollections of the nations of Europe are attached to it. At all the great periods of history, men have embraced some sort of enthusiastic sentiment, as a universal principle of action. Chivalry consisted in the defence of the weak; in the loyalty of valour; in the contempt of deceit; in that Christian charity which endeavoured to introduce humanity even in war: in short, in all those sentiments which substitute the reverence of honour for the ferocious spirit of arms.—*Mad. de Staël*.

THE MAIDEN AUNT.

MISS MARGARET FORDE, the lady from whose journal we now propose to offer a few selections to the public, died in the year 18—, aged seventy-one. She was one of a class, which, fortunately for mankind, is neither small nor rare. She was a Maiden Aunt, and she possessed that cheerful unselfishness, that indefatigable activity in the service of others, those warm, ready, and expansive affections, which we are enabled, by happy experience, to pronounce the appropriate characteristics of her genus. She was the eldest of eight children, of whom six married, and multiplied, and were scattered over the face of the earth, while Margaret, and Owen the youngest brother, remained in single blessedness. Of him we have little to say: he graduated at Cambridge, travelled for a few years, to complete his education, as the phrase has it, and then returned, to live as fellow of his college, assembling around him multitudes of minute comforts, studying his own peculiarities with a view to their scientific gratification, carefully guarding himself from all possibility of annoyance,—in short, behaving to himself exactly as a devoted wife might behave to an invalid husband, in whose happiness her own consists, and whose every gesture she watches with

the tremulous anxiety of deep affection. Shall we be forgiven for insinuating that Owen formed no unfair specimen of another class of responsible beings, usually known by the name of Old Bachelors. While he was thus drawling and fidgetting through existence, knowing no harder trial of patience than the occurrence of a false quantity either in his verses or his punch, no heavier misfortune than the breaking of a watch glass, or the overboiling of an egg, his sister Margaret was *living* in the full sense of the word,—living more in one hour than he lived in a twelvemonth,—doing, suffering, and sympathizing,—mourning with those who mourned, and rejoicing with those who rejoiced. In many a house, to many a heart, her face was as sunshine, and her step as music; and, if some human faults or harmless foibles occasionally provoked a frown, or compelled a smile, there were few who did not feel that, in her, the ridiculous was never far separated from the sublime—the sublime of charity and goodness. During the whole of a long and active life, passed among brothers and sisters, nephews and nieces, friends and acquaintance, Aunt Peggy amused herself by the feminine occupation of keeping a journal; and as, in addition to her other virtues, the good lady was a bit of a bluestocking, she

not unfrequently attempted to work up the incidents she was recording with something of artistic skill, and thus to present a continuous narrative, instead of a pile of fragmentary notes. That, among the fortunes of so large a family as we have described, she found many materials for her pen, the reader will have no difficulty in imagining, and we shall proceed, without further preface, to lay before him such parts of her lucubrations as have appeared to us to possess some degree of general interest. The character of the writer will be better developed by herself, than by any description we could hope to give; and we shall add nothing to her words, except such particulars concerning the various members of her family, as may seem necessary to render her story intelligible.

THE ALCESTE.

[EMMA, the youngest sister of Margaret Forde, married James Ferrars, a captain in the navy, and was left a widow, with two children,—a son, who followed his father's profession, and a daughter, who was the god-child and namesake of her aunt Margaret. Mrs. Ferrars resided near a large sea-port town on the southern coast, which we shall call Wearmouth.]

July 7th, 18—.—This morning I arrived at my sister's, for the visit which I have annually paid ever since that happy day when I laid the little Margaret, a sweet, fair, whimpering baby, one hour old, in her mother's arms. Dear child! I have watched her through life, and perhaps loved her all the better, because she is not one of those who have received the blessed gift of being generally loved. She has little beauty, though there is a charm of sense and sweetness in her face, which makes it lovely in my eyes; and she has always been so grave and shy in society, that there must be many who have known her all her life, without having an idea of her true character. But I know her nobleness of mind; I know how rich she is in those fine, pure, elevated feelings, which people who are not capable of understanding them are in the habit of stigmatizing as romantic. Nevertheless the world goes so much by outward appearance, and Margaret has so universally obtained the reputation of a quiet, cold, gentle girl, with nothing striking in her exterior, and very little general conversation, that I confess I was surprised when the news reached me that she was engaged to be married. I had set her down for one of the sisterhood,—not, perhaps, exactly for the same reasons that have made me an old maid, for I might have married, had I so chosen, several times over. But, knowing the earnestness, the imagination, the enthusiasm, which lay hidden under Margaret's quiet manner and composed features, I felt sure that she could not attach herself to a common-place person; and, alas! her want of fascination rendered it too probable, that one who was not commonplace would not attach himself to her. Pity, thought I, that such capacities for loving as hers should not find full employment. But I was all wrong, and I confess my mistake with delight. Seldom have I known a happier morning than that which announced to me her engagement. And today I heard all the particulars, which are in every respect satisfactory. Doctor Thornton is thirty-two; that is, eight years older than his betrothed, which I consider a very good difference. He is already in excellent practice; and, as the other physician in Wearmouth is an old man, and there can be no doubt that he will succeed to his connexion, his income is likely to be handsomer than Emma had any reason to expect for her daughter. How one falls into the habit of mentioning income first, when a marriage is in question! Money is to happiness very much what the alphabet is to learning; it would be hopeless and absurd to expect to do without it; but the absurdity of being satisfied with its

possession, as though it were the only thing necessary, is far more glaring, and far less excusable. I have heard little of Dr. Thornton; but I feel so secure of his high-mindedness and excellence, because he is the choice of that dear girl, that I have scarcely cared to ask any questions about him. Yet I am heartily glad that he dines here to-day. Margaret's wedding is only delayed till her brother Frederick returns, and, as his vessel, the *Alceste*, is expected daily, the important ceremony will take place (D.V.) before I leave them. As for Margaret, she is a changed creature, and I can scarcely take my eyes from her face. Such radiance of happiness I never beheld,—and happiness, too, which partakes not of the quietness and restraint consistent with her habitual demeanour. It is as if you were to follow a stream from its source, under the shadow of thick trees and tall overhanging rocks, and then suddenly step forth into the sunshine, and see the dark, sombre waters changed into gushing, sparkling ripples of light. She passes from tears to laughter, and from laughter to tears, like a child. How Owen would be astonished if he could see her! He once told me that he thought her the most uninteresting of all his nieces.

Dr. Thornton, or *Francis*, as I am to call him—(he called me Aunt Peggy immediately, and entreated me to be equally unceremonious with him)—arrived early. At the first glance, I admired, at the first warm shake of the hand, I felt sure I should like him. I detest that cold stroking of fingers,—that light touch of the lips against the cheek, which some persons consider to be the warmest testimonies of affection tolerated by refined society. Give me my darling Margaret's shower of fond kisses, or her Francis's hearty, prolonged shake of the hand, which sends a feeling of warmth and comfort to the heart. He is a distinguished looking man; tall and stately, with a remarkably fine forehead, mouth expressive, intellectual, and somewhat stern, but eyes so full of openness and kindness, that you feel at home with him instantly. I can easily believe what Emma tells me, viz. that he has been an object of speculation among the Wearmouth ladies; and I can fancy, moreover, that no little astonishment has been felt at his choice.

The evening was rather happy than lively, and afforded several opportunities for the display of Francis Thornton's conversational powers. It was easy to see that he had read much and thought deeply; but I was chiefly interested by certain slight indications of an undercurrent of high enthusiastic feeling, which I knew to be so thoroughly in accordance with the temper of Margaret's mind. For instance, my sister, in speaking of her son's character and prospects, observed, "Yes, he should have had a college education, ill as I could have afforded it—but, from a child, his heart was set upon the navy, so I let him have his way. What more can we wish for those we love than to know that they are happy?"

Thornton acquiesced in the sentiment, but glanced somewhat expressively at Margaret, who answered with kindling eyes, "*you don't think so, do you, Francis?*" That is not in accordance with your theories."

He turned to Mrs. Ferrars with a kind of half-deprecating smile, and said gently, in answer to her exclamation of wonder, "Oh, we shall find that we think pretty nearly alike when we come to define our notions of happiness."

"And what is your notion of happiness?" asked I.

"First, to be good, and then to *do* good; and then, if possible, to be great."

"What, Francis?" cried Mrs. Ferrars, reproachfully; "and you leave out affection in your notions of happiness?"

"Do I leave it out?" said he earnestly. "Nay, on the contrary, it pervades the whole idea. But the happiness of affection consists not so much in the presence as in the nobleness of the object beloved. It is the incentive and safeguard to virtue. Love, to be

perfect, must cast out not only fear, but sin also—and even weakness. And it does so.”

There was a momentary pause, which Francis broke by saying, in a changed and playful tone, “This is good philosophy, but I hope it may not be put to the test. Margaret, could you play Thekla if there were need?”

“Don’t ask me,” said she, looking down, while a sudden glow rose to her cheeks; “yet I hope and believe that I could.”

“My dear child,” cried her fond mother, who did not exactly understand the allusion, “I am quite sure you could play anything you chose to attempt, only you are so diffident. Was not that a knock at the door?”

“You have a late visitor,” said I. “Who can it be?”

The servant announced Mr. Moreton, the rector of Wearmouth, and an old friend of the family. He entered, and greeted me kindly, with an effort to assume his ordinary manner; but his face was grave and his demeanour troubled.

“You are come early, or rather late, to pay your respects to Aunt Peggy,” said Emma. “When did you hear that she had arrived?”

“I did not know Miss Forde was here,” returned he. “I came for a different reason. I am sorry to say, my dear friends, that I bring you unpleasant news.”

All looked at him in silent anxiety.

“Let me begin,” continued he, “by telling you our great cause for thankfulness. Frederick is perfectly well.”

“What has happened?” cried Emma, vehemently.

“It is this,” replied he. “The *Alceste* has arrived, but cannot be admitted into the harbour; in short, there is sickness on board, and she must go through some sort of quarantine.”

“And Frederick?” said Emma. “Are you telling me the truth?”

“I pledge you my word,” replied he, solemnly, “that he is, as yet, perfectly well; but it would be mistaken kindness to conceal from you that he is in a position of danger.”

“What is the complaint?” inquired Francis.

“They call it,” answered Mr. Moreton, with some appearance of reluctance, “the Black Fever.”

My eyes were on Thornton’s face, and I could see that he changed colour as these words were uttered. He continued to question Mr. Moreton, but in an under tone of voice,

“How many deaths?”

“Nine—in three days.”

“And the medical officer—?”

“Died, on the second day after the disease made its appearance.”

“But what attendance have they? Who has volunteered to take his place?”

“No one,” replied Mr. Moreton. “Dr. Monckton has a wife and family; and so has Brookes. But the news has been sent up to London, and doubtless by the day after to-morrow—”

“The day after to-morrow!” cried Thornton. “And they are dying by dozens!”—

He paused—perhaps struck by a sudden deep sigh from Margaret, who clasped my hand at the moment with a movement as of terror. Her cheeks were as white as paper, and her eyes fixed on her lover’s face. Looking earnestly upon her, he stood up and said, “My dear, dear friends, surely there can be but one opinion as to my duty.”

“Good God, Francis,” exclaimed Emma, “what are you thinking of? Is there not misery enough?”

“These poor people,” began he—but Emma interrupted him, putting her hand upon his arm and speaking with much agitation.

“We will not hear of it,” she said. “No no; you have no right to sport with Margaret’s happiness in this manner. You have other duties to think of. Margaret, speak to him!”

Poor Margaret! She sat speechless and motionless,

drawing her breath with a quick uneasy sound, and never lifting her eyes. I held her trembling hand between my own.

“Margaret shall herself decide,” said Francis, whose voice plainly showed how deeply he shared the emotion to which he was determined not to yield. “You are right, my dear mother; her claim is indeed great. Speak, my beloved, shall I go or stay?”

She cast herself upon her knees, covering her face with her hands, and murmuring, in broken tones, the words, “God help me! God help me!”

Francis approached her, raised her with the utmost tenderness, and placed her in a chair. “Nay, my dearest,” said he, greatly moved, “it is too much for you. Be calm, be comforted; I will never leave you.”

With a sudden movement she flung her arms around him. “Oh, go—go!” she cried, “I would not keep you for a moment. Go, dearest—God be with you!”

Gently unlocking her clasped hands, he consigned her to me; the poor mother, utterly overwhelmed with sorrow, was sobbing on the sofa. Oh, the sound of his feet as he moved across the room to depart! Each step seemed planted on one’s bare and shrinking heart. He paused in the doorway, and gave one look back—Margaret did not see it—she was kneeling, with her face hidden in my lap. She had not dared to look upon him since she pronounced the fatal word “go!”—and the door closed, and he was gone.

Margaret arose, went to her mother, clasped her arms around her, and they wept in silence on each other’s bosoms. We felt how vain it was to offer consolation; we could only sympathize; but when Mr. Moreton spoke of the nobleness of that spirit of martyrdom which was ready to give up all for the sake of duty, the poor girl lifted up her face, and looked at him for an instant with such an expression—it was proud, it was almost joyful. But it was drowned in a fresh burst of tears.

Never shall I forget the few days that followed. Margaret moved about the house like a restless spirit, or sat motionless with clasped hands; sometimes, to all appearance, unconscious, sometimes evidently engaged in mental prayer. Emma, with the true unselfishness of a mother’s grief, did nothing but watch and wait upon her child. Each evening Mr. Moreton brought us the report from the *Alceste*. Entering without knocking, and coming rapidly up stairs so as to give us no suspense, he would cry, “Good news,” before he opened the door. And then we kneeled down and gave thanks; and then heard the sad tale of disease and death, which always, however, began and ended with the delicious words, “Frederick and Thornton are well.”

When I would call up before my eyes an image of those four terrible days, it is neither the pale and tearful face of Emma, nor poor Margaret’s glazed and melancholy eyes and drooping figure, that I behold. I see the scene visible from the staircase window of my sister’s cottage, at which it was impossible to help pausing everytime one passed it. The gay town; the busy harbour with its clustering masts, the cloudless summer sky, the broad and sunny sea; and there, in the midst of that sheet of bright waters, like the evil spirit lurking at the gates of paradise, lay the black hulk of the plague-ship, rocking and swinging with every movement of the lazy waves. What scenes were enacting on board that gloomy vessel! What tortures were there preparing for our unconscious hearts! I shudder when I think of it.

The fourth evening came. We were sitting together, as we generally did, when the hour of Mr. Moreton’s visit drew near. It was now somewhat past the time at which he usually arrived, and we uneasily avoided each other’s eyes, as we tried to keep up a forced and languid conversation, to conceal from ourselves that we were beginning to grow fearful.

“Poor Mrs. Ellis sent for some wine for her little boy this morning,” said Margaret; “he has been—” She stopped short; her cheeks and lips became deadly white,

as though every drop of blood had been driven back to the heart. There was a knock at the door.

"My darling girl, how nervous you are!" cried I, jumping up. "There—stay quietly where you are, and I will go and learn what it means."

I hurried out of the room, and met Mr. Moreton on the stairs. The first glance at his face was sufficient: I saw we had something terrible to hear.

He grasped my hand. "Oh, how shall we tell her? how shall we tell her?" said he, much agitated.

"Which is it?" I gasped, scarcely able to articulate.

"Thornton," he replied; "he sickened this morning."

We were interrupted by a cry, the sound of which did not leave my ears for many days,—it expressed such bitterness of desolation. Margaret, unable to restrain her anxiety, had followed me to the door, and heard the fatal words. The next instant she was, happily for herself, insensible.

Her swoon lasted long, and, when she recovered, she was in a high fever,—a result which might easily have been foreseen, after four days of such suffering, ending so terribly. She was delirious, and knew no one who approached her. For three weeks, the violence of her disorder continued unabated; alternating between fits of raving, and a kind of stupor that was not sleep. During this time our kind and true friend, Mr. Moreton, was constantly with us; and great were the comforts and support which my poor sister and I derived from his presence. "A friend loveth at all times, and a brother is born for adversity." How much added force does the truth of these words acquire, when the friend and comforter of your affliction is one whose high and holy mission it is to speak peace to the troubled spirit, and declare the counsels of God!

At length the delirium ceased, and was succeeded by a long and profound stupor, supposed to be the crisis of the disease. For several days after this left her, she was in a strange kind of state: her eyes were open, and she took obediently whatever was presented to her, but never spoke nor moved; and we knew not how far she was conscious of what passed around her. Every day there seemed to be more and more of sense in those sad eyes, which feebly followed our movements about the chamber, with an expression so pathetic, that Emma and I were frequently unable to restrain our tears. At last—it was about five weeks from the first beginning of the fever—I was sitting alone by her bedside, and the sloping rays of the red and sinking sun were showering their warm rich light upon the windows of the sick chamber, when she spoke to me. "Aunt Peggy," said she, in a low, but perfectly distinct voice, "is it only you?"

I took her wasted hand, and bent over her. "Yes, dearest; there is no one else here. What do you want?"

"Oh, now then, tell me all—everything. I would not speak before, because of distressing Mamma. But, dear Aunt Peggy, do tell me!"

I was troubled, and hardly knew how to answer her. "What am I to tell you, love?" I said, at last. "You must try to compose yourself."

"Yes, yes; I will, indeed," she replied. "But I shall be so much better when I know it with certainty. It is several days since my mind came back to me; but it is still weak. I remember all; but sometimes my recollection is confused; and then my dreams—my dreams are so dreadful. I think, if I were once to hear it distinctly, I should not dream in this dreadful manner. Oh, if any thing would stop my dreams!"

"Are they so very melancholy?" asked I.

"Oh, no, no; it is their happiness which is so terrible. I dream as if nothing had happened; and then, you know, I wake, and can hardly bear it; and then I get bewildered. But if you would only tell me how it all happened; if you would say it to me in words, perhaps I should not dream so again."

"My tears fell fast, as I kissed her forehead, and replied: "But I would not check those dreams; they are

sent in mercy, my own one; they are comforts, and not torments."

"Ah, you cannot understand me," she said; "but pray, pray, have pity on me, and do what I ask you."

"You have not strength," I said: "I must go for Dr. Monckton."

She held my hand tightly. "Oh, no—no, no," she cried, earnestly; "don't go away; I want no one but you. I have strength for any thing; you don't know how much better I am."

I hesitated, and considered within myself. It was ten days since the crisis had terminated favourably. Dr. Monckton had pronounced that the disease was absolutely gone. Her weakness was excessive; but then she had been taking nourishment, and gaining strength day by day. I thought that the vexation consequent upon my evasion of her inquiries, might be worse for her than the agitation of having them answered. At any rate, I saw no means of escape; and being at all times a bad dissembler, I felt that I could not disguise the truth any longer; so I stooped over her, and kissed her, and spoke with a trembling heart.

"My darling child, suppose that those dreams were only preparations for reality."

She looked wildly at me, but did not speak.

"Recollect," I continued, "you know nothing certainly. When your dreadful illness began, it was all doubtful. God has been very merciful to us: your dear brother never caught the fever, and he is now at home; and—" I burst into tears, and could not proceed. But the disclosure which I had begun, perhaps somewhat rashly, was still more rashly completed. The door opened, and Frederick entered. But whose was that pale, joyful face behind him? Who is it that lingers on the threshold, looking wistfully into the chamber, but afraid to advance; his eyes bright with thankful hope and eager happiness, though his whole figure bears the traces of recent and severe illness? Need I name him? The sound of his step was enough—Margaret wept, and stretched out her arms. But we must leave the sacred rapture of that meeting untouched.

And what a party was it that gathered around the invalid's bed that evening! The mother, with her eyes fixed on her child's face, scarcely daring to rejoice, yet full of thankfulness, and clasping fondly in her's the hand of her restored son; and Thornton, the noble and self-devoted, receiving, even on earth, the abundant reward of his goodness. Of all who sickened in that unhappy Alceste, he was the only one who recovered. And don't forget Aunt Peggy; no heart was happier, or more grateful than her's. Truly may we old maids thank God that the privilege of sympathy is vouchsafed to us; for, if we suffer by the sorrows of those we love, we have also great happiness in their joys!

M.

LUCY COOPER.

(An Australian Tale.)

CHAP. VI.

JUST at this juncture a fresh party of litigants, who had some aristocratical fray to settle, took their places in the court, and they were immediately followed by two or three bustling lawyers, who forthwith set about examining the volumes of statutes lying on the table. Among them was Mr. Kately, whose eye caught a glimpse of the costly gold watch and appendages. He took it up in his hand, and examined it; then looking round, he recognised his man, Mr. Saunders, of whom he demanded the meaning of what he saw. Whilst Saunders was preparing to give the desired information, the facetious Colonel on the bench interrupted him, and set forth in few words the nature of the charge, and the imminent peril his pretty innocent was in of being sent

to take her trial. Mr. Kitley was seen to examine the watch and its appendages with melancholy interest; and after a pause, he observed, with an air of absence, that "there was not all."

Mr. Saunders, equally absent, promptly interposed, "Yes, sir, it is sir. That was all." He had no sooner pronounced these few syllables, than his doughy cheeks fired up with a purple light, inasmuch that he might be said to have blushed. This phenomenon, however, was transient as an Australian meteor; but his ears burned and blazed, his manner was confused, and it was very evident something had occurred which Mr. Saunders was disposed to look upon as nearly concerning his own interests.

Among the peculiarities of Mr. Kitley's intellect, his friends had early remarked and applauded a powerful sense of accidental and unintentional evidence, and a keenness in pursuing indirect testimony, which had been fostered by the universal villany of New South Wales investigations, until it had become instinctive to his mind, and the faculty upon which he chiefly valued himself. Something Mr. Saunders had said roused this passion.

"Mr. Saunders," said Mr. Kitley.

"Sir," said Mr. Saunders.

"Explain to me what you meant, when you said, 'That was all.'"

"I did not say—that is, sir, I did say"—

"I understand," said Mr. Kitley. "Your worship will oblige me by remanding this case till to-morrow. There is something in it which requires investigation. Mr. Saunders," he continued, "walk down to my office, and wait there till I return. Jackson, keep your eye upon him, and let him hold no communication with any one."

This was the issue of the first examination. Lucy Cooper was taken back to her cell, wholly unconscious that any ray of hope had broken in upon her most disconsolate and forlorn condition, stupified with the excess of her grief, and incapable of tracing her misfortune to any probable cause. Her perplexities at length resolved themselves into a more tranquil frame of mind, and gradually a feeling of resignation calmed and soothed her troubled spirit into peace. She committed her ways to God, and became composed; the dungeon lost its terrors, and her religion supported her when every thing else had failed.

In the meanwhile, the hours of business passed away, and Mr. Kitley returned to Egina; his whole household were assembled in the library, and Mr. Saunders, who had recovered some of his self-possession, ventured to marshal and order them. Once or twice he made an attempt to leave the room; but a glance from Mr. Kitley's eye at once assured him that he had not so much liberty. Mr. Kitley was engaged in such preliminary inquiries as made him master of all those facts of the case which have been already communicated to the reader; and having arrived at this point of the investigation, he observed that the watch and its chain and seals were well known to him, for it had been a favourite; that he had selected and brought home the seals at various times, as they had struck his fancy, and that they were all there but one, that one being a seal well known to him, and bearing for its device a heart, with the inscription, "Man traps set here." "Now," continued the lawyer, "this seal might have been taken from the rest, and given away,"—he never, it may be observed, mentioned Mrs. Kitley's name,— "it may have been lost, it may have disappeared a hundred ways, but I have reason to suspect, Mr. Saunders,"—here the purple bloom swept over the pale cheeks and disappeared again,— "I have reason to believe, Mr. Saunders, that you know something more about it than you ought."

"O, my dear master," said Saunders, "how can you suspect my honesty and attachment to you?"

Mr. Kitley had, as has been said, considerable attach-

ment to and confidence in his major-domo, but he loved himself above all other things; and, to pursue a nice investigation like this, he was prepared to forego all other considerations; looking on these triumphs as the greatest efforts of the human intellect and his own peculiar glory. He took no notice, therefore, of Mr. Saunders's appeal, but continued the course he had adopted.

"This watch, chain, and seals were safely deposited in the drawers of —," he paused; "they were safely locked up; and if the young woman who is charged with the theft had stolen them, she would have stolen them all; they would all have been found together. It struck me so, the moment I saw them. And when I used the words, 'this is not all,' I merely gave utterance to my thoughts, and did not expect any reply, or hope for any information. But Mr. Saunders answered my thoughts, and exposed his own. He, who could know nothing about it, except he had acquired his knowledge by searching into my depositaries, immediately showed his guilt by his assertion, 'That was all.' If, as I suspect, he gave the girl the watch, for some purposes of his own, he kept back the 'man-trap' because it suited his taste, and because the hour had arrived when he was doomed to be caught."

The sagacity which had served Mr. Kitley thus far, confounded Mr. Saunders; but the mistake which was mixed up with it renewed his confidence. He solemnly assured Mr. Kitley that he wronged him; that he had never given the prisoner any presents of any sort; and, emboldened by her absence, he ventured to assert that he never showed her any civility of any kind soever.

But Mr. Kitley was not to be baffled quite so easily.

He felt all the force of his own conclusion, and remembered too distinctly the embarrassment of Saunders when he was pressed for an explanation of his reply. He rang his bell, therefore, and ordered the constables, at which word all the audience showed many signs of uneasiness, to proceed at once to the search, and to begin with the property of Mr. Saunders.

After the necessary time had elapsed, during which Mr. Saunders had betrayed more uneasiness than there was any apparent cause for, the constables returned, bearing in their arms an immense quantity of plunder, discovered in Mr. Saunders's places of security; and as much plate and trinkets as required a large tea-tray to contain them. All eyes were intently fixed upon the booty; then they were turned upon Mr. Saunders; then they were engaged upon Mr. Saunders and his booty alternately, until Mr. Kitley called upon the constable to subject them to his closer scrutiny. Object after object, article after article, were examined; identification was generally acknowledged, and Mr. Saunders eyed each separate item with unmingled dismay. Still, however, he meditated a strong denial of guilt, and always looked with confidence to the chances of a trial, which are fifty per cent. in favour of a rogue, and altogether blank against an honest man. His first display, therefore, was in a case of a certain shawl, whose history he well knew was in no respect connected with the divorced Mrs. Kitley. Great was his indignation in general; but in particular, it provoked the best feelings of an honest and valuable servant to be charged with stealing what he had come by very honestly; and that, with regard to what had now been produced, the whole was in his especial care; he was responsible for it; could produce it whenever it was called for; and no one better knew than Mr. Kitley his own fidelity, and the unfounded nature of the charges brought against him.

However, Mr. Saunders had to do with one who was more than a match for him; and who plainly let him know the difference between those things which were committed to his trust, and articles of private interest, kept apart from common use, and deposited in the cabinets and drawers of his own inviolable guardianship. In the course of this disquisition, Mr. Kitley maintained an earnest scrutiny into the separate packages, and ex-

amined every article that could contain the missing seal, but without success. From time to time Mr. Kitley fixed his eyes upon his steward; but he manifested so little interest in his master's proceedings, that the latter was driven to adopt the conclusion that either he had not yet unravelled its concealment, or that Saunders had effectually withdrawn it from discovery. A constable was sent away to renew the search; and he brought back a magnificent rosewood writing-desk, inlaid and mounted in the most expensive style, which, being an affair much more of ornament than of use in the backward state of Mr. Saunders's education, had been purchased with an eye to decoration only.

There was a slight emotion in Mr. Saunders's face at the sight of this costly chattel, which confirmed Mr. Kitley's purpose. He demanded the key, which Mr. Saunders refused; and protested against the violation of his private papers: but it was to no purpose; for the application of a chisel burst asunder the frail security, and there lay the seal in one of the little partitions of the desk, among the coloured wax and wafers.

"The man-trap!" exclaimed Mr. Kitley, in a voice of triumph. Saunders trembled violently, and sank into a chair.

In this way, therefore, Mr. Saunders, who had dug a pit for another, fell into it himself: his travail had come upon his own head; his wickedness had fallen upon his own pate. The wolf and the lamb were shut up together in the same prison, and together awaited the decision of the law. But the gloomy cell was not the same to those two prisoners. In the one was guilt, in the other innocence; in the one was fear, in the other confidence: he was overwhelmed with the alarms of his wickedness, she had gradually resigned her fate to the event, devoutly saying, "Thy will be done." The terrors and the torments of the three weeks that ensued, together with the spare and coarse provision of the gaol, had rendered the otherwise uncomely person of Saunders ghastly and dismal. Lucy was paler, certainly; perhaps she was somewhat thinner; dejection and humility sat upon her brow; but there was also a calm and holy steadfastness in her looks, and such an unspeakable tranquillity in her eyes, that it was evident she had no internal foe to encounter, and that in her danger and distress she had found all the consolations of the faith. Poor penitent! it is hard to do justice to your condition; it is difficult to show the change that has been wrought in your heart, by the renewing of a right spirit, without giving to a convict at Botany Bay an interest which she is not entitled to. But they who remember the end of our Redeemer's mission, to seek and to save that which was lost, will rejoice to see one daughter of perdition rescued from the burning; one taken from thousands who have died in their sins.

On the morning of the trial, Saunders had bestowed all the pains upon his toilet which his altered circumstances permitted. His long, straight locks, with their bear's-grease accompaniment, had been cropped close on his being committed to prison; and the stiff stubble ill concealed the ugly breadth of his cheeks, which were once of the hue and surface of a patent crumpe, but now looked deadly yellow. The beard was close shaven, as usual, and, with its grim and deadly hue, covered more than half his face. His eyes were sunk, and they wandered over all the court, without appearing to see anything. A slight sign of consciousness was visible at times, when he recognised any face in the crowd, or caught any expression that interested him. By his side stood the female prisoner, whom Mrs. Webster's care had provided with such decent apparel as became her character and situation. Her looks interested every body in her favour. The interior of the court gradually filled—the lawyers, young and old, veteran attorneys and their clerks, novitiates in the law, reporters, witnesses, jurymen, and idlers, took up their places with easy nonchalance, intent upon amusing themselves with the vices, crimes, and miseries of their fellow-creatures.

The judges and the assessors took their seats; the jury

was sworn; the indictment was read; and the case opened. The finding of the watch in Lucy's bag was proved: her expression, "Good God, I am undone," was alleged in corroboration of her guilt; the evidence was afterwards directed to that part of the case which touched Thomas Saunders, against whom facts were accumulated in conclusive weight, until at length a general feeling arose that the guilty pair had combined to rob their master, for their mutual behoof, and Lucy, conscious of this persuasion, and overwhelmed with grief, wept incessantly. The case had now advanced to that point that the jury were about to receive their instructions from the presiding judge, the charge which was about to guide their verdict. There was a marked difference between the concern and sympathy betrayed by the uninitiated public, and the habitual apathy of the lawyers. Something, however, had interested them, and they whispered a word or two to each other, with knowing satisfaction. The judge recapitulated the evidence with much exactness; both prisoners listened with intense interest: he addresses himself first to that which concerned Saunders—then to that which involved Lucy; and he observed that there was no evidence which affected them mutually and in combination; so that only one could possibly be found guilty of stealing the watch, with which both were charged; and that even though they might be satisfied the female prisoner was guilty of receiving the watch, he was bound to tell them, if they found Thomas Saunders guilty, they must acquit Lucy Cooper of stealing, &c.

A general buzz of satisfaction spread through the court, whilst the jury, turning round for a few minutes, expressed their convictions to the foreman, who, in a firm tone and cheerful manner, replied to the usual interrogation, that Thomas Saunders was "guilty," and Lucy Cooper "not guilty:" a verdict which the court entirely concurred in. Lucy was removed from the bar, and ordered to be sent to the Female Factory at Parramatta; whilst Saunders was, in due time, sentenced to transportation for life, and conveyed to Norfolk Island.

From all that ever Lucy had heard of the Factory, it was the very last place to which she would willingly have been consigned. The dungeon which she had just quitted was gloomy and impure; but she was protected from all external annoyances, and exposed to no brutality, either from her own sex or the other. To be committed to the Factory, therefore, she rightly considered as a serious misfortune; but she had learned to believe that the whole succession of her annoyances was a necessary correction of her character, which she was well aware required much reproof. The Female Factory at Parramatta, however, is a place so peculiarly constituted, that no imagination can realize its sad condition.

Eleven women, of whom Lucy was one, were placed in a covered cart, or caravan, dismally lighted by two high apertures, so constructed as to prevent the inmates from holding intercourse with those without, and hardly adequate to afford a change of air. In about three hours time they drew near to the town of Parramatta, and, traversing the southern suburbs, they passed the church, and, crossing by a wooden bridge, not then replaced by the single arch of stone that now so gracefully spans the stream, they turned to the left, where the Romish chapel-schools, and nunnery, are placed, in immediate vicinity to the King's school, and the Old Jail, to the right, which then deformed the Green. Distant from this point about a quarter of a mile, stands the Female Factory, enclosed within its own walls, and remote from human habitation. A stone bridge, over a gutter or drain, conducts immediately to its awful gates, within which, in a quadrangle, are the lodge and office, and on the left the residence of the matron. Opposite the entrance is a large building of several floors, surmounted by a turret clock, and divided into wards, workshops, &c. The number of its inmates was always fluctuating, as the women were assigned to the various families who made application for them, or returned through the police offices to this place of confinement, for offences

committed in the most deliberate defiance of all law and authority. One part of this detestable prison was allotted to the women who were on the point of becoming mothers, or who had infant children.

Of the particular horrors of this department, and the frightful mortality among the infants, those only can form any idea who have been partakers in it. Certainly a more savage and inhuman spectacle never disgraced a Christian land. It was not merely an accumulation of evil characters, which lay festering and corrupting in closer proximity than the confinements of a ship; not the hereditary and traditional vice which was indigenous, nor the unceasing variations which the wicked heart perpetually devised to torment alike the tenants of the gaol and its guardian familiars, which constituted the chief inflictions of the place, although these were horrible in the extreme; but a distinct class of torments originated in the cupidity of those into whose hands fell the business of supplying the daily rations, scanty and coarse according to the original intention of Government, but reduced by fraud, within the walls and without, to a deplorable pittance, and further debased by adulterations of every possible kind. Nor can it be a matter of astonishment that the evil should extend itself still further; they who, at the best, were fed within the limits of the necessity of our nature, but under the workings of this system, felt the diminution of their food, and underwent many of the horrors of starvation, practised upon one another the expedients of fraud and the wrongs of violence, until their vexations and sufferings of mind and body approached towards a condition not unworthy the climate of Pandemonium.

Into the female factory at Parramatta, then, poor Lucy Cooper was admitted towards evening, after a sultry day in January. To be searched, stripped, and clothed in prison clothing, was the first process; the next was, to endure the mockery and taunts of eight hundred women, who took offence at her beauty, and disliked her modest demeanour. The horrors of that dreadful night, the heat and uproar of the crowded place, from six o'clock in the evening, when they were locked up, until six the next morning, when they were again restored to the open air, were intolerable, and indescribable. The factory was then in feeble hands; misrule and insubordination inflicted more misery upon all its inmates than the fiercest tyranny ever visited upon a few; and, to crown the whole, this place of torment was, in those days, presided over by a clerical magistrate, who once in every week preached and prayed among the prisoners, and whose daily visits to hear and settle complaints, resolved themselves into the repeated cry of "whip 'em—whip 'em." Rage, hatred, envy, and despair, reigned absolute in this abode of human wretchedness; labour and starvation, disease and misery, held subordinate rank; and filth, which it must be confessed was not commonly a stranger to the place, filled up the measure of this penal habitation.

For three entire months the unhappy victim suffered with all patience the inflictions of the factory; she had no hope of release, and, in silent resignation, learned to endure her daily sorrows, and ate her daily bread without adding to its bitterness the scalding agony of tears. During this period, she was never for an instant alone; she never addressed her thoughts to the throne of grace without interruption, until the undefined impression formed itself in her thoughts that this was the fore-runner and the type of hell.

At the end of this period, Lucy was sent for to the counting-house. Here she found the matron talking to a man, in a blue jacket and trousers, whose face and hands were brown with toil, and whose open features and massive upright figure, gave a very favourable turn to his character. Five or six other women were standing at the door, and the matron was descending upon their indiscriminate wickedness.

"All bad alike, not a pin to choose, I assure you," said the matron.

"A bad job, that," said the man in the blue jacket; "but surely there must be some difference, and as you can give me no assistance, I must choose for myself. 'Handsome is, as handsome dis,' they say; we will take it the other way, and make it, 'Handsome dis, as handsome is;' therefore, I will take my chance with you, and if you behave well, I will be even with you, and make it worth your while."

These words were addressed to Lucy, who was forthwith assigned to George Belton, a free settler, living with his wife at Prospect, a village, situated about six miles to the westward of Parramatta; and into the said George Belton's cart, and among the empty fowl-coops, Lucy was carefully adjusted, with her bundle of clothes, an empty sack beneath her; a small keg of spirits, three loaves, a parcel of groceries, and a few implements of rural life, in the bottom of the cart; and, attended by two sharp dogs on foot, they drove from the gloomy portals of the factory, as fast as a powerful and well fed horse could walk.

RURAL SKETCHES; WITH HINTS FOR PEDESTRIANS.

No. IV.

HAVING spent some days in an inland excursion, the pedestrian will perhaps direct his steps to the sea-side, to enjoy the change of scenery, and of pursuits which will there attract his attention. We will suppose him, as a lover of nature, to eschew such places of fashionable resort as Brighton or Hastings; assured that a quieter and less public place will be more congenial to his wishes. Here he may find sufficient to interest him;—the old fisherman, who will entertain him with an account of the perils of the deep he has encountered, of the shipwrecks he has suffered, and of the hair-breadth escapes he has had from death;—the sea-birds, whose strong wings enable them to fly in the face of the wind, and whose white plumage gives to them such a peculiar appearance as they dash over the foaming crest of the waves;—the boat bounding along the shore;—farther out, the sloop and the schooner, on their coasting voyage;—and in the distance, the richly-freighted ship, homeward-bound from India, from China, or some other distant shore;—and the tides also will prevent any monotony in the day, as, true to man's calculation, they ebb and flow with such wonderful regularity.

"There is a pleasure in the pathless woods,
There is a rapture on the lonely shore,
There is society, where none intrudes,
By the deep sea, and music in its roar,
I love not men the less, but nature more,
For these our interviews."

The sea, itself, during his sojourn, may present several aspects. One day, the unrippled water will have almost the smoothness of a lake; the small boat riding at anchor will scarcely be moved; and the bright sunshine will be reflected in one unbroken line. Another day, the fresh-blowing breeze will give animation to the scene; and the little boats, rising and falling on the waves, will bound before the wind, as they sail to and fro near the beach. At another time, the sea will be lashed into foam by the brisk gale, and its waves will roar and dash over the sides of the vessels, as they pass in the distance with their topsails struck, while others vainly lash the rocky coast which the Almighty has placed as a bound that they may not pass.

It is not unlikely that the tourist may be tempted

by scenery in a more distant part of merry England, especially since the rapid railroads afford such easy means of transit; and the land of mountain and of lake, of waterfall and of rocky precipice, may woo him to the far north, into Cumberland and Westmoreland.

How glorious, how magnificent, is the scenery which there awaits him! Those lofty mountains—whose summits are often clad with snow in the spring, while the sun shines hotly in the valleys—now gleam in the ruddy beams of the early morn, as they did when the dove returned not, and Noah went forth from the ark. Unchanged, and the same in their outline and appearance, they still greet the eye of the traveller on his journey northward, as when they were first descried by Agricola and Severus, when they marched the soldiers of imperial Rome towards the Scottish borders, to conquer the barbarous Caledonians. The deeply-hollowed channels, through which foam the troubled waters of the mountain-stream, are proofs, if any were wanting, of the great age of the mountains; and who may say how many centuries have rolled away since the Almighty upheaved the mighty masses, on which we now gaze with awe? How insignificant are the works of man, when compared with these glorious objects! "Man is like a thing of nought, and his time passeth away like a shadow;" the proud cities of Babylon, and Tyre, and Nineveh, are all waste and a desolation—their names alone remain; the Parthenon and the Coliseum are shattered and mouldering with age;—but these magnificent hills look as fresh in the bright sunbeam as when first formed by the fiat of Him who commanded and they stood fast. "There stands magnitude giving the instant impression of a power above man—grandeur, that defies decay—antiquity, that tells of ages unnumbered—beauty, that the touch of time only makes more beautiful—use, exhaustless for the services of man—strength, imperishable as the globe;—the monument of eternity—the truest earthly emblem of that ever-living, unchangeable, irresistible Majesty, by whom, and for whom, all things were made."¹

Some of the mountains, whose summits command extensive prospects, are well worthy of an ascent, arduous and toilsome though it will be found. The tourist, having finished his difficult task, will be amply rewarded by the richness and magnificence of the prospect which is spread around him. One of the first impressions on his mind is produced by the *map-like* appearance of the country; that which he found to be full of hills and valleys, now appears as level as the floor of a room. The comparatively slight inequalities of the surface are lost on the great altitude of the mountain summit. The sinuous course of the rivers and the streams, and the peaceful lakes with their wooded or rocky shores, are additions of much beauty to the scene. The villages, and farm-houses, and cottages, which are scattered over the landscape, give it a cheerful appearance. The sheep browsing on the mountain sides, and the cattle in the fields, show as mere specks. Far in the west is the blue sea, glittering in the bright and radiant sunshine which glistens the silver crests of the waves as they break on the shore. But, alas for romance! the opportunities of seeing the lordly eagle are now—

"Few and far between."

He startles not now the pedestrian as he was

wont, springing from his eyrie in the inaccessible rock, and menacing those who approached his Alpine solitude. The eagle is now very rarely seen, as the farmers waged a war of extermination against the monarch of the air, for the destruction he caused among their flocks.

But this land of mountains is rich in other scenery. Here and there, scattered among the hills, appearing still more lovely from the contrast, are found cultivated valleys—like oases in the desert—whose fields, divided by stone walls of rude and uncemented workmanship, are grey with the ripening corn, or verdant with the rich green grass. These are the property of a homely and simple-minded race of men, provincially called *'statesmen'*, or *estatesmen*. Many of their little estates have been handed down from father to son, from time immemorial. Their own hands, and those of their sons, cultivate the soil. They know little of what passes beyond the boundaries of the valley in which they were born, where they have always resided, and in which their bodies will rest with their forefathers, beneath the shadow of that whitewashed and humble, yet sacred building, scarcely to be distinguished from the dwelling-houses which surround it, but by its simple bell-turret. The *'statesman's'* house is often surrounded by the farm-yard, from the wall of which the stranger is reconnoitred and barked at by the dog; without whose sagacity and watchfulness the sheep would be lost when grazing on the mountain brow. Beside the house, a few ricks of corn remain of the last year's growth, and in the rear is a goodly orchard, well stocked with apples and pears. In many are venerable yew-trees, which for centuries have weathered the stormy winters of this mountain-land. Once a week the *'statesman'* takes his corn and other produce to market; and his wife accompanies him with her butter, cheese, eggs, apples, &c. In this unpopulous district it frequently happens that the market-town is at a distance of ten, twelve, or even fourteen miles, and the roads are hilly, and often in bad repair.¹ In some parts of this country the pedestrian will find no inns nor village public-house, at which he can obtain any refreshment; but the hospitable *'statesman'* will afford him gratuitously that which money cannot here purchase.

The mountain-stream in dry weather is traced down the rocky declivity like a tiny thread of silver; but after the heavy showers, which so frequently burst over this district, they are prodigiously swollen in the course of a very short time. This is the period when the waterfalls should be visited. Their stunning noise is heard long before they are visible. The turbid stream, impregnated with the soils over which it has passed, dashes madly over the rocks; wetting with its spray the shrubs and dwarf-trees which have taken root among their fissures.

But the lake, the glassy lake, the wood-fringed and embosomed lake—with its green islands, its

(1) During the season when the usual quietness of this land of lake and mountain is invaded alike by the fashionable and the lover of nature, some of the vilest roads are traversed not only by pedestrians, but by carriages. The writer was once descending the long and dreary pass of Kirkstone, on the road from Ambleside to Patterdale. The road was so rough and so filled with large loose stones, that he was afraid to drive, and jumped from the gig to hold the horse's head. While thus engaged, leading the horse, a carriage and four suddenly appeared at a turn of the road, and the unlooked for, and totally unexpected sight, startled him like an apparition. The road at that time (August, 1837) was unfit for the roughest cart.

(1) The Rev. G. Croly.

transparent water, its lovely or magnificent shore, here green with verdure and trees, whose edges and branches are steeped in its waters; there, rocky and mountainous, where the sure-footed sheep scarcely approach to nibble off the scanty herbage it affords;—if the mountain is of olden time, and magnificent in appearance, surely the lake is its fellow in antiquity, and gives to the district a charm and a repose, the absence of which would divest the scenery of half its attractions. How beautiful are those boats lying at anchor near the shore! and how gracefully is that one

"Walking the waters in her pride,"

as she passes the wooded promontory which pushes boldly out into the lake, her snow-white sails imaged on the surface of the water, which is gently rippled in her wake! The water of some of the lakes is so beautifully transparent, that the bottom may be seen where the depth is several fathoms, and the fish sport about apparently conscious of their safety, although exposed to observation. Few would imagine that some of these calm and placid lakes are occasionally dangerous, even in fine weather. Yet so it is. A boat may be sailing onward with a gentle breeze, scarcely sufficient to fill her sails, and a clear sky overhead, in which appears no ill omen, no token of a coming storm; her sails proudly set, as she dashes the water with her prow; and the light hearts which she bears on her deck feel not the least apprehension of danger. But hark! the wind gushes from the mountain, and lashes the water into foam; the boat reels before it, and trembles like a leaf; one minute more, and the sails are reduced—the least delay would have proved fatal.

On one, at least, of these lakes a small steam-vessel has been lately introduced. This is assuredly a most unpoetical object, and unsuited to the scenery. The ship and the boat, the yacht and the cutter, are fit subjects for the poet's pen, (an eminent poet has said that a ship in sail is one of the most beautiful and poetical objects), and some of the best of our poets have sung of the sea, and the ship, and the boat; but the noise, and the oily smell, and the steam, and the disagreeable tremulous motion caused by the machinery, and the filthy smoke, of the steam-vessel,—oh, they are assuredly altogether anti-poetical!

We have now taken a hasty view of such objects and scenery as will engage the attention of the pedestrian. But they should be *seen*, and not merely *read about*. How much does he lose who travels only by book; by whom the luxuriant park, the broad and crystal river, the vocal woodland, the grassy and verdant meadows, the grey ruin, the village church, the lake, the mountain and the waterfall, are seen dimly and faintly through the medium of reading! Much, indeed, does he miss of all that enhances the pleasures derived from rural scenery:—the hum of bees—the responsive voices of the cattle and the sheep—the joyous song of birds—the refreshing breeze, which gives apparent life to the trees as they throw about their branches—the fragrant of unnumbered flowers of all hues, profusely scattered about by a beneficent Creator—and the soothing sound of the river, as it flows amid scenery, to adorn and embellish which a hundred springs must rise among the hills, and send down their crystal streams into the valley, that the voice of their congregated waters may "discourse most eloquent music."

ASCENT OF MOUNT ARARAT.

THE mountain of Ararat rises on the southern borders of a plain, of about thirty-five miles in breadth and of a length of which seventy miles may be taken in with the eye; being a portion of the plain which is watered by a wide curve formed by the Araxes. It consists, correctly speaking, of two mountains—the Great Ararat, and its immediate neighbour, the Less Ararat; the former on the north-west, the latter on the south-east; their summits distant about seven miles from each other, in a right line, and their bases insensibly melting into one another, by the interposition of a wide level valley. This valley is now used as pasture ground by the shepherds, but formerly it was taken advantage of by the Kurds, as a convenient retreat, through which they might keep up an easy and certain communication between the provinces, north and south.

The summit of the great Ararat lies in $39^{\circ} 42'$ north latitude, and $61^{\circ} 55'$ east longitude, from Ferro; it has an elevation of 17,210 feet perpendicular, or more than three miles and a quarter above the sea, and 14,320 feet, or nearly two miles and three quarters, above the plain of the Araxes. The north-eastern slope of the mountain may be assumed at fourteen, the north-western at twenty miles in length. On the former, even from a great distance, the deep gloomy chasm is discoverable, which many compare to a crater; but which has always struck me rather as a cleft, just as if the mountain had been rent asunder at the top. From the summit downwards for nearly two-thirds of a mile perpendicular, or nearly three miles in an oblique direction, it is covered with a crown of eternal snow and ice; the lower border of which is irregularly indented, according to the elevations or depressions of the ground; but upon the entire northern half of the mountain, from 14,000 feet above the sea, it shoots up in one rigid crest to the summit, interrupted here and there by a few pointed rocks, and then stretches downward, on the southern half, to a level somewhat less low. This is the silver head of Ararat!

Little Ararat is in $39^{\circ} 39'$ north latitude, and $62^{\circ} 2'$ longitude, east from Ferro. Its summit rises 13,000 feet, or nearly two miles and a half, measured perpendicularly, above the level of the sea; and above the plain of the Araxes, it is 10,140 feet, or nearly two miles. Notwithstanding this height, it is not always buried in snow, but is quite free from it in September and October, and probably sometimes also in August, or even earlier. Its declivities are considerably steeper than those of the Great Ararat; its form is almost perfectly conical, marked with several delicate furrows, which radiate downwards from the summit, and give the picture presented by this mountain a very peculiar and interesting character.

Although these two mountains have no appearance of forming part of any other range, but stand in independent grandeur by themselves, still they are not altogether unconnected with other hills. While the south-western slope of both is lost in the hills of Bayazet and Diadina, which contain the sources of the Euphrates, the north-western slope of the Great Ararat runs into a chain which borders the entire right bank of the Araxes,

(1) From Dr. Parrot's Journey to Ararat, published in "The World Surveyed in the Nineteenth Century, or Recent Narratives of Scientific and Exploratory Expeditions. Translated and (where necessary) abridged, by W. D. Codley." The Extract here given relates to Dr. Parrot's first attempt to ascend Mount Ararat. It was in the second attempt that he fully succeeded.

and to which many sharp conical peaks give a very striking character. The west end of this chain wheels round the head waters of the Araxes, touches Erzerum, giving to the left side of this river, as it had already done to the right, an ornamental barrier of mountains, many of which, especially in the vicinity of Kars, must be of majestic height; for these must be the hills which I saw covered with snow to a considerable depth, and for a length of twelve miles, in the month of October, at a time when nothing else but the summit of the Great Ararat retains it without melting. This I conceive to be the Saganlûg, a branch of mount Taurus, the witness of the heroic days of Kars, Assan-Kalêh, and Erzerum; as old Ararat was of those of Erivan and Bayazed.

The impression made by Ararat upon the mind of every one who has any sensibility for the stupendous works of the Creator, is wonderful and overpowering; and many a traveller of genius and taste has employed both the powers of the pen and of the pencil in attempts to portray this impression. But the consciousness that no description, no representation, can reach the sublimity of the object thus attempted to be depicted, must prove to the candid mind that, whether we address the ear or eye, it is difficult to avoid the poetic in expression, and the exaggerated in form, and confine ourselves strictly within the bounds of consistency and truth.

My anxious longing to approach nearer to the venerable head of the holy mountain, would not allow me to remain long idle and irresolute in the quiet of the monastery. Anxiety as to the lateness of the season was beginning to produce its effect, when the serenity of the weather decided me at once to undertake an excursion to reconnoitre the summit the day after our arrival. When I speak of the serious difficulties with which I had to contend in the execution of my design, I may surprise many a one, who will be little disposed to admit that there could be any such abruptness in the declivities, or such unusual obstacles to the ascent, if the representation given of the mountain in my own drawings is to be taken as an authority. This is to be accounted for by a very common optical illusion, which every mountain traveller would do well to divest himself of, if he would avoid falling into some troublesome mistakes.

Whenever we ascend a mountain, and have the slope immediately before us, we think the angle of acclivity much greater than it would be found to be by the plummet. It is not unusual to find the estimate in this case double of the reality. The solution of this lies in the perspective shortening of the distances. The idea thus formed in our imagination, of the steepness of the declivity, is embodied in the profile outline of the mountain; and hence the exaggerated forms of almost all rising grounds, when sketched off-hand. Were they really so steep as they are shown in the drawings, there would not be very many of them climbed; for we must recollect, that though hills of an inclination of sixty degrees in drawings are not at all unusual, even among those classed with the accessible, still, an acclivity of thirty-five or forty degrees is totally insurmountable, unless recourse be had to steps or ladders in the ascent, or the surface be composed of tolerably-sized angular stones, like stairs, not quite accidentally laid together.

On the 12th (24th) of September, at seven in the morning, I started on my way, attended by M. Schiemann. We took with us one of the Kossaks, and a peasant from Arguri—a hunter, and directed our steps, first to the ravine, and then along its left declivity, till we came to a spot where there were two small buildings, of squared stone, standing near each other, one of which was formerly a chapel, and the other erected over a well reputed holy. The Armenians assign to this chapel, which they have named after St. Gregory, a very remote origin, and make pilgrimages to it from distant quarters. During our stay we often encountered Armenians from

Bayazed, at the religious ceremonies which they are in the habit of performing there; after which the visitors amuse themselves with discharges of fire-arms, and other demonstrations of joy, in a remote part of the valley.

The fountain which springs out of a rock at this spot, affords a clear drinkable water, of a pure natural taste, and is therefore an object deserving of general estimation; for there cannot be many perennial springs upon mount Ararat, as I have proved, to my vexation; since, in all my excursions upon it, I never either found or heard of any other.

It is possible that it may have originally induced some devout monk to establish himself in that locality, whose reputed sanctity procured for the spring also the reputation of miraculous virtues, until, in the course of centuries, and the storm of political events, the peaceful inhabitant was frightened away, and the miraculous spring alone remained, as the object of universal veneration among the Armenians, wherever they may be scattered round the world.

The tradition respecting the wondrous virtue of the water is this, that the flights of locusts which occasionally traverse the country on this side, and beyond Caucasus, in countless numbers, and as a kind of field plague, often laying waste an entire province in a single day, cannot be expelled otherwise than by means of a certain bird, which I have never been able to see; but infer, from the description given of it, to be a kind of thrush, though the Russians settled in this country call it a starling. Not very large, it is dark-coloured, yellowish-white on the breast and back, and is said to resort in flocks to the Araxes, when the mulberries are ripe,—though why they do so, is not well explained,—and to do much damage, by destroying the mulberries. Its Armenian name is Tarn; it is also called Tetigush, (*gush*, in the Tatar language, means *bird*, and *tut* is the Armenian for *mulberry*;) the Tatars call it Gasyrtshakh. Should it make its appearance in a tract infested by the locusts, then the fields are soon saved, for it pursues the locusts with implacable enmity. For the purpose of enticing this serviceable bird, the water of the holy well is brought into requisition; and, for this purpose, it is sufficient just to fill a pitcher or a bottle with it, and to set it down in the neighbourhood of the locusts, taking care, however, not to let the vessel touch the ground anywhere on the way; for, in that case, the water immediately disappears; but set in the open air, and in the proper place, it never fails to attract to the spot a flock of the tetigush, which soon rid the district of the devouring plague. Not merely the common people and Armenians, but some even of the educated classes, and not of the Armenian creed, have sought to convince me of the truth of this story, and related as a proof, that a few years before, the country round Kislyar, on the northern side of Caucasus, being attacked by locusts, was saved through the virtue of a bottle of water fetched in the greatest haste from the holy well, and which immediately brought together a flock of the birds. At Ararat, and in Tiflis, every one knew that the water was brought; and as to the success attending the use of it, that might be easily learned in Kislyar, where the bottle, with some of the miraculous water, was still lying in the church!

From this chapel, we ascended the grassy eminence which forms the right side of the chasm, and had to suffer much from the heat, insomuch that our Kossak, who would much rather have galloped for three days together through the steppe, seated on horseback, than climb over the rocks for two hours, declared that he was ready to sink with fatigue, and it was necessary to send him back. About six o'clock in the evening, as we too were completely tired, and had approached close to the region of snow, we sought out a place for our night's lodging among the fragments of rock. We had attained a height of 12,360 feet; our bed was the hard rock, and the cold icy head of the mountain our only stove. In

the sheltered places around, still lay some fresh snow; the temperature of the air was at the freezing point. M. Schiemann and myself had prepared ourselves tolerably well for this contingency, and our joy at the enterprise also helped to warm us, but our athletic yäger Sahäk (Isaac), from Arguri, was quite dispirited with the cold, for he had nothing but his summer clothing; his neck and legs from the knee to the sandal were quite naked, and the only covering for his head was an old cloth, tied round it. I had neglected, at first starting, to give attention to his wardrobe; it was, therefore, my duty to help him as far as I could; and as we had ourselves no spare clothing, I wrapped his nakedness in some sheets of grey paper which I had brought with me for the purpose of drying plants; this answered him very well.

As soon as the darkness of night began to give way to the dawn, we continued our journey towards the eastern side of the mountain, and soon found ourselves on a slope, which continues all the way down from the very summit. It may be seen in the drawing of the Convent of St. James, on the left, behind the roundish and grassy projecting hills; it is formed altogether of sharp angular ridges of rocks, stretching downwards, and having considerable chasms between them, in which the icy covering of the summit disappears, while forming glaciers of great extent. Several of these rocky ridges and chasms filled with ice lay between us and the side of the mountain which we were striving to reach: we got successfully over the first ridge, as well as the beautiful glacier immediately succeeding it. When we arrived on the top of the second ridge, Sahäk too lost the courage to proceed further: his limbs, frozen the preceding night, had not yet recovered their natural glow, and the icy region towards which he saw us rushing, in breathless haste, seemed to him to hold out little hope of warmth and comfort: so, of our attendants, the one was obliged to stay behind from the heat, the other from the frost. M. Schiemann alone, though quite uninitiated in hardships of this kind, yet never lost the heart and spirit to stay at my side; but, with youthful vigour and manly endurance, he shared in all the fatigues and dangers, which soon accumulated to an extraordinary extent. Before the eyes of the tarrying yäger, we crossed over the second glacier, which lay before us, and ascended the third ridge; taking an oblique direction upwards, we reached, at the back of it, and at an elevation of 13,954 feet, the lower edge of the ice, which continues without interruption from this point to the summit.

Now, then, the business was to mount this steep, covered with eternal winter. To do so in a direct line was a thing impossible for two human beings, although the inclination did not quite amount to thirty degrees. We therefore determined to go obliquely upwards on the slope, till we gained a long craggy ridge, which stretches a great way up towards the summit, and slight indications of which may be seen on the left side of the mountain, in the sketch made from St. James's, as well as in that from Syrbaghan. This we succeeded in accomplishing, by cutting with our staffs regular hollows in the ice, on which lay a thin coat of newly-fallen snow, too weak to give our footsteps the requisite firmness. In this way we at last got upon the ridge, and went along it, favoured by a deeper drift of the fresh snow, directly towards the summit.

Although it might have cost us great exertions, yet it is probable that on this occasion we could have reached, contrary to all expectations, the lofty aim of our wishes: but our day's labour had been severe; and as it was three o'clock in the afternoon, it was time for us to consider where we should find a resting-place for the coming night. We had reached nearly the furthest end of the rocky ridge, and an elevation of 15,400 feet above the sea, or about the elevation of the summit of Mont Blanc; and yet the head of Ararat, distinctly marked out, rose to a considerable height above us. I do not

believe that there existed any insuperable obstacle to our further advance upwards; but the few hours of daylight which still remained to us for climbing to the summit, would have been more than expended in accomplishing this object; and there, on the top, we should not have found a rock to shelter us during the night, to say nothing of our scanty supply of food, which had not been calculated for so protracted an excursion.

Satisfied with the result, and with having ascertained that the mountain was by no means wholly inaccessible on this side, and having made our barometrical observations, we turned about and immediately fell into a danger which we never dreamt of in ascending. For, while the footing is generally less sure in descending a mountain than in ascending it, at the same time it is extremely difficult to restrain one's self and to tread with the requisite caution, when looking from above upon such a uniform surface of ice and snow, as spread from beneath our feet to the distance of two-thirds of a mile without interruption, and on which, if we happened to slip and fall, there was nothing to prevent our rapidly shooting downwards, except the angular fragments of rock which bounded the region of ice. The danger here lies more in want of habit than in real difficulty. The active spirit of my young friend, now engaged in his first mountain journey, and whose strength and courage were well able to cope with harder trials, was yet unable to withstand this: treading incautiously, he fell; but, as he was about twenty paces behind me, I had time to strike my staff before me in the ice as deep as it would go, to plant my foot firmly on my excellent many-pointed ice-shoe, and, while my right hand grasped the staff, to catch M. Schiemann with my left, as he was sliding by. My position was good, and resisted the impetus of his fall; but the tie of the ice-shoe, although so strong that it appeared to be of a piece with the sole, gave way with the strain: the straps were cut through as if with a knife, and, unable to support the double weight on the bare sole, I also fell. M. Schiemann, rolling against two stones, came to a stoppage, with little injury, sooner than myself; the distance over which I was hurried almost unconsciously, was little short of a quarter of a mile, and ended in the debris of lava, not far from the border of the glacier.

In this disaster, the tube of my barometer was broken to pieces; my chronometer was opened, and sprinkled with my blood; the other things which I had in my pockets were flung out by the centrifugal motion, as I rolled down; but I was not myself seriously hurt. As soon as we had recovered from our first fright, and had thanked God for our preservation, we looked about for the most important of our scattered articles, and then resumed our journey down. We crossed a small glacier by cutting steps in it; and soon after, from the top of the ridge beyond it, we heard with joy the voice of our worthy Sahäk, who had had the sagacity to look for and await our return in this spot. In his company we had at least the satisfaction of passing the night in the region of grass, to the dry heaps of which, being always chilly, he set fire, in order to warm himself. On the third day, about ten o'clock in the morning, we reached our dear monastery, where we refreshed ourselves with juicy peaches and a good breakfast, but took special care not to let a syllable escape us, while among the Armenians, respecting our unlucky falls; as they would not have failed to discover therein the divine punishment of our rash attempt to arrive at the summit; access to which, from the time of Noah, has been forbidden to mortals by a divine decree: for all the Armenians are firmly persuaded that Noah's ark remains to this very day on the top of Ararat, and that, in order to ensure its preservation, no human being is allowed to approach it.

PALM LEAVES.

Oriental Tales, selected from various Sources.

V. BABA ABDOULLAH; OR, COVETOUSNESS PUNISHED.

IN the times of old, it was customary for the caliphs of Persia to perambulate their capitals by night in disguise, that they might see and hear what passed among the people. One night the Caliph Haroun el Rashed went forth on his evening patrol, accompanied by his Vizier Jaaffier; and as they passed over the bridge of Bagdad, they were accosted by an old blind beggar, who solicited their charity. The Caliph stopped to put a piece of gold into his hand, and then passed on. But the beggar instantly caught him by the arm, and said, "My friend, I thank you for your charity, but I must request you to confer a further favour on me, by giving me a blow on my face, as a punishment for my sin." The Caliph, surprised at this strange request, tried to escape from the old man's grasp; but the more he struggled, the more closely the old man clung to him. The Caliph remonstrated, and, in spite of the beggar's entreaties, he resolutely refused to comply with this preposterous request. The old man, finding all his efforts were vain, at length said, "Sir, forgive my boldness and importunity; for I cannot receive your charity on any other conditions, since I have bound myself by an oath not to receive any alms unless my benefactor will also inflict this punishment upon me." On hearing this, the Caliph gave him a slight blow, and passed on. Then, turning to the Vizier, he said, "Jaaffier, do you know the meaning of this strange fancy?" The Vizier replied, "I know not, sire; but I have no doubt the man has some good reason for making such a singular request." "I must know what it is," replied the Caliph; "go back, therefore, tell him who I am, and say that I command him to come to the palace to-morrow at mid-day." The Vizier obeyed the command of the Caliph, and they continued their rambles, and fell in with one or two other singular adventures (which we may relate at some future period), and returned to the palace.

On the following day, the blind beggar made his appearance at the palace; and on being ushered into the presence of the Caliph, he prostrated himself before him, and earnestly solicited pardon for his conduct on the previous evening. The Caliph bade him rise, assuring him that he freely forgave all that had passed, and said, "I commanded you to come to my palace, that I might ascertain the cause of your singular conduct."

"Commander of the faithful," replied the blind man, "I will briefly relate to you my history, that you may see I have sufficient reason for inflicting this punishment upon myself. My name is Baba Abdollah. I was born in the city of Bagdad, of respectable parents, who died when I was but a youth, leaving me a small fortune, with which I embarked in business. By diligence and economy I soon became rich enough to purchase eighty camels, with which I traded to various parts of your Majesty's dominions. As my wealth increased, the desire of becoming richer increased also. One day, as I was returning from Bussorah, whither I had conveyed some articles of merchandise, I halted in a shady place to allow my camels to rest and graze. While I was sitting watching my camels, a Dervise came by; and on seeing me he saluted me, and sat down by my side. I then

produced some provisions, and invited him to partake. During our repast we conversed on a variety of topics, and at length the Dervise told me that he knew of a spot, not far from where we were sitting, in which there was such an immense treasure of gold and jewels, that all my camels might be laden therewith, without sensibly diminishing it. This intelligence filled me with surprise and joy; and hoping to secure these treasures to myself, I said to the Dervise, 'As you have no means of carrying any considerable portion of this treasure away, I will give you one of my camels to lade for yourself, if you will conduct me to the place where it is hid.' The Dervise, seeing my detestable covetousness, replied, 'I should be a fool indeed to show you this inexhaustible wealth on such terms. The very least I can require is to share it equally with you; if, therefore, you will give me forty of your camels, I will conduct you to the place forthwith.' Galling though this proposition was, I found that I must either accede to it, or relinquish all hope of possessing the treasure, which my covetous mind could not do; I therefore assented, rose up, and gave him forty of my camels, and we started off on our expedition. After travelling for some time, we arrived at a range of mountains, through a narrow pass of which we entered into a valley. Here the Dervise bade me stop, and prepare the camels for loading. Whilst I was busily engaged in arranging them, the Dervise kindled a fire, and used some cabalistic words and signs, when suddenly the mountain opened, and disclosed, to my astonished and enraptured gaze, a magnificent palace, into which we entered. In every part of this spacious building were large heaps of gold, and all kinds of precious stones. Regardless of the beauty of the palace, I set to work at once to fill my bags with these valuable treasures; and my companion did the like, until all our camels were heavily laden. The Dervise then took a small box containing some unctuous matter, and put it into his bosom. After which we retired from the palace, and the Dervise closed the mountain in the same manner as he had opened it. I was astonished at what I had seen, but was so overjoyed in the possession of such treasures, that I asked no questions. We then left the valley by the same narrow pass through which we had entered. On coming into the open plain, I thanked my benefactor for his kindness, and saluted him; we then parted, he to go to Bussorah, and I to Bagdad. Although I had forty camels loaded with riches, my covetous spirit was not satisfied; I began to repent of having given the others to the Dervise, and, forgetting that without his aid I should have had no treasures, I resolved to attempt to regain possession of them. I forthwith stopped my camels, rode after the Dervise, and soon overtook him. He immediately halted, and said, 'What brings you here, brother?' 'Regard for your happiness,' I replied; 'for knowing you to be a man unacquainted with the business of the world, and fearing that the care of forty camels would be most irksome to you, I am come to ask you to let me have ten more, that I may relieve you from your burden.' 'Well,' said he, 'I find that forty is a larger number than I can manage, I will therefore give you ten.' This unexpected success encouraged me to be still more importunate, till at length I prevailed on the kind Dervise to restore all my camels. 'Take them,' said he; 'but remember that if we do not make good use of riches,

God often takes them away again.' This admonition was lost upon me, for so completely had avarice got possession of my soul, that I was not satisfied with the riches I now possessed, but I even coveted the box of unguent which the Dervise had brought from the palace, supposing that it must possess some great virtues. After many protestations of gratitude, I had the audacity to ask my friend to give me the box, and to explain to me the virtues of the unguent. The Dervise immediately took it from his bosom, and gave it me, saying, 'Take it, and be content: that unguent possesses such wonderful properties, that if you rub a little on your left eye, it will enable you to see all the treasures hid in the bowels of the earth; but if it touches your right eye, it will blind you at once.' He had no sooner said this than I applied some to my left eye, and immediately I saw such a profusion of riches, that I was almost bewildered. This enchanting spectacle excited my covetous spirit; and it occurred to me, that if the effect on one eye was so extraordinary, it would be still more wonderful if the unguent was applied to both eyes; for I could not believe that what had exalted the powers of vision in one could destroy the sight of the other. I said to the Dervise, 'You must be joking, when you tell me that this unguent will blind me if applied to the right eye.' He replied, 'I have told you the truth: it will most certainly have that effect, if you ever apply it.' I would not, however, believe him, but, deaf to all his remonstrances, urged him most vehemently to apply it to my right eye. At length, being overcome by importunity, he complied with my request; and lo! to my sorrow, I found that his words were too true, for I became totally blind. I now perceived the misery to which my insatiable desire of riches had reduced me, and I earnestly implored the Dervise to pardon my obstinacy, and once more restore me to sight. 'Miserable, covetous wretch!' exclaimed the Dervise; 'you might have been happy and prosperous as a merchant, had you been satisfied with your condition. I put you in possession of great riches, as a trial of your virtue; and you have shown yourself to be unworthy of them. If you had taken my advice, you would have escaped this calamity. You have what you deserve; and as you knew not how to make a right use of the riches which were given to you, they are now taken from you, and shall be given to some persons more grateful and deserving than yourself.' He then left me to bewail my fate, and I should have perished with hunger, had it not been for a caravan passing near where I was, the merchants in which took compassion on me, and carried me to Bagdad, where I have since subsisted on the bounty of the charitable; and, as a punishment for my folly and covetousness, I have made every person inflict a smart blow upon me."

Baba Abdoollah having finished his story, the Caliph said: "Your folly and wickedness was great indeed; and I am glad to find that you are not only sensible of it, but also sorry for it; I shall therefore order you a small pension during the remainder of your life; and I hope you have so profited by past experience, that you will henceforth be a grateful and happy man."

Baba Abdoollah prostrated himself before the throne, and thanked the Caliph for his generous bounty. He lived some years, a contented and happy man.

DETACHED THOUGHTS,

FROM

JEAN PAUL RICHTER.

"Of differing themes the veering song was mixed."

THE distant village-clock struck midnight, mingling as it were with the ever-pealing tone of old Eternity. The forms of my buried ones cling coldly around my soul. I walked in silence through little villages, and close by the churchyards; beyond them, where crumbled coffin-boards, that the earth had just up-cast, were glimmering, while the once beaming eyes that had lain in them had mouldered into grey dust. Cold thought! clutch not like a chill spectre at my heart. I look up to the sky, and an unbroken, never-ending chain stretches its golden links hither and thither, above and below; and all is life, and warmth, and light—all is God-like, or God.

When, in your last hour (think of this), all faculty in the broken spirit shall fade away, and sink into inanity—imagination, thought, effort, enjoyment—then will the flower of belief, which blossoms even in the night, remain to refresh you with its fragrance in the last darkness.

We learn our virtues from the bosom friends who love us; our faults from the enemy who hates us. We cannot easily discover our real form from a friend. He is a mirror, on which the warmth of our breath impedes the clearness of the reflection.

The poet resembles the inhabitants of the torrid zone, for whom every star must rise and set. The philosopher is like the dweller at the poles, who beholds only the stars of his pole in parallel circles, but never sees them rise or set.

According to Democritus, Truth lies at the bottom of a well, the depth of which, alas! gives but little hope of release. To be sure, one advantage is derived from this, that the water serves for a mirror, in which Truth may be reflected. I have heard, however, that some philosophers, in seeking for truth to pay homage to her, have seen their own image and adored it instead.

Oh, could I teach my emotions a more intelligible language, or give the image of my fancy more defined lineaments! Time is never so friendly to man as in youth. Time shortens to youth the present by little joys which lay such gentle hold on the young heart, joys which no fear dims, and no remorse destroys, whose approach is not barred out by caution, and whose departure is smoothed by fresher and dearer joys that succeed. Alas! often when I am tossed on the waves of doubt, or suffer from some adverse fortune, when my heart pines in vain for the embrace of a friend, when the consciousness of my faults leaves me dissatisfied with myself, how eagerly do I turn to the ever fresh joys of my youth! I forget all; I am deaf to the turmoil of the present; I extricate myself from all these painful thoughts, and clasp to my longing arms the past, with all its soft and beautiful colouring. Now to my glowing imagination arises once more the same moon to which my boyish eye so often turned, to find in its spots full scope for the pencil of young creative fancy; and now I stand in the home of my childhood, and look from

the window abroad upon the winter's storm; the gathering snow-flakes heralded to my hopes the near approach of merry Christmas; and welcome were the visible tokens of the cold, which were to me the promise of my father's tales by the warm fire-side. My mother! unhappy is the man for whom his own mother has not made all other mothers venerable! But my pen paints far worse than my fancy; the latter creates joys more easily than the former can express them.

It is an old saying, "What is born to be a nettle stings young." This was not the case with me. I am called a satirist, and yet I do not recollect an early inclination to satire: I manifested rather a degree of sensibility that was inconsistent with at least a certain kind of satire. One might have thought sugar would have spoiled my teeth; but if the grape be very sweet, it yields sour wine, which at last turns to vinegar. Thus my sensibility first changed into bitter declamatory invective, somewhat like that of Rousseau, and afterwards into cool irony. Thus is the satire of men of much feeling vehement, bitter, declamatory; as, for instance, Pope, Young, Rousseau: cold, on the contrary, and therefore ironical, is it with those who are not noted for very soft hearts, such as Voltaire and Swift. Between both these we may place Addison; who had feeling, which, however, adapted itself to irony. Too benevolent for biting irony, and too little of a poet for hard blows, he smiles philanthropically, and touches playfully rather than stabs.

The poet, when out of the sphere of his enthusiasm, is inanimate: he resembles the birds whose feathers shine most in flight.

My inclination to clearness of conception, is engaged in perpetual strife with my desire to give myself up to the warmth of my fancy. Now, I would gladly be all heart, and now all head. But I am most a contradiction to myself, when I obey only the ardent impulses of the former. Hence, I often advance opinions, the groundlessness of which I myself perceive, but in favour of which my heart is prepossessed. How often do I envy those from whom an ever-active imagination hides the weakness of the thoughts which warm, and inspire them, and make them happy! At times, by the power of imagination, I am worked up into an enthusiasm for some darling opinion, which carries cool reason away with it. I like to indulge in these flights of fancy most of all when in the company of others; and I seek to impart to them my own ardour. I often defend to others, what I do not myself really believe. Yet, I am no hypocrite in this; I do but hide my head, and uncover my heart.

A man full of compliment, is a dedication; a man full of learning, is a register.

Tacitus, when clothing his thoughts, cut the cloth too short.

Wouldst thou treasure up the relics of thy friend? There are those that more closely belong to him than the bones thou hast laid in the grave; namely, every page upon which he has left to thee a part of himself, a portion of his intellectual being, of his soul.

Of all that I have lost on earth of youth and joy, I regret nothing so much as the loss of the ideal I had formed of all.

POPULAR YEAR-BOOK.

January 25.—Conversion of S. Paul.

THIS festival was instituted in the year 813.

Prognostications of the weather, &c., for the whole year, were formerly drawn from the appearance of this day. An old proverb says,—

"If the day of S. Paul be clear,
Then shall betide a happy year;
If it do chance to snow or rain,
Then shall be dear all kind of grain
But if the wind be then aloft,
Wars shall vex this realm full oft;
And if the clouds make dark the sky,
Both neat and fowl this year shall die."

In the "Shepherd's Almanack," for 1676, among the observations on the month of January, occurs the following:—"Some say that, if, on the 12th of January, the sun shines, it foreshows much wind. Others predict by S. Paul's-day; saying, if the sun shine, it betokens a good year; if it rain or snow, indifferent; if misty, it predicts great dearth; if it thunder, great winds, and death of people that year."

A singular ceremony was formerly observed, in S. Paul's Cathedral, on this festival, and on the anniversary of S. Paul's martyrdom, the 29th of June. In 1274, the dean and chapter of S. Paul's granted twenty-two acres of land, part of their manor of Westley, in Essex, to Sir William Baud, Knight, for the purpose of being enclosed by him within the park of Curingham; in consideration whereof, he undertook to bring them, on the feast of the Conversion of S. Paul, in winter, a good doe, seasonable and sweet, and upon the feast of the Commemoration of S. Paul, in summer, a good buck, and offer the same to be divided among the canons resident; the doe to be brought by one man, at the hour of procession, and, through the procession, to the high altar, and the bringer to have nothing; the buck to be brought, by all his men, in like manner, and they to be paid twelve pence only, by the chamberlain of the church, and no more to be required. For the performance of this annual present of venison, he charged his lands and bound his heirs; and, twenty-seven years afterwards, his son, Sir Walter, confirmed the grant. The observance of this ceremony as to the buck was in this manner:—The buck being brought up to the steps of the high altar at the hour of procession, and the dean and chapter being vested in their copes, with garlands of roses on their heads, they sent the body of the buck to be baked; and, having fixed the head on a pole, caused it to be borne before the cross, in their procession within the church, until they issued out of the west door. Then the keeper that brought it blew "the death of the buck," and then the horns that were about the city answered him in like manner. For this the dean and chapter gave each man fourpence in money and his dinner, and the keeper that brought it was allowed, during his abode there, meat, drink, and lodging, at the dean and chapter's charges, and five shillings in money at his departure, together with a loaf of bread, with the figure of S. Paul on it. The granters of the venison also presented to S. Paul's Cathedral two special suits of vestments, to be worn by the clergy on these two festivals; the one being embroidered with bucks, the other with does.

Count Lauzun and the Spider.

From the German, by J. M.

A FRENCHMAN once, of noble birth,
De Lauzun was his race,
Had gain'd, for many a noble deed,
His sovereign's envy as his meed—
A dungeon and disgrace.

And now, within its depths immured,
He pined, as in the tomb:
No blessed daylight on him shone,
Save when at noontide from his throne
The sunbeams pierced the gloom.

There silence still as death prevail'd,
And deeper horror shed;
Had not the owl's discordant note
Oft banish'd sleep, he might have thought
The whole creation dead.

No kindly tones or friendly voice
Their soothing accents bore;
The only sounds were sounds of pain,
The iron clanking of his chain,
And grating prison-door.

The gaoler's looks agreed too well
With such a dreadful place;
With cruelty and scorn they glow'd,
And every evil passion show'd
That marks his fallen race.

The art that speeds our thoughts afar—
Oh, boon that fills with bliss!
Even in a dungeon but to count
The weary days, their slow amount—
He was denied even this!

How sad and heavy on his heart
Press'd misery the while!
Starved in his best affections, more
Than death itself, he felt how sore
The loss of friendship's smile.

Once, when with deep despondency
His bosom was oppress'd,
He sprang from off his cheerless bed,
And round and round the walls survey'd,
That held their weary guest.

There in a corner he espied
A spider in her nook;
No living thing for many a year
Had ventured to approach so near,
Mistrustful of his look.

With joy o'erflowed his heart to see
That he was not alone;
Even man of yore, so loved and sought,
Had ne'er such pleasure to him brought
As in his aspect shone.

For hours he'd gaze upon her toils,
So artfully design'd;
While line on line, in union met,
She added, to complete the net
Around her victims twined.

Sometimes the creature's wiles he mark'd,
Conceal'd within her hair,
Watching the insects as they fell
Within the meshes of her cell,
Then rushing on them there.

And now he saw her as in sport
Her flimsy labours ply;
In middle of her airy seat
Retreating next, prepared to greet
Her visitant the fly.

He spoke to her as if she knew
To answer or to ask;
Whene'er she span with right good will,
He praised the industry and skill
Spent on her cunning task.

To bring her food he often plann'd,
On deeds of kindness bent;
And if a gnat e'er chanced to stray
Within his grasp, the welcome prey
Soon told from whom 'twas sent.

Such kindness moved the spider so,
She span an airy thread,
From where her dormitory stood,
Down to the hand that brought her food,
And daily from it fed.

Thus joy once more revisited
His heart, so long oppress'd;
To him the spider was a friend
In whom all soft affections blend,
To cheer the aching breast.

The surly gaoler wondering saw
His prisoner's alter'd mien;
No longer grief and dark despair
Sat on his brow; a happy air
In every look was seen.

And through the key-hole peering now
The gaoler could behold;
"Ah, ah!" thought he, with savage smile,
"Does this fool's play your thoughts beguile?
The spider's days are told!"

And entering in, he cried, with look
Of ill-suppressed delight,
"A spider, see!" and in a breath
He crush'd the animal to death
Before the prisoner's sight.

As if a dagger at his heart
Had struck a deadly blow,
The count in wild amazement shriek'd,
While thus the wretch his vengeance wreak'd
On such a worthless foe.

Oh, how De Lauzun's fury boil'd
To avenge his favourite's doom!
Alas! the iron fetters' band
Was stronger than his lifted hand,
And chain'd him to his tomb.

The murderer went his gloomy way,
With fiendish pleasure fill'd;
His mocking laughter, echoed back
Along the prison's secret track,
The count with horror thrill'd.

"My only friend—my all," he cried,
"Lies crush'd beneath your feet!"
Time's gentle hand his grief repress'd;
But he who hears still feels his breast
With hate and pity beat.

CHURCH BELLS.¹

[H. K. C.]

THE blended voice of morning bells
Steals up the southern lea;
Of wedded hearts the tale it tells,
And bridal gaiety.

Again I hear a pensive peal,
The chime of a dying hour;
Fit strain methinks it is to steal
From a grey sea-side tower.

And, hark! there was a note of woe
From the grey tower, that sigh'd;
Who hath not heard it, faint and low,
And felt that one hath died?

But who hath taught his constant heart,
From this strange melody,
Since joy, and time, and friends depart,
That life is vanity?

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne*.

INTERESTING ANECDOTE.

SOME days since, a widow, keeping a well-known book-stall near the Pont St. Michel, was addressed by an old man, to whom his load of wretchedness seemed a heavier burthen than even that of his years. From beneath an

old tattered garment the stooping man drew forth a thick volume, torn and stained by long use; and offering it to the book-dealer, said:—"Intrinsically this is worth a mere nothing; it had a value to me, however; but I have not the courage to let myself die of my hunger,—so give me for it what you will." The volume in question was the *History of Astronomy* amongst all Nations, by Bailly; and, in its worn out condition, was dear at 50 centimes:—but the female merchant, pitying its owner's destitution, gave him a franc; and the latter immediately entering a baker's shop, brought out a portion of a loaf, and sat down to eat it solitarily by the river's side. M. G—, a canon of Notre Dame and haunter of the book-stalls in this neighbourhood, had been a witness of the scene; and taking up the book when the old man was gone, he found on the reverse of the title-page the following lines, firmly traced, but whose ink had assumed the colour of rust:—"My young friend, I am condemned to die;—at this hour to-morrow I shall be no more. I leave you friendless in the world—in a time of dreadful trouble; and that is one of my bitterest griefs. I had promised to be a father to you;—God wills that my promise shall not be performed. Take this volume as the pledge of my earnest love—and keep it in memory of me—BAILLY." Deeply affected by this one record of such varied miseries, at the opposite extremes of fifty years, the canon flung two francs to the merchant for her bargain,—and hastened with it to the old man, of whom he had not for a moment lost sight. From the latter he learned that he was the natural son of a person of high rank; had been, after his father's death, the pupil and almost the adopted child of Bailly; and that, on the eve of his death, the illustrious martyr sent to him this copy of the work which, in 1784, had opened to himself the doors of the Academy. This unfortunate pupil of an unfortunate master, after having been long engaged in the business of public instruction, had been attacked by illness, which compelled him to resign his functions; and had since been gradually sinking into the state of destitution, under whose gnawing promptings he had turned the last gift of his friend and benefactor into bread. The canon took the old man to his home; and has since laboured successfully to procure his admission into the hospital of Larochefoucauld—where the remainder of his days are sure, at least, of temporal comforts.

COLMAN THE YOUNGER.

COLMAN, when a boy at school, having, together with one of his class-fellows, been guilty of the unusual crime of getting through a certain portion of his studies in a marvellous creditable manner, the two received, as a reward, permission, if they chose it, to omit writing their usual evening's exercise. On the master going out, Colman said to his comrade, "Well, what shall we do?" The other replied, "Oh, I shall write my exercise, shan't you?" "On the contrary," replied Master George, "I shall exercise my right."

ERRATUM.—In "Some Account of a remarkable Organ," in No. X., *passim*, for "Grawn," read "Graun."
The poem of the "Beggars' Castle," in No. VI., was extracted from a volume, entitled "The Tribute." This acknowledgment was accidentally omitted.

FOR GENERAL READING.

No. 15.]

FEBRUARY 7, 1816.

[PRICE 1½d.]

NCE, on an autumn evening, two persons held sweet converse together beneath the walls of an ancient abbey. The one was a noble youth, the other a fair maid; not monk and nun, though they lingered on holy ground, but pure

lovers—Lionel, a bold esquire, and Constance, his betrothed. We will not repeat their converse, for

the language of love is chiefly sweet to those who speak it; theirs, moreover, was low, and overheard of none; and was long, for it lasted from sunset till the abbey bell tolled for compline. It was then that they first spoke aloud.

"Constance," said the youth, "thou knowest how willingly I would make this meeting longer, but there may be sore trials in store for me to-night, and I must not omit to pray for succour."

"And I, Lionel," the maiden replied, "who have often asked a blessing on thy actions in the battle-field, must not be more negligent when thou mayst have, perhaps, to deal with the powers of darkness."

So saying, they entered the church together, and de-

voutly joined in the prayers which terminate the labours of the day. But when the last prayer was said, the maiden left the church alone, for her lover had been summoned from another land to be dubbed a knight by a great earl in England, and this night he was to watch his arms in the church. As soon as the other worshippers had retired, Lionel was summoned by a priest to confession; he was not long so engaged, for he had few of the vices of his age, and, after a few words of exhortation and instruction, was left quite alone. It was St. Michael's Eve, and a light burned before St. Michael's altar, and here Lionel's arms were piled, beside which he kneeled, resolved to pass the night thus in meditation and prayer. His sword was all that he was allowed to retain of his armour, and, setting it upright, with its bare point on the pavement before him, he clasped his hands upon its cross-hilt.

The thoughts of a young man so shortly to be admitted to the honour of knighthood should be high and holy, full of hope and ambition, and such were Lionel's; yet, when he had kneeled for near an hour in his light garments on the cold stones, the gloom of the church striking cold to his very bones, and its silence weighing on his spirits, it must be owned that he wished his vigil at an end, and longed for the light of day. Anxious, however, to stifle all unworthy thoughts, he closed his eyes, and repeated in secret some of the prayers the good monks had taught him. He prayed for the church, his king, for the rightful cause in war, and for his own protection through the night, nor did he forget to name her who was far dearer to him than himself. While he was thus occupied, he heard a footfall close behind him. Lionel feared no man by daylight and in the open field, and his heart was stout under all dangers whatsoever, but this sound made it beat very quick, for he had been taught that a candidate for knighthood must expect strange trials during his vigils. Yet he opened not his eyes even till his prayers were finished, and this exercise of resolution doubled his courage for the expected encounter. When he did at length look up, he saw that he was indeed no longer alone. A man of obsequious mien stood before him, clad in the garb of a servitor or lay-brother of the abbey, and bearing on his arm a rich mantle of furs, and a velvet cap rising from a diadem of gold. His voice was humble and soft, as he addressed Lionel by a title to which he had yet no claim.

"Sir Knight! for so I call thee, since thy bravery and virtue have made thee one long since in all but the name,—thou followest this form too rigidly. This thin apparel and these cold stones are for men who have many sins to be quit of before they may take the vows of knighthood upon them; with thee it is not so, and the lord abbot has sent thee this mantle and this cap to guard thee from the chill air, and bids thee seat thyself in the knights' stalls, where thou wilt be more comfortably lodged."

It has been already said that the church was at this hour cold and comfortless, and that Lionel's vigil, inured as he was to hardships, was yet a painful one; it was no cause for wonder, therefore, that he felt for a moment disposed to accept the warm garments which his visitor held out to him, and to seek the shelter of the knights' stalls. But better thoughts came to his aid. "Am I not," he said to himself, "the humblest of Christ's soldiers, and shall I shrink from a few hours' hardship, and be too proud for this humble posture? How then shall I be fit for the life of danger and difficulty which a true knight destines for himself?" He refused not the gift in words, for he had been charged to keep a silent watch, but motioned the servitor away, made the sign of the cross on his breast, and with closed eyes repeated a versicle for support. His visitor was gone before he had again opened his eyes, and Lionel felt an inward consciousness that he had had to deal with a spiritual being. The thought struck him with awe, yet his successful resistance emboldened him, and he continued his vigil with a lighter and more steadfast heart than before.

But his trial was not at an end. Though the servitor himself had departed, the rich mantle and precious diadem were left on the floor beside his own armour, and with them a bag heavy with gold coin. They showed fair contrasted with his own poor armour, and the esquire did not without reflection surmount this new temptation. "It would have been foul pride," he thought, "to have worn the garb, and sat in the seat of knighthood, while I am yet a lowly esquire; but to-morrow will see me as true a knight as the richest in the land, yet in such mean armour that the very heralds will think it lost labour to cry 'largesse' for one who has so little for himself. This gold is freely offered, and I will, at least, with its aid, clothe myself in fair bright armour on the morrow. Yet," he added, "I will do nothing without the counsel of Heaven." Accordingly, he betook himself again to prayer, and so thoroughly was the temptation conquered by it, that he now looked on his own battered but trusty mail, tried in many fights, as more precious than the richest enamelled suit.

Another hour of dreary solitude had passed, when he suddenly felt a warm hand laid on his neck. He started, and, looking round, beheld the fairest woman that had ever crossed his eyes. Very beautiful she was, and had many enticing ways, for she leaned upon his shoulder as he kneeled, and whispered softly in his ear, and her voice and warm breath cheered him, for he was very lonely. She said she had taken pity on his solitude, and would give him her company during the night, but he must come to the warm cell above the church porch, for she could not live in the cold chapel where he was kneeling. Beauty is ever a perilous snare, and this lady had more than Lionel ever knew, and it may be that he would have yielded to her allurements, but that his love for the pure and faithful Constance was as a shield to him. He thought of this, and he thought too that this lady's gay apparel and enticing manner was strangely at variance with the sanctity of that old church. Yet he could not turn his eyes away, but gazed upon her with admiration, even while he crossed himself; but he had no sooner done so than her cheeks became pale, her hair grey, and all her beauty, save the fire of her eyes, departed. Then he was very glad that he had withstood her allurements, and could fix his eyes steadfastly upon the rood, and thought no more of the fair maiden.

Presently he heard voices close beside him (though he saw nothing), which repeated his name and spoke discourteously of his life and actions.

"This dainty 'squire," said one, "came home from the wars, and bragged of his great deeds there, and men hold him in honour therefore; nay, to-morrow they will make him a knight; yet I myself have seen him turn his back in battle, and he was ever readier to thrust his comrade into danger than to share it himself."

And another voice answered: "He has done worse deeds than that, for he woos a maiden named Constance, but wills not to wed her; for he is already wedded to a heathen damsel whom he captured in war." At these words Lionel was more moved than he had ever been before, and, clutching his sword, he sprang up and looked angrily around. Then he heard the voices laughing and mocking at a little distance, and he was about to pursue them through the church, when a stir among his armour caught his ear, and looking towards it, he saw a hand extended to take some of it away. He flew to it, and the hand vanished; but he kneeled still closer to his armour than before, and grieved that anger should for a moment have diverted him from his watch.

It was now midnight, and Lionel heard priests chanting the midnight prayers in another part of the church, yet he would not leave his watch to tell them what he had seen and heard, but imitated them in praying, and commending himself to Heaven.

There came then a fragrant smell of meats and dainty viands, and Lionel remembered that he had been from

midnight to midnight without food, for he who would be a knight fasts the day before his vows. He saw, but a little way behind him, a table spread with good fare and a flagon of wine, and the sight, perhaps, made his fast somewhat more painful, but he smiled at their folly who thought such dainties would lure a true soldier from his duty.

Another hour of his watch had passed without disturbance, when he heard the beat of a horse's hoofs on the soft turf in the churchyard. Then a door flew open near where he was kneeling, and he saw in the moonlight a page leading a noble charger, with all the trappings that a knight's horse should have, and all of the richest and most costly fashion. Like every soldier, Lionel loved a good horse, and he could not cease admiring the broad chest and arched neck of the noble animal which stood at the church door. Neither was he insensible to the splendour of its caparisons, or to the beauty of the richly clad page, all of which a new created knight might well covet for his first adventure. When the page had seen the esquire's admiring eye, he addressed him thus: "See, noble sir, how fair a steed for a foul rider! This proud charger and this costly apparel belong to the craven 'squire Orlando, who is most unworthily to be made a knight with you to-morrow, and I am his page. Can you bear to see him so well furnished in all things, while you, who are far nobler than he, will seem the poorer, and your sorry horse the worse, when set by his side! Only speak the word, and I will hamstring his proud horse, tear its dainty apparel in shreds, and be myself far beyond his reach by sunrise. You will then, poor as you are, be the better furnished knight of the two." The esquire was indeed moved by his words, but it was with wrath at his base proposal, and he scowled upon the page with such an angry countenance as drove him from the door without hope of finding envy in so virtuous a breast.

A weary night Lionel had passed, fasting and watching, troubled by visions and trials, and ever in one painful posture, for he had chosen to remain on his knees throughout the whole time. Nature was well nigh exhausted, and the esquire felt little power to resist any farther trials. It was with difficulty that he kept his eyes open by gazing on the holy emblems before him, and telling the beads of a rosary. Just then he heard a strain of music, very low, and sweet, and soft. It was not like the tones of the organ or the chanting of priests, and besides, it seemed close at his back, and yet it was very faint and soft. When he looked back, he saw a couch of down, prepared, as if for him; the burning incense in a censer at its foot, made a fragrant mist about it, and a concert of invisible instruments still invited him to approach. The incense and the soft music were fast stealing away his senses, and he scarce knew what he did as he tottered towards the couch: another moment would have seen his eyes closed in slumber, and his arms without a guardian. Just then, the loud voices of the monks at lauds roused him, and, starting up, he found that day was breaking, and his arms safe. By the time that his morning prayers were repeated, the sun was streaming in at the east window, painting the pavement with the forms of saints and holy emblems reflected from the glass, and gilding the flowers and evergreens which were hung about the altar for the high festival of St. Michael. A priest again received his confession, which occupied some time, for he had to tell all the strange things that had passed in the night. Then his page carried his armour from the church to his lodging, and cleansed it from the rust which had gathered on it during the night. Meanwhile his master went to the bath, and then heard mass. On his return, he found Constance waiting for him, and after an affectionate greeting, she insisted on helping to equip him in his armour. When every piece was in its place, she gave him his sword, but, first looking at the rough steel hilt, was amazed to see seven bright diamonds all of one size set in it. She questioned her lover, but he

could tell her nothing about them, and was as much surprised as she. Neither would he say what had happened in the night to make him look so pale and wan.

At length he was summoned to receive his knighthood from the earl's hands. In a full court of high-born knights and ladies, he kneeled among the other candidates, received the accolade upon his shoulder, was bidden to be a good knight in the name of God and St. Michael, and rose Sir Lionel. Then his friends came round him, and offered their congratulations and gifts. Amongst them were seven fair maidens clad in white robes, whom neither Sir Lionel nor any one present knew. The first gave him a rich mantle of state; the second, a purse of gold pieces, which he gave away in largesse to the heralds; the third bore a bright shield, which had no device, but this legend round the margin, "not lightly turned aside;" the fourth offered him a golden cup of wine, which he drank, and felt his heart strengthened within him; the fifth led a noble steed fully caparisoned; and the sixth gave a helmet inlaid with gold. With these gifts, he was far more nobly equipped than any of the new created knights, but there was yet one maiden of the seven who had brought nothing in her hands. She, however, advanced into the crowd, and led forth Constance, looking more beautiful than ever from the blushes which covered her face. The earl looked kindly on the maiden, and finding that she was betrothed to Sir Lionel, commanded that their nuptials should take place at once. Accordingly they were married by the lord abbot in the abbey church, in the presence of the earl, and, as they returned, the seven fair maidens in white went before, and strewed flowers in their path. Soon afterwards it was found that the maidens had disappeared without having spoken to any one, nor could any tell whence they had come nor whither they departed. They were never seen in those parts again but on one occasion, and that was many years after, when Sir Lionel was on his death-bed. There were present only Constance his wife, and a priest; and these averred, that as the seven maidens stood by the bedside, and looked kindly on the dying knight, his face was lighted with a smile, which did not pass away till long after death.

J. E. M.

LUCY COOPER.

CONCLUSION.

BELTON smoked his short and blackened pipe. Lucy, whose heart was relieved of the insupportable load of her hateful confinement, wiped the tears from her cheeks as quietly as she could, and silently offered her grateful thanksgivings to Almighty God for the pure air she was breathing, and the cessation of the infernal sounds she had escaped from.

"Maybe," said Belton, "you do not like my smoke;" and he took the pipe from his mouth. "But they tell me, all the factory women smoke."

"I am quite used to it," said Lucy; "pray enjoy it."

"I am an old soldier," continued the man, "and I have got the habit of it; but I have always thought it both a dirty and an idle trick; and I have taught my boy George not to make himself a slave to it as I am."

By this time they had cleared the town of Parramatta, and were entering upon the great Bathurst road, from which the whole valley of the "Heads of the Waters," (for such is the meaning of the native word Parramatta,) and all the extent of the town, were visible. At a distance was the factory, which Belton pointed out to his companion; and on the western slope of the panorama, the government domain and the country seat of the Governor overlooked the scene, with much of English comfort and repose.

"Yonder," said Belton, "is the place you came from; I suppose you are not sorry to leave it."

Lucy could not conceal the tears that flowed faster than ever.

"Well, well," said Belton, who evidently was no match for such rhetoric, "I will say no more about it—at least, if you behave yourself decently. So long as you are a good girl, you may keep out of it; and I hope you have seen enough of it to do you good."

Lucy could make no reply; but she silently remarked that her companion did not swear, and was kind and gentle with his horse. It is impossible to communicate the grateful satisfaction with which she made these preliminary observations, and drew from them a favourable augury of her new master's character.

The man at the turnpike gate, and George Belton, exchanged the nod of recognition, which implied that the matter of the toll had been previously adjusted; and they proceeded easily and quietly along a capital road, inclosed on either side with a rail-fence, the domain to the right, and the close bush to the left, forming an avenue of tall gum-trees, which was interrupted occasionally by a cleared spot, where the poor settler had built his hut, and gathered his domestic cares about him. At the summit of the first ascent, by the road side, lay the carcass of a bullock, which had died beneath the yoke. The hawks and dogs were busy over the remains, which, for months after, solicited the attention of the wayfarer. Belton's horse shied at the uncouth spectacle as usual. "Captain, Captain," said Belton, "what's the matter? You have seen that sight before; it is not the first by many. But don't be afraid, man; we will not leave you by the road side, Captain, depend upon it."

They descended the long slope, and crossed a creek, by a wooden bridge, part of the results of convict labour, and now undergoing a repair. At the road side was a tent or two, the temporary accommodation of the gang, which consisted of ten men, who were in a state of probation, and out of irons. A little further stood the "Madeira Inn," a humble house of refreshment by the road side, kept by "the Frenchman," who, however, was a native of Madeira. After crossing two more ridges, from the last of which, at a distance of nearly twenty miles, the city of Sydney was clearly discernible, and six miles beyond it, the lighthouse on the south head, they suddenly entered upon the cleared ground, and saw the rising sides of Prospect Hill, where one of the earliest and most enterprising families of the colony is settled in great comfort and opulence. After a while, Belton drew up to a gate on the left, which he unlatched and threw back, whilst Captain very carefully passed through, and waited until his master closed it and mounted his cart again, ere he proceeded. The loud barking of a carrot dog, who now came up, and whom Belton greeted by the name of Daddy Pincher, gave Lucy to understand that they were approaching to their journey's end. He had been busy with his pipe all the way, and did not seem to be a man of many words; but now he began to tell Pincher's story, and partly by apostrophes to his dog, partly by direct narrative, she learned that the carrot dog had attached himself to Belton some years ago, and had followed him with his regiment, until at length they settled here, with Mungo, his black son, and a son of Mungo's, wearing the family carrots, and called after his grandfather, young Pincher. They are good to their beasts, thought Lucy; surely they will be good to me. The three generations of dogs went capering before: the lane was long and rugged; a dog-rose, full of blooming hips and haws, rose by the fence here and there; and then a couple of haystacks, well thatched, and the smooth residue of a third, with a pig-stye and fowl-house, all in good order and comfort, seemed to close the lane; but round a sharp corner, at the edge of a small patch of green turf, and bounded by a couple of young but handsome oaks, stood the small white cottage which Belton called his home. Lucy was surprised that no one came to the door; but the master had by this time jumped down, and having thrown his

arms round the neck of a tall figure, sitting motionless in a chair by the side of the open window, he kissed the cheek of his wife, who cordially welcomed him home, but who evidently was deprived of sight.

Belton now returned to the cart, and bidding Lucy hand him out the various produce of his marketing, he finally helped her to come down, and led her into the cottage, which was clean and neat, and well supplied with substantial furniture. Whilst he was away at the stable, looking after Captain's supper and bed, Lucy was employed, under Mrs. Belton's directions, in getting the table spread for the evening meal; and, as she afterwards learned, had given the blind woman much satisfaction by the tones of her voice, and her quiet step.

After the lapse of a few days, the cottage, which was neat and orderly before, gradually assumed the aspect of extreme cleanliness and comfort; Mrs. Belton's caps and handkerchiefs were of a snowy whiteness; and the furniture and bedding as beautiful as they could be made. The dairy gradually improved; nothing could exceed the cleanliness and coolness of that great test of female industry; nor could the well-scalded vessels look whiter. A good understanding seemed to pervade the whole house, which extended to every part of the farm, and every creature in it. Thrift and economy were obvious; and so much tranquillity was hardly to be seen elsewhere.

In due time, Lucy learned that Belton and his wife had come from England with the —— regiment of foot, accompanied by one child, a boy, now superintending a large property at the remotest verge of the colony; that Mrs. Belton had never recovered from the effects of a lying-in, which had occurred within a month of their landing, and that the total loss of sight had been one of the results, and the death of an infant daughter, after a painful existence of six weeks, another.

It further appeared, that George Belton having completed the period of his service, had retired upon a pension of 2s. 10d. a day, and had purchased the house and land on which he lived. Belton was frugal and temperate, cheerful and industrious. He made no merit of doing his duty, and set little value upon himself for habits which made him respectable in the eyes of all his acquaintance. His neighbours, who could not follow his example, held him, nevertheless, in great honour; and Belton's word was everywhere respected. His manly tenderness for his afflicted wife had given him a gentle and considerate demeanour, and an air and manner approaching very nearly towards refinement. Belton had always been attentive to the offices of the Church of England; and at the time of Lucy's assignment to the family, the public service was reverently celebrated every evening, in the presence of all its members.

That these good people were kind to Lucy, need hardly be recorded. She gradually won their esteem, and all their confidence; and, in this remote and happy spot, two years rolled over her head, healing all her troubles, and improving her character. At this time, according to the rules of the department, she was become entitled to an indulgence, technically called a "Ticket of Leave;" the whole meaning of which is, that she would be at liberty to enter any service which she deemed desirable, at such wages as she could obtain, within a specified district, until the full expiration of her sentence. But it was not her intention to quit George Belton and his wife, to make her way in a society so constituted as she well knew this to be; and they, on their part, were happy to keep her to themselves, promising that she should not be a loser by her devotion to them. And in this way they continued to discharge their respective duties, to their mutual happiness and comfort.

About this time Lucy most unexpectedly received the following letter. It was seen in the post-office by a person who had known her when at Dr. Caveat's, and who, having heard of her present address, caused it to be forwarded to her.

—, 15 June, 1840.

"DEAR GRANDCHILD,

"Although we have not received a single line from you to say where you are, nor that you enjoy the great blessing of health, and I do not know how to direct this letter to you, I am willing to try whether it may not come to hand, especially as there is news which may be of much use to you. You know that, ever since your dear mother's death, the duty of bringing up yourself and sister fell upon me; and from that time, we never got one single line from your father. But I will say no more about his cruelty to your mother and yourselves. We have lately heard that he married again in India, and died of cholera-morbus, leaving a large fortune to the children of his second marriage. But what concerns you and your sister, is, to know that the sum of 500*l.* has been left to your good friend the rector, in trust for you and your sister, when you attain the age of twenty-five years respectively; and I should recommend you to write word, either to him, or to me, where you now are, and what had better be done about the legacy. Mr. Screw, the lawyer, has always said that he had good information of your poor sister's death; and he says, it is most likely you are dead too: but I hope and trust he is wrong in both cases; and that you are both alive and well to do. If I receive an answer to this letter, there are some news for you about the family, which I will send; but until I learn that my letters come to hand, I shall add no more, but remain, dear Lucy, your loving grandfather,

"PHILIP ANDREWS.

"P.S.—The good rector hopes that you have not forgotten your early lessons. You have many friends here who pray for and pity you."

Such were the contents of the letter which Lucy received. Fortunately, its general contents threw no discredit upon her, or her friends at home, which could give her pain: but enough was discovered to show her unprotected and friendless condition, when that occurred for which, by the merciful operation of the law, these two sisters were removed from scenes of dangerous association; and an impression has been made upon my mind, that the portion of guilt which really attached to the surviving sister had been greatly overrated. By this letter, however, it was pretty clear that Lucy would be entitled to 500*l.* the day she attained her twenty-fifth year; by which time also the whole period of her sentence would be terminated.

After much debate, it was concluded that Lucy should immediately acknowledge the receipt of her grandfather's letter; and Belton undertook to obtain from the authorities in Sydney such attestations of her sister's death as they were in the habit of supplying in similar cases. In the mean while, it was further determined to keep Lucy's good fortune a profound secret.

An uninterrupted course of prosperity and peace seemed to bless the cottage and its inhabitants; the daily labour and the daily bread followed each other, sweetened with contentment. George Belton gradually accumulated a stock of serviceable horses and handsome cows; his poultry, eggs, and butter, met with a steady sale; his mode of life was sober, and his habits inexpensive; he felt himself gradually growing rich. Nothing occurred to interrupt the repose and comfort of his life, until a source of anxiety arose in his son George, of whom a series of reports began to be spread abroad, that he was neglectful of his duty, insolent to his master, and giving way to vicious habits. His letters were no longer, as formerly, frequent and cheerful; but were filled with an apparent sullenness and ill-temper, which were as strange to his natural character, as they were otherwise unaccountable. His father was much distressed at this state of things, and would gladly have called him home; but he was under an engage-

ment with his master for a term of two years, to break which never occurred to the honest veteran as possible. Nearly five months of the period were yet unexpired: at the end of this time, the elder Belton reminded his son he might honourably throw up an employment which had evidently become irksome to him, for some reason or other; but which he had engaged himself to fulfil, and which he was bound not only to observe, but that with all diligence, faithfulness, and alacrity, like an honest man. To all this the young man replied, that he knew what his duty was, and would endeavour to fulfil it to the very letter, both for his parents' sake and his own, but that he was ill-supported and ill-requited by his master; his authority among the men diminished, and his best efforts for the well-being of the property frustrated. The father was so uneasy and perplexed, that he contemplated, with Mrs. Belton's full concurrence, a long and dangerous journey to the station where his son was employed: rightly judging, that any effort of the kind of which he was capable would cost him less pain than his son's bad conduct would cause him. Mrs. Belton, however anxious to relieve the father from the evident annoyance he suffered on account of her only son, never would allow that the fault or provocation lay with him: she knew his generous spirit and good temper too well to believe it; whatever was the matter, she was sure that George was more to be pitied than blamed.

It happened on a certain Sunday, when the Sacrament of the Lord's Supper was to be celebrated in the church of Parramatta, that George Belton and his wife were proceeding to town, in their green chaise-cart, with the intention of partaking in that communion. Lucy had been detained by the sudden illness of a neighbour, who, on these occasions, had been in the habit of taking care of the house in the absence of the family; it was with reluctance, therefore, that she remained behind, and allowed herself to be deprived of the benefit of the sacrament.

Her preparations for dinner had been made, the board covered with linen of the whitest hue, and the humble furniture of the table beautifully clean. The window of the common room was opened, having a monthly rose on each side of it, and growing with restrained luxuriance over the rude verandah which Belton had lately added to his house. Beneath the verandah, on a rustic bench, Lucy sat reading the morning service, and so intently was she engaged, that she was not sensible of the approach of a man until he stood almost by her side. To her great amazement she beheld a powerful man standing before her.

"I am sure," she said, looking keenly at him, "that you are George Belton."

"Why, you did not expect me, did you?" said young George Belton. "Where are father and mother?"

"You are too like Mrs. Belton to mistake," was the reply. And truly the herculean frame, and raven hair and eyes, of the young man could not conceal the regular features of his mother, which he bore with manly symmetry. His eye was like a hawk's,—

"Jet, jet black, and like a hawk,"

as the Northern bard has sung.

"Where's father? where's mother?" interrogated George; "there's nothing the matter, I hope!"

Whilst Lucy gave him the necessary information, the sound of the cart-wheels was heard, bringing home from church his venerated parents. George Belton was ready to lift his mother out, which he did with as much ease as ever, twenty years before, she had lifted him. Once set upon her feet, she continued to clasp her arms round his neck, and her exclamations expressed her joy at meeting him. His father shook him heartily by the hand; great and general were the endearments, and happy was that humble house on that day. An intimacy between the young man and Lucy was immediately commenced, and it was determined that he should remain at home for the future, to take part in the

management of the growing property, a comfort and pleasure to his fond parents. It was not hard for him to account for the unhappiness he had lately undergone. Distress and poverty had overtaken his master, the inseparable attendants upon such a course of life as he had fallen into; all his arrangements were crippled by the want of means, and his disappointments were laid upon his overseers and servants, who had, besides, the mortification of seeing all their labour unproductive. Belton had long seen ill-nature in his master's face; but when he had recourse to injurious language, an altercation ensued, which, by the young man's forbearance, terminated in their separation by consent, without further ill consequences. To mount his horse, and reach his father's house by lengthened journeys, was the first result of his liberty; for he could not wait to give them notice of his intended coming. George Belton had received from his father such accounts of Lucy as made him happy to think his mother's infirmities were so well attended to; but, however highly he might have been disposed to think of her at a distance, a nearer acquaintance added greatly to his regard. In short, the younger Belton soon found it necessary to examine himself as to the state of his affections towards Lucy Cooper, and came to the determination to speak to his father on the subject.

A few evenings after he had adopted this resolution he found an opportunity of opening the subject, as they returned home from the purchase of some cows, which they had obtained at an advantageous price, and which bade fair to turn out well. George was an honest, straightforward man, and began at once with the business in hand.

"Father," said he, "I think very highly of Lucy."

"So do I," replied his father.

"Do you think she would make a man a good wife?"

"A very good wife," was the brief reply.

They walked a few steps further in silence.

"Father," proceeded the young man, "do you think she would have me?"

"Nay," said the father, "you had better ask her."

"Do you mean that, father?" inquired the young man.

"Indeed, I do," said his father; "you may do many worse things, few better, than secure to yourself so good a young woman."

The young man grasped the old man's hand; and, with some hesitation, said, "My mother—do you think she is of your mind?"

"We never had two opinions, my boy, since we became one flesh. I know your mother's opinion quite agrees with mine."

"Well, father," concluded the dutiful son, "I think this evening's conversation will settle the business, at least as far as I am concerned."

"There is another person to be consulted yet," interposed the elder Belton.

"I hope you do not expect any difficulty there. I hope there is no person —"

Young George Belton had now touched a string which sounded harshly to his feelings; the possibility of pre-occupation had not yet occurred to him.

"Have you any reason to think, father, that Lucy has any engagement of this sort?"

"No, George," said his father, "I really think she has not. But she has strong feelings about her situation, and so much settled purpose and strength of mind, that if she should have formed an opinion that requires such a sacrifice, I am sure she would maintain it against all the world, and at any cost."

Satisfied with the result of this conversation, which the reader will observe was conducted with primitive simplicity and manliness, and that the two George Beltons were as like each other in their uprightness and honour as their broad shoulders and sturdy frames betokened their common origin, the younger man was still solicitous about Lucy's acceptance of his offer,

and her own plans for the future conduct of her life.

George was most affectionate to his mother, as a matter of course. His manly nature could not be otherwise. The evening meal and the evening prayers were concluded, and the whole party betook themselves to rest, without further mentioning a subject so important to him, and so auspiciously commenced. It was one among the few sleepless nights he had ever experienced; and, perhaps, for the first time in his life that he became acquainted with the uneasy passions. But he had achieved the greater part of his object in securing the concurrence of both his parents; and he resolved to ascertain from Lucy's own lips what was likely to be her determination. The only hesitation he felt was a doubt whether it would not be better and more delicate to request his mother to break the subject to her; but his final purpose to plead for himself, in his own person, was more in accordance with the plain integrity of his disposition.

For some days the employments of the farm, in which all were diligently occupied, put any explanation out of his power; and yet an indifferent observer could not have overlooked the half-conscious and constrained deportment of the two young people; whilst an easy anxiety and watchfulness proved satisfactorily enough that the faculties of the elder were employed in detecting little overt acts and evidences of open love. At length a moonlight evening, and a few moments' leisure, made, perhaps, on purpose by the solicitude of Mrs. Belton, gave George the much-desired opportunity of declaring his love, which Lucy heard without surprise, though certainly not without emotion; and whilst she confessed that neither his person nor his disposition were indifferent to her affections, she referred the decision to her only friends, who were his father and mother.

Brief and conclusive as this short explanation proved, it was a moment of so much unmingled happiness, that I question whether memory itself can supply another of equal bliss. When old George Belton, and his wife leaning upon his arm, returned from their little stroll, George referred the whole affair at once, in Lucy's presence, to their decision. The evening shades could not hush the sobs, though they concealed the tears, of this now happy girl; George clasped her to his bosom, and felt all the rapture which his generous spirit deserved, unmingled with reproach, and superior to shame.

"O happy love! where love like this is found!
O heart-felt raptures! bliss beyond compare!
I've paced much this weary, mortal round,
And sage Experience bids me this declare—
If Heaven a draught of heavenly pleasure spare,
One cordial in this melancholy vale,
'Tis when a youthful, loving, modest pair
In other's arms breathe out the tender tale,
Beneath the milk-white thorn that scents the evening gale."
BURNS.

Inmates of one house, the family concurred in solemnizing an immediate marriage. Mrs. Webster came from Sydney to witness the event; and lived to see the old couple and the young enjoying together for many years the fullest measure of earthly felicity.

POPULAR YEAR-BOOK.

February.

NUMA gave to this month the position in the year which it still retains, and placed it under the protection of Neptune, who was highly esteemed by the Romans, not only as ruling over one of the four elements, but as the reputed promoter of the abduction of the Sabine women, when the population of the infant city of Romulus was in

danger of extinction. The name February is either taken from *Februa*, *Februaca*, or *Februalis*, appellations of Juno; or from the *Februa*, or *Feralia*, sacrifices anciently offered to Pluto, at this season, for the souls of the departed. In allusion to this custom Ovid sings—

"With whatsoever our hearts we hold
Are purified, was Februa termed of old;
Lustrations are from hence, from hence the name,
Of this our month of February came,
In which the priests of Pan processions made;
In which the tombs were also purified
Of such as had no dirges when they died;
For our religious fathers did maintain
Purgations expiated every stain
Of guilt and sin."

Our Saxon ancestors termed this month *sprout-kele*. "By *kele*," says an old writer, "meaning the kele-wurt, which we now call the cole-wurt, the greatest *pot-wurt* in time long past that our ancestors used, and the broth made therewith was therefore also called kele; for before we borrowed from the French the name of pottage, and the name of herb, the one in our own language was called *kele*, and the other *wurt*; and as this kele-wurt, or pottage-herb, was the chief winter-wurt for the husbandman, so was it the first herb that in this month began to yield out wholesome young sprouts, and consequently gave thereunto the name of *sprout-kele*." The Saxons subsequently altered this term to *Solmonath* (rendered by Spelman "Pancake Month,") because in the course of it, before their conversion to Christianity, they offered cakes to the Sun; and "Sol," or "Soul," signified cakes, or food.

In the period of February the sun generally enters "Pisces," whence this month has the fishes for its zodiacal sign.¹ Its common representation is a man in a dark sky-coloured dress, bearing in his hand the above astronomical emblem. In some of the old Saxon pictures, however, February was represented as a vine-dresser pruning trees; and in others, as a man with his jacket closely buttoned, warming himself by striking his hands across his body, in token of the early part of the month being the most inclement season of the year.

The greater portion of February may still be considered winter, although the weather is usually less cold than in the preceding months. The days are sensibly lengthened, and snow and ice are melted by the warmth of the sun. Frequently a sudden thaw comes on; with a south wind and rain, and great injury is occasioned by the swollen rivers, which, rushing beyond their accustomed channels, carry away bridges and embankments, inundate the fields, and sweep away the cattle. The thaw is often again succeeded by frost and snow; and thus the weather alternately changes during the month. February, however, is not entirely without the cheering harbingers of spring. The woodlark, skylark, wren, robin, missel, hedge-sparrow, thrush, and chaffinch, are in song. Turkey-cocks strut and gobble; the house-pigeon has young. The raven and rook repair their nests. The bulfinch returns to our gardens. The wood-owl and green woodpecker are heard among the leafless trees. Partridges begin to couple, and geese to lay. Frogs croak; field crickets open their holes; the bee flies abroad; on a sunny day

gnats buzz on every side, and one or two early caterpillars, who have lain torpid through the winter, are visible. Moles throw up their hillocks as soon as the earth is softened, and do much mischief in gardens, by devouring and loosening flower-roots, and in the fields, by rendering the soil uneven, and thus obstructing the scythe of the mower. Many plants appear above ground, but few flowers are yet in bloom. The snow-drop fully opens by the vigil of Candlemas, and was for that reason honoured by our pious ancestors with the names of "our Lady of February," and "Purification Flower." Primroses, crocuses, polyanthuses, daisies, the periwinkle, and common polewort are seen; the apricot begins to show a few blossoms; mosses and lichens abound; the leaves of the daffodil appear; the yew and alder-trees put forth their buds; the catkins of the hazel become very conspicuous; and young leaves appear at the close of the month on the gooseberry and currant trees. As soon as the frost permits, the gardener digs and sows his borders; and the farmer ploughs his land, sows beans and peas, rye and spring wheat; sets early potatoes; drains his wet land; prunes trees, and plants those which flourish best in a wet soil, as poplars and willows.

February 2.—The Purification, or Candlemas Day.

This Festival is celebrated by all Christendom. It is generally supposed to date from the time of Justinian; but Pope Gelasius had certainly solemnized it at Rome thirty years before the accession of that emperor.

The following rhyme respecting Candlemas day is universal in Scotland:—

"If Candlemas day be dry and fair,
The half o' winter's to come and mair;
If Candlemas day be wet and foul,
The half o' winter's gane at Yule."

Bishop Hall, in a sermon on this Feast, observes, "It hath been an old (I say not how true) note, that hath been wont to be set on this day, that if it be clear and sunshiny, it portends a hard weather to come; if cloudy and lowering, a mild and gentle season ensuing." To the same effect is the old prediction—

"If Candlemas day be fair and bright,
Winter will have another flight;
But if Candlemas day be clouds and rain,
Winter is gone, and will not come again."

Very similar is the ancient Latin distich—

"Si sol splendet Maria purificante,
Major erit glacies post festum quam fuit ante:—"

which means, "If the sun shines on the Feast of the Purification, there will be more ice after the Festival than before it." In Germany there is a vernacular proverb to express the same idea:—"The shepherd would rather see a wolf enter his stable on Candlemas day, than the sun." A correspondent in Hone's "Year Book" remarks, "I have seen a farmer of the 'old school' rubbing his hands with glee during the dismal battling of the elements without, while the wind entered within through the crevices of the doors and casements of the latticed windows, and while his little children, at the loud blasts which roared around the roof, ran for protection between the knees of their father, or hid their face in the lap of their mother."

(1) This emblem is said to symbolize the fishery of the Nile, which usually commenced at this season of the year.

OLD AND POPULAR CUSTOMS.

Herrick enjoins the following observance on Candlemas day :—

"Kindle the Christmas brand, and then
Till sunset let it burn,
Which quenched, then lay it up again
Till Christmas next return.

"Part must be kept wherewith to tend
The Christmas log next year,
And when 'tis safely kept, the fiend
Can do no mischief there."

Martin, in his description of the Western Islands, 8vo, 1716, describes an ancient custom observed on this Festival: it is as follows :—The mistress and servants of each family take a sheaf of oats, and dress it up in women's apparel, put it in a large basket, and lay a wooden club by it, and this they call Brüd's Bed; and then the mistress and servants cry three times, "Brüd is come! Brüd is welcome!" This they do just before going to bed, and when they rise in the morning they look among the ashes, expecting to see the impression of Brüd's club there; which, if they do, they reckon it a true presage of a good crop and prosperous year, and the contrary they take as an ill omen.

A contributor to Hone's "Every-day Book," gives an account of a custom which he witnessed at Lyme Regis, Dorsetshire, in the days of his boyhood. The ashes of the family to which he belonged, being sold throughout the year as they were made, the person who purchased them annually sent a present on Candlemas day of a large candle. When night came, this candle was lighted, and, assisted by its rays, the inmates regaled themselves with ale and punch, or some other cheering beverage, until the candle had burnt out. The coming of the Candlemas candle was looked forward to by the young ones as an event of some consequence; for, of usage, they had a sort of right to sit up that night, and partake of the refreshment, till all retired to rest; the signal for which was the self-extinction of the Candlemas candle. This usage seems to have been a relic of the pious observances formerly performed on this Festival, and which will be described presently.

At every school in the south of Scotland, the boys and girls look forward to Candlemas day as an entire day of relaxation, fun, and festivity. On the evening preceding, the schoolmaster gives notice that to-morrow is their annual festival. The announcement is joyfully received, and they hasten home to their parents for their donations to the pedagogue, called "Candle-mas bleeze," that all may be ready on the morrow. When it arrives, all is bustle and conjecture who is to be king, who is to be queen. The master receives his "bleeze" with condescension and kind familiarity: some of the pupils bring sixpence, some a shilling, and others more, according to the circumstances of their parents. With the "bleeze" the master purchases a few bottles of whisky, which is converted into punch; and this, with a quantity of biscuits, is for the entertainment of his youthful guests. The surplus of cash, after defraying all expenses, he retains as a present to himself. The boy that brings the most "bleeze" is crowned king, and the girl who brings the largest portion is queen. To these illustrious personages the other youths in the school pay homage for the remainder

of the festivities. The king and queen are installed by being introduced to each other by the school-master; they acknowledge the honour with a fond salute; both then receive a glass of punch, and pledge their worthy instructor. They next drink long life and happy days to their loyal subjects, and are afterwards enthroned on an elevated seat. After the enthronement, the master gives each scholar a glass of punch and a biscuit; and they all drink "long life and a prosperous and happy reign to their most gracious sovereigns;" at the same time making obeisance with their best bows. As long as the whisky holds out these testimonials of loyalty and attachment are repeated. The young ones, yet full of mirth and glee, and, after receiving their master's thanks, are finally dismissed with merry hearts, to relate their adventures at home.

RELIGIOUS OBSERVANCES.

The procession on this day with lighted tapers, is one of the most ancient of the old observances, and is supposed to be in allusion to the prophetic words of Simeon, when he took the infant Jesus in his arms, and affirmed that He was a LIGHT to lighten the Gentiles, and the GLORY of Israel. Pope Sergius, says an old writer, "commanded that all people should go in procession upon Candlemas day, and carry candles about with them burning in their hands, in the year of our LORD 684." A poem before cited thus alludes to this observance:—

"Then comes the day wherein the Virgin offered CHRIST unto
The FATHER chief, as Moses' law commanded her to do,
Then numbers great of tapers large both men and women bear
To church, being hallowed there with pomp and dreadful words
to hear."

Candle-bearing on the Feast of the Purification remained in England till its abolition by an order in Council in the second year of King Edward VI. The usage of carrying or placing lighted tapers in churches on this festival was, however, partially continued by our forefathers long subsequently to the "Reformation." Dr. Donne (*temp.* James I.) thus alludes to it in one of his sermons:—"The oblation of this day's purification is light: so the day names it, Candlemas day; so your custom celebrates it with many lights."

Elsewhere, the ancient rites of Candlemas are still retained. The several Prelates, in their respective dioceses, not only bestow a solemn benediction upon the lights then used, but also upon such as are to be expended during the ensuing year, which are carried in procession. A modern traveller describes the blessing of the candles by the sovereign Pontiff as follows:—The ceremony takes place in the chapel of the Quirinal, where the Pope himself officiates, and blesses, and distributes with his own hand, a candle to every person in the body of the church; each going individually and kneeling at the throne to receive it. The ceremony commences with the cardinals; then follow the bishops, canons, priors, abbots, priests, &c., down to the sacristans and humblest officers of the Church. When the last of these has got his candle, the representatives of the Roman Senate and people receive theirs. This over, the candles are lighted; the Pope is mounted in his chair and carried in procession, with hymns chanting round the ante-chapel; the throne is stripped of its splendid hangings; the Pope and

cardinals take off their gold and crimson dresses, put on their ordinary robes, and the usual mass of the morning is celebrated.

It was anciently a custom for women in England to bear lights when they were churched, as appears from the following royal *bon mot*. William the Conqueror, by reason of sickness, kept his chamber a long time, "whereat the French King, scoffing, said, 'The King of England lieth long in child-bed:' which, when it was reported unto King William, he answered—'When I am churched, there shall be a thousand lights in France;' and that he performed a few days after, wasting the French territories with fire and sword."

February 3.—St. BLASE, the patron of the woolcombers, is commemorated on this day in the Calendar of the English Church. He was bishop of Sebaste, in Armenia, and was martyred in the persecution of Licinius, in 316, by the command of Agricolaus, Governor of Cappadocia and the Lesser Armenia: candles were formerly offered in honour of this saint. Even until very lately (and we have not heard that the custom has been generally discontinued) it was the practice in many parts of England to kindle fires upon different eminences on the day of his anniversary. Whether these customs had any allusion to the Saint's life, or merely originated from the reference such lights or *blazes* bore to his name, as some have imagined, cannot now be ascertained. St. Blase was once very popular throughout this country; and there are accounts extant which state him to have first procured such favour by visiting this island, and converting many of our Pagan forefathers.

No other reason than the great devotion of the people to this celebrated martyr seems to have occasioned the WOOLCOMBERS to choose him the titular patron of their profession, on which account his festival is still observed by them with a solemn guild at Norwich. "Perhaps also," says Butler, "his country might in part determine them to this choice: for it seems that the first branch, or at least hint of this manufacture, was borrowed from the remotest known countries of the East, as was that of silk: or the *iron combs*, with which he is said to have been tormented, gave occasion to this choice." "To this day," says Brady, circa 1815, "the effigy of St. Blase is continued to be carried by the artificers in procession about many of the great towns in which wool is manufactured, in the north of England." He then gives the following account of a pageant of this kind which had taken place a little while before:—"The procession was led by Jason, as the champion and protector of the golden fleece, who was followed by shepherds and shepherdesses; a beautiful girl, elegantly dressed, carried a lamb upon her lap, with a bouquet of flowers, made of wool, in her bosom; next followed the venerable bishop; his mitre, with the keys of St. Peter, gilt in front, were formed of wool; and he had a large wig of the same material, which reached down to the saddle; his bridle was held on each side by a page, and another was at the stirrups carrying a Bible in one hand and a wool-comb in the other; his followers dressed in white, with sashes, scarfs, and high caps, carrying two large flags, all made of wool, and wands; two persons, elevated on a stage, were at work, showing the manner in which the wool is combed."

KÖRNER.¹

NEVER did the flame of patriotism burn purer in the heart of any man than in that of Körner. No sacrifice to the liberties of one's country was ever more entire and unreserved than his, or made with a clearer apprehension of the full extent of its demands. With his pen he had laboured, and might with it alone have continued to labour sufficiently for Germany, to gain for himself a high place in the roll of those whose genius has been consecrated to the sacred cause of freedom and country; what he had already done, and might have continued doing without danger, was all that was required for fame, had fame been his only or his principal object; poets are not expected to exhibit in their own lives the heroism which it is their business to celebrate, nor to stimulate men to noble achievements by their example, as well as by their strains; and he might, therefore, without dishonour, have held back from a more active participation in the national struggle. But, though enough to have satisfied all that the world was entitled to expect, he had not yet done enough to satisfy himself. He felt that the cause was too sacred to admit of any reserve in his devotion to it; that it demanded all he could give for it; and, having no richer offering than his life to give, he freely gave his life: gave it too when life was sweetest—when a rich harvest of fame was opening upon him, for he had just surmounted the steep ascent up which genius has to toil in its first struggle for public applause, and had planted his foot firmly on the elevated platform whence further progress is comparatively easy; with every hope of comfortable, if not affluent circumstances; with attached friends; with admiring and devoted parents; and, more than all, happy in his love, and basking in the glad hope of a union which was to crown the remainder of his days with happiness and peace. Thus stood life with him, when he voluntarily gave it up; and how great the sacrifice was, let no man who is not conscious of a soul as finely tuned as his to all the tenderest sensibilities of the heart, imagine that he can estimate. He carried no half-hope of escape with him, to make the sacrifice easy; it is manifest that he felt assured he was to die—that he counted upon nothing less than that the sacrifice should be demanded to its utmost extent, and that no interposition should snatch the victim from the altar. The annals of history do not furnish a nobler example of heroic self-devotion.

Carl Theodor Körner was born at Dresden, on the 23d September, 1791. His father was counsellor of the chief consistory of that city, his mother was the daughter of an engraver of Leipzig. During childhood his health was weak and precarious, and his education was therefore later than usual of being begun. The distinguishing features of his character in childhood, his father represents to have been, great tenderness of heart, and strong affection for those who had won his love, united with singular firmness and strength of mind, and very quick and lively powers of fancy.

His childhood was not precocious, and his faculties developed themselves but slowly; when fairly awakened, however, his comprehension was keen and acute. He showed little inclination for the study of languages, pre-

(1) Life of Carl Theodor Körner, (written by his father) with selections from his poems, tales, and dramas. Translated by G. F. Richardson, Esq., of the British Museum. Second Edition. London, Nutt, 1845. This work, which is dedicated to Prince Albert, contains, in addition to the life of Körner by his father, and a variety of interesting letters and notices relative to his history and associates, a selection from his best works, in prose and verse, translated by Mr. Richardson, with much spirit and elegance.

ferring that of history, natural philosophy, and the mathematics. He early displayed a considerable inclination and talent for music. But his ruling passion was poetry; and to it he devoted himself from his earliest years, with an enthusiasm which nothing could restrain. Happily for his future progress, he did not allow his judgment to be blinded by the admiration which the excellence of his early productions gained for him. He had sense enough, young as he was, to attach little value to it; and instead of resting satisfied with the trifles to which such easily won praise is generally awarded, he, with the feelings of a true poet, hastened to compete with the noblest and most difficult themes.

Körner pursued his studies at home, under his father's eye, till his seventeenth year. It was then decided that he should adopt as a profession the art of mining; the study of which he commenced in 1808, at Freyberg, one of whose professors, at that time, was the celebrated Werner, who was a personal friend of his father's.

After devoting himself to the practical part of his intended profession with great zeal for a time, shrinking from no labour or fatigue until he had made himself thoroughly acquainted with it, he at length gave his attention in a more particular manner to the collateral sciences which are auxiliary to it—mineralogy and chemistry. He collected fossils, explored mountainous districts, drew charts, and, with the help of an experienced friend, made experiments in chemistry. His devotion to poetry does not appear to have had the effect, in the slightest degree, of incapacitating him for severer studies, or of weakening his relish for them.

In the summer of 1809 he undertook a journey on foot through Upper Lusatia, in the Silesian mountains, with a view to the further prosecution of his mineralogical studies. Enjoying the advantage of introductions to persons of high consideration in that country, from whom he received the information best fitted to direct his inquiries, he pursued them with great success. The sublimity and beauty of the scenery had the greatest charms for his mind, and he ever reckoned his residence in Silesia among the most happy days of his life. Several of his poetical compositions were written about this time.

"From this period," remarks his father, "more seriousness and depth are perceivable in his poetic production; and, in particular, we may observe a good old virtuous German feeling. He had not known religion as a dark and gloomy task-mistress, or as a foe to innocent joys, but as a cheering and elevating friend. His whole education was directed with a view that he should be impelled rather by a noble emulation than by slavish fear, and he was early accustomed to revere whatever was sacred; hence proceeded the candour and the zeal with which he embraced the spirit of Christianity. At a time when the feelings of impetuous and heedless youth might have been supposed to be paramount in his soul, it was that he produced his spiritual sonnets, which were the genuine and spontaneous effusions of his mind. Their simplicity evidently proves that they are not to be classed among the productions of fashion or caprice. He thus speaks of them, in a confidential letter:—'I think the sonnet peculiarly adapted to this species of composition; for there is in its metre a repose and love which are quite in unison with the narratives of holy writ.'

From Freyberg, where he remained two years, he proceeded, in 1810, to complete his scientific studies at Leipsic. Having spent the winter there in study, he went, early in 1811, to Berlin, where he was received with much kindness by one or two friends of his father's. He was about entering here, with his usual zeal, upon the study of botany, when he was seized with a fever, which, after continuing for several weeks, left him so enfeebled, that travelling, and change of air, were declared to be absolutely necessary for his recovery. His father, viewing with alarm the spirit then prevailing in the German universities, and desirous to seize the opportunity of removing him from the influence of college

associations, decided upon his making Vienna the direction of his travel, and upon his taking up his residence there for a time.

Here the decisive portion of his life commenced. Satisfied that he had already gained sufficient scientific knowledge for the purposes of his intended profession, he devoted himself entirely to poetical composition, in which he employed a large portion of every day. He applied himself now, also, in a particular manner to the study of history. "What his father most desired," to use his own words, "was, not so much his preparation for any particular pursuit, as the completion of his moral and intellectual character as a man; for only such a one did he consider justified in aspiring to be a poet. He was fully aware of the necessity of his son's attaining a thorough knowledge of history, and of the ancient and modern languages. There was, moreover, a poetical object in his historical studies, as these afforded him materials for his dramatic works."

The number and variety of his compositions, which were chiefly dramatic, and intended for public representation, during his residence at Vienna, afford an extraordinary example of perseverance and facility of production. His first essays consisted of two one act pieces, in Alexandrines—"The Bride," and "The Green Domino," which were both received with much applause. Then followed a farce, called "The Night Watch," also successful. His next was a serious composition, "Foni," a drama, founded on a tale of Heinrich von Kleist's; then a tragic piece, "The Expiation." To this succeeded "Zriny," "Hedwig," "Rosamund," "Joseph Heyderich," all tragedies. And they were followed by three comic pieces—"The Cousin from Bremen," "The Officer of the Guard," and "The Governess;" by two operas—"The Fisher Girl," and "The Four Years' Post;" as well as several minor poems. He also concluded an opera, commenced some time before, under the title of "The Miners;" wrote part of an opera for Beethoven, called "The Return of Ulysses;" besides preparing a multitude of plans, both of small and large pieces.

This, to be the work of fifteen months, evinces a fertility of production almost incredible, and would have been altogether impossible, but for early and sustained habits of persevering labour. For the productions, thus rapidly thrown off, were not the mere hasty sketches of a clever boy; they were serious and important works, worthy, in the greater part, of the character and fame of an established poet. "His productions experienced, on the whole," his father tells us, "a reception far beyond his expectations. The public feeling showed itself the most enthusiastically at the first representation of 'Zriny.' The author was called to appear before the audience in person, an honour altogether unusual in Vienna. But the single voices of certain critical judges, the favourable opinion of the judicious few, were yet more gratifying to his feelings. The friendly judgment of Goethe reached him from afar, and by his influence, 'The Bride,' 'The Green Domino,' and 'The Expiation,' were brought out at Weimar, with particular care, and with eminent success."

The description of his mode of life in Vienna, at this time, given by his father, is very interesting, and places in a strong light the truth of what we have already said, of the extent of the sacrifice made by him in taking up arms. "Vienna perfectly fulfilled and even exceeded the expectations both of father and son. The delightful environs, and the treasures of art collected within this city, afforded Körner a variety of enjoyment. He became acquainted with the charming banks of the Danube in his return from Ratisbon, whither he had been accompanied by a friend. The world of joy by which he was now surrounded, and in which he soon found himself at home, excited in him feelings of an accordant kind. Far from being enervated by it, his ardent nature received a new impulse; all his faculties were excited; and the objects of his emulation were constantly placed higher. And no instructive warning or exciting voice was ever

heard in vain, when it had once gained his esteem, whether by intellect, knowledge, and experience, or by the charms of female accomplishment. In this manner he was much indebted, not only to the intimacy of Humboldt and of Schlegel, but also to the elegant society which met at the house of the celebrated female writer, Caroline Pichler, and of Madame de Pereira. But it was to be attributed to a softer sentiment, that of love, that the faculties of his youth were preserved unweakened, amid the perils of a seducing capital. A lovely being, as if sent by Heaven as his guardian angel, enchained him both by the charms of beauty and of soul. Körner's parents came to Vienna; approved and blessed the choice of their son; rejoiced in the effects of a noble and inspiring sentiment; and were looking forward to a happy future, when a fortunate event occurred, as if destined to hasten the union of the endeared pair. The fortunate event here referred to was his appointment as poet of the court theatre, the consequence of the approbation with which the public received his dramatic productions. The emoluments attending this preferment assured him of a sufficient income.

It was now, just at this most favourable point of his fortunes, that he responded to the call which summoned him to fight the battle of his country's freedom. The spirit of German nationality had been for some time previous awakening, chiefly in the breasts of the young men of the universities, when the king of Prussia's appeal to his countrymen to rally under his standard, and join in the effort to expel the common enemy, roused the hearts of all Germans, like the sound of a trumpet. Körner was among the first to answer to the call, by the ready devotion of his heart and life to the patriotic work. We have seldom read anything more impressive, and, looking to all the circumstances, more affecting, than the letter in which he communicates his resolution to his father. It is very German in language and sentiment. An Englishman in similar circumstances would probably have written very differently, but the stamp of truth and sincerity which it bears raises it far above minute or conventional criticism. "Germany rises!" he writes; "the Prussian eagle, by the beating of her mighty wings, awakes in all true hearts the great hope of German freedom. My poetic art sighs for my country—let me not prove myself her unworthy son. Now that I know what happiness can ripen for me in this life—now that the star of fortune sheds on me its most cheering influence—now is this, by Heaven! a sacred feeling which animates me—this mighty conviction that no sacrifice can be too great for that greatest mortal blessing, our country's freedom! A great age requires great souls, and I feel, within myself, the faculty of being as a rock amid this concussion of the nations. I must forth—I must oppose my daring breast to the waves of the storm. Could I, think you, stand aloof, contented to celebrate with poetry alone the success of my brethren, while they fought and conquered? I am aware that you will suffer much anxiety. My mother, too, will weep. May God be her comfort. I cannot spare you this trial. That I simply offer my life is of little import; but that I offer it, crowned as it is with all the flowery wreaths of love, of friendship, and of joy,—that I cast away the sweet sensations which lived in the anticipation that I should never cause you inquietude or anguish—this, indeed, is a sacrifice which can only be opposed to such a prize—our country's freedom!" We should search far to find more affecting language of self-sacrifice than that: "My mother—may God be her comfort! I cannot spare you this trial."

He joined himself to a corps of volunteers, which was almost immediately brought into active service. In the middle of June, 1813, he was severely wounded in a skirmish; but, true to the cause he had espoused, he, immediately on his recovery, returned to his corps; and on the 26th August, he fell in an action, which took place on the high road from Gadebusch to Schwerin, not far from Hamburg.

The death of Körner excited the warmest sympathy throughout Germany, which wept, in her own peculiar fashion, many a bitter tear over the tomb of her hero-poet. He was buried under a great oak—the oak was his favourite tree—not far from where he fell, and the tree which overshadows his grave is still called Körner's oak, and there a monument, representing the lyre and sword, encircled with an oakwreath, resting upon an altar, and bearing a suitable inscription, was erected to his memory.

The character of his works is well described by Mr. Richardson, the translator of the volumes now before us, in the following passage:—

"His works consist of martial and miscellaneous poems, prose tales, and dramas. Of his poems, those of a martial character are commonly most distinguished; they all breathe a high spirit of heroism, a strong hatred of tyranny and oppression, and a deep sympathy for the afflictions of his suffering country. His miscellaneous pieces will also be found to exhibit some of the most admired graces of refined and elegant poetry. His few prose tales are very beautiful compositions, and induce us only to regret that he has left no more examples of this delightful style of writing. But his dramas are considered his highest efforts, and these display, in the most striking manner, the power and fertility of his mind. He appears to have essayed every species of dramatic composition—to have attempted farce, opera, comedy, and tragedy, and to have achieved the most brilliant success in all. In comedy, his productions were exceedingly admired, and he was considered by distinguished critics to possess that genuine *vis comica*, which is the basis of all dramatic efforts of this kind; while in tragedy, the merits of his pieces insured him the most substantial emoluments, and the most flattering honours; and he was rewarded at once with the approbation of the public, the patronage of the court, and the favourable opinion of the most distinguished writers and critics.

"His collected works consist of four considerable volumes, varying in their degrees of interest and attraction, according to the nature of their subjects; but, allowing for the imperfections necessarily incident to youthful efforts, all bearing the impress of high poetic genius. And when we reflect on the various studies, avocations, and pursuits of the author—when we consider that in addition to his academical career, his literary and scientific acquirements, he also discharged the duties of a military life, and that his various attainments were achieved, and he himself snatched away, at the early age of twenty-two, we cannot refuse our admiration of an instance of early genius, which is probably unrivalled, and certainly unsurpassed in the annals of literary distinction."

Some specimens of Körner's shorter pieces in prose and verse will be given in a subsequent number.

POPULAR ILLUSTRATIONS OF THE OLDEN TIME.

No. I.

The olden time! aye, the olden time!
Tho' wild the fable, tho' rude the rhyme,
Oh! dear is a tale of the olden time.
Those days of marvel and mystery,
Those times we never again may see,
When life was a wild and a gorgeous dream,
A meteor glancing with fitful beam;
For all was then bright, and strange, and new,
And nought was certain, yet all seem'd true.

MRS LAWRENCE.

THE field upon which we design to enter, and which is indicated by the title we have given to our paper, is a very wide and interesting one; and in traversing it

we shall allow ourselves to wander, at will, in any direction. Consequently, our readers must not expect much attention paid to the orderly arrangement of the subjects treated of in the following papers; although we hope that, at the conclusion of our series, they will find that nothing has been omitted which deserved a place in our "Illustrations." With these few prefatory remarks, we shall proceed to our proposed task.

OLD PUNISHMENTS.

Lest we should incur the censure of the kind-hearted for making choice of so repulsive and cruel a subject as the title of this paper might reasonably seem to indicate, we will say at once that it is not our intention now, or in any future "Illustration," to harrow up the feelings of our readers with details respecting those sanguinary tortures which, by our ancient laws, criminals were condemned to suffer. The rack, the stake, and their kindred punishments, are happily well nigh forgotten, and we have no wish to revive the memory of their horrors. There are, however, *some* old punishments which have equally fallen into oblivion, but are rather of a facetious than a cruel nature, and were so popular among our rough, jovial ancestors, as to deserve some notice in our columns. Such, for example, was that of the CUCKING, or DUCKING STOOL, an engine invented for taming female shrews by ducking them in the water. The scolds were compelled to seat themselves in this stool, or chair, which was fixed at the end of a long pole, by which they were immersed in some muddy or stinking pond. Mr. Lysons, in his "Environ of London," gives a curious extract from the churchwardens and chamberlain's account at Kingston-upon-Thames, in the year 1572, which contains the following bill of expenses for the fabrication of one of these machines:—

	s.	d.
The making of the Cucking-stool . . .	8	0
Iron work for the same	3	0
Timber for the same	7	6
Three brasses for the same, and three wheels	4	10

This "Cucking-stool" must have been much in use formerly, as there are frequent entries of money paid for its repairs. Even so recently as the beginning of the last century, a shrew paid the penalty for the unbridled license of her tongue, in this "engine," as appears from the following paragraph in the "London Evening Post," April 27 to 30, 1745:—"Last week a woman that keeps the Queen's Head ale-house, at Kingston, in Surrey, was ordered by the Court to be ducked for scolding, and was accordingly placed in the chair, and ducked in the river Thames, under Kingston Bridge, in the presence of 2,000 or 3,000 people." From this large assemblage of spectators it may be inferred that the punishment had then become unusual in the above locality.

There is an order of the Corporation of Shrewsbury, 1669, that, "a Ducking-stool be erected for the punishment of scolds." In Harwood's "History of Lichfield," we find a charge, in the year 1578, "For making a Cuckstool, with appurtenances, 8s.," and the antiquary Cole, among instances of proceedings in the Vice-Chancellor's Court of Cambridge, 1st Eliz., gives—

"Jane Johnson adjudged to the Ducking-stool for scolding, and commuted her penance. . . . Katherine Sanders, accused by the churchwardens of St. Andrew's, for a common scold and slanderer of her neighbours, adjudged to the Ducking-stool."

The same author, writing about 1780, remarks, "In my time, when I was a boy, I lived with my grandmother in the great corner house at the bridge-foot, next to Magdalen College, Cambridge, and rebuilt since by my uncle, Mr. Joseph Cock. I remember to have seen a woman ducked for scolding. The chair hung by a pulley fastened to a beam about the middle of the bridge, in which the woman was confined, and let down under the water three times, and then taken out. The

bridge was then of timber, before the present stone bridge of one arch was builded. The Ducking-stool was constantly hanging in its place, and on the back panel of it was engraved devils laying hold of scolds, &c. Some time after, a new chair was erected in the place of the old one, having the same devils carved on it, and well painted and ornamented. When the new bridge of stone was erected, about 1754, this was taken away; and I lately saw the carved and gilt back of it nailed up by the shop of one Mr. Jackson, a whitesmith, in the Butcher-row, behind the town-hall, who offered it to me, but I did not know what to do with it. In October, 1776, I saw in the old town-hall a third Ducking-stool of plain oak, with an iron bar before it to confine the person in the seat; but I made no inquiries about it. I mention these things as the practice seems now to be totally laid aside."

In the town of Seven Oaks, Kent, there was a pond famed for its use in this species of punishment. It is now arched over, to the great delight, doubtless, of the Kentish shrews and scandal-mongers.

The Ducking-stool is thus celebrated in a copy of verses written more than sixty years ago:—

"There stands, my friend, in yonder pool,
An engine call'd a Ducking-stool;
By legal pow'r commanded down,
The joy and terror of the town.
If jarring females kindle strife,
Give language foul, or hug the coif;
If noisy dames should once begin
To drive the house with horrid din,
Away, you cry, you'll grace the stool,
We'll teach you how your tongue to rule.
The fair offender fills the seat,
In sullen pomp, profoundly great.

Down in the deep the stool descends,
But here, at first, we miss our ends;
She mounts again, and rages more,
Than ever vixen did before.
So, throwing water on the fire,
Will make it but burn up the higher.
If so, my friend, pray let her take
A second turn into the lake;
And, rather than your patience lose,
Thrice, and again, repeat the dose.
No brawling wives, no furious wenches,
No fire so hot, but water quenches."

The following anecdote, taken from a work printed in 1684, may not be out of place here:—"Some gentlemen travelling, and coming near a town, saw an old woman spinning near the Ducking-stool; one, to make the company merry, asked the good woman what that chair was made for? Said she, 'You know what it is.' 'Indeed,' said he, 'not I, unless it be the chair you use to spin in.' 'No, no,' said she, 'you know it to be otherwise; have you not heard that it is the cradle your good mother has often lain in!'"

The Ducking-stool has long since been laid aside in England; it would be well if the slandering and scolding it was designed to correct were relinquished also! We think that in many country towns and villages it might still serve as a very useful accessory to the admonitions of the clergyman; and though the Seven Oaks pond is covered up, it might still be useful to employ the *pump* which has taken its place, in cooling the "brawling wives and furious wenches," if any such there be, of that pleasant neighbourhood.

In the accompanying wood engraving¹ is a representation of the BRANK—another machine for the punishment of scolding women; in allusion to which Dr. Plott, in his "History of Staffordshire," remarks:—"They have an artifice at Newcastle-under-Lyne and Walsal for correcting of scolds, which it does, too, so effectually, and so very safely, that I look upon it as much to be preferred to the Cucking-stool, which not only endangers the health of the party, but also gives the tongue liberty, 'twixt every dip, to neither of which this is at all liable; it being such a bridle for the tongue, as not only quite deprives them of speech, but brings shame for the

¹ (1) See Engraving, page 240.

transgression, and humility thereupon, before 'tis taken off; which being put upon the offender, by order of the magistrate, and fastened with a padlock behind, she is led round the town by an officer, to her shame; nor is it taken off till after the party begins to show all external signs imaginable of humiliation and amendment."

Brand remarks that a pair of *branks* is still preserved in the town-court at Newcastle-upon-Tyne, where the same custom once prevailed.

Another punishment inflicted by our ancestors was the confining of persons in a kind of open cage, similar to the little building figured in the back-ground of our picture. The parties thus exposed were usually trifling offenders. The cage in our engraving is copied from a print in Fox's "Acts and Monuments," illustrative of the following circumstance:—Upon the death of Pope Julius III., in 1565, Stephen Gardener, Bishop of Winchester, and Lord Chancellor, wrote to Bonner, Bishop of London, to command him, in Queen Mary's name, to order those prayers to be used throughout his diocese, which the Western Church has appointed during a vacancy in the Papal see. "Upon this commandment," says Fox, "on Wednesday in Easter week, there were hearse [frames covered with cloth, and ornamented with banners and lights] set up, dirges sung for the said Julius in divers places. At which time it chanced a woman to come into St. Magnus Church, at the bridge foot in London, and there seeing a hearse and other preparation, asked what it meant: and other that stood by said that it was for the Pope, and that she must pray for him. 'Nay,' quoth she, 'that I will not, for he needeth not my prayer: seeing he could forgive us all our sins, I am sure he is clear himself; therefore I need not to pray for him.' She was heard speak these words of certain that stood by, which by and by carried her unto the cage at London Bridge, and bade her cool herself there."

We shall conclude this paper with a brief notice of the DRUNKARD'S CLOAK. This (also represented in our woodcut) was a large cask or barrel, with the bottom taken out, and with holes in the top and the sides, which was passed over the votary of the "jolly god," so as to rest on his shoulders, and allow his head and arms to come out through the top and side apertures. Thus confined, he was paraded through the streets. To the magistrates of Newcastle-upon-Tyne, in the time of the Commonwealth, may be assigned the credit of inventing this amusing punishment, which could not fail to make the person upon whom it was inflicted sufficiently ridiculous in the eyes of his "friends, kinsfolk, and acquaintance." It does not appear that this "Drunkard's Cloak" was ever worn in other places, or that it continued to be in use at Newcastle after the Restoration. The vice it was designed to correct was deemed a very venial transgression in the days of the "Morrie Monarch," and has only comparatively of late years been considered disgraceful in what is termed the *best* society. In connexion with this subject, the following remarkable advertisement may not be thought irrelevant, and with it we will bring our "illustrations" of peculiar old punishments to a close. "WHEREAS, the subscriber, through the pernicious habit of drinking, has greatly hurt himself in purse and person, and rendered himself odious to all his acquaintance, and finding there is no possibility of breaking off from the said practice, but through the impossibility to find liquor, he therefore begs and prays that no persons will sell him, for money or on trust, any sort of spirituous liquors, as he will not in future pay it, but will prosecute any one for an action of damage against the temporal and eternal interests of the public's humble, serious, and sober servant,

"JAMES CHALMERS.

"Witness, WILLIAM ANDREWS.

"Nassau, June 28, 1795."—From the *Bahama Gazette*, June 30, 1715. J. F. R.

MARRIAGES IN BRITTANY.

In the neighbourhood of Quimper, the marriage ceremonies are singular, and somewhat burlesque. The village tailor bears a most prominent part on these occasions. He appears in Brittany greatly to resemble the barber of the old French comedy. Frequently deformed in person, (owing no doubt to his sedentary occupation) he is a gossip, a go-between, a poet; the favourite of the women, whose repasts he shares, and the ridicule of the men.

When a Breton peasant has marriage in view, he charges the tailor to visit the young woman, who always refers him to her parents; and, if their reception of his proposal is favourable, he returns to his employer. The tailor then, bearing in his hand a branch of the *genêt*, or broom, from which, like our Plantagenets, he derives his name of Bazvalen, (*baquette de genêt*), and dressed in a singular manner, with one stocking red and one purple, accompanies the young man and his nearest relative to the bride's house. While the parents arrange mere worldly matters, the young couple are allowed an hour of uninterrupted conversation; after which, hand in hand, they approach the table round which their relatives and the important Bazvalen are already seated. The young couple eat with the same knife, and drink with the same glass, and are considered *fiancés*. A day is appointed for a meeting of both families; which always takes place at the bride's house, and is called the *nelluden*, or the beholding. On this occasion the young girl appears in her gayest attire,—her scarlet boddicer, with worked eyelet-holes, laced with gold or silver; the embroidered apron, snow-white cap, and all the finery of the Breton peasant. The young man's large-bordered hat is ornamented with ribands of several colours, and the full trousers and bright blue jacket complete his costume: the jacket is often such a masterpiece of finery that the tailor's name is embroidered in coloured worsteds on the breast, as an artist writes his name on a precious painting which he deems worthy of immortality. At this meeting, the farmhouse is in all its glory. The beds, which close with doors like wardrobes, are resplendent with wax and rubbing; the rafters are hung with hams; the old black coffers you always see in Breton houses disclose their riches; linen, lace, counterpanes, blankets, all the wealth of the family, are displayed; and horses and cattle are inspected. Above all, the bee-hives are decorated with scarlet and yellow ribands; for the bees are supposed to be particularly tenacious of respect; and, if they are not put into mourning at a death, and adorned in token of rejoicing for all fortunate occasions, they immediately take flight, choosing to be treated as the friends and confidants of the family they enrich by their labours, or certainly to punish ingratitude by desertion.

As soon as the day of marriage is fixed, which is generally about a week after the *nelluden*, the young girl, accompanied by her bridesman, or *garçon d'honneur*, and the young man by his bridesmaid, go with a white stick in their hands from door to door, inviting to the wedding. The invitation is given in verse, setting forth the period of the marriage, the place appointed, and the name of the *aubergiste* or *traiteur* who provides the dinner. Sometimes six or eight hundred persons assemble on these occasions, and seldom less than three or four hundred; and as no guest goes empty handed, but all take presents of flax, corn, honey, and sometimes of money, these gifts form a material addition to the resources of the young housekeepers; and many people marry with but little more than these friendly contributions and their own labours to rely on for subsistence.

(1) From Heath's Book of Beauty.

MANNERS OF OUR ANCESTORS.

So recently even as 1662 the manners of our ancestors were so unpolished as to require the publication of the following "General and mixed precepts as touching civility among men," for the edification of the young "gentry" of England:—

"5. Sing not with thy mouth, humming to thyself, unless thou be alone, in such sort as thou canst not be heard by others. Strike not up a drum with thy fingers or thy feet.

"6. Rub not thy teeth nor crash them, nor make anything crack in such a manner that thou disquiet anybody.

"7. It is unseemly to stretch out thine arms at length, and writhe them hither and thither.

"8. In coughing and sneezing, make not great noise, if it be possible, and send not forth any sigh, in such wise that others observe thee, without great occasion.

"In yawning howl not, and thou shouldst abstain, as much as thou canst, to yawn, especially when thou speakest, for that sheweth thee to be weary, and that one little accounted of the company. . . .

"9. When thou blowest thy nose, make not thy nose sound like a trumpet. . . .

"11. To sleep when others speak, to sit when others stand, to walk on when others stay, to speak when one should hold his peace or hear others, are all things of ill manners: but it is permitted to a superior to walk in certain places, as a master in his school. . . .

"14. Hearing thy master, or likewise the preacher, wriggle not thyself, as seeming unable to contain thyself within thy skin, making shew thyself to be the knowing and sufficient person, to the misprize of others. . . .

"17. It is not decent to spit upon the fire, much less to lay hands upon the embers, or to put them into the flame to warm oneself, nor is it becoming to stoop so low as even to crouching, and, as it were, one sate on the ground. If there be any meat on the fire, thou oughtest not to set thy foot thereon to heat it. In the presence of a well-bred company, it is uncomely to turn one's back to the fire, or to approach nigher than others, for one and the other savoureth of preeminence. It is not permitted but to the chief in quality, or to him who hath charge of the fire, to stir up the fire with the fire-fork, or to kindle it, take it away, or put fuel on it.

"18. When thou sittest, put not undecently one leg upon the other, but keep them firm and settled; and join thy feet even, cross them not one upon the other.

"19. Gnaw not thy nails in the presence of others, nor bite them with thy teeth.

"20. Spit not on thy fingers, and draw them not as if it were to make them longer; also sniffle not in the sight of others.

"21. Neither shake thy head, feet, or legs; roll not thine eyes. Lift not one of thine eyebrows higher than the other. Wry not thy mouth. Take heed that with thy spittle thou bedew not his face with whom thou speakest, and to that end approach not too nigh him.

"22. Spit not far off thee, nor behind thee, but aside, a little distant, and not right before thy companion. Be-spit not the windows in the streets.

"23. Turn not thy back to others, especially in

speaking; jog not the table, or desk, on which another doth read or write; lean not upon any one; pull not him by his cloak to speak to him; put him not with thine elbow.

"24. Set not in order at every hand-while thy beard or thy stockings. . . .

"25. Puff not up thy cheeks; loll not out thy tongue; rub not thy beard or thy hands; thrust not out thy lips, or bite them, and keep them neither too open nor too shut." . . .

Poetry.

[In Original Poetry, the Name, real or assumed, of the Author, is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

LETTER FROM CAPTAIN B——,

TO

LORD H—— F——.

[H.]

AND are you in love, my dear Harry?
And can your last letter be true?
And are you intending to marry?
Alas! what these women can do!
Can you give up the pleasures of flirting?
Can you turn from your club and cigar?
All the world for Miss Stanley deserting?
What fools some young officers are!

Oh! pause, ere too late to recover!
Oh! put not the noose o'er your head!
Don't you find it a bore, as a lover?
Think, think what 'twill be if you wed!
Then listen, dear Hal, with attention,
And though you may love and admire,
If she's one of the *ifs* that I mention,
Dear Hal, make your bow, and retire.

If you find that she can't darn a stocking,
If she can't make a shirt, or a pie;
If she says, "Oh law!"—"mercy!"—"how shocking!"
If she ever drinks beer on the sly;
If soon of the country she's weary:
If politics e'er are her theme;
If she talks about "Herschell's nice theory,"
And "Lardner's dear book upon steam;"

If she wears leather shoes and poke bonnets;
If she gums down her hair on her cheeks;
If she copies out essays and sonnets;
If she blushes whenever she speaks;
If she leaps a high gate on a hunter;
If she sighs when she looks at the moon;
If she talks about "Carson" and "Gunter;"
If she sings the least bit out of tune;

If she crosses her legs, or her letters;
If you've seen her drink three cups of tea;
If she don't like your greyhounds and setters;
If she's sick when she goes on the sea;
If she seems the least bit of a scolder;
If her manners have any pretence;
If her gown does not cover her shoulder;
If her bustle is very immense;

If she's nervous, or bilious, or sickly;
If she likes to have breakfast in bed;
If she can't take a hint from you quickly;
If her nose has the least tinge of red;
If she screams when she's told she's in danger;
If she seems a coquette, or a flirt;
If she'll *polk* or gallop with a stranger;
If she's stupid, or if she is pert.

If she's one of these *ifs*, my dear Harry,
Oh, sever the chain she has bound!
That it's very unpleasant to marry,
Both Caudle and Socrates found;
A wife is a wretched invention,
And, oh, *not* a matter of course!
Shall I have one?—*that's* not my intention;
(Unless the girls take me by force.)

THE HUNTSMAN.

A BALLAD.

[By S. M.]

"SWEET brother, go not to the chase,
Ah, rest with me at home!
There is a shadow on thy face,
Foretelling woes to come.
And I have dreamed a ghastly dream,
Oh, woful sight to see!
It was thy steed swam down the stream,
And riderless was he!"

"Look, gentle one, where at the gate
My generous courser stands,
And bends his arching neck, elate,
Beneath his master's hands!
Fear not, fear not! My steed and I
Are trusty friends and tried,
And I'll be with thee faithfully,
An hour ere eventide."

"Yet, think up on the day of tears
Thou leav'st behind for me!
Have patience with a woman's fears,
They spring from love of thee.
Oh stay! and I for thee will sing
Songs thou hast lov'd erewhile,
And strive and seek for everything
The slow hours to beguile!"

"Full sweetly passeth, gentle one,
With thee, each placid hour,
And we will rest, ere set of sun,
In thine own myrtle bower!
But now—the breeze is on the hills,
The day is in the skies,
The free bird's song the forest fills
With countless melodies!"

"I must away,—adieu—adieu!"
He vaulted on his steed,
And blithely glanced his eye of blue
O'er river, hill, and mead.
But plaintively, and pleadingly,
That gentle one spake on,
"Oh, stay, for I have none but thee!
Oh, stay!"—and he was gone!

At eventide, when darkly red
The sun sank from the shore.
They brought that youthful hunter dead,
Home to his sister's door.
No words they said, but she look'd well
Upon each eye and cheek,
And *knew* the tale they came to tell—
Without a start or shriek,

She rose, and sought the lowly bier,
And, kneeling by the place,
She laid her cheek, without a tear,
Beside her brother's face.
Awhile they paused—but when they strove
To lift her drooping head,
They found that thus, in silent love,
The gentle one was dead!

SONG: THE OWL.

WHEN cats run home and light is come,
And dew is cold upon the ground,
And the far-off stream is dumb,
And the whirring sail goes round,
And the whirring sail goes round,—
Alone, and warning his five wits,
The white owl in the belfry sits.

When merry milkmaids click the latch,
And rarely smells the new-mown hay,
And the cock has sung beneath the thatch
Twice or thrice his roundelay,
Twice or thrice his roundelay,—
Alone, and warning his five wits,
The white owl in the belfry sits.

Trunyan.

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne.*

THE MANDARIN AND THE ENGLISH LADY.

THE degraded position of females in China is well known. Nothing astonishes the Chinamen, who visit our merchants at Hongkong, so much as the deference which is paid by our countrymen to their ladies, and the position which the latter are permitted to hold in society. The very servants express their disgust at seeing our ladies permitted to sit at table with their lords, and wonder how men can so far forget their dignity. A young English merchant recently took his youthful wife with him to Hongkong, where the couple were visited by a wealthy mandarin. The latter regarded the lady attentively, and seemed to dwell with delight on her movements. When she at length left the apartment, he said to the husband, in his imperfect English, "What you give for that wifey wife yours?" "Oh," replied the husband, laughing at the singular error of his visitor, "2,000 dollars." This our merchant thought would appear to the Chinese rather a high figure, but he was mistaken. "Well," said the mandarin, taking out his book with an air of business, "suppose you give her to me, I give you 5,000 dollars." It is difficult to say whether the young merchant was more amazed or amused, but the grave air of the Chinaman convinced him that he was in earnest, and he was compelled, therefore, to refuse the offer with as much placidity as he could assume. The mandarin was, however, pressing, and went as high as 7,000 dollars. The merchant, who had no previous notion of the value of the commodity which he had taken out with him, was compelled at length to declare that Englishmen never sold their wives, after they once came into their possession, an assertion which the Chinaman was slow to believe. The merchant afterwards had a hearty laugh with his young wife, when he told her that he had just discovered her full value, as the mandarin had offered him 7,000 dollars for her.—*Newspaper.*

THE ORGAN.

THE organ was first introduced into Europe in the year 757, by Constantine Copronimus, who presented Pepin, King of France, with one. Pepin had it placed in the church of Saint-Corneille, at Compiègne. Besides the novelty and singularity of the instrument, it was justly admired for the manner of putting it into action. Steam being employed to produce the sound, boiling water was placed in a reservoir under the pipes of the organ, the valves of which opened each time the keys were touched; and the steam, thus introduced into the pipes, produced the sound. Instruments of this construction were not, however, long in use; and, strange to say, the secret of their mechanism has been entirely lost.

The action of the wind was soon made to succeed that

Ancient Punishments.

See page 236.

of steam; and bellows, formed with this view, gave it free passage into the organ. The first which was constructed on this new principle, or, at least, the first which appeared in the west, was that placed by Louis-le-Debonnaire in the great Rotunda at Aix-la-Chapelle.

A short time afterwards skilful constructors of organs made their appearance in Germany. There were many at Rome towards the end of the ninth century. Pope John the Eighth had drawn them thither. From Rome the art quickly spread through all Italy. In the tenth century bellows-organs appeared in England; one, amongst others, was placed in Westminster Abbey in London.

The mechanism of this instrument was still very clumsy; as it had no less than four hundred pipes, and twenty-six pair of bellows, and required the most powerful exertions of twenty strong men to play it. The keys were five or six inches in breadth; and altogether so rudely constructed, that the musician was obliged to use his feet instead of his hands. In the thirteenth century, however, they began to reduce the size of the keys; so much so, that the performers played with their fingers, as in the present day. The method of placing separate rows of keys, one over the other, was invented at the same time; and by degrees the fabrication of the new lip was perfected, which afforded the means of imitating on the organ the sound of many musical instruments playing in concert.

In the organ constructed by Habren, master of the manufactory of Ratisbon, and which had been ordered for the Abbey of Weingaren in Suabia, were counted no less than sixty-six different lips; consequently sixty-six regulators, which governed the sound of sixty-six thousand six hundred and sixty-six pipes. Arriving at this point of gigantic complication, the organ was rather a kind of monument than a real instrument of music.

NIAGARA WHIRLPOOL.

THE whirlpool near Niagara Falls has of late become a receptacle of dead bodies, which remain in the grasp of its agitated waters; there are the bodies of two horses and a hog. These may be seen, from the bank above, passing round a "funereal circuit" of a mile or more in

circumference, each succeeding circuit drawing them nearer the vortex of the whirlpool, until each in its turn becomes submerged beneath the boiling element—again thrown violently from its angry embrace, to repeat its former evolutions. The sight of human bodies in the whirlpool is solemn and terrific—the blue waters seem to hold their prey in defiance of human efforts to dispossess them—until, satisfied in revelling with the dead, it emits them through its narrow outlet into the rapids below, to be entombed in Lake Ontario.—*Toronto Globe.*

PARENTS must give good example and reverent deportment in the face of their children. And all those instances of charity which usually endear each other—sweetness of conversation, affability, frequent admonition—all significations of love and tenderness, care and watchfulness, must be expressed towards children: that they may look upon their parents as their friends and patrons, their defence and sanctuary, their treasure and their guide.—*Bp. Taylor, Holy Living.*

INGRATITUDE is the abridgment of all baseness, a fault never found unattended with other viciousness.—*Fuller.*

THOSE who quit their proper character to assume what does not belong to them, are for the greater part ignorant of both the character they leave and of the character they assume.—*Burke.*

Cathedral of Milan.

A DAY IN MILAN.

"Let us go see the wonders of this town."—*Twelfth Night*.

WE entered Milan, after a wearisome ride from Como, between ten and eleven at night. The evening was gloomy, the streets we drove along were narrow and badly lighted, the shops had closed, so that our first impressions of this renowned city were not of the most cheerful nature. On clambering from the top of the lumbering vehicle into the court-yard of the post, we were in an unpleasing state of doubt with respect to the particular hotel to be selected during our short stay, having received in the course of the day four or five recommendations of different hotels, each recommendation being accompanied by a special warning against the hotel to which we had been last directed. However, after another glance at Murray, some inquiries made and answered chiefly by signs, and a short walk, we found ourselves harboured in La Gran Bretagna; nor had we reason to repent the choice. Whilst the narrator may be imagined sleeping away the fatigues of a long day's travel, we shall take the opportunity of laying before the reader a short statement of facts respecting the city through which we hope to have the pleasure of his company.

Milan stands in the middle of a plain, gently

inclining from north to south, within sight of the snowy Alps, and between the rivers Adda and Ticino. It is upwards of six miles in circumference, and encloses within its walls a population of 140,000 souls, thus making it the third city in Italy, Naples and Rome alone having a larger number of inhabitants. Eleven gates afford ingress to the city, all of them elegant, and one magnificent. The precise second of its latitude and longitude we can spare the reader; but we may mention that the Austrian viceroy resides here, as well as the governor-general of the Lombard provinces, and that it is the see of an archbishop. The manufactures are said to be of some importance, consisting principally of silks and jewellery. The streets in the old part of the city are narrow and irregular, but those leading from the gates are broad and handsome.

Our anxiety to make the most of the scanty number of hours to which our stay in Milan was limited, called us up early in the morning, and, dressing hastily, we made towards the Piazza d'Armi, a piece of ground as large, perhaps, as St. James's Park, lying between the great barracks and the city walls. Even at this early hour we saw several gentlemen on horseback, and remarkably fine animals they had. The object of our visit to the park was, however, to inspect the celebrated Arch of Peace, which stands over against the Caserma,

at the termination of the great road that begins at Geneva, and is called the Simplon, from a mountain of that name which it crosses. The arch is an admirable piece of architecture. It is constructed entirely of white marble, and rises to a height of seventy-four feet. It is pierced by three roadways, having on each face four pillars thirty-eight feet long, each cut out of a single block of Crevola marble, as well as a great quantity of sculpture. On the top, where the image of Napoleon was intended to be placed, there is a good deal of bronze statuary, the principal being an emblematic representation of Peace in a chariot of six horses, all of a colossal size. A staircase in the mass of the arch affords the curious the means of inspecting the bronze work closely, and of obtaining a bird's-eye view of the city. The arch is "a choice trope in fortune's rhetoric." It was commenced by Buonaparte, and completed by the Emperor of Austria. The sculpture upon it was designed by the projector to commemorate his victories in Germany and Lombardy; but, when the conquered became conquerors, all that was changed, and the carvings were rapidly metamorphosed into representations of the successful doings of the allies, but the triumphs and exploits of the Austrians are principally recorded. Thus Napoleon's entry into Milan has been adroitly changed into the triumphal return of the Emperor Francis to Vienna; the entry of the allied army into Lyons takes the place of the French emperor's entry into Berlin; and the capitulation of Dresden is represented by a bas-relief that was originally meant to picture the capitulation of Ulm.

In Roman Catholic countries the churches are open all day long, from an early hour. We looked into several, rich with paintings and marble, none of which were entirely empty, and then returned to our hotel to breakfast. That despatched, we set forth once more to inspect the notable things of the city. And first we bent our steps to the Ambrosian Library, a collection of 60,000 printed volumes, and about 10,000 manuscripts. But what attracted us thither were the relics of Leonardo da Vinci and Petrarch, and the pictures preserved there. Da Vinci! "He was the miracle of that age of miracles. Ardent and versatile as youth; patient and persevering as age; a most profound and original thinker; the greatest mathematician and most ingenious mechanic of his time; architect, chemist, engineer, musician, poet, painter! We are not only astounded by the variety of his natural gifts and acquired knowledge, but by the practical direction of his amazing powers." In this library there are twelve volumes of his works, and one huge book of MSS. containing drawings of figures, machines, &c., accompanied with notes. The anatomical sketches Dr. Hunter declared to be wonderful for their truth and beauty. This volume is kept in a glass case, and is pointed out by the librarian with great pride. The Queen possesses three volumes of Leonardo's manuscripts, of great value, amongst which there is a sketch of his own Last Supper, regarded by Canova as more precious than anything else he had seen in England. Preserved with equal care is a copy of Virgil, which belonged to Petrarch, containing many autograph notes; one on Laura naturally excites a good deal of interest. A little history is connected with this book. In 1499, when Louis XII. took Milan and carried away the library, a worshipper of the poet succeeded in obtaining possession of the volume, which he concealed until it was no longer necessary to do so. Three centuries afterwards, however, when the French invaded Italy, it was conveyed to Paris, but at the close of the war it was restored to its old shelf. The finest thing in the Gallery is Raphael's cartoon of his famous painting in the Vatican—the school of Athens. Chateaubriand declares the cartoon to be as admirable as the more finished composition. There is a portrait, done by himself, of the "myriad-minded" Da Vinci—a patriarchal head with a full flowing beard, the countenance calm and meditative. It would be tedious to mention

all the good pictures in this gallery; but it is impossible to forbear noticing an exceedingly fine Guido. The subject is Christ on the Cross; the colouring a happy medium between his golden and silvery styles. There is a number of paintings by Bernardino Luini, Da Vinci's most eminent scholar, by whom there is good reason to believe the picture called Christ disputing with the Doctors, in our National Gallery, is painted, though the design is his master's. Amongst several works of Titian there is one that rivets attention—no one could paint a portrait like he—and this is of himself.

Next we hastened to that wonder of Europe, the cathedral, the dim outlines of which we had seen against the sky the previous evening. This stupendous edifice, built of white marble, was commenced in 1386; and it is only just finished. It is in the Gothic style, but Gothic Australised, and so elaborate that it has been said to bear the same relation to its prototypes of the north, as the double rose bears to the single flower. The sculpture and statuary about its exterior are almost beyond belief, there being between four and five thousand marble images of various sizes; the front alone has nearly two hundred and fifty. On entering there is a space of 485 feet between the eye and the opposite extremity. Fifty-two columns rest on the polished floor, and towering upwards assist in supporting the fretted roof, which hangs at the astonishing height of a hundred and forty-three feet. The interior is not too much ornamented with ecclesiastical furniture; a praise which cannot be given to many Italian churches. There is a good deal of stained glass; and three windows behind the high altar are wonderfully rich in their colours. In one of the subterranean chapels the body of Saint Charles Borromeo is exhibited. He was archbishop of Milan at the time of the great plague in 1576, and of such sanctity that he was thought worthy of the honour of canonization. He is clothed in his pontifical dress adorned with diamonds, and a gold cushion supports his mitred head. The transparency of the rock-crystal sarcophagus, in which the body is enclosed, is sufficient to allow the features to be distinguished with ease. The quantity of gold and silver about the tomb seems to be at variance with the motto of the Borromeau family engraved upon it—"Humilitas." A colossal statue of brass, erected to the saint's memory, stands near Arona on Lago Maggiore. The tomb of Cardinal Frederic Borromeo, a cousin of the archbishop, is much simpler. This dignitary is a conspicuous personage in Manzoni's interesting tale of the *Promessi Sposi*, a good translation of which has been recently published.¹ To obtain an adequate notion of the cathedral, it is necessary that the stranger should ascend to the roof. Thence he may see that prospect of which Wordsworth has spoken in terms of warm admiration; a prospect bounded on one side by the Alps, and on the other by the Appennines, with the vast plain of Lombardy between. The view of the body of the Duomo from the central tower is an extraordinary sight. A crowd of balustrades, buttresses, and pinnacles of the purest white, shoot upwards far above the roof, each elaborately carved, and having a statue the size of life on the summit. We are sure that no apology need be given for quoting at this place an extract from Wordsworth's fine ode, in which his fancy flies to

"——— Milan's loftiest spire,
And there alights mid that aerial host
Of figures human and divine,
White as the snows of Appennine
Indurated by frost.
Awe-stricken she beholds the array
That guards the temple night and day;
Angels she sees that might from heaven have flown,
And Virgin saints, who not in vain
Have striven by purity to gain
The beatific crown;

(1) The Betrothed Lovers of Manzoni translated, 2 vols. Burns.

Sees long-drawn files, concentric rings,
Each narrowing above each; the wings,
The uplifted palms, the silent marble lips,
The starry zone of sovereign height."

Having descended 520 steps, we re-entered the body of the cathedral, and then quitting it, crossed the square to the Palazzo della Corte, the viceregal residence,—a large pile, with nothing very striking in its exterior. (One wing, however, projects so as to interfere with one of the best views of the majestic cathedral. The stranger is allowed to walk through a number of rooms containing the usual decorations of palatial abodes, which, however, have ceased to interest an English traveller long before reaching Milan, if he have duly investigated the interiors of all between Italy and England. The Milanese look with great approbation upon the ceilings, painted in showy colours, by Appiani, a native artist. In one room is the Apotheosis of Napoleon, which they consider worthy of every attention. The great hall is a fine apartment, embellished with caryatides, supporting a gallery which runs round it: one of these, a female with a veil over her face, was stated to be cut by Canova's chisel. Whether that is so or not, we are unable to say; but it is worthy of Praxiteles. The most cunning artist could not have more magically represented, in stone, features but half concealed by a transparent covering. You could scarcely bring yourself to believe that you could not remove the veil, which you seemed to see through.

We then betook ourselves to the Brera Palace,—a handsome edifice, of substantial construction, formerly a college belonging to the Jesuits, but now appropriated to the use of the Academy of Arts and Sciences. The gallery of pictures is full of interest to an admirer of art. It contains the famous Sposalizio of Raphael, a subject common in Italian art, representing the Marriage of the Virgin. Raphael was only twenty-one when he executed this divine picture. A painting by Guercino, Hagar dismissed by Abraham, shows the grandeur and deep pathos of which he was capable. This composition electrified Byron, and he was not easily moved by works of the pencil. He has said somewhere, "Of all the arts painting is the most artificial and unnatural, and that by which the nonsense of mankind is most imposed upon." There are many other excellent pictures; amongst which some scripture-pieces by Guido, and a grand old head by Titian, catch the attention. A performance of Raphael's father is interesting, on account of his renowned son, and the rarity of his works. He was a poet as well, but his verses were never "imprinted." A manuscript poem of his, in twenty-three books of *terza rima*, trumpeting the praises of the Duke Federigo d'Urbino, his patron, and dedicated to his son, is preserved in the Vatican. His skill in painting was not great, a fact he seemed himself to be aware of; for when his son showed signs, at an early age, of his mighty genius, he placed him in the school of another master.

We passed in front of the La Scala Theatre, which derives its name from being built upon the site of a church dedicated to Santa Maria della Scala. It has an imposing façade, and its size is very large, there being, in fact, but two larger in Europe,—one at Parma, and the other at Naples. It was a disappointment to us that it was closed just then, as the interior is represented to be strikingly fine. After taking some rest and refreshment—for sight-seeing is attended with no little fatigue—we next sought out a painting that has filled the world with its fame—the Last Supper of Leonardo da Vinci. We found it on the wall of the refectory, or dining-room, of a convent attached to the church of the Madonna della Grazia. No picture is so well known, by means of copies and engravings, as this, and none is so near extinction. It is in a much worse condition than I had dreamt of,—faded, cracked, blistered, and repainted in a deplorable way. A platform, elevated several feet from the floor, allows you to inspect

it closely; but its meaning is best gathered from the middle of the hall. There, we may form a rude guess at the painter's conception of our Saviour, when, sitting at that solemn meal, he lamented over his betrayer.

"Though searching damp and many an envious flaw
Have marred this work,
The annunciation of the dreadful truth
Made to the Twelve, survives; lip, forehead, cheek,
And hand reposing on the board in ruth
Of what it utters."

Man has little right to complain of the irreverence with which Time is accustomed to treat his most glorious works, when he himself often displays so much regardlessness in his treatment. The perishable material on which this picture was placed has certainly hastened the work of destruction; but if proper care had been used, it would still have been a fitting monument of its author's genius. The monks neglected it, and the French, in 1797, actually used the refectory as a stable and granary. The best and earliest copy belongs to the English Royal Academy.

Then, in the dusk of the evening, I entered once more the Cathedral, and paced round its vast aisles, all dim and deserted, with a thronging of indescribable sensations at every pulse. The lofty ceiling of frotted stone was invisible, and the moon shed her beams, through storied windows, upon the marble floor.

"How like a dream,—and dreamy thought
Flew off to other times and places."

Solemn and serene was that mighty temple; solemn, but perplexed, was the mind of the stranger. A whispering of the days gone by seemed to fill the vast space with a confused indistinctness. The Past was present, and the feeling of the Future was blotted out.

The French recognise in Milan a strong likeness to their own capital. Old Montaigne found that it "pretty much resembled Paris, and was like the towns of France;" and during the two years Tasso passed at Paris, in the suit of Cardinal d'Este, he noticed the same resemblance. The similarity is said to exist chiefly in the *hôtels* of the noblesse, and the *cafés*. The latter certainly strike the eye of a stranger at once. They are elegantly fitted up, and brilliantly lighted of an evening. The first room is generally open to the street, and at many of them the customers, well dressed men and women, had conveyed themselves bodily into the street. There they sat, round a table planted in front of the house, chatting, and sipping coffee, as comfortably as if they had been defended from public gaze by four stone walls. I am not able to say much in praise of Milanese beauty; in truth, I did not see one handsome face in the course of a long day's ramble. Nevertheless, the women have the most brilliant dark eyes, and the smoothest raven hair I ever saw. Their head-dress is simple, and has a pleasing effect. It is just a black gauze veil gathered into the hair at the top of the head, and allowed to hang over the face. Bonnets are not in fashion. The women of the lower class at Como, through which we passed the day before, have a very fantastical mode of ornamenting their hair. They thrust some things, for all the world like tea spoons, through the pile of hair at the top of the head, so as to form a fan, and then they shove in two table-spoons, to make a kind of shaft. The excessive narrowness of the streets at Milan renders the want of *trottoirs* more keenly felt; and, in the middle of the day, they are intolerably hot, owing, in a great measure, to the want of air. There is hardly a single article of diet which the Italians use without oil and vinegar, and the shops where these commodities are sold are proportionably numerous. We were informed that the English have not colonized Milan in the way they have most of the other continental cities. This seems rather strange, for the place offers many advantages to families who wish to combine cheapness with the luxuries of life. There is gaiety enough; in the winter months there is a rapid succession of balls; eight theatres offer their

attractions, and La Scala has usually singers of the first class. House-rent is low, and a villa, which becomes indispensable during the summer months, can be hired on any of the neighbouring lakes for 16*l.* or 18*l.* per annum. There are mineral baths, for those who fancy they require them, not far distant. The beauties of art, already noticed, are of the highest order; so that it is a little surprising these united advantages fail to attract a larger concourse of resident English.

THE PLOUGHING MATCH.

"ART going to the ploughing match, Will?" were the words I heard whilst crossing a stile at the end of a pretty lane in the parish of S—, Bucks. "Yes, man," was the reply; "everybody is going surely; and, may be, I'll get a prize, too, for my apples at the show."

The speakers were well known to me; both were old men; the one, crippled by the shocks of nearly seventy years, stood leaning on a gate; the other, still vigorous, shouldered a digging fork, and showed, by his cheerful look and air, that it might be long ere the village churchyard claimed him.

The elder was an inmate of an alms-house, established, some centuries back, by one of the ancient lords of the manor of S—. I knew "Old Robert," (such was his name,) at a glance,—the white hair falling beneath his old straw hat, the crabbed blackthorn stick, which could boast the service of many years, and his honest-looking face, were all familiar to me. Old Robert was famed as a mole-catcher, and to this day may be seen with his trap under his arm, in the still meadows of this secluded spot. Sometimes the roaming school-boy finds the old man, with his trap at his feet, stretched on the warm sunny grass, by one of the many rippling brooklets which descend from our common. Robert will leave a name behind him when he dies, likely to endure in rustic memories when greater than he are forgotten. He was not without one little characteristic, or failing, as some may deem it; namely, a wish to know a little of everybody's business. His curiosity equalled that of any old maid I ever met with. Not a stranger arrived, not a native departed, but Robert was advertised thereof; he was, in fact, the newsman of the alms-house, and speculator-general of the parish.

On the present occasion, his curiosity was clearly at work upon the "ploughing match" appointed for the ensuing day, and it was doubtless with the object of quietly extracting some information that he interrupted his old neighbour, "Will Nottey," with the question, "Art going to the ploughing match, Will?" My approach probably prevented those lengthy colloquies on things in general, in which Old Robert gloried. I saw, from his position and manner, that he had prepared himself for the feast of rustic chat. A painter, whose forte lay in depicting the natural, would have rejoiced in the view then before me. The setting sun threw its rich mellow light full on the old man's face, as if prying into every wrinkle, and fell with glorious beauty on the ancient walls of the alms-houses, covered with masses of dark ivy and wreaths of clematis. An irregular group of ancient elms and beeches displayed those numberless tints, which autumn and rich sunlight ever produce. Old Robert was in the happy mood suggested by the brightness of the hour, and, taking off his hat as I approached, wished me "good night" with the manners of a peasant gentleman. I perceived how gladly he would receive some compensation for the chat I had interrupted by my approach; and after a few inquiries respecting his welfare, the state of the alms-house, and the crops in the long slip of garden, soon found myself in the midst of a discussion on the blight in the potato,—a subject upon which Robert expatiated with particular vehemence, as his own allotted portion of the crop had been diminished by one-half.

"Well, sir," was his abrupt conclusion, "it's the work of Providence, and can't be helped; that's one comfort, at any rate. I don't know what I shall do without the roasted potatoes, which I baked in the ashes on cold winter's nights, when the storm seemed blowing the old house down. You don't know, sir, what comfort there was in those potatoes."

The picture thus presented to me, of the old man finding solace in the dreary winter over his roasted potatoes, was too much like truth to provoke a smile; so, after giving him some hints respecting the treatment of his imperilled crop, I turned the conversation to the subject which his first remark to Will Nottey had suggested, viz. the "ploughing match," expressing a hope that he would be able to see so cheerful a spectacle.

"Well, sir," said he, "may be neither these old legs nor this stick will carry me so far; though I've seen the day, sir, when twenty miles afore breakfast wouldn't ha' stopped me. But that's gone, and for ever, too; old Robert is like those black leaves that are just falling. There were no ploughing matches hereabouts, sir, when I was young; but they've done good, sir; I see that with my own eyes. I've been born and bred in this parish; and for almost seventy years, as boy or man, have I been acquainted, I may say, with every field and cottage in the place. But, sir, the parish is like some other things—it arn't got the same face it had once; I hardly know it myself."

"Well, Robert," cried I, "do you mean to say the parish has changed for the worse?"

"Why, no, sir, not exactly that, though some things are not what an old man would like to see; that they are not," said he, with one of those emphatic and half testy gesticulations which aided his limited vocabulary. "I am not a-grumbling at Providence, sir," rejoined the rustic moralist; "our poor old vicar, God bless him, though he's dead and buried—I always say God bless him, sir, when he's mentioned—as I was a-saying, our poor old vicar taught me better. I meant, sir, when I spoke of the difference in the parish, how some things had improved, how much better behaved the people are than when I was a boy, and the men who used to be at the S— Arms are now digging their gardens and pruning their trees, ever since the gentlemen began to give prizes for the best fruit and garden stuff. There was hardly a poor man's garden in the parish once, sir, except my own father's, and he was one of a thousand; none of his sons ever came up to him, sir, though we did our duty always pretty well. There was but our own cottage with a garden which could be called a garden. All was riot and tatters, though not for want of money; but the landlord of the S— Arms got that. I well remember how strangers used to make a stop as they turned the corner of yon lane with the tall elms, when they came all at once upon our cottage, to look at the only tidy garden in the place. There, sir, in yonder corner was our old house," exclaimed Robert, pointing to a little nook, as if the memories of a life had suddenly been revived. "There we, six of us, sir, were all born and brought up, and there all but old Robert died. The house is pulled down now." The old man at this moment recovered from the feeling which had suddenly crossed his spirit, and resumed: "Father used to be so pleased when he saw the ladies tell their coachmen to stop, that they might look at his garden from their carriages; and sometimes they would really walk in and look at the flowers and fruits, which always made father happy the whole week after; but now every cottage, sir, has a garden. First one thought he would try for a prize, and then another, till at last they try by dozens, as you will see, sir, if you go. I always go if I can, out of respect to father; for he, sir, got the first prize at the first ploughing match ever held in this parish."

"I am glad to hear," said I, "that you are witness to such good effects of these yearly exhibitions. I shall certainly go myself to-morrow; and hope that you,

Robert, will not be disappointed. And now, good night; the damp is settling fast on the grass, and you had better go in, Robert, and roast one of your best potatoes." This I said with a smile; and could hear him just mumble out, "No, sir, no, that would be terrible waste. I must keep my good potatoes till winter."

I was but an occasional resident in the parish of S—, and had seldom been in the place at the period of the "ploughing match," as it was called, though the exhibition partook of the nature of an agricultural and horticultural show. I determined, however, to witness, for once at least, the results of these praiseworthy attempts, on the part of the gentry and superior farmers, to improve the character and condition of the peasantry.

The next was one of those bright days which have marked the present autumn. The rich light of the sun, falling on a mellowed landscape, and the soft but healthy warmth of the atmosphere, combined with the festivities of the scene to spread a happy glow over every face. Even the ploughmen, whose prizes were yet to be won, mingled the laugh and merry retort with the anxiety which their rustic rivalry naturally produced.

I was surprised to see the numbers that arrived from every part of the surrounding country. Some, with that rustic tunic, the well-known "smock frock," as white as mother or wife could make it, looking not unpicturesque in the glancing sunlight. Something like a peasant's pride was discernible about many of these said "frocks;" the fronts and backs were elaborately worked, and worn with an air that proclaimed the possessor a member of the peasant aristocracy. Amid the simplicity and primitive habits of the rural districts, this dress seems more appropriate to a "bold peasantry, their country's pride," than the more modish garments adopted by many of the rustics in the vicinity of large towns. Some, of a class superior to these last, came in blue coats of ancient cut, the shapes of which would have puzzled all the Stulzes in Europe, but were perfectly familiar to the tailors of the villages round S—. Staid old men were these farmers, who paid taxes and grumbled, doing the latter more readily than the former. Most had come to see, not to act; few were perfect approvers of the changes around them. They laughed with grave scorn at the "experimenters" and "chemist farmers;" but were, nevertheless, quite ready to mark the improvements in agricultural implements, and the modes of rearing stock.

The "superior farmers," too, were in the field; men justly proud of their influence at markets, and aspiring in many cases to an equality with the gentry themselves. Some are evidently able to count their thousands; and have no small opinion of their value to the commonwealth.

The farming gentry, or "gentlemen farmers," were also numerous. In external appearance they frequently differed little from the larger agriculturists; but the difference in their social position could be seen at a glance; there was a respectful bearing towards each other, very distinguishable from the hey-day free-and-easy manners of the majority of the mere farmers. From these, who are farmers of their own lands, the class of experimental agriculturists is mainly drawn. Their more extensive knowledge, and greater leisure, enable them to test theories which the mere farmer laughs at. Thus they often elicit for agriculture those valuable facts which would otherwise remain buried beneath the lumber of human prejudice and ignorance. Here and there a clergyman was visible in the field, who sought by his presence to aid all classes in their efforts for the general good. At length the ploughs were assembled, their sturdy drivers marshalled, and the contest of the driving ploughshares begun. There was not much in the sight to arouse poetical images; and many who would exult over a description of the Olympian or Isthmian games, might have discerned little to excite interest in these contests of peace. Yet

the influence on human civilization is tenfold more beneficial in the latter than in the former far-famed contests. I remember the time when the villagers flocked by thousands to a field in this vicinity, to witness the brutalizing spectacle of a prize fight, from which they returned less fitted for civilized and Christian society.

But let us leave the ploughs at work, and enter the tents, in which are deposited the pride of many a cottage garden. Here are the prize specimens of fruit and vegetables; and noble specimens they are. Doubtless man is created for higher purposes than eating; but, as he must eat, so there is nothing unworthy a rational being in giving due care to produce the best food, and the greatest possible quantity. Hence the remark of a testy book-worm to one who pressed him to attend this meeting, "that life was not given to measure the diameter of potatoes and the size of cabbage-heads," betrayed a defective view of the compass and variety of human duties. In the tents were all those fruits and vegetables displayed in which prudent housewives rejoice. It was pleasant to notice the manners of those who had gained prizes, as the different observers paused to gaze upon the specimens. Some would look carelessly on their own rare productions, as if beneath their notice, but in the meantime listened with anxious expression to each remark on the size, appearance, and other qualities of their specimens. Some, on the other hand, who had been disappointed of prizes, were criticising the productions of their competitors, pointing out every defect which the sharpest ingenuity could detect. Very amusing, too, was it to hear the different criticisms of the "professionals" and the "amateurs."

There was one short, fat, old gentleman, who had devoted many years to the production of a particular kind of giant cabbage. These productions seemed to afford him as high a gratification as the dome of St. Paul's gave to Sir Christopher Wren. Another had lavished all his attention on onions, which he insisted were the most nourishing of all roots; and told more than a hundred times of the Spanish soldier who subsisted five months on onions only. Others patronized the potato with a zeal which would have delighted Raleigh.

But the orchard was not forgotten; labour and skill combined to produce apples, pears, plums, and a host of similar fruits, such as the eye rarely witnesses. It was a pleasant thought for the reflecting observer to contrast these productions of civilized man with the original wild fruits from which each specimen had descended; the groups of luxuriant apples with their rude ancestor the crab; the luscious plum with the wild berry its original. These riches are the triumphs of industry, peace, and knowledge. The great law, "Work, and thou shalt have," was here amply illustrated.

Such meetings as these make men acquainted with their powers, and must suggest those efforts of social improvement, upon which the destinies of nations, and, indeed, of the world, depend. What human perseverance has done for the fruits and vegetables of the garden, it may do in the more important matters of life. Thus man, by degrees, will learn to regard with more earnest attention the laws of the system in which God has placed him. The bringing a single fruit to perfection requires that attention to the laws of nature (that is, to the laws of God), and that well arranged combination of skill and labour, of head and hands, by which the advance of civilization is effected. But man must begin at the beginning, and learn to act in the small, ere he can hope to triumph in the great. Thus an agricultural or horticultural association may gradually train the humbler class of minds to such habits of observation, patient industry, and order, as may fit them for a higher place in the social system.

And now the time for the distribution of the prizes has arrived. The chair is filled by a learned and amiable divine, head master of a grammar-school in

the neighbourhood, whose knowledge and urbanity endeared him to all. Near him were the gentry and landholders, whose purses and time are, in this part of the county, devoted to promote the well-being of the peasantry. A large body of farmers surrounded the chairman, and added by their presence to the value of every prize. Each successful competitor received the rewards of his skill with a higher joy in the presence of his employers, in whose estimation he felt himself thus elevated. But the most happy of all were the wives, children, and relatives of the prize gainers. How important each looked as the fortunate father, husband, or brother stood forth to receive the honours of the day; how each tried *not* to look proud, yet how proud they all looked!

I noticed one little fellow with a smock frock, white as "mother" could make it, jump about in ecstasy amongst the other boys. His father had received the prize for the best carrots; and he, poor little fellow, was as happy as earth could make him. A very pleasing part of the affair was the distribution of rewards and honorary tokens to servants who had, by long and faithful service, deserved well of society. If the highest in the land are gratified by the publicly expressed approbation of their fellow-citizens, if to gain this they risk even life itself, so does such honour deeply affect the hearts of the lowly. These are the only laurels open to them. Happy for the nation is it when provision is made to nourish so just an ambition.

Many of those now rewarded were women, whose youthful days had been spent in secluded farm houses, faithfully rendering services which are as necessary to human well-being as the deeds of nobles and statesmen. To these poor people the honours of this day will ever appear like a sunny spot in the line of life.

The last in this group was a young woman who, for eighteen years, had sedulously tended an invalid mistress. In a lonely house, in the wildest part of the Chilterns, she had passed her youth for a pittance of a few pounds yearly; more her mistress, who was a small annuitant, could not afford. Once a year only, for three days at Christmas, did she leave the solitary mansion to visit her aged parents. Thus her life passed on in the exercise of the virtues which the busy men of earth so rarely appreciate. Much against her desire had she attended here to-day. The wishes of her superiors, and the desires of her parents, had, however, overcome her modest reluctance. The old people, in their simple pride, longed for all to know their daughter's merit. The day was, I am certain, the brightest in their history. Once or twice the old man was seen to draw his hand hurriedly across his eyes whilst listening to the chairman's short address to "Jane." The mother preserved a calmer manner; and smiling quietly on her daughter, uttered to a friend, that "Jane was the best girl who had ever lived." Whilst I am writing this short account "Jane" is again returning to her aged mistress, declining all the numerous offers of better service. For this she assigns but one reason: "Mistress took me into her house when I was a poor ignorant girl: I cannot leave her in her old age for the sake of a little money." Such cases of devotion are rare. When observed, men are wise to honour them.

It was not till the close of the "exhibition" that I noticed Old Robert. He was then heartily shaking hands with "Jane's" father and mother, displaying towards the old people the warmth of an ancient friend, though he had never seen them before. But, as Robert said, "it was a day to make an old man's heart jump for joy."

The remainder of the sayings and doings may be passed over; they were pleasant enough to the parties concerned, consisting of a dinner, abundance of speeches, and plenty of agricultural chit-chat. I went home early, resolved to attend the meeting next year, and become more acquainted with the habits and feelings of the

English agriculturists. I will, therefore, conclude with a toast given at the dinner—"Long may such meetings flourish, and knit together the employer and employed."

THE UNITED STATES EXPLORING EXPEDITION.¹

During the Years from 1838 to 1842.

FIRST NOTICE.

AN extended knowledge of the earth's diversified surface, falls to the lot of few. Some are confined within the boundaries of a rural district; others within crowded cities, to whom the far-stretching continents, the ocean phenomena, and the beauties of the isles of the sea, are never to be revealed. They may glance at an atlas, but apprehend little of those busy nations inhabiting the regions thereon displayed.

This ignorance is man's necessity, not his choice; few are privileged to navigate strange oceans, stand on mountain peaks, or penetrate the secrets of remote lands. But all love to hear of distant regions, and to follow, in narratives, a Columbus or a Cook in their adventurous track. Hence the pleasure afforded by a perusal of "Travels" and "Voyages." The peasant in his secluded cottage, and the merchant pent in cities, may thus behold the manners of the antipodes, and converse with the men of either pole. Great are the benefits arising from an enlarged knowledge of the earth. Juster views of mankind are thus acquired; the diversities of pagan mythology, its wild extravagances, intermingled with gleams of original truth, the varieties of the human race, all spreading from the primeval centre, with the zoological and botanical novelties of other lands, are thus brought before us.

Sometimes the explorer brings home reports of new lands, continents, or islands, filling up the blanks on our best maps. Thus we see the great family of man recovering itself from isolation, the different branches uniting and forming a thousand links of intercourse. All the maritime countries of the world have sought by "exploring expeditions" to extend their influence over the earth; ancient and modern empires have sent their heroic men to explore unknown seas, to dare the rigours of arctic frost, and risk the perils of rock-bound and savage lands. Tradition hints of such in the Phœnician and Carthaginian eras; whilst history relates the deeds of a host of European navigators, down to the discoveries of our own Ross and Parry. The United States of America have imitated the example of the mother country, and concluded, in 1842, an expedition despatched to examine the Pacific and Southern oceans.

The squadron consisted of six vessels; two sloops of war, the *Vincennes*, of 780 tons, the *Peacock*, of 650; a gun brig, the *Porpoise*, of 32 tons; two tenders, the *Seagull*, of 110 tons, and the *Flying-fish*, of 96 tons; and a store ship, the *Relief*.

The ships sailed on August 17th, 1838, and took the course towards Madeira, which was reached September 16th. The first appearance of this island disappointed expectations; it exhibited nothing to the distant view but a bare and broken rock, of huge dimensions, which, though grand and imposing, is peculiarly dark and gloomy. But this land of the vine was found, on a nearer approach, to be adorned with a luxuriant tropical vegetation, its mountain terraces covered with a rich verdure, and the valleys bright with fertility; orange groves and vineyards crowd upon the sight, and the stranger journeys along roads hedged with geraniums, myrtles, fuchsias, and hydrangias of gigantic size; on one side the eye glances into ravines two thousand feet in depth, and on the other vainly endeavours to trace the grey mountain peaks buried in the clouds. The vine is

(1) Whittaker & Co. Ave Maria Lane.

of course the chief production of the island. The following mode of expressing the juice is probably unknown to the epicure whilst eyeing his "bright Madeira." "We saw," says the narrator, "six men stamping violently in a vat of six feet square by two feet deep, their legs bare up to the thighs. After the grapes had been sufficiently pressed, and the men's legs well scraped, the mass was pressed out." Each gallon of the juice requires about ten bushels of grapes. On the 25th of September, the squadron sailed southwards, passing by the Canaries to the Cape de Verd isles. It is to be regretted that want of time prevented a survey of the Largasso sea, in which exist vast quantities of a floating plant called *fucus natans*, or gulf-weed.

When off St. Jago, the sea presented a beautiful phosphoric appearance; the whole face of the waters appeared to be on fire, so intense was the brilliancy; this arose from myriads of phosphorescent animalculæ, which filled the sea with their vivid coruscations, and demonstrated, by their countless hosts, that remote and silent ocean waters swarm with a rejoicing and multitudinous existence.

After a prosperous navigation, the squadron entered the bay of Rio de Janeiro. The fact which here chiefly claimed the attention of the voyagers was the prevalence of slavery in Brazil.

The slave population exceeds that of the white in the proportion of five to one, and between 7,000 and 8,000 are yearly brought in by the slave ships. The slaves are the principal carriers of the country; their mode of journeying is thus described:—"They appear to work with cheerfulness, and go together in gangs, with a leader, who carries a rattle made of tin, and filled with stones. With this he keeps time, causing them all to move in a dog-trot; each one joins in the monotonous chorus, the notes seldom varying above a third from the key."—P. 13. A monthly ball is held, called the white-jacket ball, because the gentlemen make their appearance in jackets of that colour; the ladies, on such occasions, make simplicity their motto, and discard all jewels and similar adornments. "On reaching the ante-room we were met by the committee of gentlemen, or managers, and kindly treated without ceremony, making us at once feel at ease. We were shortly after ushered into one of the most splendid ball-rooms I ever saw; there were upwards of three hundred persons present, all dressed in the purest white, without any finery whatever."

Whilst enjoying the hospitality of the Brazilians, attention was not diverted from those observations on the laws and customs of the people, which might enable other nations to understand the character and institutions of the country. The result of the examination is not favourable to Brazil. Education is very defective, and the females are but lately allowed to be taught in schools. The administration of the laws is perverted by bribery; and justice is obtained with great difficulty by an unpatronized plaintiff or defendant. Trial by jury is established, but the system is peculiar. The jurymen are chosen for a whole year, by justices of the peace; instead of twelve, forty are necessary to constitute a jury—rather a cumbrous number for investigating disputed matters of fact.

The singular machinery of the court of findings and losings, is well adapted to provoke a smile. "This court takes charge of all things lost and found, making it the duty of a person finding anything to deposit it with the judge. The loser, to prove property, must have three witnesses to swear that they saw him lose it, and three others, that they saw the finder pick it up; otherwise, it remains in deposit."—P. 13.

But the expedition had not been despatched to dwell in the homes, and note the habits and customs, of civilized men. Accordingly, repairs being completed, the fleet sailed towards the wild coast of Terra del Fuego, on January the 6th, 1839. It was observed, at seventy-eight miles from the mouth of the river Plate, that the sea was

discoloured, by the rush of earthy matter brought down by that stream. It is clear that a vast delta must be in process of formation, from the deposit of mud and sand at the mouth of such a river; the geologist may amuse himself by speculating on the period when this formation shall raise its head above the surface of the ocean, and form a fertile home for man, or other living creatures.

The squadron reached Orange Harbour, in Terra del Fuego, on February the 17th, and immediately began to prepare for the antarctic cruise. The natives of some portions of this region appear to rank low, even amongst savages; the narrow forehead, and wide-spread sensual mouth, combine with their distorted bodies, to create a feeling of disgust in the civilized man. One talent, however, is possessed, in the highest degree, by these barbarians; "Their imitations of sounds are truly astonishing. One man ascended and descended the octave perfectly, following the sounds of the violin correctly. It was then found that he could sound the common chords, and follow through the semi-tone scale, with scarcely a deviation. All the natives have musical voices, and speak in the note G sharp, ending with the semi-tone A, when asking for presents, and were continually singing."

This union of soft voices and song with barbarism, is an interesting fact, and suggests the hope that these savages may possess more gentle qualities than their squalid appearance indicates. In February 1839, part of the squadron sailed on a cruise towards the south, and, passing round the southern point of America, coasted along to Valparaiso. Here they saw the mighty Andes, their summits resplendent in the rising sun, and presenting the appearance of a bright golden line along the sky, running north and south. The view is most brilliant just before sun-rise, when the flashing rays fall on a thousand snowy peaks; the setting sun also produces some startling effects. The Alpine outlines then change every moment with the variations of light; here a line of mountains, clothed in purple, crimson, and yellow tints, breaks upon the view; there a group of peaks stand out in dark relief, whilst a singular green-coloured sky adds to the marvel of the contrast. Some of the summits rise abruptly into the deep heavens, like the spires of vast mountain cathedrals; others swell into magnificent domes, like titanic capitals of this mountain kingdom, of which it has been said, that ages would not suffice to observe its beauties, and discover its wonders. Humboldt in vain endeavoured to reach the summit of Chimborazo, the mightiest of these domes; when compelled to desist, he was at an elevation of 19,280 feet. These mountains do not consist of one continued chain, though so represented on most maps, but are broken into a series of groups. Thus, if the whole formation be called "a chain," each group may be termed a link in that chain. This range rests upon volcanic fires, and dreadful earthquakes have, without a moment's warning, frequently reduced flourishing cities to ruins. One of these events is thus referred to by the explorers:—"The situation of Old Callao is still visible *under the water*; and though an interesting, it is a melancholy object, when one thinks of the havoc a few minutes effected. The very foundation seems to have been upturned and shaken to pieces, and the whole submerged by a mighty wave. The wonder is, that any one escaped to tell the tale."—P. 47.

Before leaving the coast, some of the gentlemen attached to the expedition made a journey to the Andes of Peru, and examined the great silver mines of Pasco. They are 13,000 feet above the sea level, and the metallic district consists of two veins, each seventy miles long. The deserted mines are nearly 1,000 in number, proving the vast amount of labour which has been expended on these excavations. "English speculators frequently work the mines, but are often disappointed," says the narrator, "by the disorderly conduct of the workmen, brought, at high charges, from England."

This is said to have caused a ruinous and unprofitable outlay to many companies. It is to be feared that the employers paid little attention to the moral qualities of the men engaged, and received in consequence the appropriate reward of their criminal negligence. After this visit to the mines, preparations were made for a voyage amongst the isles of the Pacific; and the expedition left the American coast on the 13th of July. They were now about to explore the homes of half-civilized, or barbarous men, to trace the progress and note the manners of that extended family, which has spread itself over the thousand isles of the Pacific.

The numberless tribes, their various dialects, and the mysteries connected with the formation of this coral Polynesia, render these portions of the earth a most interesting study to the moral and natural philosopher. The islands are distributed into various groups, the *Paumotu*, the *Samoa*, the *Feejean*, and the *Hawaiian*. The fleet sailed toward the first-mentioned cluster, and reached the most eastern extremity, called Minerva Island, or Clermont de Tonnerre, on August the 13th. It is one of the low coral islands, and resembles from a distance a fleet at anchor, as nothing, save the tall trees, is visible until the coast is neared. It may be regarded as the summit of a gigantic column of coral upraised from the deep sea by animalculæ—of which it has well been said,

"They bind the deep with a secret zone,
The ocean is sealed, and the surge a stone;
Fresh wreaths from the coral pavement spring,
Like the terraced pride of Assyria's king;
The turf looks green where the breakers roll'd;
O'er the whirlpool ripens the rind of gold;
The sea-snatch'd isle is the home of men,
And mountains exult where the wave hath been."

On one side the sounding-line descended to 600 fathoms without touching the bottom, and against this coral rampart the Pacific heaves its huge billows in vain; the island wall defying the rage of sea and tempest. The term *Paumotu*, signifies a cloud of islands; not an inappropriate name for many of the crowded clusters which dot the Pacific.

These coral isles have been represented as the homes of beauty and fertility, but this is not true of many; viewed from a distance, they seem covered with a bright verdure, and thus resemble numerous vases rising from the ocean, yet this apparent fertility is found, upon landing, to consist only of patches of long coarse grass growing amongst the coral rocks. Most of the trees are stunted, a thing to be expected when we consider how thin must be the covering of vegetable mould on many of these rocks. The inhabitants of this group may be termed barbarians, though some are just emerging from the savage state through the teaching of the missionary, and the visits of traders. The conduct of the latter appears to be at times injurious to the natives, and some gross outrages are perpetrated against the islanders, causing them to regard Europeans as their foes.

The population of fifteen islands in the group is 10,000, but some have not more than twenty or thirty inhabitants, whilst one, named *Anaa*, has 5,000, and another 2,000. Thence we may regard these people as consisting of a great number of clans, differing in language, customs, and even *race*; for their physical characteristics are exceedingly various. The group is at present nearly valueless for commercial purposes, the only product obtained being pearl-oyster-shells, which are bought for European use by traders of Tahiti; but the increase of population, and the gradual formation of civilized habits, may yet render these islands a market for European goods.

This group occupies that part of our maps over which the words "Society Isles" are marked, and of which cluster the *Paumotu* group form the eastern part. Tahiti is not reckoned in the *Paumotu* group, but forms with *Eimeo* an independent division. To Tahiti the expedition next proceeded; it is composed of two

peninsulas, and possesses twenty-four harbours, abounding in districts of great fertility. Sugar, cocoa-nut oil, and arrow-root, are abundantly produced. Iron abounds in the mountains to such an extent as to render compasses useless. The South Sea whalers make these ports their places of rendezvous.

It may astonish the reader to hear that, amidst ease and plenty, the population of Tahiti has decreased,—a fact which is partly ascribed to the pernicious effects of the *spirits* introduced to the natives by traders; and thus the plague, which has wasted the American Indians, is felt in these beautiful islands. The commander of the expedition condemns, in the strongest terms, the practice of retailing ardent spirits to the simple natives in defiance of the laws of Tahiti, and notices, with indignation, the gross immorality of many captains and crews. Those acquainted with the condition of the lower orders in Europe, may hear with scepticism, that *few natives are to be met with who cannot both read and write*. Whether, in the lapse of years, the Tahitian language will contain a literature fitted to the moral and intellectual wants of numerous surrounding islands, it is difficult to decide; but it will ever be interesting to remember, that the first Polynesian language reduced to writing was that of Tahiti. The manners of many of the natives exhibited so much propriety, as to excite the surprise of the gentlemen on board the American squadron; they found that a chief of great influence had been dismissed from office for intoxication; and failed not to remark, at a luncheon given on board the ship, that, before the food was touched, the oldest chief asked a blessing. These indications of a superior moral tone, are combined with those gentle tastes from which civilization draws her rich adornments of taste and elegance. The love of flowers is a passion with the Tahitians, though the missionaries endeavour to check this natural and graceful feeling. A taste for music prevails amongst the women, many of whom possess rich and musical voices. Some peculiarities, ludicrous to a European, belong to these people; for instance, it is usual for the highest chiefs to claim the *privilege* of washing the dirty linen of the various ship's crews which touch at the islands; a prerogative which the nobles of Europe would not very highly prize.

Something like a political constitution has been introduced into Tahiti, formed in 1823 and 1826, upon the model of that of England. By this the crown is made hereditary, and the legislative power lodged in an assembly elected every three years; it consists of two members from each of the seven districts into which the island is divided, and possesses the power of enacting and modifying laws; thus the once barbarous Otahitians have gained, under English guidance, a privilege which elsewhere has caused the struggles of centuries.

The scenery of this island and *Eimeo* is grand; lofty mountains and deep valleys give all the charm of contrast to the landscape; from some of the loftiest ridges a magnificent view presents itself, ridge upon ridge arise in gorgeous confusion, till the prospect melts away amid a region of wild mountain forms. These gigantic elevations are of volcanic origin, and carry the mind back to a period when fiery craters, and boiling lava floods, heaved beneath ceaseless earthquakes.

The rocky masses in the interior of the island consist of perpendicular basaltic columns, while those on the coast are composed of horizontal volcanic formations. In one respect Tahiti resembles Auvergne, viz. in the extinction of all the ancient volcanoes; thus its lofty mountains are but the memorials of convulsions in ages past.

It is now time to leave the "Expedition" on its track from Tahiti, with the intention of soon following the navigators through other branches of the far spread Polynesian group.

NATURE AND ART,

BY PROFESSOR WILSON.

SYLPH-LIKE, and with a graceful pride,
I saw the wild Louisa glide
Along the dance's glittering row,
With footsteps soft as falling snow:
On all around her smiles she pour'd;
And though by all admired, adored,
She seem'd to hold the homage light,
And careless claim'd it as her right.
With syren-voice the lady sung;
Love on her tones enraptur'd hung,
While timid awe and fond desire
Came blended from her witching lyre.
While thus, with unresisted art,
The enchantress melted every heart,
Amid the glance, the sigh, the smile,
Herself unmoved and cold the while,
With inward pity eyed the scene,
Where all were subjects—she a queen!

Aga'n I saw that lady fair—
Oh, what a beauteous change was there!
In a sweet cottage of her own
She sat, and she was all alone,
Save a young child she sung to rest
On its soft bed, her fragrant breast.
With happy smiles, and happy sighs,
She kiss'd the infant's closing eyes;
Then o'er him, in the cradle laid,
Moved her dear lips as if she pray'd.
She bless'd him in his father's name.
Lo! to her side that father came,
And in a voice subdued and mild,
He bless'd the mother and her child!
I thought upon the proud saloon,
And that enchantress queen; but soon
Far off art's fading pageant stole,
And nature fill'd my thoughtful soul.

THE SIEGE OF CORFE CASTLE.

LADY BANKS's gallant defence of Corfe Castle against the Rebels, gives her a distinguished place among the heroines of the Rebellion. It has been said, that had all the Royalists of that day displayed the same skill and undaunted courage which distinguished the Countess of Derby at Latham, the Lady Arundel at Wardour, and Lady Banks at Corfe Castle, twenty Oliver Cromwells would have fought in vain for Republicanism.

Sir John Banks, attorney-general to Charles I., had only recently bought the castle and manor of Corfe from Lady Elizabeth Hatton, when his wife and family took up their residence there, on his joining the king at York in 1642. Here they continued undisturbed till May in the following year, when the rebels, commanded by Sir Walter Erle and Sir Thomas Trenchard, having possessed themselves of all the towns on the sea coast, resolved to make themselves masters of Corfe Castle, which they justly regarded as a place of great importance; and, for this purpose, marched some troops of horse from Dorchester, to attempt its capture by a *coup-de-main*.

They arrived there on May-day, when it was the custom of the mayor and gentry of the isle of Purbeck, (in which the castle stands) to hold a stag hunt. The sport, however, was interrupted by the appearance of the rebel party; some of whom, detaching themselves from the main body, at first endeavoured to obtain an entrance on the pretence of wishing to see the castle, but when this was refused, and the gates closed against them, by order of its mistress, the whole body of soldiers surrounded the castle and summoned Lady Banks to surrender. She refused, though her garrison at this time consisted of only five men, and boldly bid them defiance. Upon this the parliamentary committee in the neighbouring town of Poole, suspecting her of an intention to victual and man the castle, sent to demand four small pieces of cannon which were on the castle ramparts, but, by some trifling excuse, she succeeded in evading this request for the time. A few days after, forty or fifty seamen were sent to demand them, with a warrant from the commissioners; but Lady Banks, whose garrison still consisted of only five men and her maid servants, contrived to mount one of the disputed cannon, and discharge it upon the hostile party, who, intimidated by this display of resolution, returned to Poole. Lady Banks now felt it necessary to strengthen her garrison, and, summoning help among her tenants by beat of drum, a considerable guard of friends and adherents came to her assistance, bringing with them fifty stand of arms. The parliamentarians were, however, equally active on their side; they intercepted a supply of gunpowder on its way to the castle, and issued a proclamation in the neighbouring towns, declaring it high treason to sell provisions for the use of Corfe Castle, or to hold communication with its inhabitants; adding the threat, that if the cannon were not given up, the houses of Lady Banks's friends and neighbours should be burnt. Strict watch was kept that no message should be conveyed, or intelligence of any kind be suffered to pass in or out of the castle; and, thus straitened, and unprovided with victuals for a siege, it was found necessary to come to a parley, when it was agreed to give up what had been the grand objects of contention, the four cannon, the largest of which was a three-pounder, on

condition that Lady Banks should be left in her castle in peace and quietness. These terms were agreed to, the cannon were given up, and the party in the castle reduced to their original numbers. Lady Banks, however, little trusting the honour of her opponents, felt it wise and safe to strengthen her position as far as possible. The rebels, meanwhile, feeling themselves secure, relaxed in their vigilance; the watches were not kept up as strictly as formerly, and means were thus found of bringing a good store of provisions, gunpowder, and matchlocks into the castle. On the advance of the king's army, under Prince Maurice, to Blandford, Lady Banks represented so earnestly her need of assistance, and the importance of the place, that Captain Lawrence was deputed to take command of the garrison; but, through some unfortunate oversight, he came without the necessary commission for obtaining money and provisions; a mistake which could not afterwards be rectified till too late to be of any service in the siege. Soon after Captain Lawrence arrived, a body of between two and three hundred horse and foot came before the castle, bringing with them two pieces of ordnance, with which they soon opened a heavy fire on the castle from the opposite hills; they also set fire to four houses in the town, which was directly under the castle walls, and did much other damage. They were, however, gallantly withstood, so that, after again summoning the castle to surrender, they thought proper to retire. On the 23d of June the attack was renewed; and Sir Walter Erle, Captain Sydenham, and others, commanding a body of five or six hundred men, entered the town unobserved, under the shelter of a thick fog. They brought with them four pieces of ordnance, under the names of a demi-cannon, a culverine, and two sakers, and with these, and their small arms, they played on the castle from all quarters. Besides these open attacks, they sought by secret means to corrupt Lady Banks's servants within the castle; and, to rouse their fears, threatened to give no quarter, and even made the soldiers take an oath to spare none who offered resistance.

With the view of sheltering themselves in their attacks, the besiegers invented two machines, one of which they named the Boar and the other the Sow, constructed of boards lined with wool, which were designed to cover their persons and deaden the shot. These erections, however, fulfilled their part very ill. When the Sow was moved forward, its supporters could not conceal their legs, which were at once aimed at by the besieged. The Sow, therefore, was left to its fate; some who had sought its shelter ran away, and one or two were killed. The fate of its companion discouraged the Boar, which dared not advance, and played no part in the combat.

The plan of attack was now altered, and the rebels converted the ancient massively built church of the town into a battery; using it with wanton irreverence. The historian of the siege records that they made shirts of the surplice, broke up the organ, and used the pipes as cases for powder and shot, while the lead of the roof was rolled into shot, and fired against the castle.

All this profanation, however, did them no service. The shot took little effect on the walls of the castle, and made no impression on Lady Banks, who was as determined as ever to hold out. Sir Walter Erle got little fame by his ungallant efforts; he was charged with pressing on his soldiers, indeed, with great earnestness, but with being very sparing of his own person; and is said, on one occasion, from fear of the musket shot of the

besieged, (for they had no other,) to have wrapped himself in a bear-skin, and crept up the hill on all-fours. The besieged, on the contrary, showed great courage, and made several successful sallies; carrying off, on one occasion, thirteen head of cattle,—a provision much needed in the castle.

The Earl of Warwick, who seems to have been annoyed at Sir Walter Erle's slow progress, now sent him a reinforcement of 150 seamen, with a very formidable supply of petards, grenades, &c., for an assault, which was immediately to be made. A reward of 20*l.* was offered to the first man who should scale the walls, and smaller sums in gradation to those who should follow him. But as this temptation failed to rouse their courage to the necessary height, the men were plentifully supplied with spirits. "Sir Walter," it was said, "for fear he should be valiant against his will, was the only man who came sober to the assault." "Thus armed with drink," the assailants stormed the castle on all sides, and applied the scaling ladders. In the meanwhile the party in the castle were busily preparing to receive them. Captain Lawrence commanded the lower ward, and had with him the principal part of the brave little garrison; which had never amounted to forty men in any of its sieges. These repelled every onset with unflinching courage and gallantry. It was in vain that the assailants mounted the ladders; they were all either speared or shot.

The upper ward was, "to her eternal honour," defended by Lady Banks herself, assisted by her daughters, her female servants, and her own five men. The men under her direction kept up a constant fire of small arms, and when the enemy attempted on their side to scale the walls, having wild-fire in their hands ready to throw down into the castle, she and her women repulsed their fierce assailants by pouring down stones and hot embers upon them, which had been prepared in sufficient quantities for this purpose. The attack against both wards completely failed; and soon after Sir Walter received news that the king's forces were advancing, and near at hand. On this he retired in great haste to London, leaving Captain Sydenham the task of bringing off the ammunition and the rest of the soldiers; who retired into the church, intending to march from the town in the night; but, as supper was set on table, an alarm was given that the king's forces were near: on this a panic seized the captain, he left his supper, artillery and ammunition, and took boat instantly to Poole, leaving a hundred horses on the shore, a prize to the besieged. The assailants had lost more than a hundred men, killed and wounded, in the siege and assault, while the noble lady of the castle lost but two of her supporters.

Thus, after six weeks' stout siege, Corfe Castle, considered the key of that county, was, by a woman's courage, preserved for the king.

Lady Banks long survived her husband, and remained unmolested during the commonwealth. She lived to see the restoration of Charles II.

The inscription on her tombstone, in the south aisle of Rislipp church, contains all that is further known of her. It is therefore given here.

TO THE MEMORY OF

The lady Mary Bankes, the only daughter of Rafe Hawtry, (1) of Rislipp, in the county of Middlesex, Esquire, the wife and widow of the Honorable Sir John Bankes, Knight, Late Lord Chief Justice of his late Majesty's Court of Common Pleas, and of the Privy

(1) From whom the present Hawtry family are lineally descended.

Council to his late Majesty King Charles the 1st, of blessed memory, who, having had the honour to have borne, with a constancy and courage above her sex, a noble proportion of the late calamities, and the happiness to have outlived them so far as to have seen the restitution of the Government, with great peace of mind laid down her most desired life, the 19th day of April, 1661. Sir Ralph Bankes, her sonne and heir, hath dedicated this. She left 4 sonnes; 1st Sir Ralph, 2nd Jerome, 3rd Charles, 4th William, (since dead without issue) and 6 daughters.

STOCKTON ST. ANNE'S.

ADAM STOCK was a native of Aberdoen, but had been sent to England at an early age, in order to relieve his parents in some degree from the pressure of a very numerous family. However, though bringing with him nothing of this world's goods, he inherited what will generally be found to be the pledge of success in this world—a strong bodily constitution, a sound heart, good common sense, and habits of indefatigable industry. The place of his destination was one of our northern manufacturing towns, where his maternal uncle filled the office of superintendent of a cloth mill. Here Adam arrived at the age of fourteen, and, having received a good grammatical education, soon found means of establishing himself in the service, as he had before in the good opinion, of his uncle's employers. Through various subordinate occupations he rose to be a clerk in the warehouse, and afterwards succeeded his uncle in the responsible post of superintendent of the factory. This situation he held for sixteen years; he was then permitted to share in the profits of the business; and a dissolution of partnership subsequently taking place, he found himself in a position to undertake the erection of a new factory, in conjunction with one of the partners, upon a small estate which he had purchased, about a mile and a half from the town. But before entering upon this portion of Mr. Stock's history, it should be mentioned, that, after he had been settled about six years in his clerkship, he contracted a prudent and happy marriage, the issue of which was two sons, James and Robert. These sons he had caused to be apprenticed according to his then means, the one to a tailor, the other to a shoemaker. At the time of the removal of the factory, they were both carrying on extensive and profitable businesses.

The establishment of this factory is the main subject of our narrative. From his first settlement at —, Mr. Stock had been an attentive observer of the moral and religious condition of the people among whom his lot was cast. He had himself been trained in strict habits of religion. His family, though it had never risen beyond the middle class, could trace a descent of two hundred years, during which it had continued in dutiful allegiance to the Church. This was the pride of the Stocks; but it was checked by that which is the best security of uncompromising principle—strict self-denying habits of practical religion. Adam was a worthy scion of an honourable house. The evils of the "factory system," as it is now technically termed, had not yet developed themselves; but he was not slow to perceive that demoralization very generally prevailed among those who worked in the mills, and that no one tie existed by which workmen and master were bound together. Gratitude and attachment, on the part of the former, there was none; and how should there be, when no kindness or consideration was ever shown to elicit it? Something he had himself attempted, when his position seemed to allow of his doing so; but the other partners were averse to seconding his endeavours, and the habits of the people did not invite him to meddle with their domestic affairs. Over this inability to fulfil what he

felt to be, in the strictest sense, his most necessary obligations as an employer, he had long mourned; and therefore he resolved to seize the opportunity offered by the dissolution, in conjunction with the son of the original founder of the firm, who was like-minded with himself, for constructing and organizing an establishment upon better principles. With this view, a mill, of moderate dimensions, was commenced on the property aforementioned, situate in a little agricultural hamlet belonging to the town, and cottages for about fifty families of workpeople. His two sons, who were both single, had already built themselves a house, and were living together on the spot, and there was a population of about two hundred poor, who had been settled there for many generations. Simultaneously with these buildings were seen also to arise a Church parsonage, and schools, which, however, Messrs. Stock and Newsome were not allowed to erect at their own cost alone. A retired physician begged to be allowed to take a part in the foundation of this interesting colony; and though Mr. Stock refused to derive any profit from the land given for this purpose, he permitted Dr. Worth, in lieu of purchasing ground sufficient for the erection of a house for himself, to undertake the building of the schools and parsonage.

To this new township of Stockton St. Anne's, as it was called, in honour at once of the proprietor and of the saint who had given a name to a famous spring which was situated on the estate, the factory was now removed, and a new order of proceedings at once commenced. The desire of the proprietor was, that all engaged in the mill should regard themselves as members of his family: to none therefore was the invitation made without explaining the nature of the relationship which would henceforth be presumed and acted upon. Order and morality would be expected in the first instance, and, what alone can be the source of abiding peace, the bond of a common faith.

Before finally closing with his men, Mr. Stock assembled them, with their wives and families, and propounded the principles on which he proposed to conduct their little society. The wages to be paid were rather below the ordinary average; but the difference would be more than compensated by the luxury of well-contrived airy houses, with sufficient gardens. Temperance and chastity, and regular attendance at the public services of the Church, were to be indispensable conditions of a residence at St. Anne's; besides which, they were required to provide against sickness and old age, by paying to the Guild of St. Barnabas,—a well-regulated provident society, which the proprietors themselves established.

The good effects of the system began speedily to appear, in the increased happiness and self-respect of the little colony. Daily does the church bell call to morning prayer, and is responded to by at least three-fourths of the whole adult population. Contentment is visibly written on every countenance; and a better conducted community it would be impossible to find. Two accessions have lately been made to the society of Stockton St. Anne's: the first a colony of tailors and shoemakers, who have been located there by Mr. Stock's two sons; and, secondly, a highly-respectable firm have requested to transfer their flax mill from the town to this favoured site.

Mr. Stock is now in the vigour of a green old age; and long may he live to enjoy the fruits of his religious care for the well-being of his dependents, and to witness the influence of his good example upon others, to whom is committed the like responsibility of employing the labour of their fellow-men for their own aggrandisement.

Reader, if you desire a treat, we advise you to visit Stockton, either on the festival of St. Anne, the patron saint of the church, or on that of St. Barnabas, the patron of the guild,—the two great general holidays of our new township,—and you will witness a specimen of cheerful hilarity, and well-regulated mirth, that will remind you of olden and better times.

C.

POPULAR YEAR-BOOK.

February 13.—St. Valentine's Eve.

OLD AND POPULAR CUSTOMS.

"It is a ceremony," says Bourne, "never omitted among the vulgar, to draw lots, which they term valentines, on the eve before Valentine day. The names of a select number of one sex are, by an equal number of the other, put in some vessel; and after that, every one draws a name, which for the present is called their valentine, and is looked upon as a good omen of their being man and wife afterwards."

A modern writer states how this "ceremony" was conducted, a few years ago, in a small village, in the south of Scotland. This individual, with a friend, had wandered from his road, and at last was obliged to "crave hospitality" at a "comfortable-looking lonely cottage."—"The good man," he says, "heard our story, welcomed us to a seat beside a blazing fire of wood and turf, and appeared delighted with our coming. We found ourselves in the house of rendezvous for the lads and lasses of a neighbouring village to celebrate St. Valentine's eve. Our entrance had damped the pleasantries, and inquisitive eyes were directed towards us. It was our business to become familiar with our new acquaintances, and the pastimes were renewed. Our sudden appearance had disturbed the progress of the village schoolmaster, who had finished writing, on small slips of paper, the names of each of the blooming lasses of the village. Each had dictated the name of her he loved. These precious slips of paper were now put into a bag and well mixed together, and each youth drew out a ticket, with hope that it might, and fear lest it should not, be the name of his sweetheart. This was repeated three times; the third time was the conclusion of this part of the sport. Some drew beloved names the third time with rapturous joy; others drew names of certain respectable widows and old ladies in the village, introduced by the art of the schoolmaster, and the victims mourned their unpitied derided sufferings. After the lasses, the names of the young men were written and drawn by the girls in the same manner, and a threefold success was secretly hailed as a sure-thing of bearing the name of the fortunate youth. The drawing of this lottery was succeeded by the essence of amusement, for the 'valentines' were to be 'relieved.' The relieving of the valentine was a scene of high amusement. Each young man had a right to kiss the girl whose name he drew, and at the same time to deliver to her the slip of paper. The mirth of this ceremony was excessive. Those who were drawn, and not present, were to be 'relieved' with a gift of inconsiderable value, as a token of regard."

The following curious mode of divination practised on St. Valentine's eve is described in the "Connoisseur," a series of Essays published in 1754-6:—"Last Friday was Valentine's day, and the night before, I got five bay-leaves, and pinned four of them to the four corners of my pillow, and the fifth to the middle; and then, if I dreamt of my sweetheart, Betty said we should be married before the year was out. But to make it more sure, I boiled an egg hard, and took out the yolk and filled it with salt; and when I went to bed, ate it, shell and all, without speaking or drinking

after it. We also wrote our lovers' names upon bits of paper, and rolled them up in clay, and put them into water; and the first that rose up was to be our valentine. Would you think it, Mr. Blossom was my man? I lay a-bed and shut my eyes all the morning till he came to our house; for I would not have seen another man before him for all the world."

We learn from a writer in Hone's "Every Day Book," that at Swaffham, in Norfolk, it is customary for boys to send valentine letters on the evening of February the 13th. At a convenient opportunity, the door is slyly opened, and the "valentine," attached to an apple or orange, is thrown in; a loud rap at the door immediately follows, and the offender, taking to his heels, is off instantly. Those in the house, generally knowing for what purpose the announcing rap was made, commence a search for the juvenile billet-doux: in this manner numbers are disposed of by each youth. By way of teasing the person who attends the door, a white oblong parallelogram, the size of a letter, is usually chalked on the step of the door, and should an attempt be made to pick it up, great amusement is thus afforded to some of the youths who are generally watching.

February 14.—St. Valentine's Day.

HAIL, Bishop Valentine! whose day this is;
All the air is thy diocese,
And all the chirping choristers,
And other birds, are thy parishioners.
Thou marryest every year
The lyric lark and the grave whispering dove;
The sparrow that neglects his life for love;
The household bird with the red stomacher;
Thou mak'st the blackbird speed as soon
As doth the goldfinch or the halcyon:
This day, more cheerfully than ever shine—
This day, which might inflame thyself, old Valentine!

DUNNE.

A modern journalist observes of this day:—"It is now almost everywhere, we suspect, a degenerated festival, the only observance of any note consisting of the sending of jocular anonymous letters to parties whom one wishes to quiz, and this confined very much to the humbler classes." After describing the well-known valentine letters which decorate the printsellers' shop windows at this period, he adds:—"Maid servants and young fellows interchange such epistles with each other on the 14th of February, no doubt conceiving that the joke is amazingly good; and generally the newspapers do not fail to record that the London postmen delivered so many hundred thousand more letters on that day than they do in general. Such is nearly the whole extent of the observances now peculiar to St. Valentine's-day."

In former times it was very different. Misson, a learned traveller, who died in England about 1721, records:—"On the eve¹ of the 14th of February, St. Valentine's-day, a time when all living nature inclines to couple,² the young folks in England, and Scotland too, by a very ancient custom, celebrate a little festival that tends to the same end. An equal number of maids and bachelors get together, each writes their true or some

feigned name upon separate billets, which they roll up and draw by way of lots, the maids taking the men's billets, and the men the maids'; so that each of the young men lights upon a girl that he calls his valentine, and each of the girls upon a young man which she calls hers. By this means each has two valentines; but the man sticks faster to the valentine that has fallen to him, than to the valentine to whom he has fallen. Fortune having thus divided the company into so many couples, the valentines give balls and treats to their mistresses, wear their billets several days upon their bosoms and sleeves, and this little sport often ends in love. This ceremony is practised differently in different counties, and according to the freedom or severity of Madame Valentine. There is another kind of valentine, which is the first young man or woman that chance throws in your way in the street, or elsewhere, on that day." "In some places, at this time," says Mr. Hone, in 1825, "and more particularly in London, the lad's valentine is the first lass he sees in the morning, who is not an inmate of the house; the lass's valentine is the first youth she sees." This will explain the concluding paragraph of the extract above cited from the "Connoisseur." In allusion to this usage, Gay makes a country housewife remind her husband:—

"Last Valentine, the day when birds of kind
Their paramours with mutual chirpings find,
I early rose, just at the break of day,
Before the sun had chas'd the stars away;

A-field I went amid the morning dew,
To milk my kine (for so should house-wives do):
Thence first I spied; and the first swain we see,
In spite of fortune, shall our true-love be."

Shakespeare refers to the custom of "looking for your valentine, or desiring to be one," in the song of crazed Ophelia, beginning:—

"Good morrow! 'tis St. Valentine's-day
All in the morning betime,
And I a maid at your window,
To be your valentine!"

The "British Apollo," fol., London, 1708, contains the following interrogation and reply:—"Question. In choosing valentines (according to custom¹), is not the party choosing (be it man or woman) to make a present to the party chosen?

"Answer. We think it more proper to say, drawing of valentines, since the most customary way is for each to take his or her lot; and chance cannot be termed choice. According to this method the obligations are equal, and therefore it was formerly the custom mutually to present, but now it is customary only for the gentlemen." An author, in 1645, speaks of the "charge of valentines," in allusion, doubtless, to the presents above alluded to. That garrulous old gentleman, Pepys, gives us to understand that in the reign of Charles II., married and single were alike liable to be chosen as a valentine, and that a present was regularly given to the choosing party. Alluding to St. Valentine's-day, 1667, he says in his "Diary:"—"This morning came up to my wife's bedside (I being up dressing myself) little Will Mercer to her valentine, and brought her name written upon blue paper in gold letters, done by himself, very pretty; and we were both well pleased with it.

(1) This may either mean St. Valentine's-eve, or the evening of St. Valentine's-day. We incline to think that the latter period is indicated.

(2) There is a rural tradition, alluded to by Chaucer, Shakespeare, &c., that on this day every bird chooses its mate.

(1) "The custom," says Brand, "of choosing valentines was a sport practised in the houses of the gentry in England as early as the year 1476.

But I am also this year my wife's valentine, and it will cost me 5*l*.; but that I must have laid out if we had not been valentines." Two days subsequently, he adds,—"I find that Mrs. Pierce's little girl is my valentine, she having drawn me; which I was not sorry for, it easing me of something more than I must have given to others." Noticing, shortly afterwards, the jewels of Mistress Stuart, who became Duchess of Richmond, he relates:—"The Duke of York, being once her valentine, did give her a jewel of about 800*l*.; and my Lord Mandeville, her valentine this year, a ring of about 300*l*." In February 1668, Pepys observes:—"This evening my wife did with great pleasure shew me her stock of jewels, increased by the ring she hath made lately, as my valentine's gift this year,—a 'Turkey stone set with diamonds.'"

Alban Butler relates of the admirable St. Francis of Sales, that, circa 1602, he severely forbade the custom of valentines, or giving boys, in writing, the names of girls to be admired and attended on by them: and, to abolish it, he changed it into giving billets with the names of certain saints, for them to honour and imitate in a particular manner.

A contributor to Hone's "Every Day Book," describes a singular custom which prevailed many years since, on St. Valentine's day, in the west of England. Three single men went out together before day-light, with a clap-net, to catch an old owl and two sparrows in a neighbouring barn. If they were successful, and could bring the birds to the inn without injury before the females of the house had risen, they were rewarded by the hostess with three pots of purl in honour of St. Valentine, and enjoyed the privilege of demanding at any house in the neighbourhood a similar boon. This was done as an emblem that the owl, being the bird of wisdom, could influence the feathered race to enter the net of love as mates on that day, whereon both boys and maidens should be reminded that happiness could alone be secured by an early union.

On this day it is customary, in many parts of Hertfordshire, for the children of the poor and middle class to assemble in some part of the town or village where they reside, whence they proceed in a body to the house of the chief person in the place, who throws them wreaths and true lovers' knots from the window, with which they entirely adorn themselves. Two or three of the girls then select one of the youngest amongst the party (usually a boy), whom they decorate more gaily than the rest, and, placing him at their head, march forward, at the same time playfully singing,

"Good morrow to you, Valentine;
Curl your locks, as I do mine;
Two before, and three behind;
Good morrow to you, Valentine."

This they repeat under the windows of all the houses they pass, and the inhabitant is seldom known to refuse a trifling gift to the merry importunity of these youthful songsters. They begin as early as six in the morning.

"On a Valentine's day," says an anonymous writer, "being at Uswick, about six miles from Bishop's Stortford, I was awakened from sleep by the laughing voices of a troop of children. I hastily dressed myself, and threw open the window: it was rather sharp and frosty; the yet leafless trees were thickly covered with rime, beautifully sparkling in the faint sunbeams, which

made their way through the thin vapours of the moist atmosphere. 'To-morrow is come,' lisped one of the little ones who stood foremost in the throng; 'to-morrow is come,' said he, as soon as I appeared; and then, joyfully clapping his hands, all joined in the good morrow, which they continued to repeat till their attention was called off by the welcome sound of the falling halfpence on the crisp frozen grass-plot before the house. . . . They all returned with flushed faces, and repeated their 'to-morrow is come,' and, once more, I was going to say, the 'golden' drops saluted their delighted ears: again they scrambled, and again I threw, till my stock of halfpence being exhausted, and having nothing further to behold, I closed the window."

The origin of the peculiar customs of St. Valentine's day is rather doubtful. The saint himself, who was a priest of Rome, beheaded by the Emperor Claudius II., A.D. 271, seems to have had nothing to do with them beyond the circumstance of their being observed upon his day. Mr. Douce, in his "Illustrations of Shakspeare," observes:

"It was the practice in ancient Rome, during a great part of the month of February, to celebrate the Lupercalia, which were feasts in honour of Pan and Juno, whence the latter deity was named *Februata*, *Februalis*, and *Februlla*. On this occasion, amidst a variety of ceremonies, the names of young women were put into a box, from which they were drawn by the men as chance directed. The pastors of the early Christian Church, who by every possible means endeavoured to eradicate the vestiges of pagan superstitions, and chiefly by some commutation of their forms, substituted, in the present instance, the names of particular saints instead of those of the women; and, as the festival of the Lupercalia had commenced about the middle of February, they appear to have chosen St. Valentine's day for celebrating the new feast, because it occurred nearly at the same time. This is, in part, the opinion of a learned and rational compiler of the 'Lives of the Saints,' the Rev. Alban Butler. It should seem, however, that it was utterly impossible to extirpate altogether any ceremony to which the common people had been much accustomed: a fact which it were easy to prove in tracing the origin of various other popular superstitions. And, accordingly, the outline of the ancient ceremonies was preserved, but modified by some adaptation to the Christian system. It is reasonable to suppose that the above practice of choosing mates would gradually become reciprocal in the sexes; and that all persons so chosen should be called valentines, from the day on which the ceremony took place."

"There is," adds the same writer, "another opinion on the origin of choosing Valentines, which has been formed on a tradition among the common people, that, at the above season of the year birds choose their mates . . . yet this seems to be a mere poetical idea, borrowed, in all probability, from the practice in question." Again, it has been supposed that the custom originated in the following manner. During Carnival time, which usually happens about St. Valentine's day, great numbers of knights assembled together, in the various courts of Europe, to entertain the ladies with feasts and tournaments, when each lady made choice of a knight, who usually enlisted in her service a whole year, during which period he bound himself to

perform, at the suggestion of his mistress, 'what-ever was consistent with propriety.' One employment was the writing of verses full of tenderness, not that it was at all requisite for the heart to be at all concerned in the matter. A little reflection, however, may serve to show that even this practice is only derivative from the older one. When Ash-Wednesday happened to fall on St. Valentine's day, the knights and their ladies assembled only on the afternoon, the morning being necessarily devoted to pious purposes. Madame Royale, the daughter of Henry IV. of France, built a palace near Turin, which was called *The Valentine*, on account of the great veneration in which the Saint was held in that country. At the first entertainment given there by the princess, she directed that the ladies should choose their lovers for the year by lots. The only difference with respect to herself was, that she should be at liberty to fix on her own partner. At every ball during the year, each lady received from her gallant a nosegay; and, at every tournament, the lady furnished his horse's trappings, the prize obtained being hers."

In an old English ballad the girls are directed to pray *cross-legged* to St. Valentine, for good luck.

The marriage of the Princess Elizabeth with the Elector Palatine—the marriage which gave the present royal family to the throne—on Valentine's day, 1612-13, was solemnized at Whitehall with a degree of sumptuousness verging upon Eastern splendour. On that occasion the ceremony was performed on a raised stage in the middle of the chapel, and no persons were admitted under the degree of a baron, "saving the three Lords Chief Justices." "It were no end," says a spectator of the wedding, "to write of the curiosity and bravery both of men and women, with the extreme daubings of cost and riches." Different masks were represented by the lords, and by the members of the Temple, Lincoln's Inn, and Gray's Inn; that of the lords is described to have been "very rich and sumptuous, yet long and tedious, and with many devices more like a play than a mask." A new (temporary) marriage room was erected for the entertainment of the guests; and fireworks were displayed both in the gardens and on the river Thames, the cost of which amounted to more than 9000*l*. On this marriage the celebrated Dr. Donne, Dean of St. Paul's, composed an epithalamium, of which the fine lines we have inserted at the commencement of the foregoing observations on St. Valentine's day and its customs form the opening.

Poetry.

[In Original Poetry, the Name, real or assumed, of the Author, is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

THE GRAY FOREST-EAGLE.

WITH storm daring pinion and sun-gazing eye,
The gray forest-eagle is king of the sky!
Oh, little he loves the green valley of flowers,
Where sunshine and song cheer the bright summer hours,
For he hears in those haunts only music, and sees
Only rippling of waters and waving of trees;
Where the red-robin warbles, the honey-bee hums,
The timid quail whistles, the sly partridge drums;
And if those proud pinions, perchance, sweep along,
There's a shrouding of plumage, a hushing of song;
The sun-light falls stillly on leaf and on moss,
And there's naught but his shadow, black, gliding across;

But the dark, gloomy gorge, where down plunges the foam
Of the fierce, rock-lash'd torrent, he claims as his home.
There he blends his hoarse shriek with the roar of the flood,
And the many-voic'd sounds of the blast-amitten wood;
From his crag-grasping fir-top, where morn hangs its wreath,
He views the mad waters, white, writhing beneath.
On a limb of that moss-bearded hemlock, far down,
With bright azure mantle and gay mottled crown,
The king-fisher watches, where o'er him his foe,
The fierce hawk, sails, circling, each moment more low:
Now poised are those pinions and poluted that beak;
His dread swoop is ready, when, hark! with a shriek,
His eyeballs red-blazing, high-bristling his crest,
His snake-like neck arch'd, talons drawn to his breast,
With the rush of the wind-gust, the glancing of light,
The gray forest-eagle shoots down in his flight;
One blow of those talons, one plunge of that neck,
The strong hawk hangs lifeless, a blood dripping wreck;
And as dives the free king-fisher, dart-like on high
With his prey soars the eagle, and melts in the sky.

A fitful red glaring, a low, rumbling jar,
Proclaim the storm demon, yet raging afar:
The black cloud strides upward, the lightning more red,
And the roll of the thunder more deep and more dread;
A thick pall of darkness is cast o'er the air,
And on bounds the blast, with a howl, from its lair;
The lightning darts zig-zag and fork'd through the gloom,
And the bolt launches o'er with crash, rattle, and boom;
The gray forest-eagle, where, where has he sped?
Does he shrink to his eyrie, and shiver with dread?
Does the glare blind his eye? Has the terrible blast
On the wing of the sky-king a fear fetter cast?
No, no, the brave eagle! he thinks not of fright;
The wrath of the tempest but rouses delight;
To the flash of the lightning his eye casts a gleam,
To the shriek of the wild blast he echoes his scream,
And with front like a warrior that speeds to the prey,
And a clapping of pinions, he's up and away!
Away, O away, soars the fearless and free!
What reck's he the sky's strife? Its monarch is he!
The lightning darts round him, undaunted his sight;
The blast sweeps against him, unwaver'd his flight;
High upward, still upward, he wheels till his form
Is lost in the black, scowling gloom of the storm.

The tempest sweeps o'er with its terrible train,
And the splendour of sunshine is glowing again;
Again smiles the soft, tender blue of the sky,
Waked bird-voices warble, fann'd leaf-voices sigh
On the green-grass dance shadows, streams sparkle and run,
The breeze bears the odour, its flower-kiss his own,
And full on the form of the demon in flight
The rainbow's magnificence gladdens the sight!
The gray forest-eagle! O, where is he now,
While the sky wears the sign of its God on its brow?
There's a dark, floating spot by yon cloud's pearly wreath,
With the speed of the arrow 'tis shooting beneath!
Down nearer and nearer it draws to the gaze,
Now over the rainbow, now blent with its blaze,
To a shape it expands, still it plunges through air,
A proud crest, a fierce eye, a broad wing, are there;
'Tis the eagle—the gray forest-eagle—once more
He sweeps to his eyrie: his journey is o'er!

Time whirls round his circle, his years roll away,
But the gray forest-eagle minds little his sway;
The child spurns its buds for youth's thorn-hidden bloom,
Seeks manhood's bright phantoms, finds age and a tomb;
But the eagle's eye dims not, his wing is unbowed,
Still drinks he the sun-shine, still scales he the cloud.
The green, tiny pine-shrub points up from the moss,
The wren's foot would cover it, tripping across:
The beech-nut down dropping would crush it beneath,
But 'tis warm'd with heaven's sunshine, and fann'd by its breath,
The seasons fly past it, its head is on high,
Its thick branches challenge each mood of the sky;
On its rough bark the moss a green mantle creates;
And the deer from its antlers the velvet-down grates;
Time withers its roots, it lifts sadly in air
A trunk dry and wasted, a top jagg'd and bare,

Till it rocks in soft breeze and crashes to earth;
Its blown fragments strewing the place of its birth.
The eagle has seen it up-struggling to sight,
He has seen it defying the storm in its might;
Then prostrate, soil-blended, with plants sprouting o'er,
But the gray forest-eagle is still as of yore,
His flaming eye dims not, his wing is unbowed,
Still drinks he the sunshine, still scales he the cloud;
He has seen from his eyrie the forest below,
In bud and in leaf, robed with crimson and snow.
The thicket's deep wolf-lairs, the high crag his throne,
And the shriek of the panther has answered his own.
He has seen the wild red man the lord of the shades,
And the smoke of his wigwams curl thick in the glades;
He has seen the proud forest melt breath-like away,
And the breast of the earth lying bare to the day;
He sees the green meadow-grass hiding the lair,
And his crag-throne spread naked to sun and to air;
And his shriek is now answered, while sweeping along,
By the low of the herd, and the husbandman's song;
He has seen the wild red man offswapt by his foes,
And he sees dome and roof where those smokes once arose;
But his flaming eye dims not, his wing is unbowed,
Still drinks he the sunshine, still scales he the cloud.

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne*.

GOOD ADVICE NOT TO BE DESPISED.

ONE day, as an ancient king of Tartary was riding with his officers of state, they met a dervise, crying aloud, "To him that will give me a hundred dinars, I will give a piece of good advice." The king, attracted by this strange declaration, stopped, and said to the dervise, "What advice is this that you offer for a hundred dinars?" "Sire," replied the dervise, "I shall be most thankful to tell you, as soon as you order the money to be paid me." The king, expecting to hear something extraordinary, ordered the money to be given to the dervise at once. On receiving which, he said, "Sire, my advice is, begin nothing without considering what the end may be."

The officers of state, smiling at what they thought ridiculous advice, looked at the king, who they expected would be so enraged at this insult, as to order the dervise to be severely punished. The king, seeing the amusement and surprise which this advice had occasioned, said, "I see nothing to laugh at in the advice of this dervise, but, on the contrary, I am persuaded, that if it were more frequently practised, men would escape many calamities. Indeed, so convinced am I of the wisdom of this maxim, that I shall have it engraved on my plate, and written on the walls of my palace, so that it may be ever before me." The king, having thanked the dervise for his advice, proceeded towards his palace; and, on his arrival, he ordered the chief bey to see that the maxim was engraved on his plate, and on the walls of his palace.

Sometime after this occurrence, one of the nobles of the court, a proud, ambitious man, resolved to destroy the king, and place himself on the throne. In order to accomplish his diabolical purpose, he secured the confidence of one of the king's surgeons, to whom he gave a poisoned lancet, saying, "If you will bleed the king with this lancet, I will give you ten thousand pieces of gold; and, when I ascend the throne, you shall be my vizier." This base surgeon, dazzled by such brilliant prospects, wickedly assented to the proposal. An opportunity of effecting his evil design soon occurred. The king sent for this man to bleed him: he put the

poisoned lancet into a side pocket, and hastened into the king's presence. The arm was tied, and the fatal lancet was about to be plunged into the vein, when suddenly the surgeon's eye read this maxim at the bottom of the basin—"Begin nothing without considering what the end may be." He immediately paused, as he thought within himself, "If I bleed the king with this lancet, he will die, and I shall be seized and put to a cruel death; then, of what use will all the gold in the world be to me?" Then, returning the lancet to his pocket, he drew forth another. The king, observing this, and perceiving that he was much embarrassed, asked why he changed his lancet so suddenly. He stated that the point was broken; but the king, doubting his statement, commanded him to show it. This so agitated him, that the king felt assured all was not right. He said, "There is treachery in this; tell me instantly what it means, or your head shall be severed from your body." The surgeon, trembling with fear, promised to relate all to the king, if he would only pardon his guilt. The king assented, and the surgeon related the whole matter, and acknowledged that had it not been for the words in the basin, he should have used the fatal lancet.

The king summoned his court, and ordered the traitor to be executed. Then, turning to his officers of state, he said, "You now see that the advice of the dervise, at which you laughed, is most valuable: it has saved my life. Search out this dervise, that I may amply reward him for his wise maxim."

SIMONIDES, it is related, upon landing in a strange country, found the corse of an unknown person lying by the sea-side; he buried it, and was honoured throughout Greece for the piety of that act. Another ancient philosopher, chancing to fix his eyes upon a dead body, regarded the same with slight, if not with contempt; saying, "See the shell of the fown bird!" But it is not to be supposed that the moral and tender-hearted Simonides was incapable of the lofty movements of thought, to which the other sage gave way, at the moment while his soul was intent only upon the indestructible being: nor, on the other hand, that he, in whose sight a lifeless human body was of no more value than the worthless shell from which the living fowl had departed, would not, in a different mood of mind, have been affected by those earthly considerations which had incited the philosophic poet to the performance of that pious duty. And, with regard to this latter, we may be assured, that if he had been destitute of the capability of communing with the more exalted thoughts that appertain to human nature, he would have cared no more for the corse of the stranger, than for the dead body of a seal or porpoise, which might have been cast up by the waves. We respect the corporal frame of man, not merely because it is the habitation of a rational, but of an immortal soul. Each of these sages was in sympathy with the best feelings of our nature,—feelings which, though they seem opposite to each other, have another and a finer connexion than that of contrast.—*Notes to Wordsworth's Excursion*.

THE age of crusades was the youth of modern Europe. It was the time of unsophisticated feelings and ungovernable passions; the era of love, war, enthusiasm, and adventure.—*Schlegel*.

A JOURNAL OF ENTERTAINMENT AND INSTRUCTION
FOR GENERAL READING.

No. 17.]

FEBRUARY 21, 1846.

[PRICE 1½d.

" In mine own land the sun shines bright,
The morning breeze blows fair;
I must not look upon that light,
I must not feel that air.
The chain is heavy on my heart,
Although my limbs are free;
A bitter, bitter loss thou art,
O precious liberty ! "

It was King John lamented thus,
With many a mournful word;
But gentle, kind, and chivalrous
Was the heart of him who heard:
The Black Prince came—he loved to bring
Comfort and sweet relief,
So he spake softly to the king,
And strove to soothe his grief.

"Now cheer thee, noble friend!" he said;
"Right bravely didst thou fight;
Thine honour is untarnished;
Thou art a stainless knight.
That man should ne'er desponding be
Who winneth fame in strife;
'Tis a better thing than liberty,
A better thing than life.

I grant thee one full year," he said;
"For a year thou shalt be free:
Go back to France, and there persuade
Thy lords to ransom thee.
But if thy ransom they refuse,
And do not heed thy pain,
Our realm must not its captive lose—
Thou must return again.

"So pledge me now thy royal word,
And pledge it solemnly,
That thou, the captive of my sword,
Wilt faithful be to me."
The king he pledged his royal faith—
He pledged it gladly;
He promised to be true till death:
Of joyous heart was he.

Then did those generous foes embrace
Closely as brethren might,—
"Farewell, and God be with your grace;"—
"Farewell, thou peerless knight."
The wind was fair, the sea was blue,
The sky without a speck,
When the good ship o'er the waters flew,
With King John upon its deck.

With eager hope his heart beat high
When he sprang on his own dear shore;
But sad and downcast was his eye
Ere one brief month was o'er.
(Had were the lords of lovely France
When they beheld their king;
But, oh! how alter'd was their glance,
When he spoke of ransoming!

They told of wasted revenues,
Of fortunes waxing low;
And when their words did not refuse,
Their looks said plainly, "No."
Sore grew the heart of that good king,
As closed the winter drear;
And when the rose proclaim'd the spring,
He hailed it with a tear.

For the year was gliding fast away,
And gold he could not gain,
And honour summon'd him to pay
His freedom back again.

And now the summer-noon is bright,
The warm breeze woos the scent
From a thousand flowers of red and white;
The year is fully spent!

"Paris, farewell, thou ancient town!
Farewell, my woods and plains!
Farewell, my kingdom and my crown!
And welcome, English chains!
Trim, trim the bark, and hoist the sail,
And bid my train advance,
I have found that loyal faith may fail—
I leave thee, thankless France."

These bitter words spake good King John;
But his liegemen counsel gave:
"What reck's it that the year is gone?
There yet is time to save.
Thou standest yet on thine own good land,
Forget thy plighted word,—
Remain! and to thy foe's demand
We'll answer with the sword."

But the good King John spake firm and bold;
And oh! his words should be
Graven in characters of gold
On each heart's memory:
"Were truth disowned by all mankind,
A scorned and banished thing,
A resting-place it still should find
In the breast of every king."

Again the good ship cleaves the sea
Before a favouring air,
But it beareth to captivity,
And not to freedom fair.
Yet when King John set foot on land,
Sad he could scarcely be,
For the Black Prince took him by the hand,
And welcomed him courteously.

To Savoy Castle he was brought,
With fair and royal state:
Full many a squire, in rich attire,
Did on his pleasure wait.
They did not as a prisoner hold
That noble king and true,
But as dear guest, whose high behest
'Twas honour and joy to do.

Of treaty and of ransom then
The prince and he had speech;
Like friends and fellow-countrymen,
Great was the love of each;
No angry thought—no gesture proud,
Not a hasty word they spoke,
But a brotherhood of heart they vowed,
And its bond they never broke.

In Savoy Castle died King John—
They buried him royally;
And grief through all the land is gone
That such a knight should die.
And the prince was wont to say this thing
Whene'er his name was spoken,—
"He was a warrior and a king
Whose word was never broken."

[The above ballad is a sequel to "The Black Prince," which appeared in Part III., and is derived from the same source.]

THE HEALTH OF TOWNS AND POPULOUS DISTRICTS.

[SECOND PAPER.]

IN a former paper we took occasion to introduce Mr. Girdlestone's pamphlet to the notice of our readers, with some general observations on the important subject whose claims upon public attention it is intended to enforce. We again return to the subject, with the purpose of directing attention more particularly to some of the details by which the almost inconceivable misery of the existing condition of an immense proportion of the dwellings of the poor is established, and to the methods in which the benevolent exertions of government and of private individuals may be most successfully employed in improving them. We commence with the subject of drainage.

There are few subjects upon which, considered as abstract questions, there is likely to be so little difference of opinion, as upon the absolute necessity, to the health and comfort of the inhabitants of a district, of an efficient system of drainage in connexion with their houses. And yet many causes have cooperated to occasion its being neglected to an extent hardly possible to be believed. It is wonderful for how long men will, through indolence and habit, submit to most offensive personal inconveniences, even when the means of removing them are within their reach; how much more, when the inconvenience, with all its baleful consequences, is only sustained vicariously in the persons of tenants, to whom the alternative of seeking for better accommodation is not open!

We cannot better or more concisely sum up the requisites for efficient drainage, and the evils arising from the want of it, than in the words of Mr. Girdlestone.

"If there be no efficient public sewers, if the refuse be merely put out of sight in cesspools and dustbins, or in sewers which, for want of a proper fall, are full of stagnant filth, and act as extended cesspools; if there be no drains from each house into the public sewers, and no traps, or valves, or flaps at each opening of sewer and of drain; if there be no good pavement, nor any well formed roadway impervious to moisture; in such a case, and in proportion as these several points have in any case been neglected, there, not only the rain, but all the water used for washing, cooking, and manufacturing, however filthy it may have become, and all the refuse and excremental matter of every kind, accumulating hour by hour, and day by day, and year by year, except so far as it may be partially removed by the offensive and degrading process of manual labour, must be left to rot on the surface, and to sink into the soil, liable to be stirred up anew by each shower that falls, and ready to yield to the sun as it shines, and to the wind as it blows, vapour, charged and tainted with disease and death."

No man can contrast this description of what ought to be, with what his own observation informs him of the actual condition of a large portion of almost every considerable town in the kingdom, without being satisfied that there is scarcely a single matter of public interest more utterly neglected than this one of the removal of noxious influences from around the dwellings of the poorer classes. We cannot find room for the various proofs of this fact which Mr. Girdlestone has collected from the Reports of the Health of Towns' Commission; let it suffice to say, that they bear out to the very letter, and, if possible, more than bear out, the general character which he gives of

the districts in question, in the words of an eminent physician, one of the witnesses on whose evidence the Reports are founded. "I know that no verbal description of these places can convey any conception of their disgusting and poisonous condition. They must be seen to be at all understood. And when seen, every one involuntarily exclaims, 'Can such a state of things exist in a country that has made any progress in civilization!'"

It is a fact, particularly worthy of notice, that one physician gave it as his opinion, founded upon a very remarkable table of mortality, that the true cause of the periodical cholera, so generally ascribed to the abundance of fruit, is to be found in the miasmata evolved from stagnant water, or impure drains, by the heat of summer.

The evil thus proved to exist so widely is one over which those who are more immediately subjected to it, have, from the nature of the case, no control. The utmost efforts to maintain personal and household cleanliness, which is all that is within their reach in the most favourable cases, can do nothing to purify the poisonous exhalations before which their energies of body and mind are daily prostrated. Drains and sewers are difficult and expensive works, requiring capital and combination for their execution, both which are beyond the poor man's reach. It is to the government and local authorities, and to those who invest their capital in building houses, that we must appeal. And if we could suppose them to be deaf to the claims of humanity and duty when plainly set before them, we have still the strongest considerations of public and personal interest to adduce. There is no residence, however favourably situated, which is beyond the reach of the deadly contagion which the state of the dwellings of the poor is perpetually generating. The fever which exudes from the damp walls of the mud hovel, finds its way at last to the well ventilated palace. The health of the whole nation, therefore, from the highest to the lowest, is involved in this subject. As a necessary consequence, the peace of the country, and the expense incurred for the prevention and punishment of crime, are intimately connected with it; for all experience has shown that where squalor, misery, and domestic discomfort prevail, they are followed by turbulence and crime as surely as the substance by its shadow; while, on the other hand, the more comfortable the poor are made, and the more their circumstances permit them habitually to cherish feelings of self-respect, the more observant do they become of the decencies of social life, and the more interested in maintaining quietness and regularity in their neighbourhoods. But, even as a question of profit, it would be greatly for the interest of the owners of house property to add something to the original cost of the buildings for the sake of the health and comfort of their future occupants. They would have better rents, and those better paid; their property would be less injured by domestic brawls, sluttish habits, and the natural effects of damp and dirt, and would consequently be more durable. And it is not extravagant to say, that an important saving would be effected, taking this improvement in connexion with its necessary accompaniment, an increased supply of water, in the diminished risk of accidents by fire. Let not the reader who smiles at the idea of the want of drains setting houses on fire, too hastily charge us with absurdity in this.

A large proportion of the fires which occur annually in large towns are the consequence of the utter neglect of the most ordinary precautions against such a calamity; and it requires but a moment's thought to decide to what an extent the probability of its occurrence among a population crowded together in unhealthy dens, which have never possessed a single quality fitted to awaken in their minds the slightest feeling of local attachment, or satisfaction with their condition, and which contain nothing that they can feel very anxious to preserve, exceeds that of its breaking out where the inhabitants have adequate means of taking precautions against it; where they are careful, because they have something to care for; because they have comforts about them which it would be a pain and a loss to them to forfeit.

Closely connected with the subject of drainage, is that of the supply of water.

"It needs no evidence," says Mr. Girdlestone, referring to the general inadequacy of the supply in houses such as we have been speaking of, "to prove that this state of things must be detrimental to health, and therefore also to enjoyment and length of life. In personal cleanliness, in washing of apparel and of linen, in cleansing of floors and furniture, in preparing and cooking food, besides the important element which water forms in every one's diet, it is obvious that when this article is scarce, or foul, and much more when it is both, the human frame must thereby suffer more or less, daily and hourly; or rather, we may say, that in such a state of things, not a moment passes in which man, woman, and child, are not under some influence injurious to health, which might be easily abated or wholly avoided. Let a single witness suffice; a witness who mentions several striking facts, and states as the result, his 'strong conviction, that the quality of the supplies of water, and the mode in which it is received and kept in such atmospheres, influences the diet and health of the population to a much more serious extent than has hitherto been imagined.' (I. 82.) To this must be added the risk of life, as well as of property, by fire, which in a town is much greater than in lone houses; each man's safety depending in some measure on the prudence of his next door neighbour, and the common security depending chiefly on an ample and constant supply of water."

The evidence on this subject does not furnish so striking illustrations of the peculiar disadvantages under which the poor labour as compared with the rich, as that on other points of the inquiry; but there is enough in it to show that the means which they enjoy of access to pure, wholesome water are grievously defective; and that much evil is the consequence.

But the most important part of the subject, and the most general in its influence, is the state of the ventilation of the houses of the poor. Ventilation may be placed at the head of the essentials to a healthy condition of human dwellings. A perfect system of ventilation will go far to neutralize other unhealthy agencies; without it, whatever other precautions may be taken, no place can by possibility be healthy.

There is a process continually going on by which the air we use is vitiated. This is ably and powerfully described by Mr. Girdlestone.

"The air is the chief avenue by which the damp and filth of a town that is not well drained and cleansed introduce their poison into the human constitution. The putrefying refuse, whether animal or vegetable, solid or liquid, dissolves itself into various pestilential kinds of gas, all the more largely mingled with the common air, in proportion as this is damp and warm. In some

measure these noxious effluvia may affect the external skin, through its pores reaching our vitals. But it is by means of the lungs that the chief mischief is done; that atmosphere, which ought to refresh and purify the blood, coming charged with the elements of corruption; so that each time we take in a mouthful of air thus tainted, we admit, under the guise of a friend, a most subtle and deadly enemy, direct into the secret and defenceless inner chambers of the citadel of life. If our site has been well chosen, our town well sewered, our abode well drained, if all be kept clean and sweet by the free use of abundance of pure water, we may make sure, some would think, of fresh air; and we have nothing to do, but just to see that all our doors and windows shut close, and so with the addition of a good fire in cold weather, we may bid adieu to catarrh and cough, to fever and cholera, to scrofula and consumption. But why then have we been taking so much pains to make the air out of doors wholesome, if we never mean to let it come in plentifully, fresh and fresh, to circulate within doors; where most of the dwellers in towns spend the chief part of their time? Are we not aware that we cannot with impunity breathe the same air over and over again? Did we never hear of the Black Hole at Calcutta, and how many human beings there perished miserably in a few hours, simply by being kept crowded in a space where the air could not be changed as fast as they were breathing it? Let us be familiar with the true state of the case, namely, that every time we breathe,—and we do this several times in a minute, from the moment of birth to that of death, day and night, waking and sleeping, working and resting, well and ill, without intermission,—every time we breathe we vitiate the air taken into the lungs, by retaining one of its component elements, which combines with our blood, refreshing it and purifying it, whilst we return the remainder quite unfit to be breathed over again either by ourselves or by any one else. Hence it follows, that even one person, shut up in a small chamber perfectly air tight, could not live through a single day. And it is computed that the population of a crowded town, by the mere natural action of their lungs, in the course of the twenty-four hours, vitiates a layer of air, as large as the whole area inhabited, at least a yard in depth or thickness; to say nothing of the amount spoilt for purposes of breathing by fires and furnaces, lamps, candles, gas, gas works, and all manner of deleterious manufactories. (See I. 123.) Indeed, were it not for the providential arrangement that the air thus vitiated by the lungs becomes at the same time heated, and is therefore always in motion to ascend, making way for fresh air to come and take its place, we should be in constant danger of suffocation, whenever we were in a room without a draft, or in a town without a wind stirring."

After this let us see what the state of matters in large towns generally is.

"Strange as it may seem, there are districts in which the inhabitants dwell so thick upon the ground, that this circumstance alone proves most injurious to health: it being impossible for them to get enough fresh air. Such at least is the opinion of persons very capable of judging, an opinion strongly borne out by the rate of mortality in districts thus densely crowded. There is one small portion of London which is peopled at the rate of 243,000 inhabitants to the mile square. But there is a district in Liverpool containing 12,000 inhabitants, in the ratio of 460,000 to the same space. And in a portion of this district, the larger part of it, they are crowded at the rate of 657,963 to the mile square; being nearly 2½ times the maximum density ascertained in any part of London. In one street of this district, the most crowded of all, it appears that one out of every ten of the inhabitants is annually attacked with fever. (I. 156.) There is a district in Manchester nearly as highly crowded, in which 'the mortality is above twice the average amount.' (I. 208.) And there is one pent-

up court in Liverpool, the most crowded of all, in which nearly one half of the inhabitants were affected with fever in one year. The general condition of the town of Nottingham 'with respect to its health, is singularly bad,' * * * 'yet the site of the town is decidedly salubrious, and the occupations of the people are not necessarily unhealthy.' (I. 329.) But observe now how the dwelling houses are crowded together. 'With few exceptions, the houses are laid out either in narrow streets, or more commonly are built in confined courts and alleys, the entrance to which is usually through a tunnel from 30 to 36 inches wide, about 8 feet high, and from 25 to 30 feet long, so that purification by the direct action of the air and solar light is in the great majority of these cases perfectly impracticable. Upwards of 7,000 houses (out of 11,000 in all) are erected back to back and side to side, and are of course by this injurious arrangement deprived of the means of adequate ventilation and decent privacy.' (I. 318, 319.) Some statistics of the extraordinary density of population hence arising are then added; and these courts are described as being 'almost uniformly closed at both ends, being entered by the tunnel already spoken of.' Afterwards we are informed that 'the highest mortality occurs in the back to back houses of enclosed courts, situated within a few yards of the open and healthy neighbourhood, to the lowness of the mortality of which it forms a striking contrast.'

"Let us next view the inside of these dwellings; beginning with Whitechapel Union, in the metropolis. 'I know of few instances where there is more than one room to a family.' Next, in Liverpool; 'it is well known that in houses not exceeding twelve feet square, with one bedroom and a low attic, there are often found from twenty to thirty persons huddled together.' In Nottingham, 'rooms of eleven feet square often contain families of four, five, or six individuals, consisting not unfrequently of nearly related adults of different sexes, who live and sleep promiscuously.' In one of the districts of this town, the infant mortality is so enormous as to reduce the mean age at death to nearly eleven years, 'and is distinctly traceable to the vitiation of the atmosphere occasioned by the overcrowding of families into a single sleeping apartment.' But besides crowding of houses, and crowding of rooms, there is also crowding of beds. Statistical inquiries, carefully made, have brought to light several such cases as the following: In 422 dwellings examined in Preston, containing 852 beds, there were 84 cases in which four persons slept in one bed, 28 cases of five persons, 13 of six persons, 3 of seven persons, 1 of eight persons, and one other family of eight 'on bed stocks covered with a little straw.' (I. 181.) This state of things could hardly be made worse by the practice of sleeping with the head under the bedclothes. But the lowest deep of all is in the Liverpool cellars, thus described: 'The cellars are ten or twelve feet square; generally flagged, but frequently having only the bare earth for a floor, and sometimes less than six feet in height. There is frequently no window, so that light and air can gain access to the cellar only by the door, the top of which is often not higher than the level of the street. In such cellars, ventilation is out of the question. They are, of course, dark; and from the defective drainage, they are also very generally damp. There is sometimes a back cellar used as a sleeping apartment, having no direct communication with the external atmosphere, and deriving its scanty supply of light and air solely from the front apartment. Of the entire number of cellars, 1,617 have the back apartment I have mentioned; while of 5,297, whose measurements are given, 1,771, or one-third, are from five to six feet deep, 2,324 are from four to five feet, and 1,202 from three to four feet, below the level of the street; 5,273, or more than five-sixths of the whole, have no windows to the front; and 2,429, or about forty-four per cent., are reported as being either damp or wet.' In cases where they belong to lodging houses, 'at night the floor of these cellars, often the bare earth, is covered with straw, and there the lodgers, all who can

afford to pay a penny for the accommodation, arrange themselves as best they may, until scarcely a single available inch of space is left unoccupied.' 'In every room of such houses, with the exception of the kitchen or cooking room, the floor is usually covered with bedsteads, each of which receives, at night, as many human beings as can be crowded into it; and this too often without distinction of sex, or regard to decency.'

We have quoted largely from this part of Mr. Girdlestone's statement, because the important facts which he brings forward cannot be too widely known, nor too strongly impressed upon general attention, and because there is too much reason to believe, that with the natural unwillingness which all men have to contemplate that which is calculated painfully to affect their feelings, we are most of us shamefully ignorant as to the actual state of matters in this respect, wherever a veil can be drawn to hide them from our sight. The great point to establish, and it has been fully established, is, that in endeavouring to remove the evils which exist, we shall not be entering upon a utopian enterprise, to banish poverty, and the ills which necessarily attend it, from the earth; that the poor among us are surrounded by evils from which, under a right constitution of things, they might be free, and which are not inseparable from the condition of poverty.

The consideration of the remedies proper to be applied to the state of things we have described, will be taken up in a future article.

THE UNITED STATES EXPLORING EXPEDITION.

During the Years from 1838 to 1842.

SECOND NOTICE.

At the close of our last article, we left the exploring expedition on its voyage to the groups west of Tahiti, and to one of these, named the Samoan, the reader's attention is now directed. Many of our best maps scarcely notice these small geographical points; but if the reader will look at the space between lat. 13° 30' and 14° 30' south, and then mark off the region between lon. 168° and 173° west, he may be certain that within that little space 50,000 Samoan islanders are bearing their part in the business of the earth. Of this number nearly two-thirds are Christians, or under Christian teaching; thus we may justly look upon these remote Polynesian rocks with an interest heightened by moral considerations.

The first knowledge of Christianity was brought to the people by a tempest, which swept an English vessel on the coral reefs; the natives regarded the ship's crew as beings of more than mortal race, and the captain took advantage of their respect to declare the outlines of the Christian faith, and induced his crew to add their efforts to his own, and their success was great. Several churches were built, and the native paganism proved insufficient to stay the progress of the Christian truth thus imperfectly conveyed. Missionaries of various sects have subsequently established themselves on the islands, especially the Wesleyans and the Congregationalists. The latter sect had for their agent the indefatigable Mr. Williams, whose death, perpetrated by the savages, excited so much of public sympathy a few years since.

The Samoan pagans acknowledge a supreme divinity, and a number of subordinate gods; but they chiefly worship those deities that are said to preside over war. Their mythological system exhibits the ancient and widely-diffused notion, that every element of nature has its peculiar divinity.

Hero-worship is also found amongst them, and images

of their dead chiefs are carried about as objects of adoration. A future existence is one of the suppositions of their shadowy creed, but it is only some spirits which are believed to be immortal; others die, or are "eaten by the gods." This last idea is evidently similar to the pantheistic system of the Hindoos, which teaches the absorption of all existence into the essence of the deity.

The Missionaries will no doubt soon weaken the heathen party, and open the way for truth and morality to exert their influence on the Samoan character. The preachers are much impeded by those civilized wretches who form the crews of trading ships, and leave no efforts untried to corrupt the natives. Thus vice scatters her seeds by the hands of men who insult Christianity in bearing its hallowed name. Thus it will ever be, till Christian governments give to their armies and navies that ecclesiastical superintendence which would render them the bearers of truth, not the destroyers of goodness in the distant regions whither they journey. The dispositions and manners of the Samoans are superior to those of the Tahitians, and their women are treated with a degree of consideration not common among the Polynesians. As, however, a part of the population remains under the dominion of paganism, the voyager often meets with some blood-thirsty chief, or hears of acts of barbaric revenge inflicted by one tribe on another.

The Samoan language has some resemblance to the Tahitian, but not sufficient to enable a native of the group to be understood generally in the Society Isles. It is the only Polynesian dialect in which the sound of *s* is found, and all the words terminate in vowels, which gives a peculiar softness to the spoken language. That great European engine, the printing press, is at work in these islands, and issues its books and pamphlets to those of the natives who are sufficiently educated to use the publications; thus the Samoan group may yet possess its Paternoster-row.

Before leaving the Samoan group, a serious defect in the organization of the Missionaries must be noticed. It appears that no means of medical assistance are furnished by these bodies, although the natives are subject to some terrible diseases. One is the elephantiasis, which produces such a hideous swelling of the limbs, that the outline of the affected part is completely lost. Ophthalmia also prevails to a fearful extent, one-fifth or the whole population being thus affected. On one of the islands, Savai, not a family could be found without a case of blindness, in one or both eyes, arising from the disease. Under such circumstances, it is not too much to expect that the Missionaries should come provided with some amount of medical and surgical skill, by which they might not only alleviate misery, but acquire additional influence over the people. Amongst the institutions of the islanders, is a provision for preventing those sanguinary outbreaks of savage vengeance so common amongst a barbarous people. It is in its nature similar to the Hebrew cities of refuge, and more especially resembles the shelter given by the churches and altars of the middle ages. Whenever a Samoan has killed a man, he is safe for a time from the fury of the relatives, provided he escapes to the tomb of a chief, or some other sacred place.

Let us now leave this group, and follow the expedition on its course to other regions. A voyage toward the South Pole was within the plan prescribed to the commander; to prepare for which it was necessary to refit at Sydney, where the fleet moored on November the 30th. Here they remained till the 26th of December, when the sails were spread for the Antarctic cruise.

It had been generally conceded that no large tract of land could be found south of New Holland; that nothing save ranges of wintry islands was to be expected in those high southern latitudes. But a large continent is now supposed to exist within the Antarctic Circle. Ross coasted along a mountainous region, in the latitude of 79° south, and the commander of the United States

Expedition claims the first discovery of a large country connected with the high land of Ross.

We shall not here enter upon the discussion of this southern continent, if such it prove; nor speculate upon the chances of its becoming British or American territory. It will prove more interesting to describe the facts connected with this presumed discovery, and the nature of the long-hidden region thus brought to our view, from amidst the storms and icebergs of the polar world. No expectation of such a discovery seems to have animated the explorers, and it was some time before they could believe in the extent of the land which each day brought to their view. The discovery is claimed to have been made January the 16th, 1840, when land was seen from each of the ships. The excitement amongst the officers and crew was very great; some went to the mast-head to observe the coast through glasses; others watched the setting sun, to mark whether the colour of the object changed with the variations of light, as would have been the case with icebergs.

Whilst surveying this land a singular nocturnal phenomenon enlivened the watching crew,—this was the appearance of both sun and moon above the horizon at the same time. From one point the former illuminated the sparkling icebergs and distant mountains with a rich golden light; from the opposite quarter, the full moon tinged with silvery brightness the clouds around her course.

The icebergs also offered magnificent prospects; some resembled floating alabaster palaces, adorned with lofty arches and glittering pinnacles, which the varying light covered with the most splendid rainbow tints. Such rare and majestic phenomena tended to relieve the mind left to its musings on this solitary sea. The Aurora Australis, too, was at times visible in its splendour, darting from the zenith to the horizon in all directions in the most brilliant coruscations; rays, proceeding as if from a point in the zenith, flashed in brilliant pencilings of light, like sparks of electric fluid *in vacuo*, and formed themselves into one body like an umbrella or fan, showing all the prismatic colours at once, or in quick succession.

The whole line of the coast was fenced by a barrier of ice, forming a perpendicular wall of great height, and unbroken, in some places, for more than fifty miles. Behind this rampart lay the land, as if locked in an eternal prison. The ship sailed for fifteen hundred miles along the coast, finding nowhere an inlet, which could hardly have been the case, had the land consisted only of a long chain of islands. The first-discovered land was in lat. 66° south, long. 137° east, and bore away for hundreds of miles to the west, girdled by an almost impassable barrier of icebergs. No inhabitants were seen, nor is it likely that so wild a coast will ever be of any value for the purposes of civilized states. It is to be hoped that a further survey of this antarctic continent will be made, and the character of the coast more clearly ascertained. With our present knowledge of its extent, we must cease to regard the Antarctic Zone as a mere waste of waters. Captain Ross saw, in 1841, a mountainous region in lat. 79° south, which is connected with the continent discovered by the "United States Expedition." The French navigator, D'Urville, touched at a point of this new region, and declared his belief that a vast tract of land existed there. These testimonies, combined with the survey made by the Americans, leave no doubt of the existence of what may be called an Antarctic Continent. Thus a new geographical fact is added to our former acquisitions, which must ere long appear on all good maps and charts. If the discovery of crypt or chamber in an ancient building attracts the attention, and engages the learning, of the antiquary, the discovery of a long-hidden part of our earth must have a peculiar interest for all dwellers on this globe.

From this deeply-interesting, but perilous cruise, the Expedition returned to Sydney, where the damages

received from the ice were repaired. It was found that the timbers of one of the ships had been nearly pared through by friction against the razor-like edges of the icebergs amongst which she had been caught.

New Zealand was the next place visited, but want of space compels us to pass over many interesting particulars relating to this recent acquisition of the British crown. A disgusting kind of traffic formerly prevailed here, which has lately been prohibited under heavy penalties. This was the sale of tattooed heads, of which vast quantities were formerly sent to Sydney. This trade in dead human flesh, must have given the New Zealanders a strange notion of European civilization!

Tongataboo, an island in the Hupai group, was next visited, and the natives found to be engaged in furious hostilities. The Christians were at war with the Pagan party; and the war was fanned by some designing chiefs for their own ends. The heathen party, too, are enraged at the loss of the offerings once brought to their temples, and at the contempt cast upon their ancient customs. It is evident that the missionaries in these isles should be men of the strongest understandings, and well versed in that most difficult of sciences, the knowledge of human nature. A narrow spirit appears to actuate the missionaries; for instance,—they prohibit smoking amongst the native converts, and yet allow the use of *Aba*, a most intoxicating and pernicious drug.

The squadron now sailed for the Feejee group, or Friendly Isles, abounding in beautiful scenery, but inhabited by a savage and cannibal race of men; the utmost precautions were adopted to preserve the crews from collision with the islanders, which, however, proved insufficient to prevent a grievous loss of life, ere the squadron departed from the coast.

The Feejee group is divided into seven districts, under the rule of as many chiefs, who are constantly engaged in destructive wars. As the navigator approaches the fair coasts, the pleasure produced by the magnificent and varied landscape is destroyed by the thoughts of innumerable dark and bloody deeds which have stained each beautiful spot. When it is added that treachery and habitual lying characterise the natives, it will be seen how critical was the position of the exploring party.

But the dark outline is not complete till we remember that the most disgusting cannibalism undoubtedly prevails amongst these islanders. To such an extent is the horrid custom carried, that portions of human flesh are sent by relatives and friends, to others at a distance, as an acceptable offering.

The bodies of enemies killed in battle are always eaten; and a white man, long resident amongst the Feejeans, declares that on one occasion he saw more than twenty men cooked for food. One of the missionaries, Mr. Hunt, also gave an account of one of the horrid festivals, at which human flesh was publicly eaten; eleven men, who had offended a chief, were sacrificed, and cooked near the mission-house. The natives never attempt to conceal, or excuse, but rather exult in the barbarous act.

Another custom, even more revolting, prevails in this group, viz. the burying alive those who, through age, or infirmity, become incumbrances to their relatives. On such occasions the victim is coolly told that he, or she, has lived long enough. The acquaintances consult and fix the day of death, for which a great feast is prepared. The person is asked whether he chooses to be strangled before burial, or buried alive; after the answer is given, a day is fixed for the horrid deed.

The friends and relatives begin the funeral ceremonies from the time the victim is doomed. The choice of a grave is allowed to the aged person; it is dug by his friends, whilst he stands coolly regarding the process for his entombment. When the preparations are completed, the friends assist, with cold-blooded atrocity, the wretched person into the pit; and with many kisses

of assumed affection, take their departure; after which the person is wrapped in mats, and covered with sticks and earth, which the relatives assist in eagerly trampling down upon their buried father or mother. The following case was related by one of the missionaries, Mr. Hunt:—"On one occasion he was called upon by a young man who desired that he would pray for his mother, who was dead. The young man said that his brothers and himself were just going to bury her. Mr. Hunt accompanied the young man, telling him he would follow in the procession, and do as he desired him, supposing, of course, the corpse would be brought along. But he now met the procession, when the young man said that this was the funeral, and pointed out his mother, who was walking along with them, as gay and lively as any of those present, and apparently as much pleased. Mr. Hunt expressed his surprise to the young man, and asked how he could deceive him so much, by saying his mother was dead, when she was alive and well. He said, in reply, that they had made her death feast, and were now going to bury her; that she was old; that his brothers and himself thought she had lived long enough, and it was time to bury her, to which she had assented, and they were about it now. He added, that it was from love for his mother that he had done so; that in consequence of the same love they were now going to bury her; and that none but themselves could or ought to perform so sacred an office! Mr. Hunt did all in his power to prevent so diabolical an act; but the only reply he received was, that she was their mother, and that they ought to put her to death. On reaching the grave, the mother sat down, when they all, including children, grand-children, relatives and friends, took leave of her. A rope was then passed round her neck by her sons, who took hold of it and strangled her! After this she was buried with the usual solemnities, and they returned to feast and continue the mourning ceremonies."

These sacrifices are not always voluntary: the diseased and the helpless are often thus formally abandoned, or rather murdered, by their selfish relatives.

Through what degrading process these islanders have passed, to reach such a degree of corruption, we are unable to state, but we see to what depths of wickedness humanity is capable of sinking, notwithstanding its wondrous endowments.

That such a people should possess a religious system may appear surprising, but their most revolting deeds are sanctioned by a creed, and upheld by a priesthood. Every day is commenced, at the royal court, by acts of solemn worship: their chief deity, *Tara Java*, is invoked, and prayers offered to the spirits of their departed friends. The Feejeans have many deities; the chief one is worshipped under the form of a serpent, and to him the souls of men are supposed to go after death, to receive sentence. These people also believe in the existence of *mediatory* gods, and maintain that the two sons of the chief god intercede with their father for men.

According to the native creed, evil souls are plunged into a fiery cavern, from which egress is prevented by a powerful deity. In some of the isles the evil spirit is worshipped under the form of a man, with wings instead of arms. The doctrine of the soul's transmigration into other living bodies prevails in some parts, and the souls of departed chiefs are supposed often to enter into the bodies of those they esteemed. It is surprising that with such a belief in a future state of retribution, and in the existence of a superior spiritual world, the Feejeans should be under the power of the grossest barbarism. The Feejeans are a dark race, but their mythology teaches, that there were at first only two human beings, a man and a woman, both white; but some became wicked, and their colour changed to black. They hold this tradition of a great deluge, that after the islands had been peopled, a great rain took place, by which they were finally submerged; but, before the highest places were covered by the waters, two large canoes made their appearance, in one of these was *Rokora*, the god of

carpenters, in the other Rokola, his head workman, who picked up some of the people, and kept them on board till after the waters had subsided. The persons thus saved were eight in number.

It was not the fortune of the "expedition" to leave these islands without experiencing the effects of the native ferocity. A boat's crew was attacked, and a part brutally murdered, by a sudden onset of the savages. The aggressors were punished by the destruction of their fortified town, with a great loss of life on the part of the Feejeeans. This act has elicited much criticism, and the commander was tried on a charge of murder, when he reached the United States. His government, undoubtedly, authorized him to punish outrages of such a nature, but whether undue severity and cruelty were employed, is a question involving too many details for discussion in this place.

The fleet departed from these singular and barbarous isles, on August the 10th, for the *Hawaiian*, or Sandwich group.

We are compelled to omit the subsequent operations of the "expedition," and can only express our hopes that such researches into the condition of remote branches of the human family may long be continued, and result in the diffusion of arts, knowledge and religion over the globe.

We trust that the publishers of this abridged edition of the "Narrative" have met with the encouragement due to all who endeavour to familiarize the popular mind with the facts relating to the present condition and future prospects of mankind.

SPRING FLOWERS.

"Flowers have a soul in every leaf."—MOORE.

We delight in Flowers: from our very infancy have they ministered to our happiness. Beautiful gems! how often have ye recalled us from the trammels of every-day life to revel among Nature's fairest beauties! We almost tremble with delight at finding we are about to enter into such a sea of happiness as the contemplation of the unnumbered daughters of Flora affords us. What a delightful study is the examination and cultivation of flowers! what so much calculated to remind us of the goodness of God? Does not the beauty of their rich blossoms tell us that they were painted by no earthly hand?

"Who can paint
Like Nature? Can imagination boast,
Amid his gay creation, hues like these?
And can he mix them with that matchless skill,
And lay them on so delicately fine,
And bow them in each other, as appears
In every bud that blows?"

Flowers are considered the sweetest of all Nature's smiles. Who does not love—what heart so callous to all feeling, as not to yield to the brightening influences of the children of showers and sunny beams? And who, making the slightest claims to be considered a poet, has not tuned his muse to sing in praise of the God-enamelled flowers?

Who then would wish to be without them—to live without flowers? Where would the poet fly for his images of beauty, were he to be deprived of them? Are they not the emblems of loveliness and innocence—the living types of all things pleasing and graceful? We compare young lips to the Rose, and the white brow to the pearly Lily; the winning eye gathers its glow from the Violet, and the sweet voice of a young maid is like a breeze perfumed by the breath of the flowers—the incense of the garden. We hang delicate blossoms on the silken ringlets of the young bride, and strew her

path with the fragrant bells when she leaves the church. We place them around the marble face of the dead in the narrow coffin, and they are symbolic of our affections—pleasures remembered and hopes faded, wishes flown, and scenes cherished the more that they can never return. Still we look to the far-off spring in other valleys—to that eternal summer beyond the grave, where no rude blasts ever intrude, and where flowers once faded shall bloom again in starry fields of ever bright radiance. Sweet flowers! They come upon us in spring like the recollections of a dream which hovered above us in sleep, peopled with shadowy beauties and purple delights, fancy brodered.

So many and so very pleasing are the associations connected with our early spring flowers, that even some which, but for these feelings, might be considered but homely specimens of Nature's handiwork, stand high in our favour, and seem to possess something dearer than beauty to make us so prize them.

Among the earliest of all flowers comes the pale and drooping Snowdrop.

"Mild offspring of a dark and sullen sire,
Whose modest form, so delicately fine,
Was nurs'd in whirling storms,
And cradled by the winds."

This flower, so simply elegant in itself, and so welcome as the earliest harbinger of brighter days, springs up, as it were, heedless of all obstacles. Year after year do its bright tufts appear to cheer us in our wintry desolation.

"It dwells alone in its forest cave,
Where the moss lies round like an emerald wave,
And the wintry insects sleep and dwell,
Till awoke by the Snowdrop's silvery bell."

From its power of piercing through the snow, the Snowdrop is called by the French people *Perce-neige*. Mrs. Barbauld has the following beautiful notice of it:—

"Now the glad earth her frozen zone unbends,
And o'er her bosom breathe the western winds;
Already now the Snowdrop dare appear,
The first pale blossom of the unripened year:
As Flora's breath, by some transforming power,
Had changed an icicle into a flower;
Its name and hue the scentless plant retains,
And winter lingers in its icy veins."

This beautiful flower may be said to be the emblem of consolation, and the symbol of hope. When the heart of man has been saddened by the gloom of winter; when the north wind whistles, and the hoar frost clothes the verdure-despoiled trees; when the earth is covered with her carpet of snow; when not even the bold Crocus dare show its head; and when the more brilliant flowers are in their winter's sleep,—then are the pearly flowers of the Snowdrop a symbol of hope, an emblem of consolation, an assurance of coming spring.

"I've oft admired the lonely flower,
That 'mid the wintry snows,
When other flowerets bloom no more,
Its silvery bosom shows."

"I've thought it represented hope,
Which, with support replete,
Pours in the bitterest earthly cup
A more than earthly sweet."

"Yes, let affliction force the tear,
The world our bosoms sting,
Hope, like the Snowdrop, still shall cheer,
And point to coming spring."

What can be the reason that we are all so fond of the little Snowdrop? Is it for its whiteness or its delicacy? No; other flowers are as white, as delicate, and more beautiful. It is because it comes alone, at a season when everything around us bears the aspect of gloom; then do we hail the little shoot of pale green, and its snowy flowers, which come to smile upon us when

we have no other flowers to admire. One poet in addressing it says—

"Though no warm or murmuring zephyr
Fan thy leaves with balmy wings,
Pleased we hail thee, spotless blossom,
Herald of the infant spring."

The Snowdrop (*Galanthus*) is generally thought to be a native of Britain, but we are told that it is likewise claimed as a native of Switzerland, Austria, and Silesia. It makes its appearance in February in our meadows and woods, and is fond of the grassy banks of our rivers.

In former times, when the Roman Catholic faith was more prominent than it is now in this country, this little flower was dedicated to the Virgin Mary, and used then to be called the Fair Maid of February, because of its usually blossoming early in that month.

The flowers of poetry have been lavished upon this wintry favourite; and Shakespeare, Langhorne, Barbauld, Wordsworth, Tickell, L. E. L., Charlotte Smith, and many others, have sung in its praise.

Next in order, after the Snowdrop, comes the Pale Primrose. Except, perhaps, the Daisy, no flower more touchingly recalls the days of our childhood. Who does not remember the time when he

"Bob'd every Primrose root he met
And oftimes took the root to set;
And joyful home each nosegay bore,
And felt as he will feel no more!"

Various as are the varieties of the Primrose, perhaps there is none so dear to us as the common sulphur-coloured one, which is one of our native wild-flowers; it being associated with the recollection of our spring rambles, and of the sunshiny days of our youth, when we went rollicking about from dingle to dell, and from place to place, full of careless innocence.

The Primrose is emblematical of early youth, and well may it be so; so bright, so delicate, it may be nipt in the very bloom of beauty. Shakspeare says:—

"Pale Primroses
That die, unmarried, ere they can behold
Bright Phœbus in his strength."

Indeed, all the poets invest it with a mournful character. The poet Herrick gives us the following pensive, but delightful stanzas:—

"Ask me why I send you here
This sweet infant of the year?
Ask me why I send to you
This Primrose all bepearled with dew?
I will whisper in your ears,
The sweets of love are washed with tears.
Ask me why this flower does show
So yellow, green, and sickly too?
Ask me why the stalk is weak
And bending, yet it doth not break?
I will answer, there discover
What fainting hopes are in a lover."

John Clare, the peasant poet, in speaking of the Primrose, says:—

"Welcome, pale Primrose! starting up between
Dead matted leaves of ash and oak, that strew
The every lawn, the wood, and shining through,
Mid creeping moss and ivy's darker green;
How much thy presence beautifies the ground!
How sweet thy modest, unaffected pride
Gleams on the sunny banks and wood's warm side,
And where thy fairy flowers in groups are found!"

If we might presume to differ from the high authorities who have already fixed the emblem of this flower, we would rather, from its retiring beauty and love of dingle and dell, have it made the representative of humility.

The Primrose, *Primula vulgaris*, makes its appearance among us early in March.

Come we now to that special favourite of the poets—

the Violet, in one respect the rival of the Rose. It is a common indigenous plant, growing not only in most parts of Great Britain, but in every country throughout Europe. The Violet is an emblem of faithfulness:—

"Violet is for faithfulness,
Which in me shall abide;
Hoping, likewise, that from your heart
You will not let it slide."

Shakspeare makes frequent mention of this lovely favourite:—

"Violets dim,
But sweeter than the lids of Juno's eyes,
Or Cytherea's breath."

And again:—

"They are gentle as zephyrs—
As zephyrs blowing below the violet."

We have another beautiful comparison in a scene in "Twelfth Night":—

"That strain again! It had a dying fall;
Oh, it came o'er my ear like the sweet south,
That breathes upon a bank of violets,
Healing, and giving odour."

But, perhaps, the most delicious thing that has been said of the Violet is the simile of an Arabic poet named Eln Abrumi, who compares blue eyes weeping to *violets bathed in dew*. Sir Walter Scott wrote in praise of this sweet little flower. He says:—

"The Violet in her greenwood bower,
Where birchen boughs with hazels mingle,
May boast herself the fairest flower
In glen, or copse, or forest dingle."

"Though fair her gems of azure hue,
Beneath the dew-drop's weight reclining
I've seen an eye of lovelier blue,
More sweet through watery lustre shining."

"The summer sun that dew shall dry
Ere yet the day be past its morrow;
Nor longer in my false love's eye
Remained the tear of parting sorrow."

Beautiful floweret!

"Still doth thy April presence bring
Of April joys a dream,
When life was in its sunny spring—
A fair, unrippled stream."

The poetry, the romance, the scenery of any country, is embroidered with the Violet, from Caledonia, stern and wild, to the flowery fields of fair Arcadia; and the very same individual species is, or has always been, the object of homage, no matter in what country. The fable of this plant having sprung up to be food for the metamorphosed Iu, is too poetical to be soon forgotten.

Many fables account for the origin of the name of the Violet; and poets, both ancient and modern, from Homer down to Byron, have endeavoured to fix its origin. To one it has suggested the image of a secluded maiden; to another, as we have seen above, a beautiful eye dropping a tear. Perhaps the truest etymology is that which derives the name from the word *via* (way-side), from whence the wanderer is often greeted with its fragrance.

Let us now prate of the Daisy—Burns's "wee, modest, crimson-tipp'd flower,"—a flower associated with all the sport of childhood and the delights of innocence; and no less dear to us in after years, for the many delightful associations it recalls to our memory. Its rich disk of gold, and white rays beautifully tinged with crimson, merit the name of the Eye of Day. It opens with the rising sun, and closes at sunset.

"When, smitten by the morning ray,
I see thee rise alert and gay,
Then, cheerful flower, my spirits play
With kindred gladness."

And when at dusk, by dews deprest,
Thou sink'st, the image of thy rest
Hath often eased my pensive breast
Of careful sadness."

The simple notice of the botanist, that the Daisy grows everywhere where there are pastures and meadows, is perfectly sufficient to give it a high claim to our regard. A thousand indefinable emotions are blended with this simple flower; it recalls to mind the days of our bright girlhood—the race in the meadow—the rambles to Braid Hermitage on Saturday afternoons—the necklaces made of chains of this flower. The Daisy is the flower which, among all others, is most certain to recall those delightful recollections; it is to flowers what the cuckoo is to birds in our young days.

The Daisy has been made by the poets emblematical of innocence. Perhaps the following quotations will not be out of place here.

Dr. Carey was much delighted, when in India, upon seeing a Daisy spring up, having been brought from England among other seeds. Some exquisite lines have been penned upon this circumstance by Montgomery. They are too long to insert here; but they conclude thus:—

"Thrice welcome, little English flower,
To me the pledge of hope unseen:
When sorrow would my soul o'erpower,
For joys that were, or might have been,
I'll call to mind how fresh and green
I saw thee waking from the dust,
Then turn to heaven with brow serene,
And place in God my trust!"

The following beautiful extract is from the poems of Ossian: "We have seen, O Malvina, we have seen the infant you regret, reclining on a light mist. It approached us; and has shed on our fields a harvest of new flowers. Look, O Malvina—among these flowers we distinguish one with a golden disk, surrounded by silver leaves; a sweet tinge of crimson adorns its delicate rays. Waved by a gentle wind, we might call it a little infant playing in a green meadow; and the flower of thy bosom has given a new flower to the hills of Cromla." The Daisy has been consecrated by the Celts to infancy. It is, say they, the "flower of innocence"—"the flower of the new-born."

"That old favourite, the Daisy, born
By millions in the balmy vernal morn—
The child's own flower."

One poetical illustration more, and we wander to another flower; it is from Wordsworth:—

"Bright flower, whose home is everywhere!
A pilgrim bold in nature's care,
And oft, the long year through, the heir
Of joy or sorrow;
Methinks that there abides in thee
Some concord with humanity,
Given to no other flower I see
The forest thorough!
And wherefore? Man is soon deprest;
A thoughtless thing, who, once unblest,
Does little on his memory rest,
Or on his reason:
But thou wouldst teach me how to find
A shelter under every wind;
A hope for times that are unkind,
And every season."

The next that demands our attention among the fair favourites of Flora, is that exquisite gem—"the silver mistress of the gale"—the Lily of the Valley. This flower has something about it so exquisitely lovely,—

"With its bonny bells, dangling so pure and so light,"

that, however much we may admire the charming Rose, the majestic Lily, or the gorgeous Tulip, we cannot with-

hold from it our tribute of admiration. About this modest little flower, we find everything that is beautiful; no tinsel, no flaunting gaiety, no staring port, no obtrusion upon our notice; on the contrary, we see in it reserve, purity, sweetness, retirement, delicacy of form, and gracefulness. This flower will flourish in the shade, where its more gaudy compeers would droop for want of the rays of the sun;—but hear Hurdis:—

"To the curious eye

A little monitor presents her page
Of choice instruction, with her snowy bells—
The Lily of the Vale. She not affects
The public walk, nor gaze of mid-day sun;
She to no state or dignity aspires,
But silent and alone puts on her suit,
And sheds her lasting perfume, but for which
We had not known there was a thing so sweet
Hid in the gloomy shade. So when the blast
Her sister tribes confound, and to the earth
Stoops their high heads, that vainly were exposed,
She feels it not, but flourishes anew,
Still sheltered and secure."

The Lily of the Vale is common in many rural districts, as a wild flower. Our poets combine to sing the praises of this little gem; Prior, Milton, Keats, Leigh Hunt, and many others, speak of it with affection. We could select volumes of choice poetry upon this favourite alone. Bishop Mant says:—

"Fair flower, that lapp'd, in lonely glade,
Dost hide beneath the greenwood shade,
Than whom the vernal gale
None fairer makes, on bank or spray—
Our England's Lily of the May,
Our Lily of the Vale!"

Pardon our vanity, dear reader, if we, instead of quoting from poets of more celebrity, conclude this article by a poem of our own:—

There is a pale and modest flower,
In garb of green array'd,
That decks the rustic maiden's bower,
And blossoms in the glade:
Though other flowers around me bloom,
In gaudy splendour drest,
Filling the air with rich perfume,
The Valley Lily I love best.

I see the Tulip's gorgeous hue,
And Sunflower's crown of gold;
I see the Rose and Woodbine too,
Their scented leaves unfold;
Though they adorn the gay parterre,
I love them not so well
As the drooping Valley Lily fair,
Growing in shady dell.

So much for the gentle Lily of the Valley; and so concludes our first bouquet.

AGNES.

THE KJEMPE VISER;

OR,

ANCIENT BALLAD OF SCANDINAVIA.

THE English reader has within the last few years become acquainted, through the medium of translation, with the lighter literature of Sweden and Denmark, and even in some measure with the characteristics of ancient Scandinavian history, in Mr. Laing's recent version of the Icelandic "Heimskringla;" a wide and unexplored field, however, still lies before the student of foreign lore, which has but lately been rendered accessible by the researches of some of the most distinguished literary characters of the North. It is, we believe, scarcely known in England, that Denmark boasts of a collection of national ballads unrivalled by those of any other country in Europe; surpassing, in varied interest and

valuable historical information, the Spanish ballads, rendered familiar to English readers by Mr. Lockhart's translation, and pre-eminently rich in genuine traits of character and passion, which, since their revival, have afforded the happiest themes to the most gifted poets of Denmark. Oehlenschläger and Ingemann, for instance, have largely availed themselves of the traits of poetic feeling which pervade the *Kjempé Viser*, and which, indeed, are so striking in their simplicity, that they appear to lose somewhat of their freshness when clothed in the garb of modern paraphrase. The claims of the *Kjempé Viser* to remote antiquity are fully established. They are considered to have replaced "The Saga," or prose traditions of Scandinavia, in the chivalrous or romantic ages of the North; and appear to have exercised a powerful national influence, more especially on the minds of the independent Bonder, or peasantry. Not only the greater events of history, but also the personal fortunes of their sovereigns and chiefs, were handed down for successive generations through the medium of these lays. They are, however, not altogether historical, and may be classed, like the Spanish, into the historical and romantic, perhaps we might add the mythic, or, still more correctly speaking, the superstitious, many of these ballads appearing to have been composed expressly for the purpose of handing down the superstitions which led the ancient northmen (possibly still imbued with the leading ideas of their old mythology) to regard the elements and the destinies of men as subject to the control of the supernatural beings who figure in these ancient lays, as Elves, Dwarfs, and Mer-men. Some of these stories distinctly refer to the events of pagan times, although strangely mingled with the views and customs of a more advanced period. The greater number of the *Kjempé Viser* date from the fourteenth and fifteenth centuries. They were as popular in the halls of princes and nobles, as in the dwelling of the burgher and the hut of the peasant, where, indeed, in the latter, they are still familiar. They were regarded by the Danes in the light of a national treasure, and as valuable records of the history of their country and the fortunes of their valiant forefathers. One curious trait belonging to them is, that they comprehend a code of proverbs, comprising in pithy phrase the morality and rules of action recognised by the ancient Northmen.

The *Kjempé Viser* were collected and printed for the first time in 1506, by Peter Lotlé of Halland, one of the Danish Islands. M. Oehlenschläger, in his selection of *Kjempé Viser*, published in 1840, gives it as his opinion that the internal evidence of these ballads sufficiently proves that they were not written by knights in the age of chivalry, and that they are as distinct from the chivalrous poetry of the Germans as from the lays of the ancient Northern bards. They were, in fact, national ballads composed by national minstrels. The poet is generally a witness of the events he records; but his themes are also sometimes derived from tradition, consequently strict historical accuracy is not always to be looked for—but, on the other hand, this defect is more than counterbalanced by the manifest impartiality with which the minstrel of low degree either mourns over the misdeeds of the lawless noble, or rejoices whenever a character appears to whose virtues he can render unfeigned homage, or an event occurs which calls forth the sympathies of his nature. According to M. Oehlenschläger, several of the Danish ballads were not only taken down in writing, but actually composed by noble ladies to beguile the time in the absence of their lords in the wars or in the chase. One remarkable peculiarity of these lays is, "The Refrain," or "Burden," which is always preserved in the older editions, although frequently rejected in modern selections on the supposition of its want of connexion with the theme of the ballad. To the general reader, indeed, it must often appear meaningless; but those who are well acquainted with the ancient history and mythology of the North, will frequently recognise in the most obscure of these,

some reference to ancient customs or superstitions, which may be traced with confidence to the oriental source of the mythic imaginings of the Edda. It appears probable, judging from analogy between the customs of other countries, that these lays were constantly chanted as a musical accompaniment to the dance, a practice still preserved at the present day in the Faroe Islands, and in some parts of Switzerland, Wallachia, and Servia. It would appear that the principal performer chanted the theme, and was responded to by the circle of dancers with the chorus of the Burden. Learned commentators are unanimous in supposing that when all connexion is apparently lost between this and the song, the chorus was extemporised by the dancers, with reference to the localities or other circumstances connected with the performance. It would seem, at times, to be merely the spontaneous expression of feelings inspired by the beauties of surrounding scenery, or even the joyous influences of spring and sunshine.¹ M. Grimm, in his preface to his "*Alte Danische Kjempé Viser*," decidedly advocates this opinion, regarding the chorus, in many instances, as composing a picturesque back ground to the poetical canvass.

Great, however, as was the popularity of these ballads in the chivalrous age of Denmark, they were, as we have already said, solely indebted for their preservation to oral tradition; and it is to accident alone that Denmark owes the voluminous collection compiled by Peter Syv and Anders Sørensen Vedel. The latter, who well deserves the name of the Danish Percy, was a country clergyman, contemporary and friend of the celebrated Tycho Brahe. Tycho's residence was in the Island of Hveen, in the Sound, situated nearly midway between the shores of Denmark and Sweden. Here he spent his time in the castle of Uraniborg, surrounded by a small circle of pupils and friends. Among the most intimate of the latter was Vedel, who seems to have never travelled unaccompanied by what he regarded as an inestimable treasure, namely, his collection of the ancient ballads of his country. Vedel chanced to be one of the guests assembled at Uraniborg at the time of the visit of the Queen Sophia, consort of Frederic the Second of Denmark, to the Observatory at Hveen. This queen was the steady patroness of Tycho Brahe, and justly celebrated for her intellectual endowments. Tempestuous weather and dark nights defeated the object of her visit; no star was visible during the queen's sojourn at the astronomer's castle. Courtly amusements were, as may be supposed, wanting on this little island, and the visit might have ended in mutual disappointment, had not her majesty's love of poetry, and his friend Vedel's collection, stood Tycho in good stead, and beguiled the time so pleasantly, that, before they parted, Queen Sophia imposed upon the Danish antiquary the grateful task of revising his collection, and printing it, with a dedication to herself. It was published in the following year (we believe in 1560), in five volumes: the edition is now scarce. The writer of this notice in vain endeavoured to purchase a copy during a late residence in Denmark; but at length, through the kindness of a friend, had the privilege of perusing that belonging to the royal library at Copenhagen. Had we it now at hand, we should have preferred presenting the reader with a specimen of the Danish ballad translated from this original source. The copy from which the following ballad is translated, is that of M. Oehlenschläger's select *Kjempé Viser* already referred to. We have chosen one of the romantic, instead of the historical ballads, as possessing more general interest.

(1) For instance,
Skoven staar alt i Blomster,
The woods are clothed with leafy green.

And,
Dit er saa favert om Sommeren,
How pleasant 'tis in summer tide.

And again,
Dansen gaar so let igjennem Lunden,
Lightly we lead the dance through the grove.

THE LADYE BODIL.

AN ANCIENT DANISH BALLAD.

The linden tree (1) stands on the hill,
Lowly its branches bend,
Ladye Bodil sad cares haunt still,
Cares none can soothe or mend.

The linden tree stands on the hill,
Unfolds its leaves so glad;
Ladye Bodil she grieveth still,
And must for aye be sad.

Then Ion spake: the youthful knight,
Thus spake he to his wife:—
"A strange dream fled at morning's light,
Which bodes ill for my life.

"I dreamed I rode through forests free,
To chase the deer intent,
But grisly wolves there seized on me,
And limb from limb they rent."

"Dreamt ye such dream, my heart's true love?
Then, Lord, our helper be!
Watch ye, and pray to Him above,
Ere war robs me of thee."

Straight to the kirk Sir Ion went,
In prayer there bent the knee;
Thenceforth unto the war was sent,
The first that fell was he.

Forth with his king did Ion go
Into the desperate strife;
Before his banner fled the foe,
But glory cost him life.

Three moons had waned since Ion fell,
Bodil looked out afar:
"Ah, yonder sail! I know it well!
The ship with the golden star!

"Yonder I see the gilded prow
Over the waters glide;
The king's slain corpse it bringeth now,
Or his! ah woe betide!

"Haste ye! saddle my grey steed fleet!"
*Then to her squires she said:—
"For forth I ride my lord to meet,
Now numbered with the dead."

Soothly then spake Sir Peter brave,
So kind of heart and true:—
"Good hope I to my sister gave
Ion again to view."

Then turned he to the Danish king,
The foremost in the throng:—
"My liege, what tidings shall I bring?
My sister speedeth on."

"Say thou, Ion will soon be home,
His page's bier we bear;
Ere Candlemas be come and gone,
He comes with breezes fair."

They told Bodil the hopeful tale,
But nought could she believe;
Her hands were clasped, her cheek was pale,
Full sorely did she grieve.

"Halt, ye! let mine own eyes behold;
Set down the bier by me!
Not e'en the oaths of kinsmen bold
Can bid one heart-throb flee!"

Sad change had passed o'er Ion's face—
The change to death from life;
Deep wounds had marred his form of grace;
None knew him but his wife.

(1) The linden tree, introduced into the first two stanzas, appears to be a type of adverse fate. In ancient times the oak, the ash, and the linden tree, were regarded with superstitious reverence by the Northmen. Sacrifices were offered in heathen times under their shade. At a more advanced period, "The Thingé," or national assemblies, were convened under them, and sentences of life and death awarded. In the fourteenth and fifteenth centuries, whence this ballad dates, the linden tree especially was supposed to afford shelter to malignant spirits. See Professor F. Magnusson's notes on "The Eddas."

"Changed though thou art, my love," she said,
"Though dimmed thine eyes' deep blue,
None else may know thee 'mong the dead,
I claim my brave and true."

She knelt, and gazed upon his face
In anguish, as it seemed;
Yet love's swift memories there found place,
And peace through tear-drops beamed.

She gently smoothed his silken hair,
As paly gold 'twas bright:—
"How oft I've trimmed those locks so fair!
With silver aclassors light."

And then she took his chill, white hand,
And to her lips she pressed:—
"I sit a widow in the land;
Lord, pity the bereft!"

And then outspoke the Danish king,
To Bodil did he go:—
"Now, grief it is an idle thing;
Why sigh and weep you so?

"Now, hence with sighing and sorrow,
To fate resigned be;
A wooer will sue to-morrow,
Richer by far than he."

"Silver and gold I have in store,
My lands stretch far and wide;
But such a friend I find no more
In all the world beside."

Swift turned the king his charger's head,
To kirk did Bodil wend,
There laid her lord in lowly bed,
While grief her heart did rend.

Firm she the Danish king withstood,
His prayers did nought avail;
Her days she vowed to widowhood,
That lady meek and pale.

In royal hall stepped not the knight
Who could her grief dispel;
In death as life, her troth was plighted
To him she loved so well.

Reading for the Young.

THE MOTHER AND DAUGHTER.¹

MARY ANNE was in despair at her mother's wishing her to begin another page of writing, as the first had been very bad. She had spent half an hour, which would have enabled her to complete her task, in crying and fretting; for Mary Anne, although nine years old, and full of good qualities, was not always quite reasonable, and her best resolutions were often put to flight by some whim or sudden fit of passion.

"My dear," said her mother, who during this time sat quietly working at the other end of the room, "I should advise you to set about it, as it must be done."

"Must be done!" said Mary Anne, sharply, "and wherefore is it so very necessary that I should write this page?"

"Because I choose you to do it."

"And why do you choose me to do it?"

"Because it must be done."

"It must be done, because you choose me to do it; may you not do as you like?"

"Certainly not."

At this Mary Anne became still more irritated. "You may not do as you like?" said she, throwing herself back in her chair, and striking her fist on the table, "when I am obliged to obey you in

(1) From the French of Madame Guisot.

everything." "The other day, too, you said to Madame Thibourg, speaking of me, 'I belong to that child:' to say that you belong to me, when you do nothing but contradict me all day long!"

"That is the very reason I contradict you, because I belong to you."

"Now really," said Mary Anne, in a tone which anger had turned to impertinence, "I should feel much obliged if you would explain that to me."

"I shall explain nothing at present," said her mother with severity, and commanding her to be silent, she obliged her to resume her occupation: which, as may well be imagined, did not improve the temper of Mary Anne. She pouted, wrote badly, drew fresh punishments upon herself, and passed the remainder of the day in alternate fits of ill behaviour and despair: but the next morning she awoke in such a good temper, rose so quickly, repeated her prayers so fervently, set herself so diligently to whatever she had to do, exceeding even her allotted tasks in order to make up for her past faults, that when she met her mother at breakfast, she had the satisfaction of seeing such a smile on her face as had not visited it since the preceding evening.

"Mamma," said she, "are you now pleased with me?"

"On whose account am I pleased, on yours or on mine?"

"I know that you are glad that I have done my duty; that duty was imposed by you; but you can do what you like with me."

"What! drown you like the kittens which were born in the garret last night?"

"No, no! mamma, but you might make me obey your will in everything."

"Then if I wished you to steal our neighbour's sugar when she leaves her door open, or her syrups, or cups, should I have a right to do so?"

"What an idea, mamma! as if you could ever wish for such things."

"Then there are some things which I have no right to wish for, and consequently have no right to order you to do. A fine authority, truly! But may I be allowed *not* to will? If I had not willed to teach you to read and write, if during the time of my nursing you I had not willed to rise in the night and still your cries, should I have been right?"

"Why, mamma, you know that would have injured me?"

"I have no right then to do you harm; I am only allowed to will what is for your advantage, and you call that having a will of my own."

"But mamma, when you give me an order, it is always your will that I obey."

"And when do I order you to do anything?"

"Whenever you please."

"And am I at liberty to think as I please that a thing is right or wrong?"

"Certainly, mamma, no one prevents you."

Madame Leroi made no reply, but said soon after, "Mary Anne, I intend next week to begin to teach you to draw with your elbow."

"What! my dear mamma, draw with my elbow! and how am I to hold my pencil?"

"With the point of your elbow; nothing more easy."

"What can you mean, dear mamma?" said Mary Anne, laughing immoderately.

"I mean, my dear, what I entreat you for my sake to believe possible."

"But, mamma, how can you expect me to believe such a thing?"

"You told me, just now, that we could believe what we pleased."

"Oh, that was quite a different thing!"

"It may be so for you, my child, but I assure you that when you write badly, I cannot bring myself to think it good; and when you behave ill, I feel the necessity of forcing you to amend by punishing you. What would you have me do? I cannot think in any other manner, so I am obliged to obey the instigations of my conscience, in the same way as I wish you to obey me; and I have no more right to bring you up badly than you have to disobey me."

Mary Anne had been accustomed to consider the performance of her duty as necessary, although her conduct did not always lead one to suppose that she looked at it in this light; but she wanted her mother to recal the offensive phrase, "I belong to that child." At this moment entered Madame Thibourg. "Quick, quick!" cried she, "I have a ticket for Malmaison; my children are waiting below in the carriage, and I have a basket of provisions there also; come, make haste!"

"I promised to send home this tapestry during the week," said Madame Leroi, glancing from her work-frame to her daughter, who, having at first uttered an exclamation of delight at Madame Thibourg's proposal, now stood motionless with anxiety at the delay of Madame Leroi's decision.

"I would willingly take charge of Mary Anne," said Madame Thibourg, "only my nurse is ill, and as there is a good deal of water at Malmaison, I shall have enough to do to look after my own children. Come, you will easily make up for it some other day."

"But if I should be as ill as I was last week,—I am afraid it would be imprudent."

"You will not be ill, and it will be quite prudent," rejoined her friend, "there are some pictures to show Mary Anne."

"Well," said Madame Leroi, "if you think so—" and she looked at Mary Anne, whose countenance had changed six times in the space of a minute. They were soon ready for the expedition, and the day passed off without a cloud. We need not describe the delight with which the dinner was eaten on the grass, without table-cloth or plates; the charms of gathering a salad; and the pleasing novelty of being obliged to rinse out their only cup, after each person had drunk from it, in the little stream by the garden gate. Mary Anne, who, when she was pleased, was always affectionate, embraced her mother again and again; and, in the evening, in spite of her fatigue, she continued to talk so much of her past pleasure, that Madame Leroi actually scolded her into silence and to sleep. "You do not consider," said she, "that for this indulgence I shall have to rise, for three or four successive days, at four in the morning."

"But you know, mamma, that my seeing the pictures at Malmaison was of great consequence to me."

"And why, my dear," said her mother, "should I study your advantage before my own? Am I created for your service! Tell me, is it by chance that I belong to you?"

"Ah! mamma," said Mary Anne, kissing her mother, "I am quite willing that you should belong to me, since it is only to indulge me;" and turning

herself to sleep, her dreams partook of this pleasing idea. Indeed no mother could more completely belong to a child than did Madame Leroi. Widow of a person whose profession had not enabled him to make any provision for his wife and little daughter, Madame Leroi felt that her first duty was to render her child an estimable member of society, and to enable her to gain an honest livelihood. For this she sacrificed all the advantages which her talents would otherwise have afforded her. She had been a very brilliant musician, and educated with a view to teach singing and the harp, but, at the age of eighteen, she had the measles so severely as to affect her chest, and oblige her to abandon her intention. She then turned her thoughts towards painting, for which she had a great taste, and her father, being an artist, had taught her well. But death having deprived her of his instructions in a very short time, she married M. Leroi, a man of middle age, and of very singular character, and one who would by no means have consented to his wife's going out to give lessons. As his income was sufficient for their support, she devoted her time to the care of her house, and to the improvement of her own mind, that she might be capable of educating those children with which Providence might bless her. After having lost two, she gave birth to Mary-Anne, and from that moment she centered her affections on her child. On the death of her husband, finding herself again in difficulties, she fancied, for a moment, that she might pursue her original plan, but the idea of her child, abandoned to strangers, and deprived of the acquirements and sentiments with which she had enriched her own mind for her child's sake, and of her losing those amiable qualities with which her fond partiality already invested her, decided her to remain at home, and to give her the most solid and virtuous education in her power. She therefore devoted herself to her child, who already gave great promise of musical talent; and she delighted in feeling that to her alone did her child owe the happiness of her life.

But this did not supply the means of subsistence, and she found herself obliged to look out for some such sedentary employment as would answer for their moderate demands. She undertook to work tapestry, which her knowledge of painting enabled her to embellish with all sorts of devices in flowers, figures, and landscapes. Chance befriended her, and her hours were soon fully occupied. Her work was so superior to what was generally seen, that it gained a good price; and this occupation enabled her to superintend, almost uninterruptedly, the studies of her daughter—who would sometimes ask her when she would leave off working so hard.

"When you can work for me," replied her mother; and Mary Anne, if in good humour, would take the hint and seat herself at her harp. Her character was of a very variable nature. Her disposition was generous, and her heart tender; yet she would at times launch out into such passions and fits of obstinacy as produced an entire change in her. At such times she would take a pleasure in vexing that mother, whose happiness she so often delighted to witness, so that one felt alternately charmed and touched by the natural inclination which she seemed to have for what was good, and disgusted with the strange perverseness of her temper. Her mother, however, by a happy mixture of firmness and indulgence, had greatly suc-

ceeded in softening the harshnesses of her disposition, and the day before the party to Malmaison was the last on which she had serious cause to complain of her.

On the morning after this agreeable expedition, she arose, and instantly felt aware of how much fatigue she had undergone. She dressed herself carelessly, seated herself on every stool she came to, and arose so slowly to open the door for the porter's wife, who came to cook for them, that one would have imagined her nailed to her seat.

"Really, mamma," said she, throwing herself into an arm-chair by the door, as if she could no longer support herself, "if you belonged to me, as you say you do, I should send you of all my messages to-day instead of going myself."

"Ah, my love," replied her mother, in a half serious tone, "I anticipate a much more fatiguing employment, that of making you do them yourself."

"Certainly, mamma, that will be very fatiguing."

"Ah! if you only knew how tired I am!—but still I shall have to say, 'Mary Anne, open the door;' or 'shut the window;' or 'pick up my pin-cushion.'"

"Well, mamma, what is there very fatiguing in that?"

"Only think, Mary Anne, how cross you will be. I shall be obliged to scold you so much to make you obey. It will be my duty to do so; and a visit to Malmaison does not absolve me from it. What a day I shall have! and you are not the child to spare me."

"Who said so?" said Mary Anne, with an air of pique.

"It would be all very well," answered her mother, "if you were older and wiser. I should then say to you,—'My dear, as long as I was necessary to you, I belonged to you, but now you must belong to me, and make yourself useful to me; do, then, what I tell you, in order to spare me;' and you would do it, for you would be reasonable."

Mary Anne upon this arose, and setting herself to work, determined to conquer her lassitude, which in a short time disappeared. She maintained this glorious resolution throughout the day—never hesitating for a moment to do her mother's pleasure, and even forestalling it. Perceiving that Madam Leroi was in want of a footstool, she flew to place one under her feet; and when her pin-cushion had rolled to the other end of the room, Mary Anne so quickly replaced it on her mother's table, that the latter remarked with a smile, "that Mary Anne must surely belong to her to-day."

A tender embrace was Mary Anne's only reply. Alas, a few minutes only passed away, before, having bungled over a passage on her harp, she became angry with her mother for obliging her to repeat it. "Mary Anne," said she, "do not force me to remember that I belong to you, and that unless you obey me I shall be obliged, much against my will, to scold you."

Mary Anne recovered her serenity immediately, and the day, which in the beginning promised so badly, ended without a cloud upon their happiness. A couple of mutton chops formed their modest meal. Mary Anne asked her mother for the one which had a bone in it.

"Certainly not, my dear," said her mother; "for you know that I prefer it myself," and, added she, smiling, "I love you too well to suffer you to con-

tract so bad a habit as that of preferring yourself to another."

"What? not, mamma, when you profess to belong to me?"

"Yes, yes, my dear; I too well know my duty to allow you to take advantage of my devotion to you." So saying, she helped herself to the chop.

"Well," said Mary Anne, "your resolution is of some advantage to yourself at least."

"To be sure," rejoined her mother; "nothing does one so much good as doing one's duty."

Mary Anne shook her head, but she was too well pleased with herself to yield to a slight temptation to anger; and when her mother, satisfied with two or three cherries from their small dessert, left the rest to her, she quite understood the motive.

In the afternoon, one of Mr. Leroi's old friends called on his widow;—he was old and tiresome, and remained all the evening, to the great annoyance of Mary Anne, who, after her day of application, had anticipated an agreeable walk with her mother. She could not help giving several hints to this effect (notwithstanding her mother's frowns), which Mr. Lebrun's deafness prevented his remarking. Poor Mary Anne tried to be patient; and, on his departure, contented herself with asking her mother if she had been much entertained by Mr. Lebrun.

"No, my dear; but he has a claim to my consideration; he came a long way to see me, and I would not have shortened his visit for the world."

"Now, mamma," said Mary Anne, "I am always very glad to discover that you can do *some* things against my interest, for surely the depriving me of my healthy walk could not be for my advantage."

"My dear, you have no notion what a good thing it was for you to stay at home to-day?"

"Now, mamma, how can you prove that?"

"I trust that you will survive the deprivation, and only think how injurious it would have been to *you*, had I, to please you, neglected Mr. Lebrun."

"Well, mamma, you can always find a reason for contradicting me."

"And assure yourself, my love," said her mother, playfully tapping her cheek, "that I shall never let one escape."

Mary Anne made a little grimace, but all in good humour, for the good behaviour of the morning ensured that of the evening.

The next day Mary Anne and her mother went out to purchase some new gowns. They were shown two remnants exactly alike, which were sufficient to make Mary Anne a frock, a winter spencer, and plenty to mend them when requisite. Her fancy was much more taken by another stuff; but as Madame Leroi's gown could not be made from the remnant, the little girl was obliged to make up her mind to it herself. While she vainly employed her eloquence to induce the shopman to sell the gown piece on the same terms as the remnant, Madame Leroi, by measuring and calculating, discovered that by having seams in the sleeves, and making the gown round instead of open, as she had intended, she could use the remnants, and leave the gown piece for her little girl. Mary Anne at first would not consent to this arrangement; however she allowed herself to be persuaded, and joyfully carried away her pretty frock, not without a peep or two at it by the way. When she had spread out her treasure to the admiring gaze of the porter's wife, she sighed at

the sight of the remnants destined for her mother, and seating herself on her knee, with one arm passed round her neck, she asked her, in rather a melancholy voice, whether it had been her duty to give up that pretty gown to her.

"No, my dear little girl," said her mother, "it was my pleasure."

Mary Anne now felt herself at liberty to enjoy to the full her pretty purchase, as her approbation of it appeared to increase her mother's happiness.

The more reasonable she became, the better she understood the deep devotion of a mother's heart, and also the feeling of duty which should prevent a child from abusing her parent's indulgence. She was fully persuaded that her mother never unnecessarily contradicted her, and she used her utmost endeavours to save her this necessity, so that their mutual confidence daily increasing, they lived together like two friends.

(To be concluded in next.)

Poetry.

[In Original Contributions under this head, the Name, real or assumed, of the Contributor, is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

TYRE.

High on the stately wall
The spear of Arvad hung;
Through corridor and hall
Gemaddin's war-note rung.
Where are they now? the note is o'er.
Yest for a thousand years and more,
Five fathom deep beneath the sea
Those halls have lain all silently;
Nought listening, save the mermaid's song,
While rude sea-monsters roam the corridors along.

Far from the wondering East
Tubal and Jason came,
And Araby the blest,
And Kedar, mighty name.
Now on that shore, a lonely guest,
Some dripping fisherman may rest,
Watching on rock or naked stone
His dark net spread before the sun.
Unconscious of the doom-lay
That broods o'er that dull spot, and there shall
brood for aye.

Agon.

LINES

On leaving a place where one had dwelt many years.

There are some moments in each life
With strange and wayward feelings rife,
When certain words and certain things
Strike on the heart unwonted strings,
And waken forth some solemn tone
There nature yet has never known:
And it is thus—when from some place,
As from a long-familiar face,
Though you may wish the chain to sever,
Still are you sad to part for ever.
Perchance 'twas an unlovely spot,
Perchance, too, that you loved it not—
Perchance that in that place had been
Dramas of many a cloudy scene—
That there the first fresh tear was wept,
Or youth's impatient vigil kept,
That not a day you there had spent
Kept its unchequer'd merriment,
Mark'd by the free heart's earliest throes,
And chronicled by childhood's woes;

Though soulless men may wonder why
You heaved the involuntary sigh,
And how the loss your soul oppress
Of that all-cherish'd when possess;
Yet when the thinking eye has cast
One look, and knows it is the last;
And while that look is fixed behind,
In every melancholy wind
A myriad sorrowing voices come,
The sighs of a remember'd home,
A long and terrible farewell,
Pronounced by lips invisible:
When many an eye with rapture gleaming,
And many a smile with joyance teeming,
That may have saved you from despair,
Or lighten'd up your sojourn there,
By after-misery sorely tried,
In death embalm'd and sanctified,
Have a new life within your brain,
And seem to gaze and beat again—
Then thoughts of pain are all forgot,
And pleasure's memory passes not;
Yet this, by some distortion strange,
Its very being fain must change,
And dim with gloom that parting hour,
Using a stern reflective power,
As the low trembling spirit strays
Amid the smiles of other days.

These are the *eras* of existence,
The seasons these when all resistance
To times and fates must ever seem
A futile unconsoling dream.
So much of life we feel is past,
Whene'er we murmur forth "the last;"
So nearer are we to the shore
Where time and things of time are o'er—
Where all is present, and the past
Of aught can never be the last.

R. M. Milnes.

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne*.

AN INCIDENT FOR A NAUTICAL DRAMA.

A Dutch seaman being condemned to death for mutiny, his punishment was changed, and he was ordered to be left ashore at St. Helena, at that period uninhabited. This unhappy person, representing to himself the horror of that solitude, fell upon a resolution to attempt the strangest action that ever was recorded. There had been that day interred in the island an officer of the ship. The Dutch seaman opened the grave and took the body up out of the coffin, and having made a kind of rudder and paddles of the upper board, ventured himself to sea in it. It happened fortunately for him to be so profound a calm, that the ship lay immovable within a league and a half of the island. The tide ebbing, he was gradually floated towards the ship, when his companions, seeing so strange a boat, imagined they beheld a spectre; but when he came alongside, they were not a little startled at the resolution of the man, who durst hazard himself in that element in so frail a vessel, though he had no mercy to expect, or hope to be received aboard by those who had so lately sentenced him to death. The incident was touching:—there floated the poor wretch in a coffin. It was put to the question whether he should be received or not. Some would have the sentence put into execution; but at last the captain, taking into consideration the strangeness of the event, allowed mercy to prevail in his breast, and the man was taken aboard and was brought to Holland. This seaman lived for a number of years in the town of Horn, and related to many how miraculously he had been delivered by Providence.

SCREW PROPELLERS.

Those who are watching events cannot but observe what a change is silently taking place in our navies, both royal and mercantile. It is all now Steam—Steam. We hear of a line of merchant vessels established to run from England to Constantinople, each with a screw propeller. The Liverpool papers also announce the first of a series of packets from America with screw propellers:—and as the Massachusetts is said to be fitted out with several novelties, we shall quote the account:—"The passage of the screw-auxiliary vessel Massachusetts, from New York to Liverpool, from wharf to wharf, may be put down at 17 days 11 hours. She had, the whole way, head winds and calms,—and her run may therefore be considered excellent. She is 800 tons burden, American measurement, 155 feet on deck, 178 feet from billet-head to taffrail, 33 feet beam, has engines of 280 horse-power, and is ship-rigged with a few exceptions,—the most striking being that her top-masts are fixed abaft the mast. The lower masts are also unusually tall, and the funnel of unusual lowness, even in screw steamers. Her cabins are capacious, and ventilated in a new and effective manner; and she can accommodate 40 passengers. Her screw is of a novel construction: it can be drawn out of the water at pleasure, by a simple process, and placed in a perpendicular position against the stern; and in such circumstances the Massachusetts is to all intents and purposes a sailing vessel. The screw works most powerfully, and insures a speed, with sail, of twelve knots an hour. The sails and rigging abound in curious contrivances to ease the labour of reefing, shortening sail, &c.,—perhaps the first instance in which modern machinery has been carried aloft. All sail has been repeatedly set in 25 minutes. She has four life-boats; every bench, every seat, stool, &c. is a life-boat, made of iron, with air-tight compartments, and adapted to swim, even with the weight of a man. So many contrivances for safety were never before brought together."—*Liverpool Journal*.

It is too common an opinion that change of scene is the best restorative of an unhappy mind. With some temperaments it may succeed, but, surely, not with all: and yet, how universally is the remedy suggested for almost every species of mental ailment, notwithstanding its being so seldom productive of the effects attributed to it. What lasting amelioration of our condition can be rationally expected from yielding to what is but the mere impulse of the moment—a sensation of restlessness, arising from our own ill-regulated feelings, and a vain desire to escape from ourselves and our own thoughts, which is mistaken for an aversion to the places and objects that have been the unconscious witnesses of our sufferings. From whatever source our uncomfortable feelings may arise, they would perhaps be alleviated, or subdued, by a little firmness and determination on our part; and this, if we chose, could be easily summoned to our aid at home, instead of setting out on our travels to seek for consolation we know not where. And to the *really* unhappy, alas! to imagine that a deep and heart-felt grief can either be eradicated, or even assuaged, by change of place or scene, is but to mock a sorrow, the intensity of which we are incapable of comprehending.—*Emily, a novel, by Mrs. Maberley*.

THE HILLS THAT BRING DOWN THE RAIN.

SOME years ago, I employed part of a summer vacation in taking, in company with a friend, a walking excursion through part of the Western Highlands of Scotland. We had neither of us been previously familiar with mountain scenery. A range of blue hills, in the distant horizon, of no remarkable elevation, and whose outline, traced in gentle undulations against the sky, bounded in the landscape like a picture frame, constituted the utmost of our acquaintance with the sublimer features on the face of nature. We were both of us essentially children of the plain. It may be conjectured, then, with what impressions of wonder and delight we found ourselves, for the first time, traversing the land of mountain and flood; with what feelings of awe we contemplated, no longer from a distance, those gigantic Titans—the eldest born of Earth—as, canopied in mist, they seemed to withdraw in sullen dignity from our intrusive gaze, or, standing out clear in the bright sunshine, sunlight and shadow alternately chasing each other over the green slopes at their base, they presented no unapt emblem of vigorous old age, with childhood playing at its feet. Our feelings, as we advanced, became strung to the highest pitch of enthusiasm for all that was beautiful and sublime in nature, and we looked with envy upon each bare-legged gillie we passed, who enjoyed the privilege of a constant familiarity with those scenes, to which we could only pay a flying visit for once in our lives; we wished that we too had been born sons of the mountains.

On one day, in particular, we had passed through a district especially marked by the characters of grandeur and sublimity peculiar to the country. Part of our route lay through a glen or valley which had been the scene of an event of deep historical interest, and the gloomy grandeur of whose external features, as the dark crags by which it was hemmed in on either side looked down in frowning majesty upon our path, was strikingly in harmony with the feelings naturally excited by the recollection of the tragedy of which it remained the undying memorial. As we passed through it, we were to a more than usual extent under the influence of the impressions I have already spoken of. The whole country appeared to us invested with a poetic character. Every old man we met seemed to be an Ossian, a *seannachie* or bard, whose store of traditions and memories of the olden time, would, to a certainty, if we could but master enough of the language he spoke to address him in, overflow upon us in song. We never doubted that the enthusiasm which had come upon us as a strange and novel feeling, kindled up by our sudden admission to the contemplation of so much beauty of a character so new to us, was, to those who were continually living in its presence, an abiding habit of the soul, tinged all their feelings and modes of expression. In this mood of mind we were overtaken, and our poetic musings for a time put to flight, by a rattling shower of rain—one of those peculiar to the mountains, which instead of falling down plump upon your head, like any honest shower in a Christian land, sweep, and whirl, and eddy about you, like cuirassiers galloping round a square of infantry, as if seeking for the unprotected parts of your person, dash into your mouth and eyes, and strike against your ears with a force which makes your cheeks glow for the remainder of the day. After a quarter of an hour's buffeting with this sudden tempest, we found shelter in a cottage or cabin not far from the way side, whose inmates were a woman and two children. We were received, not exactly with the frank "kindly welcome" hospitality we had anticipated, from what we had heard and read of the Highland mode of exercising this virtue; but we were received, and permitted to warm ourselves and dry our clothes by a peat fire, which gave out quite as much smoke as heat. Truth compels me to say, that neither the appearance of our hostess herself, nor that of her children or dwelling, harmonized much with the poetical colouring through which we had been predisposing ourselves to look upon everything nursed among the

hills. She was sluttish in her dress, and dirty in her person; the little freckled savages by the fire-side looked as if they had never seen water in their lives; and the house, which might have been a comfortable one, (for, if not architecturally beautiful, it was at least pretty substantially built,) and the few articles of furniture it contained, were anything but inviting in their aspect. The poor woman wore a shrewish and anxious expression, as she moved about on some occupation of housewifery, which she had not thought it necessary to intermit on account of our presence, and which certainly did not add to the *agrémens* of our visit. Finding she spoke some English, we attempted to open a conversation with her. But the reply drawn from her by the very first observation I made, was of a nature to disincline us from persevering in the attempt. Referring to the cause of our intrusion, I ventured the remark, a very safe one as applied to any part of Scotland, that probably a good deal of rain fell in that valley in the course of the year. Never shall I forget the strong guttural emphasis of discontent and disgust, defying all attempt to indicate it by any peculiar form of orthography, with which she exclaimed in reply, "Ach, yes; this nasty hills brings doon the rain!"

There was no denying the fact; the hills did bring down the rain, and plenty of it too, as our short experience in the Highlands amply proved. But that this abundance of moisture should extinguish, in a native of the hills, the love and admiration for them, which a brief association with them had so largely kindled in us; that the canopy of mist, which to us was as a veil of glory shrouding an unseen Divinity, should become, on closer acquaintance, literally a wet blanket, stifling every enthusiastic emotion; this we did not expect, and it came upon us with all the force of a most unpleasant surprise. We took advantage of the first gleam of sunshine to buckle our knapsacks again on our shoulders, and continue our journey, somewhat sobered in our feelings, and beginning to admit a dim apprehension, that, although to mere occasional visitors, such as we were, that description of country was the most attractive which best filled the eye, and spoke most eloquently to the imagination and feelings, it was yet barely possible that these might be attended by some serious drawback in the experience of a permanent resident, who might perchance find good cause to prefer for a home a country of more homely features, but of kindlier soil and more genial climate; and which, if it was less fitted to attract to it the wandering tourist, was also free from an attractive power of a more uncomfortable character; in which there were no "nasty hills to bring down the rain."

I have often since that day thought of the Highland woman's remark with some feeling of amusement, but also with a strong impression of its substantial truth, and of its applicability to matters of more universal interest than the prevalence of rain in a mountainous country. It is not in landscapes only that

"Distance lends enchantment to the view,
And robes the mountain in its azure hue."

The same kind of illusion takes effect also in the moral world. The historical events, and the points of national and individual character, which fill the largest place in the thoughts of men, and gain the greatest share of their admiration and applause, are very far indeed from being those which it is always most agreeable to be brought into close contact with; and it were well, perhaps, if we were more frequently reminded, at how great a sacrifice of individual happiness and comfort those things may have been gained, which strike most vividly upon the imagination, and are deemed most ornamental to the social edifice. In the utmost fervour of our admiration, we should not forget that there is another point of view, and one which, in the case of persons particularly situated, may be the only one open to them, from which the object we admire may present a very different appearance from that in which we behold

it; that beauty may appear to us its leading character, only because we are never brought so close to it as to be within the range of its more direct and abiding influences; and that the very qualities to which it is indebted for the admiration it excites in us who stand afar off, or only occasionally approach it, may be the immediate source of a great deal that is most painful and uncomfortable to those with whom it is a necessity to be always in its near neighbourhood.

The military achievements of a nation, for example—how ample a space do they not fill in its history! how largely do they not contribute to make up the estimate which we form of its character! The leaders of its armies are celebrated by poets and orators as its greatest men, as, of all others, the most worthy of having their names handed down with praise to posterity, and of being remembered with gratitude to distant ages. And yet, of the millions who constitute the nation, how small is the proportion to whom the most brilliant of these achievements have brought either advantage or enjoyment, or even the fantastic and unsubstantial gratification which arises from the contemplation of national glory! National glory is a ray which gilds only the elevated pinnacles of society; it penetrates not to the lowly region in which the great masses of mankind move. To them the splendours of war are only known in the loss of sons, brothers, fathers, and husbands, and in the added weight of an intolerable taxation, which lays its ruthless hand upon every crust of bread they eat, upon every rag which covers them, upon the roof which shelters them from the winter's cold, upon the fire which warms their shivering limbs, upon the light which struggles through their dim and dusty casements. May not these, with truth, apply to all that can be said of the imposing splendours of war, that it has been to them but as "the nasty hills which bring down the rain?"

Or, to take a more familiar illustration. There are men of rare and rich endowment, who seem formed to be the delight of every circle into which they enter—who, alike in the courtly saloon or the snug reunion of choice spirits at the club, attract towards themselves, by an irresistible fascination, the most distinguished for wit, intelligence, and accomplishment, causing them to press emulously around them, and leave them with regret and reluctance; for whom the fairest and loveliest hoard their sweetest smiles, and with whose society the greatest in the land are proud to have their tables graced. Who would not look with envy upon those who enjoy the privilege of constant association with such men,—of having every, the most minute, incident of daily life illumined, and tinged with all the prismatic hues of grace and beauty, by the bright beams of such a sun? And yet, is it not often the case, that there is just one place where that laugh is never heard? that there is one loving, wistful, anxious countenance, towards which the bright glances of that eye are never turned? that the idol of every circle, the magic spirit who throws his fascination around him wherever he moves, becomes disenchanted as he crosses one threshold—and that threshold his own? that there he, who is so full of life and gaiety, witty, eloquent, graceful, tender, becomes silent, fretful, *ennuyé*—it may be, harsh and unfeeling? With how much justice may not the poor, neglected, broken-hearted wife curse those very attractions which are so delightful to all the world besides, but which, as having created that distaste for home and its quiet enjoyments, the effects of which she feels so deeply, are to her, in literal truth, the nasty hills that bring down the rain—bring it down in many a shower of bitter and unavailing tears!

The evil most to be guarded against by those who have it in their power to determine the arrangements of society, is the permitting any one class to feel that the pleasures and advantages of another bring only suffering and discomfort to them. There is no circumstance in our social condition, which can be said, strictly

speaking, to be altogether a gain; no good which we can count ourselves to have received without any counter-vailing sacrifice. Even civilization, which has so greatly multiplied our enjoyments, and enlarged and strengthened our capacity for enjoying; even it, which, next to the knowledge of divine truth, is the greatest boon our nature is capable of receiving, is never unattended by its train of evils, of which uncivilized man has comparatively little experience. It is, therefore, no ground for discontent or murmuring to find that there is nothing so every way good as not to have its unfavourable side. That would appear to be a law of nature against which it is foolish and vain to struggle. But it would seem to be a fair subject of complaint, should the good and the evil resulting from any of the circumstances of our common lot be so distributed, that the former should be poured out unmixed on one side, and the latter on the other. Should that at any time be the case, we cannot wonder that much murmuring and discontent should be the consequence; and if we could conceive a condition of society in which such a distribution was the general order of things, we could have little difficulty in predicting for it a speedy and violent dissolution. No state of society, in which the hostile elements were so distinctly separated from each other, sifted asunder and disconnected as to their parts, but kept in proximity as to their masses, could by possibility continue to exist: a collision would be inevitable. Like two clouds, of which the one is positively, the other negatively electrified, they would rush against each other with a crash which would shatter both into fragments.

The tendency of every social system whatever, when left to its own uncorrected action, is this result. A preponderance of advantage, enjoyed at first by accident, gives superiority of power, and that again draws to its possessor a larger share of the advantage from which it has flowed. So the two, alternately cause and effect, continue acting upon and enlarging each other. The strong tend constantly to become stronger, the weak to become weaker. It is for this reason, and to correct this tendency, that periodical reforms, attended with more or less violence, become a kind of necessity, a sanatory discipline necessary to restore the equilibrium of the system, and prevent its utter dissolution. The more regularly and uniformly we take care to act in counteraction of the morbid tendency, the less occasion will there be for violent and painful remedies. It is only when the tendency is left to itself unchecked for so long that it at last becomes unbearable,—when the equipoise is so entirely disturbed that the motion of the social machine is impeded, and threatens to stop,—that the cure becomes violent and dangerous. When the great men of the world have been heedlessly and selfishly adding gratification to gratification, without casting a thought upon the influence these exercise on the comfort of those beneath them,—then, when at length the good of the former comes in the belief and experience of the latter to be identified with their own evil,—when they feel that all that gives grace, and elegance, and beauty to the upper regions of society, is to them as the "nasty hills which bring down the rain,"—then, indeed, may we fear for the result of the struggle to bring things right, and apprehend that the throes of nature, in putting forth her *vis medicatrix*, may be too much for the vitality of the system. On the other hand, let there be a constant shifting of the ballast, as it leans over to one side; a continual care bestowed to mix the good and evil of life to all classes, with as much equality as the differences in their circumstances will admit of: let it be caused to be felt, that what brings good to some brings good to all, and what injures some injures all; and we may safely leave society, with all its machinery of wheels and balances, to take care of itself, secure that it is safe at least from all internal sources of decay.

REMARKS ON THE CHURCH ARCHITECTURE OF ENGLAND.

No. II.

We now come to speak of the first style of Christian architecture, properly so called, which was used in England.¹ This style has been appropriately called the *Early English*; it prevailed generally throughout the 13th century, that is to say, from the death of King Richard Cœur de Lion, through the reigns of King John, of Henry III., and Edward I. It is distinguished most prominently from the preceding styles, by the round-headed arch and its peculiar mouldings being entirely disused. Henceforward we have, there-

bold and prominent appearance, having deep hollows, in which an ornament, called the *tooth ornament*, is frequently inserted. The doorways of this style are very elegant: they usually consist of a single slender shaft on each side, with capitals in the shape of bells reversed; from these spring a few bold mouldings, or a simple line of tooth ornament, having a hood-moulding over it. In large churches, we meet with doorways divided into two by a single or clustered shaft in the middle, and the two arches thus formed are inclosed within a larger arch, the space between being filled up with sculptured work. Porches become more usual in this style: they are large, and have high-pitched and vaulted roofs. We have now quite left the heavy, massive piers of the Norman style, and, instead of

SQUARE-HEADED TREFOIL ARCH.

fore, to do with pointed arches; for the exceptions to this rule are few. There were three kinds of pointed arch used in this style: first, the lancet; secondly, the equilateral; and thirdly, the obtuse. Of these, the lancet and the equilateral were most used for large buildings, (as at Westminster Abbey the lancet prevails, at Salisbury the equilateral;) but in small country churches the obtuse-angle arch is most frequently found. The mouldings assume a

them, we have the piers in large buildings composed of one column, surrounded by slender shafts detached, but uniting in one capital above, as at Salisbury; or again, clustered close together, as in the chapel called the Dean's Chapel, in Oxford cathedral, and at Lincoln. In the smaller churches, a plain octagonal or circular pier was used, as at Boxgrove; but, as these piers were used also in later styles, they are only to be distinguished by the mouldings and ornaments of the capitals and bases. As we hinted above, the usual form of early Eng-

(1) "Gothic," a name given in error; it had nothing to do with the Goths.

lish capitals is the reversed bell-shape, having round the lower part a small head-moulding; the capping, or top part of the capital, consists of one or more round mouldings, with deep recesses between them. The capital is often decorated with a

of a church was also introduced in this style, viz. the steeple or spire. The Normans never attempted anything more than a low, square, pyramidal capping; but now this was raised into the noble spire, which crowns so many of our parish

SALISBURY CATHEDRAL.

LINCOLN CATHEDRAL.

kind of foliage peculiar to this style: the stems rise from the neck or lower part of the capital, the leaves curl gracefully under the upper mouldings; they are very boldly sculptured, and stand completely off the surface of the capital. In smaller churches the capitals are often round, with a small nail-head moulding, or have as many angles as the pier which they crown. The lancet window, which is so much used in this style, is often quite simple, having no kind of moulding; but it is sometimes found, in the same simplicity, repeated (in the east end of a church) three times, the centre one being higher than the side ones, and all three combined by a simple hood-line above them, as at Stanton Harcourt, Oxon. Sometimes two or three which stand apart on the outside are combined inside into one window, by wide splaying interiorly, and by the intervention of slender detached shafts, as at Salisbury cathedral.

In this style appear the first specimens of tracery (that is, stone divisions) in the heads or upper parts of windows. The first hint of it (so to speak) seems given in such windows as that at Brounsover church, Warwickshire; but the first specimens deserving the name of tracery are such windows as that at the east end of St. Giles', Oxford, which is formed of three lancet-shaped divisions below, and the head filled in with three circles, having foliations in them. This sort of window occurs late in the early-English style, and forms a sort of link or connexion between the simple lancet window, and the windows (of the next style) which we call geometrical. The mouldings of this style are, as I observed, very bold, and give an alternation of prominent roll-shaped lines, with deep hollows between them. The buttresses in this style are either narrow ones, of slender proportions, with a pediment or gable at the top, as at Beverley Minster, or else plain ones, with stages or slopes. Flying buttresses, as they are called, were also now first introduced, and, with other such contrivances, rendered the old fashion of massive walls no longer necessary; hence the masonry of this style is usually much less bulky than that used in the Norman buildings. One very important part

ST. GILES'S, OXFORD.

FOXGROVE, SUSSEX.

churches, and seems to point heaven-ward. At first they were very simple: that of Wandsford church, Northants, gives a fair specimen of their appearance in this style. Crockets also first appear in this style: they are projections from the outer angles of pinnacles, canopies, and the like, and

SKELTON CHURCH, NEAR YORK.

resemble leaves or flowers. In this style they have a simple, but bold appearance, as at Lincoln and at Salisbury cathedrals.

It will be well to mention a few of the most known buildings in this style. Salisbury Cathedral is, perhaps, the most perfect specimen of it in its early state. It was built by the munificent bishop Poore, between the years A.D. 1220 and 1260: the windows here are, for the most part, of the narrow lancet shape. The nave and transepts of Westminster Abbey, commenced in the year 1245, exhibit the style in a more advanced state; while Lincoln Cathedral is a fine specimen of its latest period. The west front of Wells Cathedral, built by the munificence of Bishop Joceline

between the years 1213 and 1239, exhibits some fine specimens of the statuary of this period.

At the end of the 13th century, during the reign of Edward I., the early-English style began to lose its simplicity, and gradually became so much altered, that in the course of fifteen or twenty years, we are fain to give up the name altogether, and to call the altered style by a new one. The name chosen for this style, which crept in thus gradually, is one which expresses the nature of it—it is called the *decorated style*. It lasted about a century. It

sometimes of the same shape, or else of a different one, as at Hanwell and Chacombe churches. The capitals in large churches are often richly decorated with elegant sculpture, of a more delicate and less prominent kind than that used in early-English. Fine specimens occur at York Cathedral. In this style also we begin to find the pier mouldings running up into the arches, without any capital intervening, as at *Rusley, Warwickshire*. The bases of piers differ chiefly from those of the early-English style, by having the deep hol-

SALISBURY CATHEDRAL.

WINDOW IN CHICHESTER CATHEDRAL.

is, indeed, we think, the most beautiful style of architecture that England ever saw; and, though some have thought its profuseness and variety of ornament displeasing, after the chaste severity of the early-English, we must say, that we look upon it as the first complete style in Christian art, to which the early-English, graceful as it is, is merely a sort of introduction.

We lose the lancet arch entirely in this style: those generally employed in it were the simple, pointed, equilateral, and obtuse arches. They are often difficult to distinguish from the late arches of the preceding style. The piers used in this style, in large buildings, are composed of a cluster of shafts, not detached, as in the last style, but joined together, so that only half, or three-quarters, of each appear. Thus the piers in Exeter Cathedral are like a cluster of slender shafts, closely put together, diamond-wise. An ordinary pier is made of four such shafts, as at Grendon and Austrey churches, in Warwickshire; or, again, of eight shafts, four large and four small. A great mark of this style is the square-edged, projecting ribband, or fillet, as it is called, running up the face of each shaft: it is rarely seen in other styles. In small churches the plain octagonal pier is very usual, as at Tysoe, Warwickshire; and the capitals are

lows of the mouldings filled up with small round mouldings. The bases are often angular, as at Worcester Cathedral.

Large stone-vaulted roofs now appear; and they have each division intersected by various ribs, running lengthways, or across, or from angle to angle. There are but few of the original timber roofs of this style remaining: they were of a very high, narrow pitch, and were open to the very top beam, called the ridge beam; the timbers were, indeed, as we have reason to think, always exposed in this way. The roof of Adderbury church, Oxfordshire, is a good specimen of this date,—probably the latter part of the 14th century. The doorways in this style become more highly ornamented; they have several slender shafts on either side, sometimes detached, but generally joined to the wall; over them is often found a canopy, with rich crockets, from which springs the arch moulding, as at Adderbury. But the chief glory of this style is, the beautiful and various forms which its windows assume. In the lower part they are divided into several, sometimes as many as seven, perpendicular divisions, or *lights*, as they are called. These lights are separated by stone *mullions*, which do not stop at the spring of the arch, but run into forms, sometimes of a regular geometrical shape, (such as may

be described with compasses,) or again, into easy, flowing lines, which branch into various flame-like compartments. Of the first kind, the windows of Merton College chapel, in Oxford, are good specimens; of the flowing style, some windows in Oxford Cathedral afford specimens. There are four of this kind on the north side of the Lady Chapel. In some windows the mullions merely cross in the head. Smaller windows (especially clerestory windows) are often found square-headed, and filled in the upper part with flowing tracery.

In ornamental detail, the most characteristic ornament is one called the *ball-flower*. It resembles a ball within three or four overlapping leaves, bearing some resemblance to a rose-bud: it is usually inserted in rows, in a hollow moulding, whether of doors, windows, or cornices. A four-leaved square flower is also commonly used in this style in the same way.

In buttresses of this style, we have chiefly to notice, that they are usually placed diagonally at the corners of buildings, instead of in a line with the walls, which was the plan pursued in earlier styles. They are divided into stages, and in some cases have niches, with canopies, for statues, on the outer faces, as at Witney church, Oxon. Parapets pierced through with wavy, flowing tracery, as at Malmesbury Abbey-church, and at Brailes, Warwickshire, are characteristic of this style. The transition from this style to the next, as from the last to it, was very gradual; and we often find buildings combining the features of both, which are puzzling, at least to the inexperienced eye.

ADVENTURES IN THE SNOW.¹

WHEN snow comes, the scene changes. The moment that it becomes trodden down hard on the roads, all the world is on sledges; sledges come forth from their year-long hiding-places, and stand before the houses ready to be hired. On the road are sledges of all sorts and sizes, from the largest to the smallest, from the smartest to the simplest. Some of them, especially in some of the chief cities, are very gay indeed. They are of various shapes, but resemble the bodies of chariots, phaetons, gigs, &c. set on sledge-bars. Some of them are very gaily, and others very gaudily painted, richly cushioned, and furnished with aprons of the shaggy skins of wild beasts, as bears, wolves, foxes, and deer. Their sledge-bars sweep up in a fine curve, and meet high before, bearing on their summit some figure—a pine-apple, a fir-cone, a lion's head, an eagle with outspread wings, or a human figure. The horses are covered with cloths of gay colours, which are stitched all over with little bells, and bells are generally hung on the sledges too.

Besides the handsome ones, many an old-fashioned affair comes forth, down to the bauer's or peasant's sledge, which is his old wicker-basket wagon-body, on a few poles rudely knocked together. Every thing that is a vehicle of conveyance becomes a sledge. Wheelbarrows disappear, and become sledge-barrows. Every thing that was before carried now becomes drawn. Tubs, baskets, bundles, all are on sledges, and are travelling the streets and roads. Every boy has his sledge,

too, made of a few boards nailed together, on which he is flying down the hill-sides with the utmost velocity. Wherever there is a bit of a descent in a street, or in the country, down it are going little sledges with one or more children on each of them. Boys and girls draw one another along the streets and highways at full speed on these little vehicles; every where you see them in motion, and they afford a world of amusement. If a heap of rubbish has been thrown to some outside of the town, or by the river-side, covered with snow, it becomes a sledge-bank for the lads; and they go down places so steep and uneven, that you expect to see them every moment thrown head over heels; but no such thing—away they go, as light and free as birds on the wing! and when they get to the end of their course, pick up their sledge and carry it back to the top again.

But it is not only the children that delight in sledging; the grown Germans are as much children in this respect as any of them. They partake with northern nations in all their fondness for sledging. Sledges are driving about every where, filled with merry faces, and attended by loud cracking of whips. They make also large sledging-parties, which are matters of much excitement and great display, as well as of very particular etiquette. Young gentlemen will engage young ladies for a drive in a sledging-party, or *Schlitten-fahrt-partie*, for three months before. Great are the arranging, the planning, the cogitation, while a party is in preparation. The acquaintance that shall be asked to join in it, the choice of ladies by the gentlemen, the number of sledges and outriders that they shall sport, the place to which they shall drive, and whether they shall have torches to return by or not. All parties enter into the scheme with heart and soul, and much anxiety is felt lest any change in the weather, a sudden thaw, or a fierce snow-storm, should prevent it.

The sledging-parties in the country are often still more lusty, if not so gay. The rich bauers, or farmers, in the upper Rhinlands, and other parts, are excessively fond of these excursions, and with sledges that will hold at least twenty people, will, in winter, drive about for whole days together. The gentry, in some parts of Germany, will, with much joviality, make use of the same capacious vehicles, and set on foot parties to some place of resort. The trouble in the country to get these together, and the ludicrous accidents that occur to them, afford subject of much entertainment. In the kingdom of Wirtemberg, the wirths, or landlords of the inns, are especially obliging. If you stop merely at their doors, while your driver gives his horses some bread and water, they feel much annoyed if you will not honour their house by going in. If you want nothing, they don't trouble themselves about that. They will do you any little service they can, just as much as if you had spent a large sum with them. At Waldenbuch, not far from Stuttgart, we stopped at the door of one of these good-natured men. We had recently breakfasted, and, as we wanted nothing, and the driver said he would not stay long, we proposed to sit in the carriage for the time. The wirth, a tall and very respectable-looking man—for the wirths are generally men of a tolerable education, and often hold a rank with the smaller gentry of the neighbourhood—came and

(1) We have taken this amusing little sketch from W. Howitt's interesting work on Germany. 8vo. Longman & Co.

begged us to alight. We explained to him that we wanted nothing, and therefore did not wish to trouble them by going in and out. He appeared much disappointed; said it was of no consequence whether we took anything or nothing, but he hoped we would honour his house by entering it. As we, however, respectfully persisted in remaining in the carriage, he went away, but soon came again, and with much earnestness besought us to alight. If we would not go in, we ought at least to see the country, and there was an old ducal castle too that we ought to see, and if we would permit him, he would have much pleasure in being our guide. This disinterested kindness it would have been most uncourteous to decline. With many thanks we alighted; and the good-hearted Swabian, calling for his hat and his cane, for he did not think his ordinary cap which he had on sufficiently in dress to appear openly with strangers, he led the way.

But our worthy wirth has been introduced here for his sledging-party. In the stables of the castle he tapped with his cane on a very capacious sledge, and breaking into laughter, said: "That is mine! Aha! I cannot see it without laughing. If you had but been here at a sledging-party that we had last winter! The forest-master and the clergyman were always saying that *we* could not get up a genteel sledging-party here. That other places could do it, but that *we* had not here any respectable materials to compose one of. I determined to try. I took my sledge and drove round. I went here and there. I got together the amtman, the clergyman, and the physician of the next dorf, the collector of the land taxes, the steward, the master of the forests, and their families. We made a most imposing party. In this, my sledge, were stowed sixteen souls. I drove, and we took the lead. All went well; we drove out far into the country. The air was clear, though sharp, and all were in the highest spirits. My horses were full of life; and as I led the way at a great rate, I heard behind me a loud sound of mirth, and laughter, and gossip. But unluckily, as we passed over a part of the way which hung over the valley below, the snow had drifted over a precipice of at least a dozen feet high, and hung in great round rolls and wreaths. My horses at this critical spot suddenly took fright, and became restive. I endeavoured to whip them sharply forward, but spite of all my exertions they backed and backed till one side of the sledge was over the precipice. There was a sudden and astounding shriek, not only from those in the sledge, but from those in sledges behind, as they saw it toppling over. I leaped out to seize the horses by the reins and drag them forward; but it was in part too late. The cries from all the party rose more wildly than before; and glancing at the sledge, I saw one after another of its load disappear over the precipice. Amongst them was a little boy of mine, only about four years old. As I saw him plunge down over the precipice, I lost all self-command, and all thought of every thing else. I ran in distraction towards the nearest point where I could descend into the valley, crying, 'Oh! my child! my child! my child is killed!' I plunged frantically down a deep descent; I rushed like a maniac to the spot where the child and the others had fallen. There were four or five men and women already scrambling out of the snow-heaps, or standing as much like pillars of salt

as Lot's wife, and crying, and cursing, and shaking themselves in the middle of the way. As I drew near, all at once broke out furiously—'Oh, what have you done! This is your fine sledging party! Oh, you have killed us! You have lamed us for life!—'Cursed stuff!' I exclaimed, raging; 'my child! my child! where is he? He perishes—he is smothering in the snow!'—I sprung into the drifts; I caught a sight of his red worsted glove—I seized it—I grasped his arm—I drew him out. He was already black and blue in the face; but presently a gush of blood started from his nose, and he set up a most vigorous yell. He had fallen with his nose and eye against a stump or a stone, and I found that his eye was seriously injured. One man near me exclaimed, 'Oh, I have broken my arm!'—'Never mind your arm!' I exclaimed. 'What does your arm signify? my child's eye is knocked out!' As soon as I was satisfied the child was not actually dead or dying, nor seriously hurt, I looked about to discover if any one else was yet in the snow, and presently I espied a pair of great old boots standing up in the drift, the head and body of whose possessor had disappeared downwards in the snow. I had known these boots too many years not to recognise them in an instant. The old doctor of the next village was there lying, head foremost. Much as I was concerned for him, and loudly as I called on those who had already got out to come to his help, there was something so ludicrous in his situation, that I could not for the life avoid bursting into loud laughter, as with all our might we grasped the old boots, and dragged out their owner. It was some time before we could wipe away the snow out of his face, and set him on a great stone to recover his breath. For a while he gasped and panted; and when we asked him how he felt, did not even answer by a shake of his head, but looked wildly and angrily about him. At length he rose suddenly from the stone, cast the most savage glances at me, and with much panting and catching of his breath, said to me, 'There! you have done for me with your *verdammte* sledging party. You have cut me off in the middle of my days.' The worthy old man was already upwards of eighty, and the idea of his being cut off in the middle of his days was too much even for those who had themselves but just got out of the snow, and were therefore not in the best of humours: a general laugh arose, at which the old gentleman looked highly indignant, and marched off in great scorn. But if we were merry at the old gentleman's sally, how much was this increased when, hearing a cry for help somewhere above our heads, we looked up, and beheld a big man suspended by his coat-laps in the boughs of a tree which stretched over the precipice! It was the steward. There he hung like Absalom, and quivered his legs like a bird in a springe, being neither able to reach hold of anything with his hands, nor to drop down into the snow. At this sight our laughter grew tenfold. We were absolutely disabled from flying to his assistance; but our noise brought some of the other party to the brow of the precipice, to see what was the matter, where they beheld the cause of our entertainment. There was an instant call from them to the rest above to come and look. All that dared, flocked forward till they could see the poor steward dangling like a scarecrow in the tree. At this nobody could forbear laughing—all broke out; and above and below the poor fellow heard our unnatu-

ral mirth, as it must have seemed to him. A light active youth, however, soon scrambled into the tree, and cutting away several small boughs, down plumped the steward into the snow.

"Nobody was really hurt, except it was myself, on whom all joined in heaping the bitterest reproaches; first, for having so zealously advocated and brought about this party; and secondly, for driving on a road so dangerous, though this latter matter had been the choice of others, not mine. By the time that we reached home, nevertheless, all had recovered their good-humour, and were more inclined to laugh at the ludicrous parts of the adventure than to regret what had happened, except the worthy old doctor. He cast most cutting looks and speeches at many of us, but more especially at me, over his dinner and his wine, and persisted that we had done for him, and had actually cut him off in the middle of his days. The worthy old man yet lives, however; though he never has, and never will, forgive our laughter."

POPULAR YEAR-BOOK.

February 24.—Feast of St. Matthias.

THIS apostle is supposed to have suffered crucifixion, A. D. 61 or 64.

Shrove-Tuesday (1846).¹

In the north of England, the day preceding the above is called Collop-Monday: and upon it, eggs and collops compose a usual dish at dinner. "It should seem," says Brand, "that on Collop-Monday they took their leave of flesh in the papal times, which was anciently prepared to last during the winter by salting, drying, and being hung up. Slices of this kind of meat are to this day termed collops in the north, whereas, they are called steaks when cut off from fresh or unsalted flesh; a kind of food which I am inclined to think our ancestors seldom tasted in the depth of winter." At Eton School, it was the custom on this day for the scholars to write verses either in praise or dispraise of "Father Bacchus," poets being considered as immediately under his protection. He was, therefore, sung on this occasion in all kinds of metres; and the verses of the boys of the seventh and sixth, and of some of the fifth forms, were affixed to the inner doors of the college. "Verses," says "Peter Parley," in his Annual for the last year, "are still written and put up, but the young poets are no longer confined to the god of wine; and one of the last poems was on the college pump."

Shrove-Tuesday is so termed from the preter tense of the Saxon word *to shrive*, because at this season, prior to the change of religion, every communicant throughout the kingdom was obliged, individually, to confess to his parish priest, as a preparation for the austerities of Lent. The great bell which summoned the faithful early in the morning to this duty was called *pancake bell*, and is still rung in some parishes. Its title is evidently derived from the practice of eating pancakes and fritters at Shrovetide. After the people had made their confession, they were permitted to indulge in festive recreations, although forbidden to partake of flesh. Hence arose the usage, just alluded to,

of eating pancakes on Shrove-Tuesday—a practice which survived the Reformation, and still prevails. In a poem written in 1634, it is jocularly remarked that, on this day, every "paunch,"

"Till it can hold no more,
Is fritter-filled, as well as heart can wish;
And every man and maid do take their turn,
And toss their pancakes up for fear they burn;
And all the kitchen doth with laughter sound,
To see the pancakes fall upon the ground."

Taylor, the Water Poet, writing in 1630, gives the following curious account of the above custom:—"Shrove-Tuesday," he observes, "at whose entrance in the morning all the whole kingdom is unquiet, but by that time the clock strikes eleven, which (by the help of a knavish sexton) is commonly before nine, then there is a bell rung, called the pancake-bell, the sound whereof makes thousands of people distracted, and forgetful either of manners or humanity; then there is a thing called wheaten flour, which the cooks do mingle with water, eggs, spice, and other tragical, magical enchantments, and then they put it, by little and little, into a frying-pan of boiling suet, where it makes a confused dismal hissing . . . until at last, by the skill of the cook, it is transformed into the form of a flip-jack, called a pancake, which ominous incantation the ignorant people do devour very greedily."

A correspondent in Hone's "Every Day Book," relates that the old curfew bell at Hoddesdon, Hertfordshire, still exists, and has, from time immemorial, been regularly rung on the morning of Shrove-Tuesday at four o'clock, after which hour the inhabitants are at liberty to make and eat pancakes until the bell rings again at eight o'clock at night. He adds, that this custom is observed so closely, that after that hour not a pancake remains in the town.

Allusion has been made to the festive amusements anciently tolerated by the Church of England on this day. If we may credit the author of the "Popish Kingdom," they were certainly of a jocose nature. He says—

"Puddings everywhere
Do swarm: the dice are shook and tossed, and cards apace they
tear:

In every house are shouts and cries, and mirth, and revel rout,
And dainty tables spread, and all beset with guests about:
With sundry plays and Christmas games, and fear and shame away.
The tongue is set at liberty, and hath no kind of stay.
And things are lawful then and done, no pleasure passed by,
That in their minds they can devise, as if they then should die;
The chiefest man is he, and one that most deserveth praise,
Among the rest, that can find out the fondest kind of plays.
On him they look and gaze upon, and laugh with lusty cheer,
Whom boys do follow, crying fool, and such like other gear."

The poet then proceeds to describe the "plays" above alluded to. Some of the revellers, he relates, carried staves, or fought in armour; some disguised themselves as devils, and frightened the boys; some scampered along the streets with nothing on but masks; some ran about attired like kings or monks, accompanied by guards and "other stately things;"

"Some hatch young fools, as hens do eggs, with good and speedy
luck,
Or as the goose doth use to do, or as the quacking duck.
Some like wild beasts do run abroad in skins that divers be
Arrayed; and eke with loathsome shapes, that dreadful are to see,
They counterfeit both bears and wolves and lions fierce in sight,
And raging bulls. Some play the cranes with wings and stilts
upright."

(1) We propose to notice the moveable holydays on the days on which they fall in the present year.

Some dressed like apes, and some like fools: some bore, what Hone delicately terms an "unsavoury morsel,"

"That on a cushion soft they lay,
And one there is that with a flap doth keep the flies away,"

Others stuffed a "doublet fair" and hose with straw or rags,

"Whom as a man that lately died, of honest life and fame,
In blanket hid they bear about, and straightways with the same
'They hurl him up into the air, not suffering him to fall; &c."
And this they do at divers times the city over all."

Men wore women's clothes, and women, dressed as men, entered their neighbours' or friends' houses, and ate and drank to excess.

If the snow lay deep on the ground, the poet records, battles were fought with snow-balls, to the discomfiture of old matrons and sober individuals, who were constrained to stay at home in consequence. These processions and mockeries, as we learn from the same writer, had for their spectators "noble men, the rich, and men of high degree," who came abroad with "waggons finely framed before," drawn by a "lusty horse, and swift of pace," covered with trappings, and decorated with "a hundred jingling bells." These waggons were occupied by the wives and children of their owners, who stood behind—

"Well armed with whips, and holding fast the bridle in their hand."

In this fashion—

"With all their force throughout the streets and market-place they run,
As if some whirlwind mad, or tempest great from skies should come,"

to the great peril of the "amazed people," on foot: and not content "to use this madness all the day," they continued their rough "pastime" till midnight, whereby they disturbed the slumbers of the more sober citizens, and caused their heads to ache sorely. The records of Norwich relate that, in 1440, one John Gladman, who is there styled a man "who was ever, and at this hour is, of sad disposition, and true and faithful to God and the King," made a "disport" with his neighbours, crowned as king of Christmas, on horseback, having his horse bedizened with tinsel, &c., and preceded by the twelve months of the year, each month disguised as the season required; after him came Lent, clothed in white and red herring skins, and his horse trapped with oyster shells, "in token that sadness should follow, and a holy time," and so "rode in divers streets of the city," with other people in masquerade dresses, "making mirth, disports, and plays."

Till within late years Shrove-Tuesday was the great holiday of the apprentices, who used chiefly to amuse themselves upon it by punishing persons of evil fame, assailing houses of dubious répute, and carting the inmates through the city. Football was formerly, and remains, a game played on this day in various parts of Britain. The author of a "Statistical Account of Scotland," 1795, relates that at Inveresk, county of Midlothian, there is, on Shrove-Tuesday, a standing match at football between the married and unmarried women, in which the former invariably are victors. The same writer says, that in the parish of Scone, county of Perth, every year, on this day, the bachelors and married men draw themselves up at the cross

of Scone on opposite sides. A ball was then thrown up, and they played from two o'clock till sunset. The game was this: he who, at any time, got the ball into his hands, run with it till overtaken by one of the opposite party, and then, if he could shake himself loose from those on the opposite side who seized him, he run on; if not, he threw the ball from him, unless it was wrested from him by the other party; but no person was allowed to kick it. The object of the married men was to hang it, that is, to put it three times into a small hole in the moor, the *dool*, or limit, on the one hand; that of the bachelors was to *drown* it, or dip it three times in a deep place in the river, the limit on the other. The party who could effect either of these objects won the game; but if neither party won, the ball was cut into equal parts at sunset. This custom is supposed to have had its origin in the days of chivalry. An Italian, it is said, came into this part of the country, challenging all the parishes under a certain penalty in case of declining his challenge. All the parishes declined except Scone, which beat the foreigner, and, in commemoration of this gallant action, the game was instituted. "With regard to the custom of playing at football on Shrove-Tuesday," says the antiquary Brand, "I was informed, that at Alnwick Castle in Northumberland, the waits belonging to the town come playing to the castle every year on Shrove-Tuesday, at two o'clock P.M., when a football was thrown over the castle walls to the populace. I saw this done Feb. 5th, 1788."

Hutchinson, in his "History of Cumberland," relates:—"Till within the last twenty or thirty years, it had been a custom, time out of mind, for the scholars of the free school of Bromfield, about the beginning of Lent, or, in the more expressive phraseology of the country, at Fasting's even, to *bar out the master*; that is, to depose and exclude him from his school, and keep him out for three days. During the period of this expulsion, the doors of the citadel, the school, were strongly barricaded within; and the boys, who defended it like a besieged city, were armed, in general, with *bore-tree* or elder pop-guns. The master meanwhile made various efforts, both by force and stratagem, to regain his lost authority. If he succeeded, heavy tasks were imposed, and the business of the school was resumed and submitted to; but it more commonly happened that he was repulsed and defeated. After three days' siege, terms of capitulation were proposed by the master, and accepted by the boys. These terms were summed up in an old formula of Latin Leonine verses, stipulating what hours and times should, for the year ensuing, be allotted to study, and what to relaxation and play. Securities were provided by each side for the due performance of these stipulations, and the paper was then solemnly signed both by master and scholars.

"One of the articles always stipulated for and granted, was the privilege of immediately celebrating certain games of long standing; viz. a football match and a cock-fight. Captains, as they were called, were then chosen to manage and preside over these games: one from that part of the parish which lay to the westward of the school; the other from the east. Cocks and foot-ball players were sought for with great diligence. The party whose cocks won the most battles was victorious in the cock-pit; and the prize, a small silver

bell, suspended to the button of the victor's hat, and worn for three successive Sundays. After the cock-fight was ended, the foot-ball was thrown down in the church-yard, and the point then to be contested was, which party could carry it to the house of his respective captain; to Dundraw, perhaps, or West Newtown, a distance of two or three miles; every inch of which ground was keenly disputed. All the honour accruing to the conqueror at foot-ball was that of possessing the ball. Details of these matches were the general topics of conversation amongst the villagers, and were dwelt on with hardly less satisfaction than their ancestors enjoyed in relating their feats in the border wars."

The above was not the only place where cock-fighting was practised on Shrove-Tuesday; the custom has now generally fallen into disuse, and is one of those which we do not wish to see revived. Cock-fighting was prohibited in England under Edward III. and Henry VIII., yet the latter brutal tyrant indulged his sanguinary tastes by patronising this cruel amusement.

In the old town of Leicester is an open space called the Newarks, of a cross form, accessible by three gates, and surrounded by tall buildings. In the afternoon of Shrove-Tuesday, three men take possession of this place, armed with waggon whips, and each attended by another man carrying a bell. These worthies, who are called Whipping Toms, claim a right to flog everybody entering or passing through the Newarks whom they can catch, and this as long as the attendant bellman can keep ringing his bell. The amusement consists in surrounding the bellman and silencing his bell; for during the cessation of ringing, the whipper is powerless. This, however, is a service of some hazard, and requires the combined address and activity of the young men who take part in the frolic. As soon, however, as a Whipping Tom finds his companion silenced, and subject to the laugh of the spectators, he hurries, with his attendant bell, to the rescue; and the scene becomes one of considerable mirth and animation, and many daring attempts are made to capture the succouring bell on the one hand, and to liberate the captured bell and get both whips into action on the other. By the three outlets from the place escape is easy, and the fourth contains a nook called "Little London," within which you are entitled to sanctuary. The bustle, activity, and address elicited by the whole affair, and the merriment of the spectators, as bells are captured, or luckless wights subjected to whipping, render it an afternoon of great excitement, which the young especially talk of for months before and after.

The common people formerly, at this time, assumed a privilege of breaking down doors for amusement. Of this there are, perhaps, some remains, in a practice which still exists in some remote districts, of throwing broken crockery and other rubbish at doors. In Dorsetshire and Wiltshire, if not in other counties, the latter usage is called *Lent Crocking*. In the former county, the boys sometimes go round in small parties; and the leader knocks at the door, leaving his followers behind him, armed with a good stock of potsherds, the collected relics of the washing-pans, jugs, dishes, and plates, that have become the victims of concussion in the hands of unlucky or careless housewives for the past year. "When the door is opened," says a correspondent in Hone's "Year-

Book," "the hero, who is, perhaps, a farmer's boy, with a pair of black eyes sparkling under the tattered brim of his brown milking-hat, covered with cow's hair and dirt, like the inside of a black-bird's nest, hangs down his head, and, with one corner of his mouth turned up into an irrepressible smile, pronounces, in the dialect of his county, the following lines:—

'I be come a shrovin',
Vor a little pankiak,
"A bit o' bread o' your biakin',
Or a little truckle cheese o' your own miakin',
If you'll gi' me a little, I'll ax no moore,
If you don't gi' me nothin', I'll rattle your door.'

Sometimes he gets a piece of bread and cheese; and at some houses he is told to begone, when he calls up his followers to send their missiles, in a rattling broadside, against the door."

In Wiltshire, the begging of pancakes, &c. is omitted, and the Lent crockers pelt the doors as a matter of course. The fragments of pots and dishes originally signified, that, as Lent was begun, those cooking vessels were of no use, and were supposed to be broken; and the cessation of flesh-eating was intimated in the petitioning for pancakes and bread and cheese.

An anonymous writer records, in 1826, that at Ludlow, on Shrove-Tuesday, the corporation provide a rope, three inches in thickness, and in length thirty-six yards, which is given out by a few of the members at one of the windows of the market-hall, at four o'clock; when a large body of the inhabitants, divided into two parties, commence an arduous struggle; and as soon as either party gains the victory by pulling the rope beyond the prescribed limits, the pulling ceases; which is, however, always renewed by a second, and sometimes by a third contest; the rope being purchased, by subscription, from the victorious party, and given out again. In the end the rope is sold by the victors, and the money, which generally amounts to two pounds or guineas, is expended in liquor. The origin of this singular custom is involved in obscurity.

Very like, though rather more refined than the old English Shrovetide revels, is the Italian carnival, celebrated on Shrove-Tuesday and the nine days preceding. In the Catholic districts of Germany, carnival is still celebrated as in Italy, during the three days in February ending with Ash-Wednesday, though not with the same native gusto and spirit as amongst the Italians. The next approach to this is in Cologne, and in Mayence, with which Mannheim, Worms, and other Rhine cities, have sometimes attempted to vie. In Cologne, in particular, the people give themselves up to it heart and soul. They have their public processions, generally intended to satirize some public or private occurrence of the day, or to amuse the people with grotesque representations of historic scenes and personages. Others again are got up to recall the romantic ages in all their splendour. In 1841 Mannheim exhibited a procession of this kind, intended to rival the most magnificent ones of Cologne. It was the entrance of a princess of England as the imperial bride, the emperor of Germany and a great number of princes being assembled to receive her. There were electors, princes and princesses, dukes and duchesses, bishops and knights, in great numbers; all on horseback, in the most gorgeous chivalric costume

and array. There was the travelling kitchen, the travelling apothecary with his shop, belonging to the imperial train. There was old father Rhine, Michael Scott the necromancer, Saracens, &c. All was conceived and executed with the most correct historic or poetic propriety, and formed a most splendid spectacle as it paraded the streets. Those, however, who were accustomed to the carnival of Italy, or even of Cologne, complained that it was too silent and pantomimic; that it wanted all the attractions of masking figures, and witty encounters in the streets. These are to be found in Cologne. Here, immediately after New year's day, committees are formed, who make it their business to strike out and prepare costumes, characters, witticisms, &c. in readiness for the carnival, or Fasching, as it is called in Germany. The Fasching committees meet in general assembly once a week, in a hall fitted up for the purpose, with raised platforms and rostra for orators. This is called the great council, and is presided over by a select council and a president. Here, in sittings of from two to three hours' length, they appear in hundreds, in their costumes and in many-coloured caps. Here are proposed such plans as have been laid before the different committees; and orators, generally clad in old Roman costume, address them from the rostra, in advocacy or rejection of these proposals. Then commence warm and often humorous debates, and resolutions are adopted, amid the loudest outcries and clamours of applause or disapproval, attended with the playing of flourishes and marches by a numerous orchestra.

These assemblies, as the carnival approaches, are held still oftener. They are opened with the general singing of some patriotic song, and the three days of the public carnival make it but a small portion of the real one, which is going on almost daily before the arrival of the public exhibition. The great points of splendour in the carnival are the procession and the masked-ball, the latter, at Cologne, being held in the great gothic hall of the Kauffhaus, highly adorned for the occasion.

February 25.—Ash Wednesday, (1846.)

This is the first day of Lent. It is called Ash Wednesday, from an ancient Christian ceremony. The people flocked to church, and the priests strewed them, as they knelt, with ashes, signed them with the cross, and said, "Memento, homo, quia pulvis es, et in pulverem reverteris." "Remember, man, that dust thou art, and to dust thou shalt return."

The Lenten Fast.

LENT (which, as we have intimated, begins on Ash Wednesday,) is so called from the time of the year in which it is observed: Lent, in the Saxon language, signifying Spring. This is a solemn fast, lasting forty days, and "was taken up," says Bishop Sparrow, "by holy Church in imitation of Moses and Elias in the Old Testament; but principally in imitation of our SAVIOUR's fast in the New Testament."

OLD CUSTOMS.

Among the ancient customs of this country which are now disused, was a singularly odd one, continued even to so late a period as the reign of George I. During Lent, an officer, called the King's cock-crower, crowed the hour each night within the precincts of the palace, instead of pub-

lishing it in the ordinary manner of watchmen. On the first Ash Wednesday after the accession of the House of Hanover, as the Prince of Wales, afterwards George II., sat down to supper, this officer abruptly entered the apartment, and, according to accustomed usage, proclaimed in a sound resembling the shrill pipe of a cock, that it was "past ten o'clock." Taken by surprise, and imperfectly acquainted with the English language, the astonished prince supposed the assumed crow was some mockery intended to insult him, and instantly rose to resent the affront; nor was it without difficulty that the interpreter explained the nature of the custom, and satisfied him that a compliment was designed, according to the court etiquette of the time.

It is mentioned by Mr. Fosbroke that ladies wore friars' girdles in Lent. This custom may be illustrated by an amusing anecdote. Sir Thomas More finding his wife scolding her servants during this season, endeavoured to restrain her. "Tush, tush, my lord," she replied, pointing to her friar's girdle; "look, here is one step to heavenward." "I fear me," he answered with his accustomed humour, "that one step will not bring you up one step higher."

Other Lenten customs will be noticed in our remarks upon the days on which they were observed.

Reading for the Young.

MOTHER AND DAUGHTER.

(Concluded.)

WHEN nearly fourteen years of age, Mary Anne, who had rather outgrown her strength, became languid, low spirited, and irritable; and, although she had gained such an ascendancy over herself as to restrain her numerous caprices, there yet remained enough, when excited by illness, to try her mother's patience severely, who, fearing by contradiction to increase her malady, endeavoured by extreme gentleness to lead her back to her former reasonable manner of conducting herself; and, at those moments, she felt ready to adore her mother for her forbearance.

One day that Madame Thibourg happened to be present at one of those scenes of ill-humour, she endeavour to reason with Mary Anne, but, disgusted at her sharpness, and at the disrespectful manner in which she answered her mother, who was endeavouring to calm her, she told her some very unpalatable truths, which so offended her, that she left the room in such a flood of tears as threatened a fit of hysterics. Her mother, who followed her immediately on the departure of Madame Thibourg, found her still trembling, but calm, and thoroughly ashamed of what had passed, although she endeavoured to excuse it by pleading that Madame Thibourg had irritated her.

"She wished to prove to you, my child, that she was right and you were wrong; you wanted to do the same; and supposing that you both desired to be thought right, was it not your place to yield?"

"Ah, mamma! but that is not the way you deal with me," said Mary Anne, on whom the remembrance of her mother's kindness fell with redoubled force.

"My child," said Madame Leroi, "I am bound to sacrifice every feeling of my heart, rather than allow you to entertain one which would injure

either your disposition or your health. Mary Anne, can there exist another person who feels for you as your mother does?"

Deeply affected, and still suffering from the effects of the late scene, Mary Anne threw herself into her mother's arms, exclaiming, "Oh, mamma, it is you alone who know how to manage me; and I yield more readily to you than to any other person."

"Yes, my child, you will, and you ought to do so; and you will one day repay me all my love with usury. Calm yourself, my dear; your mother has patience to await your restoration to tranquillity."

Mary Anne vowed in her heart to devote herself to her mother's happiness, and, re-assured by her gentle words, she gradually regained her former happy state of mind. She watched over herself, and succeeded, by her mother's assistance, in conquering her impetuosity. But her lowness of spirits, and her emaciation, increased to such an alarming degree, as to draw from the physician an opinion, that unless country air was resorted to, he would not answer for her life. This was a dreadful blow to Madame Leroi, whose slender means had been already nearly exhausted. Madame Thibourg, to whom she communicated her anxiety, proposed to join her in hiring a small country house at St. Mandé, which she knew was to be let for six hundred francs. The saving we shall make by living together, will amply reimburse us for the extra expense of the hundred crowns that it will cost each of us. Madame Leroi, however, was quite aware that, on the contrary, her expenses would be much increased by a residence with Madame Thibourg, who studied her own comfort, and was much more expensive in her tastes; but, too much rejoiced at any plan which would benefit her child to make difficulties, she acceded at once, with a resolution to work still harder to obtain the hundred crowns which were demanded in advance for the rent of the house. For this purpose she parted with her eiderdown quilt, and the four fine engravings which ornamented her apartment, and made up the rest of the money, as well as that which was necessary for her removal, by adding a sum which she had destined to the purchase of a stove for their small dining-room, or rather closet; for, dreading to run any risk of dirtying or tarnishing her work, and suffering much from cold, she, with her child, had hitherto eaten in the kitchen, where the coal-smoke had affected her head and chest. These sacrifices could not be concealed from Mary Anne, and great was the grief they caused her. She was become so exquisitely sensitive upon all subjects, that, notwithstanding her great desire to go into the country, the idea of her mother's selling her eiderdown quilt, an article she knew to be so essential to her comfort, threw her into such a state of excitement, that Madame Leroi found it necessary to use rather severe measures with her.

"Do you forget, Mary Anne," said she, "that you should strengthen yourself, to be useful to me one of these days?"

Her remark was happily timed, as it diverted the thoughts of her daughter, who assisted in the preparations for departure with a zeal which afforded her poor mother at least a gleam of hope and joy.

The gates of Paris were hardly passed before Mary Anne experienced a change in her feelings, and a week's residence in the country made so

great a difference in her, as to astonish all her friends; her mother regarded her with tearful eyes, and every glance which Mary Anne directed towards her, served to confirm her happiness. Her usual gaiety and ardour returned with health, and she found herself able to accomplish all that she had before imagined unconquerable. Her understanding becoming fully developed, she devoted herself to the acquirement of new accomplishments, and to the practice of those in which she still felt a deficiency. Her mother's unvarying affection had made so indelible an impression on her heart, that she worried herself in schemes for requiting her. She determined to regain the time she had lost during her illness by intense application to her studies; and she looked for her mother's approbation as her dearest reward; but with a feeling of dissatisfaction with herself, she would say, "It is all very well, mamma, you are pleased for me, because you think that my improvement will benefit me; but when shall I be able to do any thing exclusively for you?"

"Patience," said her mother; "the time will come."

"Oh, that it were already come," would she say, and fall to work again still harder than before.

Much pains did she take to re-establish herself in Madame Thibourg's good opinion, which by her former conduct she had lost. Alas! how little do young people consider the injury they are doing themselves, while exposing their faults to strangers, who, judging only by what they see and hear, become impressed with notions extremely disadvantageous to them, which are seldom effaced. Madame Thibourg treated Mary Anne at first with harshness, suspecting her of even more faults than she really possessed; this made her very angry, until her mother explained the cause of this apparent injustice to her.

"Well, if she be unjust," said Mary Anne, proudly, "so much the worse for her."

"No, my child; so much the worse for you, since it is your fault. If you had not given rise to this injustice by once placing yourself in an unfavourable light to her, you might resign yourself to hear it quietly, but as it is, you must put an end to it."

After a few outbreaks of that temper to which Mary Anne had been so subject, but which she generally overcame immediately, she felt the truth of her mother's remarks, and resolved to keep so strict a watch over herself as to leave little cause for blame. A look from her mother was sufficient to induce her to refrain from a repetition of the fault, and to make amends with the most engaging candour. Thus, at the age of sixteen, after a nine months' sojourn at St. Mandé, a most astonishing improvement was observable in her mind, manners, and appearance.

At the beginning of winter they returned to Paris, for nothing would have induced Madame Thibourg to remain in the country during that season; and the road being nearly impassable, owing to the bad weather, Madame Leroi could no longer traverse it on foot to return her work to her employers; indeed, her health had been severely tried, and was now evidently giving way under the severity of the winter. Mary Anne was convinced that the want of the eiderdown quilt very much increased her mother's sufferings; and she was at times in a state of feverish anxiety for the arrival

of that time when she might hope to assist and console her.

The spring was cold and late, and their stock of wood was exhausted. Madame Leroi, whose ill health had prevented her working as much as usual during the winter, being averse to contracting a debt, declared that she could very well do without a fire; but Mary Anne, who knew how much she suffered, wept each morning when, on opening the window, she found the cold as intense as ever. She would willingly have assisted her mother with her tapestry, but, although a tolerable worker, Madame Leroi had not encouraged her to neglect her more serious employments for the sake of perfecting herself in embroidery, and she had not yet entrusted her with any thing of much consequence.

"Do not fear, Mary Anne," said she, "you will work soon enough for me."

On a day that Madame Leroi had returned to her bed with a bad sick headache, a piece of tapestry was sent to her with an order to work it as quickly as possible, to repair an accident caused by the falling of a lamp. The chair which it was to match was sent with it as a pattern. Mary Anne promised that it should be finished by the following week; and, agitated by an idea which had just entered her head, she shut all the things together in a place where her mother was not likely to find them. Madame Leroi having been asleep at the time of this occurrence, knew nothing of it. Mary Anne found, to her great joy, that her mother's box of silks contained all that was necessary for her work.

With the assistance of the porter's wife, to whom she confided her scheme, she dragged from the garret an old work-frame, and fixed it in an uninhabited room, of which this woman had the key. Before her mother awoke, the frame was mounted, the chair placed before it, and the needle threaded; and the following morning, being unable to sleep, from impatience, she silently escaped to her work, to which she also devoted the two hours which were usually spent in a walk with Madame Thibourg and her daughters. She communicated her intention of surprising her mother to Madame Thibourg, but said not a word about the privations which that mother had undergone. The harp was a little neglected, to be sure; for, while practising, she thought only of the shades of her silks; but in time she found herself quite equal to her undertaking. As she had only to copy, and was now endued with that perseverance which conquers all difficulties, this her first attempt succeeded to admiration; and on the seventh day, the porter's wife, and Madame Thibourg and her daughters, who were summoned to a consultation, declared that the copy could not be distinguished from the original. The good woman was commissioned to take the work home, and receive the money, which Mary Anne destined to the purchase of half a load of wood.

The next morning, while Madame Leroi was still in bed, Mary Anne, who was now very much delighted at the coldness of the atmosphere, had the wood put in the fire-place, while the porter's wife, nearly as much pleased as herself, brought a good stoveful of lighted coals. Madame Leroi, awaking at the noise of the crackling wood, asked what it was, and reproached Mary Anne with having bought a faggot.

"A faggot, indeed!" said the woman, proudly; "come and look if the kitchen faggots are like that;" and Mary Anne, opening the curtains of her mother's bed, showed her such a nicely-burning fire as she had not seen for many weeks; then, without answering a question, she threw a dressing-gown over her, took her to the kitchen, where the good creature had piled their store of wood, and, after placing her by her sitting-room fire, she related all that had occurred.

"My dear child—" were the only words her weeping mother could utter.

Mary Anne pressed her mother's hand, and exclaimed, in an animated, yet serious tone, "Now, mamma, I do indeed belong to you!"

"Yes, my love, and I take possession of you," replied the mother, with great emotion; "now is your turn to give yourself to your mother,—the time is come." And Mary Anne, falling at her mother's feet, covered her hand with kisses.

From that day she assisted her mother in working, without stealing from her hours of study; her strength and activity never failed, for the good feelings that put them in action were inexhaustible. At the age of eighteen, she was quite qualified to give lessons, having tried her first efforts in teaching on Madame Thibourg's youngest daughter. Her next pupils were the young ladies of a school, and, as she became more known, she taught in several respectable families. At first, the porter's wife used to attend her to and from the houses of her pupils; but in a short time, Mary Anne's good sense, and the modest, serious manner which the thought of her peculiar position required her to adopt, induced Madame Leroi to allow her to go alone; and this enabled her to make more extensive engagements. The expenses of their house was thus defrayed; and if, on Mary Anne's return, she found her mother looking fatigued, she would take the work from her hand, saying, "I belong to you, mamma, you must do as I please."

Madame Leroi's health became worse and worse, but she felt no anxiety about it, while her child remained well. At such moments as these, Mary Anne rejoiced in the consciousness of her health and strength.

On receiving an advantageous offer of marriage, she felt that in accepting it, she would not only deprive herself of the pleasure of working for her mother, but also rob that mother of the charms of her society,—and she declined it. Fortunately the announcement was made to herself, and she studiously concealed her refusal from her mother (who would never have consented to such a sacrifice) until some time afterwards, when, seeing her mother deeply affected, and nearly angry at this intelligence, she fell at her feet, exclaiming, "Mother, I have but one favour to ask of you, that of being allowed to belong to you always!"

"My child," said her mother, with a sigh, "be happy in your own way;" and she concealed her deep regret at the failure of this marriage.

Not very long afterwards, mention was made, in Mary Anne's hearing, of an officer, whose wounds compelled him to retire from active service, although little more than thirty years of age. He had lost his left arm, and his former good looks had disappeared, under an accumulation of sufferings. Full of ardour for his profession, but sadly depressed at the reflection of so early a termination to his once brilliant expectations, he had devoted

himself to solitary meditation. He would not think of marriage, having, as he said, but his own wretched self to offer to a woman. Mary Anne, whose natural disposition, and habits of thinking, led her to delight in generosity of sentiment, replied, with warmth, that she thought the whole charge of a husband's happiness a sufficient offering to any woman. This speech being repeated to M. de Luxeuil, the officer, together with the comments on Mary Anne's character which it elicited, excited his curiosity to know more about her; and, when he was informed that she had hitherto devoted her life to her mother, he conceived the idea, that by assisting her in this pleasing task, he should give himself a claim to her gratitude and affection.

The person who had mentioned Mary Anne to him (not without design), encouraged the idea, and managed so well, that from talking of her, M. de Luxeuil became desirous she should hear of him, and he then thought it might be possible for him to make himself agreeable to her.

To make my story short: in course of time, the proposal was made, and joyfully accepted; and after their marriage, M. de Luxeuil took his wife and mother-in-law to a charming country house which he possessed, about thirty leagues from Paris. On arriving, he conducted Madame Leroi to the apartments which he had ordered to be arranged for her use, and Mary Anne beamed on him a smile of fond affection, as if in thanks. The rest of the house excited new admiration at every step. In the drawing-room, Madame Leroi's arm-chair was placed in the most comfortable corner, and care had been taken in planning their future style of living, that it should be such as best suited her health, tastes, and habits. "My children," said she, looking affectionately at her son-in-law and daughter, "I perceive that you have already talked a great deal about me."

Mary Anne's happiness was complete, and M. de Luxeuil began a life of such bliss as he had never before even dreamed of. Formed, by their mutual tastes, to become dearer to each other, and most grateful for their reciprocal happiness, Mary Anne and her husband felt almost alarmed at this untroubled stream of joy. Madame Leroi hardly knew how to respond to this double affection. "Leave me alone," she would say; "what am I to do with two causes of happiness at once."

THE STORY OF HORSLEY HALL.

(J. E. M.)

THE lady was sitting alone in her grief,
Yet her proud flashing eye scorn'd to weep for relief,
While these half-mutter'd words from her pale lips comest
Gave vent to the passion that swell'd in her breast:—

"Am I thus then cast off, like a plaything laid by?
Has he sated his lust? has he wearied his eye?
Has his fickle heart, yearning again to be free,
Learnt another is younger and fairer than me?

"Where's the love he once swore should be strong in all time,
Should soften our age as it gladden'd our prime?
The flame then so hot has grown suddenly cold,
Like a dream that is fled, like a tale that is told.

"His want of affection and love I could bear,
With a heart ill at ease, and a proud, careless air;
But to meet such a slight, such a mark of disdain—
Oh, my God! it o'erpowers and maddens my brain.

"Was his easy neglect not enough of disgrace,
That he needs must caress here my maid to my face?
'Twere better to die than a bye-word to live—
Life to me now no pleasure save vengeance can give."

'Twas a sight full of dread in that old chamber dark,
The lady's fine face how it worked to mark:
Far better to meet with a she-wolf at bay
Than encounter a woman when balked in her way.

She heard a low knock, and serene grew her face,
Like the sea when a cloud passeth o'er without trace:
As, the door softly opening, her maiden stepp'd in,
You'd have thought her a creature too lovely for sin.

Said the lady, with voice that dissembled her hate,
"I forgot that the evening was drawing in, Kate;
Thou shalt dress me, good wench, to the best of thy power,
For Sir Thomas, I hope, will be here in an hour."

Her forehead is bound with a chaplet of pearl,
And her dark raven locks on her snowy neck curl;
O never, I ween, had that lady, so fair,
Seem'd fairer than then, or more sprightly her air.

She leaned through the casement her beautiful head,
"He is coming at last—he is coming," she said;
"Now nearer and nearer his horse's hoofs fall,
He will quickly be here; let us haste to the hall."

Through the gallery long the unfortunate pair
Arrived at the head of the broad oaken stair;
When the maid, by her mistress (as old people tell)
On a sudden pushed down, o'er the bannister fell.

One instant, her white robes were fluttering in air;
The next, she was dashed at the foot of the stair.
You may still see the stain on the mouldering wood,
Where the floor of the hall was bespatter'd with blood.

As the lady descended the staircase alone,
She thought once she heard her in agony moan;
But when on the last step she listen'd; no sound
Save the clock's heavy tick broke the silence around.

When Sir Thomas and she o'er the dead body met,
There was that in her eye man might never forget:
One glance spoke the whole of her heart's deadly hate,
And told how the maiden had come by her fate.

Neither utter'd a word—for their souls felt within
That each knew the whole of the other one's sin;
But they gazed on the blood-spotted face of the dead,
And learnt that in life all their pleasure had fled.

'Twas deemed that Kate's foot slipped—for none saw the blow—
Yet at times there were whisperings, though secret and low,
That some terrible thing did that lady appal,
Whenever she ventured to pass through the hall

They buried the corpse in the pleasant churchyard,
At the foot of a yew by the western gate hard;
And still does a tomb, with a quaint arch built high,
Mark the place where the bones of that young creature lie.

Yet a curse seemed to rest on the house. The proud dame
Soon to foreign lands passed, nor again ever came;
But sought in a convent, by praying and tears,
To atone that sad deed all the rest of her years.

When Sir Thomas died early, the last of his race,
No kinsman attended his bones to their place;
But buried by strangers, uncared for, unwept,
With his fathers in Birkenhead Abbey he slept.

The above Ballad is intended to embody an old story of Horsley Hall, on the borders of Denbighshire and Cheshire, once the seat of the Powells, a family which became extinct in the last century. They were people of much consequence in that part of the country, and the possessors of the abbey lands at Birkenhead: so that their history seems to confirm the opinion of a curse attending such kind of property. How far the facts of the case are adhered to in the Ballad, is extremely doubtful. One account represents Sir Thomas as the murderer, and not his lady.

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne*.

SUBURBAN VILLAGES FOR THE LABOURING POOR.

A PROJECT for the improvement of the condition of the industrious poor who have been expelled from the crowded localities of St. Giles's, Lambeth, Westminster, Wapping, Spitalfields, and other equally populous districts of the metropolis, by the new streets which have been lately formed, and other public improvements, has been set on foot, and it seems to be one of fair pretensions and promise. It is argued, that private charity, being too limited to accomplish all that is required for the full attainment of an object of this description, the cooperation of the wealthy and speculative classes is desirable; and that, since the enterprise of the day is running in favour of the establishment of railways, a railway should be made the medium of the proposed benefit to the labouring multitudes who have been disturbed by recent alterations. We extract a passage from the "suggestions" circulated by the promoters of the scheme:—"The plan proposed is to build villages in the surrounding neighbourhood of the metropolis, sufficiently distant to ensure a pure atmosphere, and healthy soil, on which dwellings may be erected, at a moderate price, yet so connected with the metropolis by distinct lines of railway, and stations to each, as to leave no portion of London more than one mile distant from some one station; thus bringing the daily place of occupation of the working classes within ten minutes distance of their residence, and enabling them to resort to the one and the other with the same order and facility as though still inhabiting the precincts of the great city itself." It is added, that each village should contain about 5,000 cottage residences, covering 500 acres of land; and that, taking the probable average of the inhabitants of each cottage at seven in number, it will give to each village 35,000 inhabitants; making a total population, supposing the ten villages to be in the course of time erected, of 350,000 removed from the dens of the metropolis. It is contemplated to erect only ten cottages to an acre, which, built in pairs, will give to each residence a good garden—will secure perfect ventilation, and incite the occupant to industry, regularity, and neatness. It is intended that churches, chapels, cometeries, and other religious and social conveniences, should be attached to each village, as well as public baths and washing establishments, for the promotion of cleanliness and health. The parties to be principally benefited, are to be, if disposed, allowed to participate as shareholders in the undertaking contemplated.—*Newspaper*.

NATURAL INSTINCT.

FOR some time past the workmen engaged in renovating the Glasgow cathedral had observed an unusual concourse of sparrows always coming regularly to a hole, in one of the slanting walls of the old Consistory Court, which is now being taken down, and holding a great ado, "cheeping and chirping," and apparently feeding some birds within. For a brief space of time this was thought nothing of, as it was known the young brood were just about flying; and it was imagined that it might be some of these, not so strong as the others, whom the parents were feeding. The meetings being continued, however, a gentleman in the neighbourhood induced the men to get a ladder, and examine the cause of all those noisy doings; when it was found that the female sparrow, after all her brood had left her, had got so warped about the leg with some of the threads composing her nest, that it was impossible for her to escape, the leg being considerably swollen by the attempts she had made to effect it. In the above dilemma, how beautiful it is to perceive that she was constantly consoled with, and her wants sup-

plied by her fellow sparrows; sparrows of humanity and generous feeling they must have been. Let mankind take the lesson. It is needless to say the poor bird was let away.

THE LOCOMOTIVE ENGINE V. THE LIGHT-FINGERED FRATERNITY.

A TRAVELLER by the Edinburgh and Glasgow railway, on lately leaving the station in the former city, missed his pocket-book, containing 700*l*, and immediately returned to the train to make inquiries. The stoker told him that a fellow-traveller, whom he had supposed to be his servant, followed him from the station, and afterwards returned, took his place in a train that was starting for Glasgow, and was now on his way westward. The gentleman ordered an express train; but there was little hope of overtaking the other, for some time was lost in getting up the steam. However, off he went, the stoker accompanying him; and when they were approaching the inclined plane which leads into Glasgow, they saw the train ahead. The whistle of the "express" engine was violently blown, and the conductor of the passenger train, inferring danger, removed to the other line of rail. The "express" shot past, and got to the station in time to admit of arrangements for apprehending the pickpocket. The train then came in, the suspected person was seen and identified by the stoker, and the pocket-book and money were found upon his person. The owner, overjoyed at recovering his property, offered a handsome reward to the stoker, which was resolutely refused, and the gentleman, therefore, enclosed 100*l*. to the directors, requesting them to take pay for the express, to reward their servant *ad libitum*, and to return the change (if any). The directors returned the whole, stating that they would make no charge for the engine, and would themselves reward the stoker.

SINGULAR FACT.

A SOMEWHAT novel incident occurred very recently at the terminus of the South-Western Railway at Vauxhall. A carrier pigeon was seen in an exhausted state; it was caught by hand, but died shortly afterwards. A label was appended to one of its legs, addressed to his Grace the Duke of Wellington, which stated that three pigeons were thrown up at the island of Ichaboe, and bore date July, 1845. The distance is computed to be between 2,000 and 3,000 miles from the place where the pigeon appears to have been liberated, to its destination in London. The bird, with its appendage, was immediately forwarded to Apsley House, and the Duke of Wellington, by an autograph note, the next day courteously acknowledged the receipt from the party who sent the bird. It has been stuffed, and in the process it has been discovered that the bird was shot, otherwise there can be no doubt that it would have reached home, and it is supposed not to have had strength to cross the Thames.

THE favourableness persecution of any good cause is the lash of lewd tongues, whether by bitter taunts or scurrilous invectives, which it is as impossible to avoid as necessary to condemn.—*Bp. Hall*.

Erratum.—In the poem, "Nature and Art," No. 16, page 240, the Author's name should have been printed, agreeably to our rule, at the end. We had no intention of claiming it as an original contribution.

GRAY'S ELEGY, AND STOKE PAGES.

THE manuscripts of celebrated men, whether poets who have stirred human souls to action, or philosophers whose lessons have guided nations, must ever possess a peculiar charm for succeeding ages. The places where illustrious men have lived and died, have their natural interest increased by becoming the depositaries of their writings.

Could we enter the room where a Milton or a Shakspeare thought and wrote, and gaze upon the very pages over which their fingers have passed, we should enter into a closer fellowship with the poets on whose memorials we reverently gaze. The former homes of men ennobled by lofty thoughts are the appropriate resting-places of their writing.

These thoughts have been suggested by the recent sale of the manuscripts of the poet Gray. They were bequeathed by him to his biographer, Mason; from him they passed into the hands of a Mr. Bright, whose sons offered them for sale with the poet's books. Two of the most valuable MSS., the original copies of the "Elegy" and "Long Story," were purchased by Mr. Granville Penn, of Stoke Poges.

At Stoke the author of the world-famed "Elegy" lived; there that undying work was written; and in the church-yard Gray is buried; to no place, therefore, could these MSS. have more appropriately returned.

The "Elegy" and "Long Story" arose, unquestionably, from the suggestive character of the scenery of Stoke Poges, and the gothic glories of the ancient manor house. To the lovers of Gray, a brief description of the localities connected with these admired pieces may prove acceptable.

The church-yard is the first object of a stranger's visit. From a distance nothing is seen save the white spire, rising from the midst of a circling belt of trees. So closely is the church veiled from the gaze of busy man, that, were it not for the indicating spire, no passing traveller would suppose the clustering mass of foliage girdled one of the most tranquilly beautiful church-yards in England. The visitor passes through a portion of Stoke Park towards a sombre group of trees, until a gentle turn of the path brings before him the still and solemn resting-place of many generations. All here is calm and peaceful; no stormy blast passes into this home of the departed; aged trees interlace their gnarled branches, to guard the sacred circle from the strife of the elements; neither do the burning rays of summer fall with rude heat on the clustering graves, but with a gentle and subdued light gild the ivied tombs and hillocks, on which violets lovingly dwell.

In this place Gray held communion with the spirit of solemn poetry; here descended upon him the deep expressive calm which breathes through the "Elegy." In yonder quietly carved and antique porch he sat, as imagination composed the histories of the dead.

One of these mouldering heaps suggested—

"Perhaps in this neglected spot is laid,
Some heart once pregnant with celestial fire;
Hands that the rod of empire might have swayed,
Or waked to ecstasy the living lyre."

Many years have passed since that time; the graves have increased, and the poet himself sleeps here; but the church-yard is yet marked by that solemn stillness recorded by Gray. The tumult of life has not violated the spot. Windsor's proud keep is seen afar; the fashion and pride of the land moves in the distance; but no jarring sounds enter here. Two sombre yew trees keep guard over the graves, which are thickly grouped beneath their shadow—

"Where heaves the turf, in many a mouldering heap."

The "ivy mantled tower" still affords to the "moping owl" a home, and imparts to the ancient walls a venerableness which time alone confers.

But where is the tomb of Gray?

You may look around for some sculptured memorial, significant of his burial-place. You examine a lonely tomb in the north-eastern corner of the church-yard; another at the north side of the chancel; all in vain. At length a small stone slab is perceived, fixed in the eastern wall, on which we read the following inscription:

"Opposite to this stone, in the same tomb upon which he has so feelingly recorded his grief at the loss of a beloved parent, are deposited the remains of Thomas Gray, who died August 1st, 1771."

No epitaph tells of the poet; the only lines on the tombstone relate to his mother and aunt. The epitaph

on the former is Gray's own composition,—a short but expressive eulogy on a departed mother by her only surviving son. The words are—

"In the same pious confidence, beside her friend and sister, sleep the remains of Dorothy Gray, widow, the careful and tender mother of many children, one of whom alone had the misfortune to survive her. She died March 7th, 1755, aged 66."

Many have expressed surprise not only at the absence of an epitaph, but also of a sepulchral memorial in the churchyard, to the poet's memory. This does not arise from forgetfulness of Gray; for a cenotaph was erected to his memory in Stoke park, in 1799, by Mr. John Penn. Three sides of this monument are inscribed with selections from the works of Gray. It may here be noted, that everything connected with the burial of the poet wears an appearance of extreme simplicity. What can be more brief than the entry of his burial in the parish records? where all we read is—

1771. Thomas Gray, Esq. was buried August 5th.

A few yards eastward from the church are the remains of the ancient manor-house, the scene of Gray's humorous piece, entitled "the Long Story." The opening stanzas intimate the history, and describe the former appearance of the house:—

"In Britain's isle, no matter where,
An ancient pile of building stands;
The Huntingdons and Hattons there
Employed the power of fairy hands,
To raise the ceiling's fretted height,
Each panel in achievements clothing,
Rich windows that exclude the light,
And passages that lead to nothing."

The mansion was taken down, excepting a wing, in 1789; when the present manorial residence was erected, by Mr. John Penn, the uncle of the present possessor.

Gray's house is still preserved, and every room connected with his history regarded with reverence. It is called "West End House;" and is about two miles from the church. The stone summer-house, where the poet often studied, is carefully preserved, but the mansion is undergoing extensive changes, under the direction of its proprietor, Mr. Penn.

Upon the poetic character of Gray, his finished eloquence, and varied learning, we need not here dilate. That he preserves the admiration of cultivated minds, must be inferred from the numerous visits made to his tomb. Travellers from the most distant parts of the earth often diverge from the great western road, for the church-yard of Stoke.

Frequently, in the bright days of summer, a party is seen to enter the quiet enclosure, and gather around the tomb. Some, poring over the enriched tombstone, attempt to decipher the epitaph; others, resting on some grave-hillock, sketch the most impressive point of view. Not unfrequently a twig of ivy is plucked from the church wall, and carried off as a treasured memorial to distant lands.

Thus, whilst the resting-places of the Huntingdons, the Hungerfords, and the Molines, are forgotten or neglected, homage is paid to the memory of him, whose only nobility was that of the mind.

The rapid sale of the late illustrated edition of Gray's poems, published by Mr. Williams, of Eton, is a further proof that his works retain their former hold upon poetic minds.

The stranger desirous of visiting the grave of the poet, has but to inquire at Slough the road to Stoke church, and half an hour's walk will bring him to the spot. If he can select a tranquil summer day, the quiet beauty of the scenery will repay his trouble, whilst a host of rich associations will be stirred up within him, and long remain a source of bright thoughts and pleasing reflections.

THE LAST WORD OF THE SINGER.

CHAP. I.

"It is a singular event," said Counsellor Bolnau, to an acquaintance whom he met on the High-street of the town of B——; "it is clear we live in evil times."

"You mean the history in the north," replied the other. "Have you, then, commercial news? Has the minister of foreign affairs, for the sake of old friendship, told you some of the particulars?"

"Ah! politics and state papers are nothing to me; as far as I am concerned things may go as they will. No, I mean the story of Bianetti."

"The singer? How, is she again engaged? It was said the conductor of the orchestra had quarrelled with her."

At this the counsellor of the board of trade drew himself up in astonishment, and exclaimed, "In what cavern do you live, that you know not what goes on in the town? So, then, you know nothing of what has happened to Bianetti?"

"Not a word, upon my honour; what is the matter?"

"Well, nothing more is the matter but that yesterday evening she was stabbed by some villain, and is now dying."

The counsellor passed among his acquaintances as a wag, who, when he took his morning walk on the High-street, between eleven and twelve, liked to entertain people with any thing which chanced to hit his fancy. His friend, therefore, was not much affected by this frightful piece of news, and only answered, "Do you know nothing more than this to-day, Bolnau? You must indeed be at your wit's end when you lay on the colours so strongly. When you again meet me in the street, do think of something more reasonable; otherwise I shall be compelled to make a circuit as I go home from the chancery office, in order to keep out of your way."

"So you don't believe it!" exclaimed the counsellor; "you don't believe it! Had I told you that the Emperor of Morocco was killed, then you would have pocketed the news with thanks, and asked for more, because you know that there such sort of things happen. But when a singer here in B—— has been wounded, and perhaps murdered, no one will believe it until he sees the funeral procession. However, friend, this time it is true,—as true as I am an honest man."

"Sir! consider what you are saying," replied the other, with horror. "Did you say Bianetti was really murdered?"

"She certainly was not dead an hour ago, but she lies in the last agonies; so much is certain."

"But, tell me, for heaven's sake, how could any one murder a singer? Do we live in Italy? Of what use is our much-extolled police? How did it happen? Assassinated? Impossible!"

"Do not cry out so murderously," answered Bolnau, soothingly; "the people are already putting their heads out at the windows to see what all the noise is about. You may lament, however, *sotto voce*, as much as you please. How did it happen? Ah, that is the matter; but as yet not a soul knows. Yesterday evening the pretty child was at the masquerade, as amiable and charming as ever, and at midnight the physician Lange was called out of bed with these words: 'Signora Bianetti is dying; she has been stabbed to the heart.' The whole town speaks of it of course, but speaks the greatest nonsense. The unfortunate circumstance is, that no one can get at the real truth; no one is permitted to be in the house but the physician and the persons who wait on Bianetti. It is known even at court, and an order was given that the guards were not to pass the house; the whole battalion was obliged to make a circuit, and go through the market-place."

"Shocking news, indeed! but does no one know how it happened? has no one the least clue?"

"It is difficult, in the midst of the various reports, to get at the truth. Bianetti, it must be granted, is a most respectable person, with whose conduct none can find the smallest fault. Yet now the people, and especially the women, when the good conduct of the poor girl is spoken of, shrug their shoulders, and insist on knowing every thing of her earlier life. Of her early life! she is scarcely seventeen, and has already been here half-a-year. Poor child! what do they call her early life?"

"Do not dwell so long on the preface, but come at once to the point," interrupted the other. "Does no one know who committed the deed?"

"That is precisely what I wish to know. It is said, a rejected or jealous lover has killed her. Indeed the circumstances are absolutely singular. It is likewise reported, that she spoke last night a considerable time to a person in a mask whom no one knew, and some persons say they saw the same mask get into her carriage. Nothing further is known as certain, but I shall soon get at the bottom of the affair."

"I know you have your own private channels of news, and no doubt you have some serviceable spirit in the house of Bianetti, who can inform you what goes on. There are people who call you 'the chronicle of the town.'"

"Too much honour! too much honour!" smiled the counsellor, yet appearing somewhat flattered. "This time, however, I have no other spy but the doctor himself. You must have observed, that I do not, according to my usual custom, walk up and down the whole length of the street, but that I keep between Charles-street and Frederic-street. Dr. Lange comes every day about twelve o'clock through this street on his way to the palace, and I stand here on the watch, just to catch him as he turns the corner."

"Then I shall remain likewise," said the friend, "with your permission, for I must hear exactly all the story about Bianetti."

"Worthy sir, do not so inconvenience yourself," replied the other; "I know you dine at twelve, and do not let the soup get cold. Besides, Lange may not be inclined to speak out before you; come rather after dinner to the coffee-house; there you shall hear every thing. Now you had better go, for here comes the doctor round the corner."

"I do not consider the wound absolutely mortal," said the physician Lange, after the first greeting. "The thrust appears not to have been surely given. She is again quite restored to consciousness, and, except from the weakness caused by so much loss of blood, there is, at least for the present, no danger to be apprehended."

"I am delighted to hear that," answered the counsellor, slipping his arm confidentially into the doctor's; "I shall accompany you a few streets until you reach the palace. But tell me, for heavens's sake, the particulars of this matter; we cannot at all understand how it could have happened."

"I confess to you there is a strange mystery in the affair. I had scarcely fallen asleep, when Johann awakened me with the news that a person dangerously ill desired to see me. I threw on my clothes, ran out, and in the passage there stood a girl pale and trembling, who whispered so low that I could scarcely hear her, that I must bring my materials for bandages, &c. with me. This rather astonished me; I leapt into the carriage, made the pale damsel sit beside Johann on the box, in order to show him the place, and away we went to the Lindenhof. I got out before the entrance of a small house, and asked the girl who the sick person was."

"I can readily imagine your astonishment."

"Astonishment, indeed, when I heard in answer, 'It is the Signora Bianetti!' I knew her only, it is true, by having seen her at the concerts; I scarcely ever had seen her more than thrice; but the mysterious manner in which I had been called to her, the dressings for a

wound which I had been requested to bring with me; altogether, I must own I was most anxious to learn what could have befallen the famed singer. A few steps led me to the entrance hall. The girl went in first, let me wait a few minutes in the dark, and then returned, sobbing and paler than ever. 'Step in, doctor; step in,' said she; 'but I fear you are come too late; the signora cannot live.'—I entered; it was a fearful sight."

The doctor stopped short; looked thoughtful and sad; a vision seemed to come before him, from which he appeared in vain to be able to free himself.

"Well, what did you see?" cried his companion, impatient at the interruption. "Do not keep me in suspense in this way."

"I have met with much in my lifetime," began again the doctor, after composing himself; "much which has made me shudder, much which has horrified me, but never any thing which so affected me as that sight. In a small, dimly-lighted apartment, lay a young woman on a sofa, pale as death. Before her knelt an old servant, who pressed a cloth upon her heart. I stepped nearer. White and rigid as a statue, the head of the dying one lay back,—the jet-black hair falling down in tresses: the dark brown eyelashes of the shut eyes formed a strange contrast to the dazzling whiteness of the forehead, the face, and the beautiful neck. The snowy drapery richly folded, which doubtless was the dress she wore when at the performance, was marked with crimson streaks which seemed to have come from the heart. All this in an instant shewed me it was Bianetti the singer. The old servant removed the handkerchief, and I saw with surprise a wound as if from a poniard, very near the heart. This was not a time to ask questions, though many were on the tip of my tongue. I examined the wound, and applied the bandages. My patient during the whole operation showed no sign of life, except shrinking with pain when I probed the wound. I then let her rest, and watched her sleep."

"But the girl and the old servant;—did you not ask them how it had happened?"

"I will own to you, counsellor, as you are my old friend, that when I saw nothing more could be done for the lady, I most plainly told them, that unless they explained every thing to me I would not move another step in the matter."

"And what did they say? Do tell me."

"About eleven o'clock the singer had returned home, but accompanied by a tall man in a mask. I must have looked rather suspiciously at both the women when they said this; for they again began to weep, and to assure me, with the most solemn protestations, that I must think nothing evil of their mistress; they had served her now for a long time, and she had never permitted any gentleman to cross the threshold except during the day. The younger one, who must have read many novels and romances, maintained that the signora was an angel of innocence."

"That I likewise affirm," said the worthy counsellor; "no one can speak evil of Bianetti. She is a gentle, good child, and how can she help that she is beautiful, and must earn her bread by singing?"

"Believe me," replied Lange, "in this the physician has an unerring psychological measuring rod. One glance at the pure countenance of the unhappy girl convinced me more of her goodness, than all the asseverations of her waiting women. But hear the rest. The young lady came with the stranger into the apartment, and bid her maid withdraw. The damsel, however, lingered near the door—from curiosity, doubtless, at the unusual occurrence of such a late visitor. She heard a vehement exchange of words between her mistress and the deep hollow voice of the man, carried on in French. The signora at last burst into tears, wept bitterly, and the man used shocking oaths. Suddenly she heard her lady scream, and, no longer able to contain herself, she rushed into the room, while at the same moment the stranger flew past her into the passage and towards the

steps. She followed him a few paces, heard a terrible noise as if he had fallen, and believes he must have tumbled down stairs in his haste. She then heard as if from the bottom of the staircase a groaning and sighing like some one in pain; but she was afraid, and ventured no further. She came back,—ran to the signora, whom she found bathed in blood, with her eyes shut. The girl knew not well what to do; however, she awoke the old servant to watch beside her mistress, while she came to me, in order, if possible, still to save the signora."

"And did Bianetti herself say nothing? Did you not interrogate her?"

"I went instantly to the police, aroused the inspector, and even then at midnight, every inn, every beer-shop, every corner of the town was searched; no one had passed through any of the gates; and, since that, every person has been strictly examined. The people who live in the upper part of the house first knew of the accident when the police came to search the place. It was incomprehensible how the murderer could get away, for he must have been much hurt by his fall, as a quantity of blood was seen at the bottom of the stairs, and it is not at all unlikely that in falling he had wounded himself with his dagger. It is the more surprising how he could have escaped, as the house-door was locked. Bianetti awoke about ten o'clock next morning, and, in the report to the director of the police, said that she was utterly ignorant of who the person was, and could not give the slightest information. All the surgeons and physicians have received orders, that, if they should be called to any patient who has been injured by a fall, or by a wound from a dagger, notice should immediately be given, so that, if possible, the murderer may be traced in this way. Thus the matter stands. However, I am as thoroughly convinced as I am of my existence, that a deep mystery hangs over the affair, which the singer will not unfold. Bianetti is not the person who would permit any one perfectly unknown to her to accompany her home. Her waiting maid, who was present at the examination when the report was given to the police director, thinks so likewise. When she saw her mistress wished nothing to be known, she said not a word about the quarrelling she had heard, and gave me an imploring look not to betray her. 'It is a horrible affair,' she said, as she accompanied me afterwards to the door; 'but nothing on earth shall tempt me to reveal what the signora wishes to remain concealed.' She, however, confessed one circumstance to me which may be the means of throwing some light on the matter."

"Well, and may I not be made acquainted with this circumstance also?" asked the counsellor. "You see in what a state of anxiety I am: do not, for heaven's sake, keep me in suspense, or I shall be certain of another fit of illness."

"Listen then, Bolnau; collect your senses, and tell me, does any other Bolnau live in this town except yourself? If another exists in the world, can you tell me where?"

"With the exception of myself, not one in this town," answered Bolnau. "When I came here eight years ago, I was thankful that I was not called Black, White, or Brown, not Meyer, Miller, or Bauer, for in that case all manner of unpleasant confusions might have happened. At Cassal I was the only man of the family, and now there is no longer a Bolnau on the face of the earth except my son, that music-mad fool, who, since he sailed to America, has left us uncertain whether he be dead or alive. But why do you ask about my name, doctor?"

"Well, it cannot be the counsellor, and his son is in America. It is now a quarter past twelve, the Princess Sophia is ill, and I have already talked too long, so adieu: au revoir!"

"Not a step," cried Bolnau, holding him firmly by the arm, "not a step until you tell me what it was the girl told you."

"Well, if you must have it, Bolnau, keep it quiet.

The last word of the signora before she fell into that faint, was *Bolnau*!"

Counsellor Bolnau had never been seen to walk along with such a sad and earnest face as on that day when Doctor Lange had left him before the palace. Formerly he had been accustomed to step on briskly and merrily, greeting all the ladies he met, old and young, with the most friendly smiles, laughing with his acquaintances of the other sex, telling them all manner of news, so that few would have thought he was a man of sixty. He seemed, likewise, to be in possession of every comfort; had amassed by speculation a tolerable sum of money; and now, satisfied with his fortune, he lived in the town of B— with his wife, contented and free from care. The only drawback to his comfort was a severe nervous disorder, which now and then attacked him. Year after year passed away happily and pleasantly. He had an only son, whom the old gentleman had destined to run the same business career as himself. The son, however, only lived and moved in the kingdom of sound; music to him was everything, and the trade and commerce of his father he despised as low and vulgar. The father was of an obstinate disposition, so was the son; the father was easily excited, so was the youth; the father carried everything to its extreme, so did the son: thus it may be easily conceived that it was impossible for them to live with each other. When the son had reached his twentieth year, his father was fifty, and he wished now to retire from business, give it up to his son, and live in quietness and peace. All, indeed, was soon peaceful enough; for, one fine summer evening, the son, along with some pieces of music, disappeared, and was no longer to be found. He had arrived safely in England, however, and afterwards he wrote a friendly epistle to his father, saying that he was going to America. The counsellor wished him a happy journey, and retired to B—.

Thoughts, however, of the music-mad fool, as he called his son, now and then oppressed him; for he had commanded the latter never again to appear before him, and of course it was not to be expected that he would return uncalled for. Indeed, at times, the old gentleman fancied that he had done wrong in wishing to compel his son to devote himself to business. But time, society, and a cheerful disposition did not permit these reflections to rest long in his mind. He lived happily and pleasantly, and those who wished to see him in all his glory had only to walk, between eleven and twelve o'clock, along the broad street of B—. If they met there a tall thin man, whose neat dress, eyeglass, riding whip, and whole outward bearing seemed but ill to agree with his grey hairs, who was seen greeting almost every one in passing, chattering with much gesticulation now to this one, now to that, they might rest assured that this was Bolnau. The worthy counsellor was in short one of the *characters* of the good town of B—.

But to-day all was changed. The sad story of Bianetti had affected him almost too deeply, and the last words of the doctor had completely unhinged him. "*Bolnau*," Bianetti had uttered, just before she became unconscious! His own honourable name she had mentioned under such suspicious and dangerous circumstances! His knees trembled, his limbs seemed scarcely able to support him, his head sunk heavily and thoughtfully on his breast.

"*Bolnau*!" he ejaculated; "counsellor of his majesty's board of trade! What if the singer should die! if the waiting maid should unfold what she knows, and make the inspector of the police acquainted with all the particulars of the murder, and with that ominous word? What might a skilful advocate not make out of one single word! especially when his vanity would be stimulated in shewing his acuteness in such a '*cause célèbre*'?" He eyed, with a most despairing look, the house of correction, whose gable was seen in the distance. "In that place, *Bolnau*! by special favour, and in consideration of so many years' service.

When an acquaintance passed and nodded to him, he instantly thought, "Ah! he already knows about the matter, and gives me to understand as much." If another passed without greeting him, nothing appeared more certain than that he did so intentionally, to avoid coming in contact with a supposed assassin. "Little is wanting," he thought to himself, "to bring me in guilty of murder!" It was, therefore, no wonder that he made a long circuit in order to avoid the office of the police; for might the inspector not be standing at the window, see him, and call out, "Worthy sir, will you have the kindness to walk in for a few minutes? I have something to say to you." Was he not aware of a certain shuddering? Did he not feel as if his features were assuming the expression of a poor criminal, lest it should be believed that it was he whom the singer with her last word had accused?

It now occurred to him how injurious such excitement was to his constitution; he anticipated a fresh attack of his disorder: agonizingly he looked for panes of glass to divert his mind, and to calm himself by counting them; but houses and streets all danced before him, the very steeples seemed to bend mockingly towards him, a delirious terror seized him, he ran through the town, until, exhausted, he sank down in his own house, and the first question, after he had in some measure recovered, was, whether there had not been a police officer asking for him?

Towards evening, when Doctor Lange visited his patient, he found her much better than he had anticipated. He seated himself by her bedside, and entered into conversation about the unhappy accident. The signora rested her arm on the pillow, while her delicately formed hand supported her beautiful head. Her countenance was still very pale, but even the exhaustion of her strength seemed to lend an additional charm. Her dark eye had lost nothing of that fire, of that peculiar expression, which had attracted and interested the physician when he first saw her in public. Although Doctor Lange was a man of grave habits, and past the age when imagination lends its aid to our admiration of the beautiful, he nevertheless confessed that such a finely formed head, such a lovely countenance, he had seldom if ever beheld. The features were far from regular, yet over the whole there was such harmonious grace and repose as almost puzzled the good doctor to account for. But his psychological studies eventually solved the riddle. It was that purity of mind, that nobleness of nature, which shed over those youthful features such spiritual brilliancy and loveliness.

"You appear to be studying my countenance, doctor," said Bianetti, smiling. "You sit looking at me, so quiet and thoughtful, that you forget what I asked you. Or is the answer too unpleasant, you think, for me to hear? May I not be made aware of what is said about this accident?"

"Of what benefit could it be were you to know all the foolish conjectures which idle people first invent, and then repeat? I have just been thinking how distinctly your soul is imaged in your countenance. You have peace in yourself; why, then, should you trouble yourself about the opinion of others?"

"You evade my question," she replied, "and seek to escape from it by complimenting me. Should I not be anxious about the opinion of the public? What right-minded young girl ought thus to place herself beyond the opinion of society, and be quite indifferent to what may be said of her? Or perhaps you think," added she, more earnestly, "I should ask nothing about it, because I belong to a class who are but little esteemed? Confess to me, then, that you believe me to be light-minded."

"No, certainly not," replied Lange; "I have never heard anything but what is good of you, *Mademoiselle Bianetti*, and of your quiet retired manner of living; you are much respected, although you are so isolated, and exposed to so many cabals. But why will you know

precisely what people say, when I, as your physician, do not think such news at all good for you?"

"I pray you, doctor, do not torture me," she exclaimed; "I read plainly in your eyes that evil is said of me. Why will you keep me in suspense, which is much more dangerous than even the truth itself?"

This last reason the doctor found undeniable;—during his absence, might not some loquacious lady come in, and repeat things much more annoying than he could say?

"You know the people here," he answered. "The town is tolerably large; but a piece of news of this kind shows how very village-like our citizens can gossip. It is true you are the topic of conversation; this cannot surprise you; and, as nothing certain is known, then—all manner of strange tales are invented. For example, it is reported that the person in the mask, who was seen speaking with you at the masquerade, and who, without doubt, is the same who committed the deed, is a——"

"Well, do speak out," entreated the signora, in the greatest anxiety; "finish the sentence."

"It is said he was a former acquaintance, who had loved you elsewhere under other circumstances, and who, out of jealousy, sought to kill you."

"Oh!" she exclaimed, while tears came into her eyes, "how hard is the lot of a poor girl who is without defence and support! But speak on, doctor, I beseech you; there is still something behind, which you do not tell me. In what town do the people say I——"

"Signora, I thought you had been stronger," said Lange, grieved at the excitement of his patient. "Indeed, I now repent of having said so much. I never would have done so, had I not feared that others, unasked, might have come, and repeated these idle stories."

The signora quickly dried up her tears.

"I will be calm," she said, smiling sorrowfully, "calm as a child in repose; nay, I will be cheerful, as if these people, instead of now condemning me, were showering upon me a thousand bravos. Only tell me the rest, dear, kind doctor!"

"Well, the people speak stuff," continued the doctor, in a tone of vexation. "It is said, that, when you lately played in Othello, there was a foreign count in one of the front boxes, who claimed acquaintance with you, and who had seen you some years ago in a certain house in Paris. But—bless me! you become paler and paler!"

"It is nothing; merely the shadow of the lamp. Go on—go on."

"This tale at first was reported only in the higher circles, but now it has become quite public; and, since this accident has happened, the two things are put together—the former connexion in that wretched house in Paris, and the present catastrophe."

During this speech, the most deadly paleness and the deepest crimson passed alternately over the expressive features of Bianetti. She had raised herself higher, as if not to lose a word of the horrid recital. Her burning eye seemed to fix itself on the lips of the speaker; she scarcely breathed; the beating of her heart was arrested.

"Now it is over," she said, raising her eyes with a sweet expression towards heaven. "Now it is ended; should he hear this, it will be too much for him. Ah, wherefore did I not die yesterday? then should I have been in heaven with my dear parents, and their child would have been comforted for the scorn of this cruel world."

AN INCIDENT OF EMIGRANT LIFE.

(From Rowcroft's *Tales of the Colonies*.)

THIS most interesting volume has now been some time before the public, and is very generally known and

(1) *Tales of the Colonies; or, the Adventures of an Emigrant*. By Charles Rowcroft, Esq., a late Colonial Magistrate. Fourth Edition. London: Smith, Elder and Co. 1845.

appreciated. The events narrated in it are, doubtless, for the most part, fictitious, but yet, we have reason to believe, have so far a foundation in fact, that they may be relied upon as presenting a true, as they certainly do a very vivid, picture of the adventures, the struggles, difficulties, and successes, of an Emigrant in Van Diemen's Land. We regret that the extract we here give does not bring the adventure it relates to its final conclusion. To do so would have carried us far beyond the limits within which we are obliged to confine ourselves. But we may as well set the minds of our readers at ease, by informing them, that it ends happily.

The family which we were hastening to help had not arrived on their land more than three weeks, and consisted of a Mr. Moss, his wife, a daughter about seventeen, and two young boys of seven and six years of age. They had been well off at one time, but a succession of misfortunes had reduced their means to an income too small for a bare subsistence in England, but amply sufficient for a prosperous establishment in Van Diemen's Land. Mrs. Moss had been highly educated, and her daughter was possessed of more than the usual accomplishments of her age, and of their former station. The arrival of this young lady at our settlement seemed, as a young friend of mine expressed himself, "like the springing up of a beautiful flower in the wilderness." We all felt a strong interest in these new settlers, and we were ready to risk much to serve them.

It was my plan to cross the river by the trunk of a tree, which had fallen over from the opposite bank, and formed a natural bridge, a rough one, and not easily to be passed by day; and in the dark the passage over it was rather a dangerous experiment. There was a dead silence around, which seemed more terrible than the cries by which we had recently been alarmed, and filled us with ominous fears for the fate of our neighbours.

We quickly reached the crossing-place, and in a low whisper I warned my companions of the dangerous points of the bridge. My young neighbour, Beresford, was particularly anxious on this occasion. I did not remark it at the time, as we were all active and excited; but subsequent events made me remember it. The river at this spot is narrow, and flows with the rapidity of a mountain torrent. I observed in the gloom that Beresford's two companions hesitated at the sight of this difficulty.

"I wish we had light for this work," said one; "I can see the foam of the water, and I think I can see something which I suppose is the tree lying across it; but it's an awkward job this."

"Speak low," said I; "you don't know what ears may be listening to you."

"Speak low!—why, the roaring of this water is enough to drown all the noise that we shall make on this side. The river seems to be angry to-night. I hope you are sure of your tree-bridge. I should not like to find myself in that boiling gulf below; if I did, I'm inclined to think no one else would find me."

"It's an ugly sight," said the first speaker; "but if Thornley is sure of the passage, I'll venture it; and don't let us lose any time, for if we are to do any good, we must be quick about it."

"Well, we are in for it; we can't go back; who leads the way?"

"I'll lead the way," said Beresford; "I'm the youngest of the party; now, follow me."

"No," said I, "that's my business; I know the passage best...."

"Perhaps not better than I do," said Beresford; "come on."

"How can that be?" said I; "you have not occasion to cross the rivers so often as I have."

Beresford said something which the noise of the waters prevented me from hearing. I led the way, and began to crawl over on my hands and knees.

I must confess that it was not without a momentary tremor that I beheld the white foam of the torrent dashing furiously past beneath me. A single false movement was death; and the disagreeable feeling came over me, that if an enemy should have had the foresight to guard this point, I and my companion in our defenceless position were exposed to sure destruction.

With these thoughts agitating me, and the darkness of the night, the incessant rushing of the water, and the danger of our expedition, all tending to inspire doubt and fear, it is impossible to describe my sensations, when, stretching forward my arm to feel the way before me, my hand encountered what seemed to be a human head of hair. I was clinging to the trunk of the tree, in a position disabling me from the use of my weapons, nor indeed did the necessity of holding fast allow me to have more than one hand momentarily disengaged in my creeping posture. All sorts of fears were instantly conjured up in my horror and bewilderment.

My first thought was that the bushrangers, suspecting our intention, were lying in ambush, and every instant I expected to receive a volley from the opposite bank. Then visions of the natives arose, and I actually crouched up, the better to defend myself against the shower of spears which I knew would be the beginning of their attack. My companions behind me, embarrassed by my stoppage, and not knowing the cause, urged me to proceed, as the swift running of the white waters beneath their eyes was beginning to produce giddiness. For nearly a minute I was totally at a loss what to do. At last the mist with which the sudden alarm had enveloped my brain began to disperse; I reasoned with myself rapidly and decisively.

I knew that to go back over our perilous bridge was, in the dark, and encumbered as we were with our arms, impossible. Go on we must. As I formed this resolution, it suddenly occurred to me that the form before me must be in the same embarrassment as to advancing or retreating as myself; and that, at any rate, the chances were equal in the event of a struggle for mastery. Emboldened by this thought, I stretched out my hand again, and met with the same object. It seemed certainly a human head! It was motionless, and had remained, as well as I could judge, in the precise position in which my hand lighted on it before. But the second time, the hair struck me as being softer, and the sensation flashed across me that it was not a man's hair that I was feeling. My wonder increased by this new discovery, and my fears yielding to my excitement, I extended my arm, and traced the long ringlets of a woman! My alarm was now changed to wonderment and horror! Laying my hand on her face, I found it deadly cold; her arms were encircled round the trunk of the tree, but they hung lifeless; and I at once guessed that the female, whoever she might be, in attempting to cross the river by this dangerous place, rendered more dangerous and frightful by the darkness, had been terrified by the roar of the raging waters, and had fainted.

What to do in this unexpected dilemma, I was at a loss to imagine. My companions began to be alarmed, and the infection of superstitious fear was beginning to unnerve them. In these perplexing and dangerous circumstances, I felt the necessity of coming to some prompt decision. The female before me had evidently either fainted, or, perhaps, overcome by fear and exhausting excitement, was dead! But her lifeless body formed an obstacle to our further progress; and I considered that, at that very moment, while I was deliberating, the work of death might be going on among our neighbours, whom we were endeavouring to succour, and that our assistance was prevented by an impediment to whom all help, perhaps, now was vain.

With this feeling, that four lives were at stake on the trunk of the tree, trusting to my guidance, and that

other lives were jeopardized by the delay of our assistance, the exquisitely painful thought came over me, that stern necessity justified the sacrifice of the one for the many; and that we must risk the dislodging of the body of the woman, for the purpose of completing our passage across the river. The form lay motionless, and on the balance on the slippery trunk of the tree; the slightest motion was sufficient to overturn it into the boiling and roaring gulf below! My companions urged me to proceed. I explained to them in a few words the cause of my stoppage; but they still continued to press me to go forward, their fear of the present peril overcoming their apprehension of the remoter hazard, should the bushrangers be in ambush on the other side, and waiting for us to rise up to get the surer aim; they vehemently and angrily complained that they could no longer keep their hold, and that they could neither recede nor advance.

Impelled by the imminency of the danger, my senses benumbed by the cold, and my mind confused by the unceasing roaring and foaming of the furious waters, my presence of mind almost forsook me. I stretched out my hand again; the form was still motionless; but I traced the outline of the small and delicate features of that cold face, and quick as lightning the thought of my own daughter flashed across me. That thought restored my wandering senses. I became instantly calm and collected; and, with a sort of desperate energy, I raised myself to a sitting posture across the tree, and propelling myself with my hands towards the object before me, I took firm hold of her long tresses, to prevent the body from slipping from its dangerous resting-place. All continued to be still around, except the noise of the river. I now raised my voice to overtop the roaring of the waters, and turning my head towards my wondering companions, I communicated to them my intention to preserve the body, dead or alive.

"It is the form," said I, "of a young girl."

"A young girl!" exclaimed Beresford. "Then ——"

"In the name of Heaven," said the man behind him, "do not stay talking. Man or woman, young or old, we must pass now to the other side. Necessity has no law. Move on quickly, for I shall not be able to hold on half a minute longer."

"Yes," cried out the hindmost, "move on—move on—I dare not attempt to move backwards. As it is, the cold has so benumbed me, and I am so giddy with the roaring of these waters under me, that every moment I expect to slip off. Move on, I say; this is no time for fine feelings; our own lives are at stake. We are lying here to be murdered, if there are really bushrangers abroad—and this affair looks like it. Move on, I say, or by —— I shall be tempted to make a way for myself."

"Stop," said Beresford; "stop—for God's sake, stop; I have a horrible presentiment of who this poor girl must be. We must make an effort to save her. Let me try to pass you (speaking to me); or stay—I think I see a branch below, that the water is rushing against; I will make the attempt to save her, if I perish."

With that my young friend, passing his fowling-piece to me to hold for him, threw himself by a bold and active movement under the tree; and clinging by the broken boughs, by a succession of desperate struggles succeeded in gaining a position on the other side of the female, where the thick part of the trunk afforded a surer footing. He then gradually drew the motionless form towards him, and taking it in his arms, bore it to a small distance from the river, and laid it on the grass, glistening with the white frost. In the meantime we had all succeeded in crossing the bridge safely; and the men finding themselves on firm ground, soon recovered their presence of mind and courage, and were ready for action. There was no time to be lost. The spot which we had to reach was less than a quarter of a mile distant, and we were all eager to move forward. But what was to be done with the lifeless female? Young Beresford

had been endeavouring to restore warmth by chafing the hands of the inanimate body, but without success. It seemed as dangerous to leave it on the cold ground, should life be not quite extinct, as to bear it with us. But decision was necessary; and, yielding to the entreaties of Beresford, whose interest in the inanimate form seemed overpowering, we hastily agreed that he should bear the body with us, while I advanced before, being best acquainted with the locality, his two friends following close after me. In this order we approached the spot where our new neighbour had raised his homely dwelling. * * *

All this time Beresford had not spoken a word. I found him, as I passed, stationed close to the door. There was a light outside the hut now, as some of the party had kindled a fire in front of it, which threw its glare around for a considerable distance. All our party now assembled together; and it was agreed that we should keep watch round the place during the night, and that at daybreak we should go in search of our neighbour. We made a diligent examination of the parts about, as we conjectured that the bushrangers might have bound and gagged him, and left him at a distance from the hut; but we could find no traces of him or of them. With one accord I was chosen the leader of the present expedition, as being the oldest settler, and the one best acquainted with the bush. I had mustered my party with the view of allotting to them their different stations, when a cry from the hut arrested our attention, and young Beresford came running to us, and crying out,—

"She is saved! She is saved! She is alive! She is breathing!—And now," said he, "for her father; that's the next thing to attend to. It's the first inquiry she will make when she recovers her senses, and if she should suspect the worst, the consequences in her present state I am sure would be instantly fatal."

"That is our object," said I; "we must find the poor fellow. And now let us make our arrangements. There are twelve of us; I dare say we are strong enough to cope with the other party; for we have the right on our side, and that is a tower of strength. I propose that at break of day we should remove this family to my cottage. In the mean time it is necessary that we should prepare ourselves for bushing it, for some days perhaps. Let four men go to my cottage, and procure all the necessaries that we shall want, and don't forget the kangaroo rugs, for the nights are cold, and we shall need them."

"Don't forget some brandy," said one.

"Nor the tea and sugar," said another; "there's nothing like a cup of tea in the bush; it's more refreshing than all the spirits in the world."

"Bring plenty of pannikins," said a third; "one apiece will not be in the way."

"Take care to bring plenty of rice," said I; "it lies in a small compass, and is more handy for the bush than flour; but tell them at home to make as many small dampers as we can carry; and bring away all the baked bread in the house. My men will help you to carry the things."

"How are your powder-horns?" said young Beresford.

"Plenty of powder, but little shot."

"Ask for the bag of slugs and the little bag of balls that hang by my bed's head," said I; "and bring a dozen or two of spare flints with you—and anything else that you think will be useful."

"Would it not be well," said one, "to give notice to the magistrates?"

"Right," said I; "who will volunteer to go over the plain this dark night, and tell the one farthest off?"

"That will I do," said a spirited young fellow; "I know every inch of the way; if I meet with anything, I will fire off my piece."

"You can tell one of my servants to apprise the other magistrate of this night's work, as his house is in a line from my cottage. If he is at home, he will be with us

by daylight, you may depend on it; for he is young, and has no wife nor child, and he likes these expeditions. It may be useful, too, to have a magistrate among us to sanction our proceedings, so ask him to come with us, and say that we should be obliged to him if he would be our leader; and you may as well say that no one could do it so well as himself. There's nothing like being civil, and we all like to be flattered a bit. Who knows what it is o'clock?"

"Not eleven yet."

"Then we have the whole night before us."

"And so have the bushrangers; they may get well away before morning."

"No," said another; "it is impossible to travel fast on a night so dark as this. Let us have daylight before us and get well on their tracks, and they can't escape us."

"Shall we try the dogs after them?"

"No; the kangaroo dogs are of no use as blood-hounds; they will track those they are used to for any distance, but they don't understand being set to track strangers. But we must take some dogs with us, for we shall want to pull more than one kangaroo for our dinners before we have done, I'm thinking."

"Here is one to begin with," said I, as I felt a cold nose thrust into my hand. "Hector and Fly are growing old now, but here's one of their breed, and here's another. They have found me out, you see. Now let some one get two more, so that the four may not all belong to one party, in case of being separated. Shall we take any horses? I have three in the stable, and four more in the bush that are sure to come for their corn in the morning. Perhaps they're in the open stable now, for they often come up and get under shelter when the nights are wet or cold."

It was agreed that four of the party should be mounted, to act as scouts; but as it was likely that the marauders would choose the most inaccessible paths, where a horseman would be taken at great disadvantage, it was thought best that the rest of the party should be on foot.

"Take another horse, as a pack-horse," said one, "to carry our provisions, and let one of your men lead him."

"A bright thought!" said I, "and now I think we shall be well prepared for the bush; so I recommend all to sleep as much as they can till daylight, that we may be the fresher for the work."

"Oh, never mind sleep; we are too much excited to sleep to-night; but let us have some supper."

"Will you come to my cottage, or stay here?"

"Oh, stay here; we will not leave the poor woman to-night; no, we'll sup here, and make a bush night of it to begin with; but it's terribly cold. There," said the speaker, throwing a heavy log on the fire, which made the sparks fly up like a fire-work; "there's some food for you; and there's another and another. By George, we'll have a jolly fire, and make a merry night of it. I say, how's the young woman?"

Beresford required no further hint than these words; looking at me, I gave him a nod, and he disappeared in an instant. He tapped gently at the door of the hut, and returning to us immediately, whispered to me—

"She lives! she has not spoken; but she sleeps."

"Good," said I; "and now do you sleep too; we shall want all your strength to-morrow."

He smiled, and shook his head—"I will never sleep," said he, "till I have found her father."

"I do not doubt," said I, "that you will spare no exertion to recover him; and now let us try to get some information about this sad affair. Is the mother cool enough to tell us her story? It would be a help to us to know something of the character and numbers of the party who attacked the hut. We should not lose any time by it, as it would be useless to start in pursuit of the bushrangers till daylight. See if the poor lady can leave her daughter for a while; the surgeon can sit by

her while the mother is away; and we ought to know all the particulars as well as she can tell them."

Beresford went to the hut, and presently returned with Mrs. Moss, from whom we were happy to learn that her daughter still breathed and slept. We placed the afflicted lady on a log of wood before our bush-fire, and our sentinels being planted in suitable places, to guard against surprise, she described the attack in the following terms:—

"I hardly know where to begin:—I have very little to tell. It all seems now to have passed in a moment. We were sitting round the fire, I and my husband, and my poor Lucy and the two children. Since we came up here, my husband always used to keep his gun in his hand, or else close by him, ready for use, for our greatest horror was these bushrangers, and I don't know really whether I was most frightened to see him always carrying that eternal gun about with him, or to see him without it; though it would have been but little protection against so many! Perhaps it's all for the best. If he had fired, and killed one of them, it might have exasperated them, and they might have done worse. Well, we were assembled round the fire, as I said, and my husband was particularly cheerful; he was sitting in the corner close to the window, with his gun leaning against the wall close to his hand, when he got up to close the shutter on the other side, as the wind was chilly.

"It seems that we had been watched all the evening, and I suspect one of our men (we have only one man besides the shepherd) was a spy on us, for my husband had left the corner where his gun was, only for a moment, when a man in a kangaroo jacket rushed into the room, and got between my husband and his weapon, which he seized hold of, and pointing his own gun at my husband, commanded him to throw up his hands over his head, or he would fire.

"We were all in a cluster together, and my husband fearing, I dare say, that we might be wounded or killed, held up his arms. On this the bushranger threw his gun over his arm; but my husband in an instant rushed at him, and clasped him round the body. In the struggle, the bushranger's gun went off. But in the meantime more bushrangers had come; two of them immediately seized my husband from behind, and the first struck him over the head with the end of his gun, which I think stunned him for a time. They then bound him tightly hand to foot, and at the same time, two of them held me and bound me also, and another man took hold of the children. Looking round, I missed Lucy, and guessed that she had escaped from the back window of her little bedroom. God help her! I hardly know whether to wish she may be restored to life and consciousness or not. But God's will be done!

"Well, gentlemen, when they had bound my husband, they asked him where he had put his money; for being new settlers, we had been so imprudent as to bring nearly a thousand dollars with us, besides a little plate, and our watches, and other articles of value, of which, no doubt, the bushrangers had information. My poor husband was scarcely recovered from the stunning blow of the bushranger's gun, but he declared that we had no money; that we were poor settlers, and had nothing with us but a few necessities, such as flour and tea and sugar.

"The man who had first pointed his gun at him, now placed it close to his head, and swore most horribly that if he did not instantly tell him where the money was hid, he would blow out his brains. This man seemed to be the leader.

"Money," said he, "we will have; we know you have got it, so tell us where it is, or—and here he swore a dreadful oath—"you shall have the contents of this barrel through your brains."

"I was held by two men, who had tied a handkerchief over my mouth, and it was in vain that I struggled to

get loose. The bushranger put his finger on the lock of his gun, and I heard a click; I knew well what that click meant. In another instant I expected to behold my poor husband's head shattered to pieces. With a desperate strength, which nothing but despair could have lent to me, I loosened one arm, and tearing the handkerchief from my mouth, I exclaimed, 'Oh! tell them, tell them! For God's sake tell them!—life is better than money...'

"Oh—ho!" said the leader, "so there is money after all. Then I think I'll find a way to get it. Here," he said to one of the men, "put your musket close to this gentleman's head; that's right—now cock it—now put your finger on the trigger, and if he offers to cry out—fire! And now for the lady. Just put the handkerchief over her mouth again, and this time take care she doesn't get it off again; a woman can't hold her tongue though her husband's brains may be blown out from her talking. In the mean time, ma'am," said he, with a sort of mock politeness, "I'll trouble you to walk into the inner room. I should not like to shock a lady's nerves, nor a gentleman's neither, with what is usual in these cases."

"I will not move," said I, horrified at his words. "I will not move; I will not leave my husband and my children. Kill me, if you will, but here I will stay."

"By no means," said the mocking bushranger; "we never wish to kill anybody if we can help it, that's not our game; but if you will not walk, you must be carried."

"The two men who held me then lifted me up in an instant, and carried me into the bedroom, where they threw me on the bed.

"Now," said the leader, "is the lady put comfortably to bed?"

"Ay, ay," said the man who held me down; "we've got her tight enough."

"You see," he said to my husband, for I could hear him speak plainly, as the two rooms are separated only by the log partition, "you see how things are; you had better tell at once, before we proceed to further extremities."

"Extreme terror and faintness had kept me silent till this moment, but now fear for my husband and my children, as well as the horror of my own condition, overcame all other feelings, and I cried out, 'I'll tell, I'll tell. Don't fire. Take up the stone before the hearth—the money is there.'"

"The leader immediately desired some one outside to bring a strong stake to lift up the stone, telling him to be quick, for they had no time to lose, as they had far to travel before morning. Then I heard them remove the stone, and the dollars clinked as the man pulled out the bag and threw it on the floor. The sight of the heavy bag, and the sound of the money, I fancy, put the party in good humour, for the men who held me relaxed their hold, and one left, telling the other not to lose sight of me.

"Presently I heard the leader say—

"Where's the young girl?"

"No one seemed to know.

"By —," said he, "the young husky has escaped, and she will give the alarm. Be quick, my men, quick—quick; leave nothing behind that you can carry away—blankets, sheets, clothes—everything. We shall want them when we get to the lake. It's a pity, though, that the girl has escaped. She will set her father free, and that may be awkward for us. Stay; we'll take him with us, and then he can't give any information about us."

"To shoot him is the shortest way," said one.

"Hang him," said another. "Chuck him into the river, and there he'll be snug till somebody finds him."

"Don't stand talking about it," said a third; "shooting him would give the alarm, and throwing him into the river is unnecessary trouble. Just lend me a bit of cord, or a silk handkerchief, and I'll warrant he'll be quiet enough after."

"I conjectured he was about to strangle my helpless husband, for I heard the leader say—

"Step!—no murder, if we can help it. We can do that with him at any time, if his living is likely to harm us. For the present, we will take him with us. Loose his legs, and bind his arms behind his back. And now, let us be off. But first let us make the lady safe."

"I was taken accordingly into the sitting-room; and then they bound me fast, and left me as you found me. My husband had been silent all this time, with the object, no doubt, which he carried into effect when he was removed outside the hut. When he found himself on the outside, where his voice could be heard, he immediately set up a loud shout for help, that made the woods ring; he was answered by screams near the river, which proceeded, I do not doubt, from Lucy. My husband's cries were instantly silenced.

"Gag him!" cried out a voice.

"Let us knock that young vixen on the head before we go," said another voice; "she will rouse the neighbourhood, and our plan will be defeated."

"It's too late," said the leader; "the alarm is given already. It would do us no good to put the girl out of the way now; we should only lose time; we must be quick, and place a good distance between us, before we can be pursued. We shall gain a march, for we cannot be tracked till daylight; but we can travel all night, and so get well a-head."

"With that they left me, threatening me and my children with instant death if I uttered the least sound of alarm. I think I must have fainted; for I remember nothing more, till I was aroused by the door of the hut being burst open, which the bushrangers, I suppose, before they left, had fastened on the outside."

"How many in number," said I, "do you think they were?"

"I cannot tell; I think there must have been eight or ten at one time in the hut; at the same time, I heard the voices of some outside. All those whom I saw were armed with a gun of some sort. They were very wild-looking; the leader had on a kangaroo-skin jacket, and he did not look very ferocious, but he was very determined."

"It was your husband's and your daughter's cries," said I, "that we heard on the other side of the river; and it is plain, from your story, that your daughter endeavoured to cross the river for help, but was terrified by the roar of the waters and the difficulty of the passage, and that, overcome with exhaustion, she fell into the fit on the trunk of the tree in which we found her. Let that fortunate escape," added I, "inspire you with the hope that we may be successful in finding your husband uninjured."

The lady then returned to her daughter; and our companions, who had gone on their several missions, having returned, we passed the remainder of the night by the fire, planning our next day's expedition, and giving and receiving mutual information on the best course to be pursued, and the likeliest track of the bush-rangers.

THE

SHEPHERD OF THE GIANT MOUNTAINS.¹

From the German of Fouqué.

BY S. M.

Love ye to listen to a goodly tale,
Full of simplicity, yet full of marvel,
Brightness, and beauty, like the days of old?
Then follow me,
Back through full many a hoary century!
Come to the Giant Mountains,
Which separate Silesia from Bohemia—

(1) See Engraving, p. 289.

Deep in the deepest of their shadowy glens,
Just at the hour when Eve her dewy mantle,
Streaked with a few faint lines of sunny gold,
Spreads forth, admonishing to sweet repose!
But in the mountain-woods
The shepherds roan in terror to and fro,
Gaze upward fearfully, and, if a sound
Cleave the gray clouds above like rustling wings,
Dive under bush and reed, and murmur hoarsely,
"The griffin! ah, the griffin! God defend us!"
One only of their band,
A tall slight youth, with waving locks, and face
In its smooth freshness well-nigh maidenly,
Sits, seemingly untroubled, on the brow
Of a green eminence, now steeped in light
By the red glory of the sinking sun,
And plays upon his pipe.

And sings full many a careless verse between.
Sweet, sweet, their melody!
Then wrath was mingled with the anxious fear
Of the old cowherd Hans, and thus he spake:—
"Nay, Gottsche," (thus it was the peasants' manner
To call that graceful youth amid his friends,
Though Gottschalk was the name he truly bore)—
"Nay, Gottsche, trillest thou the merry pipe
And singest, like a gay unreasoning bird,
In the midst of such great peril?"
Young Gottschalk nodded with a friendly smile,
And still pursued his strain.
Ill-pleased, the old man shook his reverend head
And greatly marvelled. "Well," he said at length,
And, as he spake, clombe upwards to the youth;
"Well, well, the peril's over for to-day;
The griffin's in her nest, and there she feeds
A brood of growing griffins like herself;
Who shall, in days to come, be our destruction."
Herewith the garrulous old man began
A piteous tale of plunder and distress,
Reckoning the numbers of the monster's prey.
"I too," young Gottschalk, with a nod, replied—
"I, too, have lost the fairest of my flock;
Six of my lambs the ravening beast hath seized."

HANS.

And there he sits and trifles with his pipe,
As though 'twere nothing! Nay, but tell me, Gottsche.
What, thinkest thou, will be the end of this?

GOTTSCHALK.

I know not, good old Hans; in truth, I know not:
I prithee, let me play!

HANS.

Nay, thou must hear me:

I'll picture thee the fashion of the end:
I see each step in detail to a hair.
First, one by one, it will devour our flocks,
Sheep, oxen, calves, and lambs; when none are left
Of all the herds, then comes the herdsman's turn!
Ay, even now, I've watched it through the clouds,
If suddenly a man hath come in sight,
Roll hungrily its cursed and glowering eyes
As if impatient for its prey.

GOTTSCHALK.

Fear nothing,

Thou good lean Hans, 'twill make no meal of thee.

HANS.

Jest on. But who can say? All things are relished
When hunger's in extremity. There's no help—
That which we cannot cure, we needs must bear.

GOTTSCHALK.

Ah, mine old friend, I think with thee entirely;
Could we but bring the griffin where a band
Of vigorous shepherds like myself might greet her,
And battle with her on the firm free ground,
Methinks her appetite were soon appeased.

But lightning-like she shoots
Out of the lofty air, and grasps her prey,
And lightning-like is back again. How now?
There's nothing to be done.

HANS.

I know it, Gottsche,
And for this cause I mourn.

GOTTSCHALK.

Nay, for this cause
I play and sing.

HANS.

But does it profit thee?

GOTTSCHALK.

And do thy lamentations profit thee?
Now, hold thy peace, and hearken for a space;
I'll sing thee a fair strain I made but now.

"O fir-tree! O fir-tree!
Thou wear'st a noble mien,
Green art thou in the summer,
And in the winter green!"

HANS.

Right sweetly made! Come, come, 'tis an old song;
I sang it when no higher than thy knee.

GOTTSCHALK.

Nay, hear me out. Somewhat that is not old
I've added to the strain. The fir-tree answers:

"O shepherd! O shepherd!
Green must I ever be,
For in summer and in winter
The same sweet light I see"
"O fir-tree! O fir-tree!
Now name to me thy light!
My heart is like thy branches,
For ever green and bright.
Like the heath upon the mountain,
Or the May-dew soft and sheen—
O fir-tree! O fir-tree!
Speak, why art thou so green?"

The tree now answers for the second time:
Attend, now comes the beauty of my lay.

"O shepherd! O shepherd!
A vision passed me by,
Fair as the youthful morning
In cloudless radiance,
Fragile as spring-side willows,
Slight as my fir-stem high,
Soft as the river-lily,
Young as a butterfly!"

HANS.

Methinks thou speakest of the duke's fair daughter
Who trod of late our woodland floors; at least
Her image rises up before mine eyes,
Clearly and brightly, while thou sing'st. go on,
For the lay pleases me.

GOTTSCHALK.

"The vision is a maiden
Of high and noble blood,
With squires and ladies round her,
And all of gladsome mood.
For this my mood is gladsome,
My boughs are green with hope,
Because she will come back again
When the first violets ope!"

HANS.

True for the violets; but, alas, dear fir-tree,
The griffin's hovering shape will scare her hence.

GOTTSCHALK.

"O fir-tree! O fir-tree!
Bold are we both, I ween;
The self-same hope hath made us
For ever fresh and green!"

HANS.

What says the fir-tree now?

GOTTSCHALK.

The lay is ended.

HANS.

Ah, gentle shepherd, that is well for thee.

GOTTSCHALK.

Why?

HANS.

For, methinks the tree could only say,
"O shepherd! O shepherd!"
I cannot fashion thee the phrase in rhyme,
But thus, in simple prose, the tree must answer:
"O shepherd, thou art crazy! Sing of hope,
And, in the same breath, name the duke's fair daughter!
Why, her next visit to our woods will quench
The last faint spark of reason in thy brain.
Ah, Gottsche, I must laugh at thee! Poor Gottsche!"
Hear'st thou, thus speaks the tree.

GOTTSCHALK.

Nay, I can give the fir-tree leave to laugh,
If he desire it; 'tis the same to me.
A fair good night, old Hans.

And blithely sprang he homewards down the mountain.
Awhile the old man stood, and shook his head,
And gazed upon him, murmuring to himself,
"Young blood—mad thoughts! The proverb is a true
one!"

II.

A herald winds his clarion in the woods,
And Gottschalk, who beholds him from afar,
And loves to look upon all noble sights,
And loves to listen to all novel tidings,
Leaps, lightly as a bird, from crag to crag,
Till, standing in the valley, he salutes
The stranger courteously. Right graceful seemed
The agile shepherd in the herald's eyes;
Reining his snow white steed, which proudly wore
Its brodered housings as a robe of honour,
He answered graciously. Then Gottschalk spake:
"O gentle herald,
Fain would I ask thee, if I fitly may,
On what fair errand thou art hither sent?"
Then smiled the herald, stroked his sable beard,
And answered thus:
"I bring a message, friendly shepherd youth,
To all the knights and lords of mountain castles,
By which, if such be God's good will, shall come
Deliverance to you dwellers in the vale."
"May I not hear this message?"

"Readily

I'll the ears of all the world I must proclaim it."
Herewith upon his golden horn he blew
A blast reverberant, and with mighty voice
Challenged the forest-echoes in these words:
"Greetings and favour from our lord the duke
To every Christian dweller in the land!
Whereas 'tis known to many, that for long
A monstrous griffin hath devoured the flocks
And scared the trembling shepherds, unopposed
Spreading its devastation o'er the plains;
Our gracious master, to the valiant man
Who shall subdue and slay this hideous monster,
Offers, as prize and pledge of victory,
The hand of Adiltrude, his only daughter,
So peerless in her beauty and her grace.
Up, warriors, to the fight! Arm, heroes, arm!"
Again the trumpet pours its echoing note;
The herald turns to ride upon his way;
But Gottschalk steps, with flashing eyes, before him,
And speaks:
"What was thy message only to the knights?
Nay, it hath wider span—its terms embrace
Each Christian dweller in the land!"

"'Tis true,

Shepherd, 'tis true; yet only by a knight
Could such a deed of marvel be achieved.
Go to thy flocks, and guard them from the griffin!"
He went his way, and Gottschalk sought his flocks,

Musing, and heedless of the fleecy treasure,
So that his mates scarce recognised the youth,
Who made but now the mountain-woods resound
With the blithe music of his careless songs;
And, stranger even than this, from time to time
The clear eyes of the silent youth would flash
As with the pride and joy of victory!

III.

"Where's Gottsche, to make music for the dance,
And join its mazes in his gladsome manner?"
Thus cry the maidens—thus the shepherds cry—
In vain!
Far through the twilight's late and deepening shadows
The youth had wandered forth;
Through the most trackless chasms of the mountain,
Where never yet the foot of man hath been,
He boldly climbs; before, with heavy wings,
Slowly, half-wearied with the weight she carries,
And heedless of the youth's pursuing steps,
Rushes the griffin. Gottschalk plants his foot
Softly, scarce audibly, and holds his breath,
Watching, with wary ever-restless eyes,
The progress of his devastating foe.
The griffin stoops—doubtless her nest is here,
In the tall branches of yon monstrous oak,
Right on the towering cliff's most lofty crest.
Ha! hark how suddenly the ancient branches
Do stir and rustle!
Hark to that shrill and hissing sound, and see
How from the leaves a group of scaly throats,
With various hues all hideous in their brightness,
Stretch forth to meet their booty-laden mother,
Who hisses her shrill answer of grim joy.
And now begins the banquet (close at hand
The shepherd, peering from his giddy height,
Looks sheer upon the horrors of the nest);
Now do the bones of strangled oxen crack
Like dry boughs smitten with the axe, and now
The greedy griffin-brood break off their revel
To quarrel for the dainties; curl and twist
Their ghastly necks in many a filthy knot,
Biting each other, and with barbed claws
Clutching and gripping at each other's throats.
The aged griffin, barbarous peace-maker,
Lashes her angry children with her wings;
Wild howl the savage brood, and then again
Renew their feasting, fight, and howl again,
While, from the oak's tall stem,
Gushes a hideous stream of mingled blood
From strife and banquet poured—from slain and slayer.
Reeling with horror, Gottsche well-nigh sank
From his tall crag, but manned himself, and grasped
The side, and firmly stood; and having seen
All that he sought, with slow and cautious steps
Clombe downwards unperceived, and paused once more,
Safe for the present, in the peaceful vale.

IV.

Now, with his herdsman's staff, iron-tipped, and sharp-
ened
Like a good battle-axe, upon his shoulder,
Gottschalk sets forth upon his dreary way,
Beneath the burning noon,
When, as he knows, the monster leaves her nest,
And seeks her prey amid the distant plains.
By scattered boughs and fragmentary rocks,
And many another sign which his quick eye
Had noted heedfully, he finds his path:
The mountain-desolation deepened round him,
And he must press through many a narrowing pass
Where youth's slight form and swift dexterity
Can scarce avail to save him. Torrents there
Rush on with wild lamenting sounds, and pines
Groan in the howling tempest. Nature seems
To cry with an articulate voice, "Back, back,
Thou hapless shepherd of the gladsome heart!"

Back, or thy doom is fixed, for ever fixed!
Thou diest alone amid the dreary mountains,
And thy poor body finds not even a tomb!"
His young and buoyant heart did well-nigh sink;
But then he took his pipe, true friend and faithful,
Which never left his side, and drew therefrom
Sounds of blithe melody, and sang this lay:

"When weary shepherds lie asleep
Beneath the noonday's sultry sky,
Then Gottschalk leaves his harmless sheep,
And seeks the mountains wild and high.
'O shepherd youth, where wouldst thou go?
'O daring heart, thy pride must fall!'
'Nay, sleepers, nay, ye must not know;
My secret is above you all.'"

Soft as the murmurs of a whispered tale
Dies the pipe's lingering echo, gently, gently.
And in the shepherd's heart
There woke a light benign,
And airily he trod, as if on wings.
'Twas but a transient courage, for not yet
Hath he the rightful source of strength explored;
Once more dark shadows fall upon his soul,
And terror creeps along his quaking limbs;
Then he kneeled down beside a mossy stone
Reverently, as though it were the holy altar
Within the village-church;
And to the music of a murmured hymn
The shepherd lifted up his voice and prayed:
"O dear and gracious God! Thine eye is on me;
Thou seest I seek no evil. I am bent
To slay the monsters which devour our flocks;
And this I seek, to serve my lawful prince,
And save my friends and fellow-countrymen.
Why sufferest Thou my soul to grow so dark?
Thou know'st the deepest secrets of my breast;
Thou know'st my heart is set on somewhat more,
Somewhat most glorious. Ah! is this a sin?
Now, if it be a sin, release me from it!
Withhold from me that peerless prize; reserve it
To grace another and a better man!
Only vouchsafe me victory in Thy strength,
To bless our groaning land;
Or, if that may not be, vouchsafe me death!"
A voice gave answer in his heart, and said,
'Go forward in thine innocence, and fear not!'

(To be concluded in our next.)

POPULAR YEAR-BOOK.

March.

THIS was the first month of the ancient year. Romulus so placed it in his kalendar, and the Hebrews began their ecclesiastical or sacred year about this time, in obedience to the divine command. In France, March was generally reckoned the first month, until 1564; and it retained that precedence, in various legal points, in this country, even until 1752. The Romans named it after Mars, the god of war, in honour of their first monarch, "the reputed son" of that deity, and also, as some suppose, "from the fierce and blustering winds generally prevalent at its commencement." By the Saxons, March was called *Hyld-monath*, or the stormy month; *Lenct-monath*, or the lengthening month, because the days now begin to be longer than the nights; and *Rhede* or *Rheth-monath*, a term derived either from one of their idols named *Rheda*, to whom sacrifices were offered in March, or from *Ræd*, the Saxon word for council, because at this season the gothic tribes usually undertook their wars and expeditions.

March is represented as a man of a tawny colour and fierce aspect, with a helmet on his head, leaning on a spade, holding almond blossoms and scions in his left hand, with a basket of seeds on his arm, and in his right hand the sign of *Aries*, or the *Ram*, which the sun enters on the 20th of this month, thereby denoting the

augmented power of the sun's rays, which in ancient hieroglyphics were expressed by the horns of animals." The above portrait is drawn by Mr. Brady. Our great poet Spenser has sketched a rather different one. He says:—

"Sturdy March with brows full sternly bent,
And armed strongly, rode upon a ram,
The same which over Hellespontus swam;
Yet in his hand a spade he also hent, (1)
And in a bag all sorts of seeds ysame, (2)
Which on the earth he strowed as he went,
And fill'd her womb with fruitful hope of nourishment."

This month is characterized by the severity of its chilling blasts, which, however unpleasant to the aged and the invalid, are necessary to dry up the superabundant moisture caused by the snow, rains, and thaws, of February, and so prepare the soil for the labours of the husbandman, and the genial influence of the sunshine and showers of spring. The importance of this being a dry season is expressed in the old proverb:—

"A bushel of March dust is worth a king's ransom."

Another adage affirms, that this month "comes in like a lion and goes out like a lamb;" in other words, that in the early part of March the weather is rough and stormy, but mild and soft towards its close. March, however, exhibits more of the temper of the lion than the lamb, as, although the sun has now acquired so much power that on a fine day we often feel the cheering warmth of spring, mild and pleasant weather is seldom of long continuance.

The animal creation is now all alive and active. The thrush sings from the beginning of the month, and blends his notes with those of the lark, blackbird, and golden-crowned wren: the pheasant crows: the ring-dove coos: the goose, hen, and pigeon set, and the duck and turkey lay: crows, rooks, and hedge-sparrows are all busy in building or repairing their nests. Of rooks it has been remarked, "highly amusing it is to observe the tricks and artifices of the thievish tribe, some to defend, and others to plunder, the materials of their new habitations. These birds are accused of doing much injury to the farmer, by plucking up the young corn and other springing vegetables; but some think this mischief fully repaid by their diligence in picking up the grubs of various insects, which, if suffered to grow to maturity, would occasion much greater damage. For this purpose they are frequently seen following the plough, or settling in flocks on newly turned up lands." In the course of March, the winter birds of passage, as the field-fare, red-wing, thrush, and woodcock, begin to leave our shores, for Norway, Sweden, and other northern regions. The reason why these travellers quit the North of Europe in winter, is clearly to escape the severity of the frost; but why at the approach of spring they should retire to their native haunts is not so easily assigned. It cannot be scarcity of food, for if they can subsist in this country during the winter, they surely may fare sumptuously during the summer; neither can their departure be occasioned by a dislike to warmth, for the season when they migrate is by no means so hot as the Lapland summer. It is well known that the crane, stork, and other birds, which were formerly natives of England, have left it as cultivation and population have extended, and possibly the same cause forbids the red-wing, thrush, and fieldfare, &c., which are naturally of a timid and retired disposition, to make choice of it as a place of sufficient security for breeding and incubation. Their loss is supplied by the bunting, red-sparrow, red-legged sea-mew, stone curlew, chaffinch, and wheatear, which now visit us. Young lambs, most of which are yeaned in this month, come tottering forth in mild weather. Snakes, newts, and lizards, which during winter lay torpid, now begin to appear. Frogs rise from the bottom of ponds and ditches, in large numbers; at first they only peep occasionally above the surface of the water, but, as soon as they begin to couple, they wax bolder,

(1) Seised.

(2) Collected together.

and croak vociferously in chorus. Their eggs have been compared to a mass of jelly filled with little black spots. Smelts or sparlings run up the rivers in order to spawn. Of the insect tribe, gnats are now numerous; beetles and lady-birds appear, as do also the "humming-bird sphynx," and "march moth," and the "sulphur," "orange-under-wing," and "light-under-wing," butterflies. Bats show themselves about the close of this month, and bees venture out of their hives. About the same period, the primrose, crocus, celandine, violet, hyacinth, narcissus, scarlet ranunculus, great snow-drop, anemone, mazeroon, daffodil and hepatica, are in beauty. The fields are green with the young grass, but can yet boast but few wild-flowers. The "modest daisy," however, may be seen in the dry pastures, and the glossy yellow blossoms of the pile-wort enliven the moist banks of ditches. The buds of most shrubs and trees are swelling, and the leaves of the elder, lilac, laurustinus, bay, rose, and honeysuckle, begin to open. Firs, pines, and larches, are also in flower. The hazel shows its catkins, and the willow, aspen, and alder-trees are in full blossom. In the gardens, the cherry, apricot, peach, and nectarine trees are covered with their pink or snowy blossoms. The gardener prunes his trees, digs and manures his beds, and sows his seeds, both in the flower and kitchen garden; and, as soon as the winds have sufficiently dried the land, the farmer "extends the exercise of his plough," and begins sowing oats and barley, spring-wheat, flax, grasses, broom, hemp, &c. He also "dresses and rolls his meadows," and plants quicksets and osiers.

Towards the end of March, the *equinox* occurs, when day and night are of an equal length all over the globe; or rather, when the sun is an equal time above and below the horizon. This takes place again in September. The one is termed the *vernal*, and the other the *autumnal*, equinox, at which times storms and tempests are particularly fierce and frequent.

An able writer, before quoted, remarks, that in Scotland the three last days of March are the subject of a strange and obscure popular story, which leads the mind back into the earliest stage of society. These three days are called the *Borrowing Days*, being alleged to have been a loan from April to March. The idea is also prevalent in England, where there is a proverb thus given by Ray in his collection:—

"April

Borrows three days from March, and they are ill."

In an ancient Romish kalendar, to which frequent reference is made in Brand's *Popular Antiquities*, there is an obscure allusion to these Borrowing Days under the 31st March; it is to the following effect:—"A rustic fable concerning the nature of the month: the rustic names of six days which shall follow in April, or may be the last of March." The most common rhyme on this subject, in Scotland, goes thus:—

"March borrowed from April
Three days, and they were ill:
The first o' them was wind and weet,
The second o' them was snaw and sleet,
The third o' them was sic a freeze
It froze the birds' nebs to the trees."

A Stirlingshire version is more dramatic, and gives the name of one of the months in nearly the original French:—

"March said to Averil,
'I see three hogs on yonder hill;
And if you'll lend me days three,
I'll find a way to gar them die!'
The first o' them was wind and weet,
The second o' them was snaw and sleet,
The third o' them was sic a freeze,
It froze the birds' feet to the trees,
When the three days were past and gane,
The silly pair hogs cam hirpling hame."

"What," continues the author of "Traditions of Edin-

burgh," "could have inspired March with so deadly a design against the three sheep, is one of those profound questions which can only be solved by the cottage fire-side, 'between gloaming and supper-time.' Certes, however, the three last days of March are still occasionally observed to be of the kind described in these rhymes—and that in defiance of the statute 24 Geo. II. cap. 23. It is purely vain to point out to one of the sages who keep an eye upon the Borrowing Days, that the three last days of March are not now the same as they were before the year 1752, but in reality correspond with that part of the year which was once the 18th, 19th and 20th of the month. 'Gae wa,' said one old man, to whom we had explained this circumstance, 'd'ye think the ALMIGHTY cares for acks o' parliament?'"¹

BILLS OF FARE FOR MARCH.

I.

Boiled chickens.
A dish of stewed oysters.
A grand sallet.
A roasted breast or loin of veal.
A pigeon or chicken pyc.
A dish of soles or smelts.
A dish of young rabbits.
Custard, capon and tart.²

II.

FIRST COURSE.—Brawn and mustard. A fresh neat's tongue and udder in staffaldo. Three ducks in staffaldo. A roasted loin of pork. A venison pasty. A steak pyc. SECOND COURSE.—A side of lamb. Six teal, three larded. A lamb stone pyc. Two hundred of asparagus. A warden pyc. Macinated flounders, jellies, gingerbread, and tarts-royal.³

March 1—4.

March 1.—The name of St. DAVID, the tutelary patron of Wales, and the great ornament and pattern of his age, occurs on this day in the kalendar of the Church of England. He was uncle to the famous King Arthur, and son of Xantus, prince of Cardiganshire. Trained for the priesthood in the celebrated monastery of Bangor, he was early distinguished for learning and sanctity, and esteemed one of the noblest and most able of the preachers of Christianity to the Britons. After his ordination he became an ascetic in the Isle of Wight, whence he removed to Menevia, a city of Pembrokeshire, on the most western promontory of Wales; in and near which place he founded twelve monasteries. In 519, at a synod held at Brevy, in Cardiganshire, to suppress the false doctrines of the Pelagians, St. David confuted and silenced their heresy by his learning, eloquence and miracles. Shortly afterwards, St. Dubritius, archbishop of Caerleon, resigned his see to St. David, who presided in it till his decease, with exemplary piety. He departed this life in 544, at a very advanced age, and was buried in the church of St. Andrew, from which, in 962, his relics were translated with great solemnity to Glastonbury, together with a portion of those of St. Stephen, the protomartyr.

Of St. David, many miracles are related. It is said that his birth was predicted thirty years before it took place; that at the synod above mentioned he restored a child to life; that a snow-white dove descended from heaven and sat on his shoulder, when he expounded Holy Scripture; that, on one occasion, the ground on which he stood rose under him till it became a hill, on the top of which a church was subsequently built; that the waters of Bath received their warmth and healing qualities solely from his benediction; that an angel constantly attended and ministered unto him; and that, when the hour of his departure was come, "our LORD JESUS CHRIST vouchsafed His Presence, to the infinite consolation of our holy father, who, at the sight of Him, exulted." "Not only in Wales," says a catholic writer, in 1632, "but all England over, is most famous the memory of St. David. But in these days, the greatest part

of this solemnity consisteth in wearing a green leek, and it is a sufficient theme for a zealous Welchman to ground a quarrel against him that doth not honour his cap with the like ornament that day." The custom here alluded to is the theme of much facetious conversation in Shakspeare's Henry V., and still exists. Its origin is somewhat doubtful. Brady affirms that it grew out of the following circumstance. In the year 640, the Britons, under king Cadwallader, gained a complete victory over the Saxons, at Hethfield Chase, in Yorkshire; and St. David is considered not only to have contributed to this triumph by his prayers, but also by the judicious regulation he adopted for rendering the Britons known to each other, by wearing leeks in their caps, drawn from a garden near the field of combat; while the Saxons, for the want of some such distinguishing mark, frequently mistook each other, and dealt their fury among themselves, almost indiscriminately slaying friends and enemies. King James says, in his *Royal Apothegms*, "The Welchmen, in honour of the great fight by the Black Prince of Wales, do wear leeks as their chosen ensign." Owen, in his *Cambrian Biography*, suggests that "the wearing of the leek on St. David's Day probably originated from the custom of *Cynhortha*, or the neighbourly aid practised among farmers, which is of various kinds. In some districts of South Wales," he adds, "all the neighbours of a small farmer without means, appoint a day when they all attend to plough his land, and the like; and at such a time it is a custom for each individual to bring his portion of leeks, to be used in making pottage for the whole company; and they bring nothing else but the leeks in particular for the occasion." "The commemoration of the British victory," says Brand, with whose opinion we concur, "appears to afford the best solution of wearing the leek."

On St. David's Day, at Jesus College, Oxford, an immense silver gilt bowl, containing ten gallons, the gift of Sir Watkins Williams Wynne, in 1732, is filled with a pleasant liquor called "Swig," and handed round to those who are invited to the festive board. "Formerly," says Horace Smith, "it was the custom with the London populace, on St. David's Day, to insult the Welsh, by dressing up a man of straw, to represent a Cambrian hero, which was carried in procession, and then hung in some conspicuous place; a provocation which probably did not always pass unavenged by the cholerie sons of the principality." On this day, also, "taffies"—small figures of white "parlement," like gingerbread, moulded into the semblance of "a Welchman riding on a goat, affixed to a skewer of wood"—were wont to be exhibited in the shop windows of the gingerbread bakers, small pastrycooks, and chandlers in the metropolis, and large towns in the country. The skewer was inserted as handhold for the children, their purchasers. These ancient "nie-naes" have entirely disappeared from their accustomed place within these few years. St. David's Day in London is now only celebrated by the Society of Ancient Britons, who dine together to promote subscriptions for the Welsh charity-school in Gray's Inn Road.

March 4th.—Ember Day (1846). The Wednesday, Friday, and Saturday of this week are called Ember Days, and the week in which they occur, Ember Week. As early as the third century, Calixtus, bishop of Rome, set apart Ember days and weeks for imploring, by prayer and fasting, the Divine blessing on the produce of the earth. He also directed that the same seasons should be especially devoted to the preparation of the clergy before their ordination, in imitation of the apostolic example. At first these days were not uniformly observed by different churches at the same period; but the Council of Placentia, in 1095, decreed, that the spring and summer Ember days should be the Wednesdays, Fridays, and Saturdays after the first Sunday in Lent, and Whitsunday; and those of autumn and winter upon the same days after the festivals of Holy Cross

(1) See "Popular Rhymes, &c. of Scotland," pp. 38, 39.

(3) "The Family Dictionary," &c. 1705.

(September 14th) and St. Lucy (December 13th). The above-named days of the week were chosen, because on Wednesday our blessed Lord was betrayed by Judas; on Friday He was crucified; and on Saturday, says Bishop Sparrow, "we represent the apostles' sorrow for the loss of their Lord lying in the grave." The Church of England commands the observance of the Ember seasons with prayer and fasting, as in former times; and that her clergy shall be ordained "only upon the Sundays" which immediately follow them. They "have been called Ember days," writes an old author, "because that our fathers would on these days eat no bread, but cakes made under embers; so that by eating of that they reduced into their minds that they were but ashes, and so should turn again, and wist not how soon." Sir H. Spelman conjectures that they were so named from the Saxon word *ymbrem*, a circuit or revolution, because these fasts are "set seasons in the circuit of the year."

THE WINE OF CHIOS.

Is the splendid isle of Chios there lived, in the olden time, a noble minded man, who had come over from the land of Asia, and had built himself there a dwelling, not far distant from the sea-shore. He had also planted vine-trees on the sunny hills—the precious fruit of his native land: these grew more beautiful than he expected, and produced the richest and noblest wine which Greece or the islands afford. But Philos—such was this man's name—was benevolent, and loved his fellow-men. And he thought within himself how he might show his gratitude to the good Being who makes the earth fruitful, for the great gift of wine, and the sweet blessing of the vine-branch. Thus he spoke:—"He has shown me good, and my heart rejoices: I will also do good to other men, and will make their hearts glad. This will be the best thanks I can render to Him who stands in need of nothing from his creatures."

He rejoiced and comforted the sick and sorrowful around his dwelling, and the strangers who resorted to him. And these praised the beauty of the wine, and said, "It is a gift of God." But more still they praised the goodness of the man; for they said, "He is a man of God."

One day there was a storm on the sea: and the waves ran high and roared greatly. A ship was tossing upon the billows; and the seamen trembled and were dismayed before the force of the storm. Philos stood on the shore, full of anxiety and pity for the poor sailors; for the storm increased, and the ship was driven towards the island. But there were many hidden rocks on the shore, and when the ship came near, it struck upon them, and parted asunder in the middle, and was swallowed up by the waves. The ship's crew threw themselves upon planks, which enabled them to swim; and at last the waves cast them ashore upon dry land. The ship's captain and the pilot lay torn and bleeding in the head and limbs, for the fury of the waves had thrown them against the rocks. Then Philos commanded that they should be carried into his house; and he poured oil and wine into their wounds, and refreshed them with draughts of the richest and noblest of the juice of his grapes; and they began to revive, and fell into a quiet slumber. Then Philos spoke to the people of the ship, and said, "Go you likewise, and be refreshed;" and he caused his servants to supply them with bread and wine, which they did. Philos now conducted the chief passengers, of the ship who were disciples of the sage Pythagoras, to a shady retreat under the elms and palms of his garden, and regaled them with the good things of his house. And when their hearts were warmed and gladdened, they opened their lips, and spoke of the Almighty Ruler of all things, and of the destinies of man; of the immortality of the soul, and of the joys of paradise; and they sung a hymn of praise to Him who gives life and happiness to all his creatures. In such converse the

time passed, while their souls flowed into each other, even as the juice of berries flows together into one bowl, and makes up one rich and precious drink. Thus they sat by their wreathed goblets until the evening star rose over their heads.

Then suddenly an uproar was heard from the house, and a loud noise, as of many voices in fierce discord. Philos sprang up, together with the wise men, and ran into the house; and they were amazed and alarmed at the sight. For the strength of the wine, immoderately drunk, had stirred up the rude tempers of the ship's people to a deadly strife. They had pulled to pieces the dwelling of the good-hearted man, destroyed his household goods, and turned the peaceful wine-cups into implements of war. The earth ran with the blood of the slain and wounded; and frightful tumult filled the air with noise.

Philos was vexed in his spirit, and thus spake: "You ungrateful men! is this the return you make for the favours you have received, and for the noble gift of God which you so greatly abuse? Go back to the rude waves of the sea, which have cast you out, and which you too much resemble in your conduct. You are not worthy to remain under my roof."

Thus saying, he thrust them forth. But the others he kept and nourished, and often raised the sparkling goblet, saying, "We will not let the gifts of God suffer for the outrageous conduct of evil men."

Even the sun—which, by its genial heat, promotes the growth of the vine—produces also, by its heat, the poisonous vapour from the soil. So also men misuse knowledge, which was given for peace and joy, converting it to misery and bloodshed. But, to the wise and faithful in the land, it remains a tree of life. —*From the German.*

Poetry.

[In Original Contributions under this head, the Name, real or assumed, of the Contributor, is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

KING ROBERT BRUCE AND THE SPIDER.

J. M.

LONELY on his bed of anguish,
Hopeless, pale, and blood-beaprent,
Lay the Bruce, in woe lamenting
Scotland from his sceptre rent.
"Six times on the field of battle
I've withstood the tyrant's course;

(1) By a mistake of the Printer, the cut intended to accompany this Poem was placed at the head of the poem of "Count Lauzun and the Spider," in No. 14. We now place here the cut which was intended for that poem. Our readers will have the goodness to suppose them transposed to their right places.

Six times crownless have retreated,
 Master'd by o'erwhelming force.
 Hunted on my native mountains
 To the death, like beast of prey,
 All my faithful followers scattered,—
 Where can hope find rest or stay?
 Spilt upon the sand like water,
 Life hath pass'd—its aims undone;
 Like a torch in gloom extinguish'd,
 Like a flower without the sun.
 Take my crown, ye robber minions,
 Hope and strength my soul have left;
 Blessed Jesu! take my spirit,
 Of all earthly joys bereft."
 Thus while Bruce, for death preparing,
 Turn'd to God, his only stay,
 Straight his eye beheld a spider,
 Swinging in the sunny ray.
 From the mullion'd window pendent,
 There the spider kept her hold,
 Fixing every line and threadlet,
 Like a workman skill'd and bold.
 But, alas! the vain endeavour
 Seem'd to say each time, "give o'er,"
 For, as still success look'd certain,
 Down she dropp'd upon the floor.
 Six times thus the spider falling,
 Bravely set to work again;
 Six defeats could ne'er convince her,
 That her struggle was in vain.
 Bruce the while, intently gazing
 On the spider's steadfast aim,
 Felt within his bosom rising
 Self-reproach and burning shame;
 And he vow'd that should the spider
 At the seventh time have success,
 Bruce, his languid couch forsaking,
 Scotland's wrongs would yet redress.
 See! the persevering spider
 Boldly mounts the breach again;
 See, the brave, determin'd spider
 Wins the field without a stain.
 Starting from his bed of anguish,
 New-born vigour fires the Bruce:
 Hark! his voice o'er Scotland swelling,
 Rouses from inglorious truce.
 See his banner proudly flying,
 Striking terror in the foe;
 See, from every vale and mountain,
 Stream on stream his warriors flow.
 Dauntless on his path proceeding,
 Every day fresh trophies yields;
 Till the day of Bannockburn
 Crown'd the whole—great field of fields!
 On his throne when seated glorious,
 Twined with victory's proudest bays,
 Still he dwelt, with thankful bosom,
 On the humble spider's praise.
 And his sons were told the story,
 From a grateful father's lips,
 How a feeble spider rescued
 Scotland's freedom from eclipse.

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne*.

THE HEART OF NAPOLEON.

THE following curious circumstance was stated to me on good authority:—When the body of Napoleon was opened at St. Helena, his heart was taken out, and, preparatory to its final destination, put in a basin of spirits and water, and left for the night on a table in the bed-

room of the medical man who had charge of the matter. In the course of the night, the doctor was awakened from a light slumber by a heavy splash from the basin, and starting up alarmed, he rested on his elbow, and by the light of a taper looked eagerly round the apartment before he should spring from bed. Not the shadow of an intruder was to be seen. What had moved the basin? Had that mighty heart, scorning to be quelled even by death, regained some of its terrible energies? Was it still leaping with life? Ha! catching the appearance of something moving in the corner of the room, he saw the heart of Buonaparte going into a hole in the wall; and jumping from bed was just in time to seize and rescue it from the teeth of a rat. The blood of Ahab was licked up by dogs. And it is recorded by Bishop Burnet that, after the body of Charles II. had been disembowelled, the servants of that licentious and heartless palace, utterly regardless of dead royalty, emptied their basins, containing some of the inward parts and the fatty matter of the entrails, into an open sewer, and many of the clotted lumps were seen for days sticking to a grate over the mouth of a drain into which the sewer ran. How nearly had a still more marked visitation come on the remains of Napoleon—to have his heart eaten by rats!—*The Old Bachelor in the Old Scottish Village*. By T. AIRD.

RATHER EXPENSIVE DIET.

A GENTLEMAN, residing at no great distance from Lancaster, bought three pounds' worth of postage stamps the other day, and put them in one of the drawers of a book-case; but, to his mortification, on opening the drawer next morning, he found half of them eaten by mice, and the remainder gnawed through in such a manner as to be totally unfit for use. The adhesive substance with which the stamps were coated is supposed to have been an irresistible temptation to these mischievous little vermin.—*Newspaper*.

THE COST OF RAILWAYS.

In a recent work, prepared and published by Mr. Weale, we find these considerations strikingly presented and enforced. After detailing the engineering principles of the timber bridges, framed viaducts, and pile foundations adopted in the American railroads, the author exhibits a tabular view of the primary expense of the railways in different countries, from which it appears that the cost of the English lines has averaged 30,000*l.* per mile (in round numbers); the Belgian, 15,000*l.*; the Prussian, 9,000*l.*; and the American, 4,000*l.* And as a singular instance of economical construction, the works of the Utica and Syracuse railway, 166 miles in length, are described with much minuteness, that line being carried, at an expense of 3,600*l.* per mile, over a country presenting engineering difficulties little less formidable than those encountered in forming our own Liverpool and Manchester railway (including the passage over a deep swamp very similar in character to the celebrated Chat Moss)—the English line having cost somewhere about 47,000*l.* per mile.—*Railway Examiner*.

LAZINESS grows on people. It begins in cobwebs, and ends in iron chains. The more business a man has, the more he is able to accomplish; for he learns to economize his time.—*Hale*.

POPULAR NOTIONS OF SCIENCE.

In this age of progress and enlightenment, when nothing is too marvellous to be believed, (except the faith of our childhood), nothing too difficult to be accomplished, (except the practice of self-distrust or humility), when the elements are subject to man as to a necromancer of old, when he paints portraits with the sunbeams, and binds down the very airs of heaven to labour at his chariot-wheels, it may seem strange to propose the question, whether the world be really any wiser than it used to be? What! have we gained nothing by throwing off our shackles, and emancipating ourselves from the tyranny of prejudice? Have we not exchanged the Black Art for Homœopathy?—the incredible absurdities of Astrology for the sober truths of Mesmerism? Instead of the monsters and miracles of the olden time, the barnacle-trees and the unicorns, “the anthropophagi and men whose heads do grow beneath their shoulders,” have we not Lamarck’s “Theory of Development,” according to which, the resolute and repeated endeavours of an animal are capable of supplying it with new organs, which are transmitted in more perfect forms to its offspring—just

as, in ordinary life, a mother who obstinately persists in preferring a dirty face to a clean one, has not only the power of keeping her own face dirty, but also of causing her children to be born black? Or, might we not quote that recent hypothesis, more simple and far more satisfactory, which evolves one species from another by the ordinary mode of birth, and traces the Howards, the Montmorencys, and the Sforzas, to one common origin in the Chimpanzee! The probability of this latter view may be demonstrated by a sum of simple proportion, wherein the author of it represents one of the terms; viz. as a monkey is to a man, so is the writer in question to a philosopher. There is the same ingenious mimicry of deportment, degenerating every moment into caricature; the same marvellous activity of movement, displayed in jumping *over* arguments and *at* conclusions; the same want of a mind capable of guiding, comprehending, and harmonizing its own efforts. But to return to our comparison, have we not the nebular hypothesis of Comte to set against the crystal spheres of the ancients? Is not the chemist, who actually makes insects, a greater man than the alchemist

(1) See “Vestiges of the Natural History of Creation.”

who only tried to make gold? Are not quarrels about boundaries, and wars to force opium on the Chinese, more in accordance with the spirit of Christianity than the Crusades? Is not an Union Workhouse a finer sight than a Cathedral or an Abbey? And lastly, could Cicero be for a moment compared to —, or Bacon to —?

But the argument is becoming unfair. We compare the greatness of the past with the littleness of the present, and the consequences are of course inevitable. Neither was the irony with which we commenced, though more plausible, a perfectly fair method of putting the question. The progress of the human race is not to be tested by reckoning the absurdities of one age against those of another; the items and total of the sum will always be themes of mournful and indignant wonder to the reflecting observer. To confess the truth, in comparing the world of the nineteenth with the world of the ninth century, we feel disposed to reproach the former somewhat as a schoolmaster might wind up his lecture to "the biggest boy" after some unpardonable ebullition of boyishness, "I am not so much surprised at your little brother, but surely *you* were old enough to know better!" Neither shall we obtain our answer by comparing among each other the great men of all times. That glorious company stand ever above, and apart from, their fellows, guiding and contemplating, rather than joining the movement and tumult of the multitude. They may differ, as "one star differeth from another star in glory," but they are all stars, and we watch, but cannot follow, their course. True genius is, by its very nature, immortal; it is the citizen of all worlds, the contemporary of all ages, and when, in the Valhalla of our imagination, we gather together the few noble who have in turn adorned and left desolate the earth, we can discover no rule of precedence by which to marshal that illustrious assembly. Shakespeare is proud to sit beside Homer, and Newton does willing homage to Copernicus.

But those upper regions are ever in communication with the earth beneath them: there is a downward process of filtration going on, by which gradually and partially the mass is permeated by a spirit foreign to itself. Tedious enough is the work of digestion and assimilation, constantly impeded by difficulties, often interrupted by disease; nevertheless, by it the intellectual life of that great body, the public, is supported; and, without it, there would be atrophy or torpor. Now, as the greatness of an individual mind may be fairly tested by the influence which it exercises upon contemporary minds, still more by the durability of the lessons which it bequeathes as a legacy to after generations, so will an examination of the mental advancement of the great mass of educated persons at any given period, supply one of the surest methods of testing the intellectual character of that period, of estimating the measure by which it has outstripped any previous era, and even of conjecturing how far it will probably be left behind by the coming age. Let us then inquire how much we, Englishmen and Englishwomen of the 19th century,—we, the middle classes, the boast, and (in our own opinion, for here too it is the man, not the lion who writes) the ornament of our country, are wiser than our grandfathers. In what degree have the gentlemen and ladies whom one meets in society, the swallows of hot soup, and frequenters of club drawing-rooms, the polka-dancers and duett singers, the men of business, and the men of leisure, the readers of newspapers, and the readers of novels, in what degree have all or any of these approached, we will not say to a knowledge, but to an intelligent interest in the gigantic advances of science, and a respectful appreciation of the sublimity of her truths? Is it common to meet with persons whose acquaintance with electricity extends beyond the fact that they must not stand under a tree in a thunderstorm, or who comprehend anything more of meteorology than is necessary

to enable them to open their conversations with the eternal remark upon the weather? Did you, my dear reader, ever meet with any person who was able to tell you off-hand at a moment's notice, the meaning of Palæontology? Do you not honestly think that it would often be referred to the author of the evidences? Do you perfectly understand it yourself? But we will not question you too closely. We ourselves are acquainted with an elderly gentleman, of respectable average abilities, who utterly denies the existence of astronomy; and we have heard a well educated and highly talented lady profess her opinion that all maps of the moon must be purely conjectural. What can be the reason of this ignorance and this apathy concerning matters of such deep and universal interest? We shall proceed to suggest a few.

There is an unity in the multiplicity of truth; and the character which she demands of her worshippers is likewise uniform. The same blindness and earthliness of spirit, which it is needful to cast aside in order to receive rightly the revealed word of God, are found to clog our footsteps and darken our path when we would study His works. Here, too, the knowledge at which we would arrive springs from no other source than the mind of Deity:—here, too, we must walk reverently, if we would walk securely; and here, too,—alas! that it should be so!—"fools rush in where angels fear to tread," and the thousand and one heresies which distract the Church—the false and foolish systems of theology which have prevailed, more or less, in all ages—the infidelity, the rationalism, or the pantheism of men, are scarcely subjects of more profound amazement to the thinking mind, than the insane presumption which would explain, harmonize, or even question, the phenomena of the visible universe, without a long, a humble, a laborious study of their nature. Therefore is it that the irreverence, which has been pronounced to be one great characteristic of these our days, is a bar to the general spread of scientific truth. Therefore is it that, among the half-informed, we find bold hypotheses in the place of patient inquiries; among the wholly ignorant, arrogant judgments in the place of respectful attention. What we would advocate is rather accuracy of estimate, than fulness of knowledge: rather a reverence for truth in every shape, than a minute acquaintance with it in any. This, surely, need not be stigmatized as the dream of an enthusiast,—thus far surely the multitude might attain, if they would. But so long as some will talk on subjects concerning which they know nothing,—so long as others will coolly dismiss all mention of the wonders and magnificence of the world in which they live, or the greatness of those among their fellow men, by whom such wonders have been in part explored and understood, with the words, "that is not in my way—I have no taste for such things,"—so long as he who rejoices in prize oxen, and lives on the thoughts of mangel-wurzel—who speculates in railroads or in stock till every faculty of his intellect is absorbed by the miserable process of reckoning pounds, shillings, and pence for gain, is honourably distinguished from him who lives among the everlasting truths of Science and Art, as a "PRACTICAL MAN,"—so long is it hopeless that the general mind should become elevated, or the general taste refined. That popular phrase, "a practical man," may be called the very watchword of barbarism. With how expressive a sneer of quiet self-approval is it uttered! How completely does it imply that the mere garments of humanity, the tangible flesh-and-blood matters of every-day life, the gloves and shoes, the food and physic of a man, are greater things than the immortal and unquenchable fire within him—that the body is better than the soul!

We come to another besetting sin of our age—Utilitarianism. It is strange that the prevailing popular acceptance of the word has never been considered purely in a ludicrous point of view. The absurdity of it is boundless. Taken in its ordinary sense, it means

literally what has just been said, that the body is greater than the soul. Of course the Utilitarian denies this; but practical proofs are abundant. Tell a man of this stamp that Lord Rosse's telescope has penetrated the mysterious vistas of space, and opened to our view, not new worlds, not new systems, but, as it were, a new universe, bowing our very souls before the vague conception of infinity which it lets in upon them, and he will mouth out his "cui bono," with a contemptuous shrug of the shoulders, in which the implied superiority is a sore trial to the temper. Tell him, however, that a clever application of mechanical force has produced a new and admirable variety of easy-chair, and, with the thought of an after-dinner nap softening his heart, he will shake you by the hand, and tell you that science is, after all, a very good thing in its way. Still more cordial will he become, if you show him that science may be made to earn money. The marvellous discovery which could win but a negligent smile, as a truth destined to enlighten and delight the wise of all ages, rouses him to rapture when it is shown to have filled the pockets of one insignificant mortal.

But of Utilitarianism in its higher and true sense we profess ourselves zealous disciples, only desiring that the Useful should be properly defined. All things that improve, soften, and strengthen the character, make the spirit holier, and the life purer; these are useful in the first and highest degree. All things that refine and elevate the intellect, ennoble the imagination, and kindle that steadfast enthusiasm to which a due consciousness of the greatness of nature and the littleness of man is but an incentive and encouragement to exertion; these compose the second class. The things that minister to the body come last of all, as being immeasurably meaner in their nature, and lower in the ends at which they aim. But let not our friends the Utilitarians cry out upon us for talking what they are pleased to call high-flown nonsense. We know, as well as they do, that man is subject to the degrading necessities of eating, drinking, and sleeping. We speak not here of the needful support, nor even of the needful comfort, of the body. But, for all beyond this point, for the luxuries of civilization, the ingenuities of caprice, and the feebleness of self-indulgence, we proclaim our utter contempt. Study and love these things if you will, but be content, while you do so, to rank low in the scale of rational being, and arrogate not to yourselves an equality with those who are disciples of a loftier school.

There remain, ere we close this rapid and most imperfect sketch, two "popular notions of science," that is to say, two obstacles to the progress of scientific knowledge among the people, which we cannot leave wholly unnoticed. Both are plausible, and both false. The first is the idea, that a deep and accurate acquaintance with the mysteries of nature impairs a due sentiment of their grandeur—a kind of superstition with which we feel some sympathy even while we condemn it. We have walked through scenes of matchless beauty with a botanist, who was so engrossed by groping after "specimens" with her face up against a bank, that she had not a glance to bestow on the loveliness around her, except, indeed, in compliance with our summons, which, in sheer disgust, we soon desisted from repeating. But the fault lies here in the nature of the individual, not of the science; and the disadvantageous impression which it produces is traceable to that habit of generalizing from particular instances of which it would seem impossible to cure mankind. "Many a clear manuscript," says Goethe, "is illegible in twilight;" but the man whose dim apprehension renders it unintelligible, will certainly persist in attributing the obscurity of which he is conscious, not to himself, but to the work. Do we suppose that he, who would "peep and botanize upon his mother's grave," was an affectionate son till his heart was hardened by the study of botany? Would the matter have been much mended if he had known

nothing at all of botany, but had haggled with the apothecary for the amount of his bill, immediately after his mother's funeral? We might as well charge the extravagancies of Munsö upon the Bible, as tax Science with the follies of her votaries. But we are apt to fancy that the moment in which a fact first becomes apparent to our senses, is the starting point of its existence, and, because the meanness of a man's mental stature becomes glaringly manifest when he stands on the eminence of knowledge, and breathes its liberal air, we speak as though such "dwarf dimensions" did not exist in an equal measure, while he was grovelling in the valley below. The mind of man is like one of those landscapes made of layers of silver paper—apparently blank while it lies in the shadow, assuming a thousand shapes when it is held up to the light; yet the light does not create those shapes—it only makes visible that which previously existed unseen.

No one who has a due comprehension of the intimate alliance between Truth and Beauty, can suppose it possible that, as we approach the one, we must needs separate from the other. There is no truth which is not beautiful; there is nothing beautiful which is not true. The loftiest imaginations of the poet, the most magnificent creations of the artist—aye, even the mysterious harmonies of the musician, are only so far valuable as they represent or symbolize a part of our nature; dimly understood, indeed, and often scarcely recognized, but not the less real for that;—or as they approach instinctively, and with imperfect consciousness, to the conception of something beyond and above that nature, though in accordance with it. The mystery of beauty is unfathomable, but it is certain that truth lies at the bottom of it. We have, however, been speaking here as if it were necessary, or even possible, for the generality of men to acquire that "deep and accurate acquaintance" with science which is erroneously supposed to interfere with the enjoyment of nature. It was needful thus to argue, for it is marvellous how fearful the *very* ignorant are of becoming too learned. Since the days of Pope's melodious fallacy, the danger of a little learning has been more generally acknowledged, than the difficulty of a great deal; and it is no uncommon thing to meet with persons who, after confessing that they know nothing on this or that subject, close their sentence by the declaration, "I hate a smattering; I never do things by halves; so as I have not time to make myself master of it, I prefer leaving it quite alone." Alas! the most persevering of enquirers seldom obtains half that which he seeks, and it would take somewhat more than a lifetime to make a man *master* of any single science. Those who seem to us as masters, are but pupils in a higher class, as they are themselves the first to acknowledge. If people would but attempt to acquire that *smattering* of knowledge which they so proudly despise, they would often find it difficult enough to tax their highest abilities, and delightful enough to repay their utmost efforts; while, that it would raise them not a little in the social scale, many a spender of long days, and sufferer of morning visits, would gratefully confess.

That "joyful amazement" (*freudiges Erstaunen*) to use Humboldt's expressive phrase, which is experienced by the student of nature as she unfolds new marvels to his eyes, begins with his first doubtful step into her realm of enchantment, and increases in intensity and refinement the farther he advances. That there are those who have no eyes for all this beauty; no ears for this chorus of inexhaustible harmony; no senses to drink in this balmy and bracing air; it would be folly to deny. Such are the menials of science, and, place them in what sphere you will, they must continue menials; unless, indeed, you locate them in the region of popular Utilitarianism, where they may be monarchs if they please; just as a man may always be king of his company, by descending low enough to look for subjects. Whether they are not more respectably employed in

gathering materials for the architect whose labours they are incapable of imitating, than in pelting his fabric with stones and dirt, is another question. In the first case they help on the progress of the work, in the second they impede it; but, however indignant the workman may feel, let him take comfort in reflecting that they are in reality powerless, and that, when their clamour and their dust are gone by, his edifice will remain to challenge the admiration of the enlightened, as though they had never been. The wise men of Spain could not keep Columbus from discovering America, nor has the world yet learned from Voltaire to look down upon Shakspeare.

The second objection has been well-nigh answered already, though not specifically stated. It is the unhappy idea that Knowledge stands necessarily in antagonism to Faith, and that a man cannot fathom the mysteries of Nature without learning to doubt those of Revelation. This may be true of those who mistake *laws* for *causes*, but in such an error they sin as deeply against Science, as they do against religion. If God be the source of all Truth, natural as well as revealed, is it not impiety to suppose that the study of the one volume cannot be pursued without casting doubts upon the authenticity of the other? The man who thinks thus, is indeed wise to abstain from such a study, for he holds his faith in so feeble a grasp, that a breath would blow it away. In everything there is reaction and compensation. With every new taste, we acquire a new want—with every friend gained, we have an additional source of possible unhappiness opened to us, to balance the positive enjoyment acquired—and every increase of power, whether mental or physical, is for good or for evil, according as we choose to employ it. Let not him who feels within himself the seeds of consumption, attempt to scale the mountain-side; to him, the fresh breezes are poison, the invigorating exercise is death. But let him remember that the evil is in himself, and that the efforts so injurious to him, impart all the energy of health to a stronger frame. And if there be a few melancholy instances that would seem to justify the opinion we have been combating, if there are to be found some who have intruded themselves into the sanctuaries of Nature only to deny the God who should there be worshipped, let us, while we deplore their blindness, and condemn their presumption, remember these two things:—

First, that their unbelief arises out of their own evil hearts, and is, in all cases, a high treason against the majesty of truth, whether natural or revealed, whether scientific or theological; secondly, that those who would charge the sin upon Science, should be the last to judge the sinner. If they are so morbidly sensitive to the danger of the trial, let them be merciful to him who falls beneath it.

But we thank God that these are only the exceptions, and while we can appeal to such names as those of Bacon or Copernicus, of Newton, of Cuvier, or of Herschel, we may fearlessly proclaim the truth, that the Almighty intended all the faculties he has bestowed to be exercised, and all the revelations he has vouchsafed to be studied, and that the man who hides his talent in a napkin, is doing the will of his Creator as little as he who perverts the gift to his own destruction.

B. S.

CHURCH ARCHITECTURE.

NO. III.

DECORATED.

In Exeter Cathedral this style may be said generally to prevail, although some parts are of earlier, and some of later date. Great part of Lichfield Cathedral was also built during the 14th century,

as were also the Lady Chapel and chapter-house of Wells Cathedral. The cloisters at Norwich are among the most beautiful we have; they were commenced so early as 1297, but not finished for more than a century. Many country churches are of this date. That of Shottisbrooke, in Berkshire, was built (in the form of a cross) by Sir John Trussell, about the year 1387; Winnington church, Bedford, is of the same date. During this century additions were made, in this style, to older churches; such as aisles, transepts, and chantry chapels, in all of which more or less of the beauty and elegance of the style is observable.

PERPENDICULAR.

We have now arrived at the last style of pure Gothic architecture which was adopted in the 14th century. This style began to creep in as early as the close of Edward III.'s reign, about the year 1375, and it prevailed for a century and a half, or rather more, till late in the reign of Henry VIII., about the year 1539. It has been sometimes called the *Florid* style; but as this seems not sufficiently to distinguish it from the Decorated, the name of *Perpendicular* has been of late usually given to it; and this name is both distinctive and appropriate; for the manner in which this style is distinguished from the Decorated is mainly by the change from the flowing tracery and outlines of the last style, to straight mullions in the windows running up vertically to the very top, and divisions of ornamental panel-work, in parallel perpendicular lines. Indeed the whole character of this style agrees with this perpendicular arrangement of its details.

Of the arches of the style none is confined to it, except the four-centred arch, commonly called the *Tudor* arch, from the name of our royal family during this period, which is almost peculiar to this style alone: the windows of St. Mary's Church, Oxford, are of this shape; in them may be observed also the way in which the tracery, instead of diverging into wavy lines, runs up, almost straight, into the head of them, something like bars. In the windows of Merton College antechapel may be seen another feature of this style, viz. the *transome*, a horizontal stone division, cutting the lower part of the window into two stages: it has a small battlement on it in this case—a common ornament at that time. The mouldings used in windows were very shallow, hollow mouldings; which also appear in door-ways and pier-arches, and under parapets, and the windows of the clerestory were usually square-headed. The piers in this style are generally formed of a square or parallelogram placed diamond-wise, with the angles fluted or hollowed, and a slender shaft with base and capital attached to the flat face of each side of the pier, as at Croydon, and in many other places. In some churches these shafts are attached to the angles instead of the sides of the piers. A richer looking variety of pier is formed by a lozenge with hollowed sides, in which are single shafts, and a cluster of them at the angles. Of this style of pier good specimens are seen at St. Mary's, Oxford. We must also mention that panelled compartments are often found in this style running up the inside of the piers, and the under part of the arch (called the soffit.) Of the door-ways of this style there is a great variety: the most common is the depressed four-centred arch, within a square-head or frame,

NEW COLLEGE, OXFORD.

as it were; sometimes the same arch is found without the square hood-mouldings, as at Lincoln cathedral: other shaped arches are also met with, with the hood, as at Adderbury, Oxfordshire.

The porches of this style are very frequent, and profusely enriched with panel-work, tracery, and niches for statues. They are also vaulted, and sometimes have small chambers over them. The south porch of Gloucester Cathedral, and the south-west porch of Canterbury, are very fine specimens; as is also the west porch at Peterborough, under the centre arch of the west front.

The roofs of this period are usually of so low a pitch as to appear almost flat from without. Timber roofs are common, and are usually very highly decorated, particularly in the cornices. They often have no tie-beams (where the pitch is very low), but the principal rafters are so united as to serve as a tie, and the whole roof is subdivided, by the smaller beams and purlins, into squares. The roof of the south chancel aisle at Evesham Church, in Oxfordshire, is a very good specimen of the timber roof of this period. They were usually painted. In some cases a shaft is carried up to the wall pieces, from the inner face of the piers.

The stone vaulting of this period is very rich, and is found covering vast buildings, without any apparent adequate support. The groining is very much complicated, and at every intersection, highly-wrought bosses with flowers and foliage, or sometimes shields with sacred emblems, are introduced. A very rich specimen is the vaulting of the choir of Oxford Cathedral, which was inserted quite at the end of the perpendicular period, by Cardinal Wolsey. Winchester cathedral was also vaulted in a similar manner (that building being Norman as well as Oxford cathedral), by William of Wykeham, who was the great patron and improver of the perpendicular style. A very rich and peculiar kind of vaulting is one composed of pendant semi-cones, with rich panel-work, called *fan-tracery*, from the design resembling a fan spread open. The roofs of St. George's Chapel, Windsor, of Henry VII.'s Chapel, Westminster, and of King's College

Chapel, Cambridge, are well known, and most splendid examples of it.

A feature peculiar to this style is the panel-work with which the interior and exterior of many buildings of this period are ornamented. Specimens of this on the exterior are the Beauchamp Chapel, at Warwick, the west front of Winchester Cathedral, and Henry VII.'s Chapel, Westminster.

The parapets used during this period were either the plain embattled, with coping mouldings, as at St. Erasmus' Chapel, Westminster, or else the pierced, as at Redcliffe Church, Bristol, which has a broad, shallow moulding, with square flowers in it, just below it—an ordinary ornament at this time.

Of minor ornaments, we may mention the rose (the badge of the two houses of York and Lancaster), which is frequently met with; as also rows of a trefoil or lozenge-shaped leaf, somewhat like a strawberry leaf, with a smaller trefoil intervening: this is known by the name of the *Tudor flowers*. The tendrils, leaves, and fruit of the vine are also often introduced in the broad, shallow mouldings of this style. In general, a squareness of outline prevails in the ornaments and foliage of cornices, panels, &c. of this period.

The buttresses were either very simple, divided into stages, with plain offsets, as at New College, Oxford: or else panelled, and highly ornamented with tracery as at Evesham. The buttresses at the Beauchamp Chapel, Warwick, are unusually bulky and projecting, in order to support the weight of the stone vaulting, but their heavy look is removed by the rich paneling with which they are covered.

Among the early buildings in this style, we may mention the tower of St. Michael's Church, Coventry, which was begun in 1373, and finished in 1395. Westminster-Hall was begun in 1397, by King Richard II., (for the old one was almost utterly destroyed), and finished in 1399: the entrance has the square hood over it, and the spandrels, or parts, between the arch, and this hood, are filled with sunk panel work: both the end windows are divided into perpendicular com-
